...IMPROVED WOOD QUOIN...

The "Wells" Long Wood Quoins

DO YOU SEE
THAT NOTCH?

DESIGNED BY

MR. HEBER WELLS,

OF PATERSON, N. J.

CONTRARY to what some of the wise ones will tell you, the days of wooden quoins are not over. We sell carloads of wooden quoins in the course of a year, and this is abundant evidence that the best printers still use them. These new quoins, with their long bearing surface, will increase the use of wooden quoins to a still greater extent. About the only advantage the metal quoin has over a wooden one is the long bearing. In using these quoins a perfect lock-up is secured, for the quoins are so long that a great pressure is secured without severe driving.

THERE IS ONLY ONE QUOIN, and any two quoins make a pair.

They are beveled on one side only. No time is lost in looking for rights and lefts, and this is the secret of their success.

STRAIGHT FURNITURE can be used and NO SIDE-STICKS are required. Every practical printer will appreciate this great advantage.

No. 1

No. 2

No. 3

No. 4

The above cuts show the Top Face of the Wells Long Wood Quoins, in their exact size. Beveled one way only.

These quoins are improved by a **TOP NOTCH**, which greatly assists in unlocking the forms. They are made in four sizes, all working in pairs with straight furniture, or **they can be used singly with side-sticks.** We believe that our customers

will be quick to recognize the superior advantages of this improved wooden quoin. They are put up in neat paper boxes, properly labeled, each box holding 100 quoins.

LIST PRICES.

No. 1	Box of 100 Quoins	Hickory, \$.75	Boxwood, \$1.10
" 2	" 100	" .75	" 1.10
" 3	" 100	" 1.10	" 1.75
" 4	" 100	" 1.10	" 1.75

The above prices are subject to the usual discount on Wood Quoins.

We're Not Giving Chromos

In order to sell our machinery ; fact is, the name "Challenge" is sufficient, it's a synonym for superior quality.

Take the CHALLENGE COUNTRY PRESS, for instance—the best Country Press ever made—designed for the country printer, meets his requirements exactly ; enables him to print his paper or job work that's too large for his eighth-medium easily and quickly without steam or other motor. It is easy on the type, has many modern improvements, including points and reel rods in cylinder, color back fountain, impression adjustment, large bearings for cylinder, rigid, unyielding bed, and automatic gripper mechanism, unbreakable even if grippers are left open.

Purchasers of the CHALLENGE are its best friends. Here's what one wrote recently, and we have plenty more of similar character :

ALL DEALERS
SELL THEM.

GENTLEMEN—Since we got the Challenge we have very nearly doubled our circulation. Last week we made a record. A young man who had not turned off the edition but once or twice since we got the press, came in, and we got him to "turn off" for us. He hadn't had hold of the press for about six months. He turned off 720 copies in one hour and three minutes, which included a stop of five minutes to put up a fresh batch of paper. Seven hundred and twenty in an hour is pretty good time.

We are going to get out a special edition on December 21. It will contain enough halftone cuts to make three solid pages and over.

Respectfully,
Orion, Ill., Dec. 4, 1899.

BOLLES & STEVENSON.

Copper=Facing Type Doubles the Durability of Every Font *****

NEW YORK TRIBUNE,
NEW YORK, February 3, 1888.

TO THE NEWTON COPPER TYPE COMPANY.

Since writing my testimonial on July 23, 1858, I have had thirty years of additional experience in the use of Copper-faced Type, and I assume the responsibility of saying that I not only believe, but that I know, that Copper-facing type adds at least 100 per cent to its wearing value, whether the type is used for stereotyping, electrotyping, or letterpress work. Yours, THOMAS N. ROOKER.

THE NEW ORLEANS Times-Democrat

THE LARGEST CIRCULATION SOUTH OF THE
OHIO AND POTOMAC RIVERS.

CIRCULATES in every town and village of Louisiana, Mississippi, and Alabama, and in all the leading towns of Texas, Tennessee, Florida, Georgia, and other Southern States.

A thoroughly up-to-date newspaper with correspondents in every portion of the country, and the fullest news—social, political, industrial, etc.—from all points.

The strongest and most independent organ of public opinion in the South. A newspaper which is free from all bonds to corporations, factions, etc.; which is the organ of no person, faction, or corporation, but can speak out and does speak out strongly, emphatically, and energetically on all the great questions of the day; which is the representative and mouthpiece of the people, and the leader and moulder of public opinion.

The TIMES-DEMOCRAT is one of the most active promoters of the literary movement in the South—publishes more literary matter from writers in all parts of the South, and spends more for original literary matter, than any paper of the section. Its Southern news, its market, financial, and commercial reports

are complete, thorough, and accurate, and it covers the entire field of news, making it the best advertising medium for all the States of the Southwest.

Its mechanical department is perfectly equipped. It operates a full quota of Linotype machines, and has added to its pressroom within the past few months one of the largest and finest presses in the country, making it the most perfect in the South.

The TIMES-DEMOCRAT is one of the best-equipped newspapers in the country, furnishing the most complete news, and exercising an influence and power throughout the section in which it is printed—greater than any other paper.

It is the widest circulated, the most quoted from, and the best-read Southern newspaper; and is the most independent and progressive, having been the first to utilize all improvements tending to make a better paper.

It was the first Southwestern paper to print special correspondence from the surrounding towns, and the first to use the Linotype machines, and thus to treble the amount of reading matter in each edition.

START THE TWENTIETH CENTURY RIGHT !

*With the price of labor and materials at the highest point, to attempt to do business with antiquated machinery is certain ruin.
Get the latest and best. You may not be able to decrease your expenses but you can increase your output.*

Do you need a Two-Revolution Press ?

IF so, investigate, but beware of those who claim much in a general way — who, instead of showing the advantages of their machines, talk about “Springfield rifles” and “the shape of the lion’s claws” — who have the “fastest two-revolution press ever built” (constructed with the knuckle joint driving the bed from one side), “a reciprocating bed with a centerless motion,” and with “two tracks better than four, “a NEW CRANK movement two-revolution,” etc., etc. It is no doubt difficult for a printer, who is not a mechanic, to make proper selection when most of the builders claim to have the “best built,” “quickest running,” “most accurate,” “most durable,” “most powerful,” or, in fact, in every way the most perfect and desirable machine. In order, however, that he may not purchase a machine from a prevaricator, he should write us for our catalogue of printing machinery.

A BIG MISTAKE FOR PRINTERS

TO imagine our business is confined to the making and selling of type! That our best efforts are given to its design and manufacture is the fact that accounts for our leading position as typefounders. Selling our type calls for little effort. It sells itself. This gives us ample time to cater to printers in every other line. For the equipment of modern plants there is not an item that we do not carry in stock. Cylinder and Job presses, cabinets, cases, paper cutters, stitching and perforating machines, shafting --- Absolutely Everything!

GOOD-CHILDREN STREET.

(From "Lullaby-Land," by Eugene Field, published by Charles Scribner's Sons, New York.)

Copyright, 1892 and 1897, by Julia Sutherland Field; 1892, by Mary French Field; 1893 and 1894, by Eugene Field.

There's a dear little home in Good-Children
Street —

My heart turneth fondly today
Where tinkle of tongues and patter of feet
Make sweetest of music at play;
Where the sunshine of
love illumines each
face

And warms every heart
in that old-fash-
ioned place.

For dear little children go
romping about
With dollies and tin
tops and drums,
And, my! how they
frolic and scamper
and shout
Till bedtime too speed-
ily comes!
Oh, days they are gold-
en and days they
are fleet
With little folk living in
Good-Children
Street.

See, here comes an army with guns painted red,
And swords, caps, and plumes of all sorts;

The captain rides gaily and proudly ahead
On a stick-horse that prances and snorts!
Oh, legions of soldiers you're certain to meet —
Nice make-believe soldiers — in Good-Children
Street.

And, yonder, Odette
wheels her dolly
about —
Poor dolly! I'm sure
she is ill,
For one of her blue china
eyes has dropped out
And her voice is asth-
matic'ly shrill.
Then, too, I observe she
is minus her feet,
Which causes much sor-
row in Good-Child-
ren Street.

'Tis so the dear children
go romping about
With dollies and ban-
ners and drums,
And I venture to say
they are sadly put
out
When an end to their
jubilee comes:

Oh, days they are golden and days they are fleet
With little folk living in Good-Children Street!

PAGE M. BAKER,
Editor-in-Chief of the New Orleans Times-Democrat, and his daughter
CONSTANCE,
five years old.

The little maiden was a great favorite of Eugene Field, and to her were dedicated
his verses entitled "Good-Children Street."

National Printer & Journalist

VOL. XVII.

CHICAGO, JANUARY, 1900.

NO. 1

The Convention at New Orleans.

Great Preparations for the Fifteenth Annual Meeting of the National Editorial Association at the Crescent City.

EDITORS of the United States will have occasion to long remember the year 1900 and the fifteenth anniversary of the National Association. There will be one round of entertainments beginning at Memphis, taking life grandly at Jackson, the home of President Henry, carried forward at historic Vicksburg, and consummated in the carnival of sport and spectacular display at the Crescent City of the South. On the pre-convention visit by the editor of this paper the first stop after leaving St. Louis was at Jackson, Miss. Unfortunately President Henry was absent at New Orleans, looking after convention and excursion arrangements, but, arriving at the office of the Clarion Ledger, the son of the President, in charge, was found a worthy representative of his father. Through his courtesy the State Capitol was visited and the Governor and other state officials met, and then the office of the Jackson Evening News was invaded, introductions and an inspection of the print shop followed. At the Capitol the pleasure of meeting Colonel Powers, the Nestor of the Mississippi press, was enjoyed. He is now Secretary of State, with a popularity that promises to keep him in the position as long as he may feel willing to accept its duties. He, by no manner of means, has given up writing for the papers. He renders a real service to the State by preparing an article every week that is published in a hundred or more State papers, full of statistics and facts with regard to Mississippi, gathered in the course of his duties. State officials generally might be more useful by keeping closer in touch with the people and informing the taxpayers as to what is done with the State funds in the way of educational, reformatory, punitive, eleemosynary institutions and other matters. Governor A. J. McLaurin, the United States Senator to be, was cordial and earnest in his greeting, and impressed one as having the characteristics of a popular politician, joined with strong, aggressive intellectuality. However, he is not the Governor who will deliver the welcoming address on behalf of the sovereign State of Mississippi to the editors of the United States. The Legislature that convened three days later inaugurated a new Chief Executive

of the State, Judge A. H. Longino, who, like his predecessor, is a native Mississippian. The editors will have an opportunity to meet and learn more of these gentlemen. Hon. Luther Manship is another gentleman whom the editors will be glad to meet. He is an orator and lecturer of re-

R. H. Henry, President National Editorial Association.

known, whose "Evening of Song and Story" has won for him a warm place in the hearts of the people, and placed him in the high rank among the platform celebrities of the day. Then there will be the Mayor and other representatives of the State and municipal governments, and of the judges that will join in words of welcome to the representatives of the nation's greatest educational agency—the modern newspaper.

Speaking of the State Capitol, which will doubtless at no very distant day, give place to a new, more ornate, modern and pretentious structure, there is a great deal of historic interest about that old building. The foundation or corner stone was laid by Henry Clay in 1834, and its legislative halls have echoed with the voices of the greatest statesmen and orators of the South. Our first acquaintance with the building was in 1887 on the occasion of the meeting of the Stock Growers' and Butter-Makers' Association, over which as President, J. S. Hoard, afterwards Governor of Wisconsin, presided. Delegates had been appointed to this meeting from nearly every State in the Union, and the Governor of Mississippi had appointed or named as members nearly a thousand farmers of that State. The proceedings were intensely interesting and instructive. We then learned of the steps being taken in the State toward industrial education and of the splendid success of the State agricultural farm. The old building, with its many memories, through the pleasant and instructive occasions, both social and educational, won a warm place in affection and memory, and we shall feel sorry that it, too, like the men who have added to their fame and to the store of human knowledge, in its old halls, must be removed, to give place to a more worthy successor. When this Capitol was completed in 1836 it was counted the most elegant in the South; was the pride of Mississippi and the envy of the citizens of neighboring States; but, alas, the destroying hand of time has touched the once proud edifice, and its glory is in its history.

When the State Capital was located at this place it was known as the Le Flor Hill, or the Hill of Flowers, but the act of the Legislature authorizing its location provided that whatever place was chosen should be named Jackson, in honor of the great General and President, whose name still stands as the personification of the policy and principles of one of the great political parties of the nation.

Jackson has two daily papers, the Clarion Ledger, of which our "Department or Newspaper Criticism" had considerable to say in the December issue, and the Evening News. Through the courtesy of the publishers of the News, whose kindness we are able to give, the splendid illustrations and many of the interesting facts with regard to the city, and to present the bouquet of beauties, that ought to give the name of City of Belles to what was once known as the Hill of Flowers.

The News issued a very excellent "Illustrated Midsummer Edition" in July and followed that with an equally creditable Christmas edition on December 16th. The editions are proofs that extra issues pay.

It was in this office that the recent splendid record was made on a linotype machine of sixty thousand ems in eight hours by Mr. Frank Humphries, formerly a hand compositor, who started to learn the linotype last summer and picked it up at odd times when the machine was not engaged. His success shows that the old hand compositors need not be crowded to the wall if they will but adapt themselves to the new conditions.

Jackson has several important State institutions, among which are the Blind Institute, the Deaf and Dumb Institute, and the Lunatic Asylum, which the editors will have the

pleasure of visiting. The entertainment here will consist of a dinner at the hotel on the arrival of the train at about noon, a trolley ride about the city, and a visit to the insane asylum and to one or more of the schools, probably to either Jackson or Campbell College for Colored People; an informal reception at President Henry's residence, and then a reception at the opera house, where addresses of welcome will be made by the Governor of the State, the Mayor of the city, and by Bishop Chas. E. Galloway, Col. Charles E. Hooker and Judge A. H. Whitfield, representative of the State Press Association. This will be followed by a banquet at Masonic Hall, that has been tendered for the purpose, with the adjoining Odd Fellows' Hall as a reception room. This banquet will be under the direction of the ladies of Jackson. The Confederate monument, the old Capitol building, the Governor's mansion, the State institutions, the schools and churches will be found of interest. The site of the city is on a hill overlooking the valley of the Pearl River, from which the city gets its water supply.

Mississippi has made great progress in education, and in the efficiency of industrial and agricultural schools it stands at the front. It had the first and, so far as we now remember, has the only industrial school exclusively for girls not punitive in character in the United States. Here the young ladies receive a good English education and a thorough training in all the domestic arts necessary to the care and management of a home and to providing suitable dress; they are taught the real and useful accomplishments of life. The State constitution guarantees free public schools for four months in each year, at expense of State. Several counties have extended the term, and nearly all the cities and towns give a nine months' term.

The State University at Oxford, the Agricultural and Mechanical College at Starkville, the Industrial Institute and College at Columbus—all for whites—give free tuition at expense of State; the Alcorn A. & M. College, near Rodney, and the State Normal School at Holly Springs—both for colored—also give free tuition at expense of the State. Tougaloo University, near Jackson, the Jackson College, and Shaw University, at Holly Springs—all supported by church and missionary societies of the North—are each full to overflowing by colored youth aspiring to higher education. The two Agricultural Colleges receive liberal annual aid from the "Morrill Fund."

Mississippi has some of the best male and female colleges in the Southwest—most of them under denominational control, and all well attended. Comparatively few of the youth of Mississippi now find it necessary to go to other States for education.

The area of the State is 46,810 square miles, or 29,958,400 acres; improved acres, 5,216,937.

The number of farms (census 1890), 144,318; average size, 122 acres. The average size in former census (1880) was 156 acres; in 1870, 193 acres; in 1860, 370 acres. In 1860 there were only 42,840 farms; so that there are 101,478 more farms in 1890 than in 1860.

The census of 1890 gave a total population of 1,280,600—an increase of 158,003, or 13.96 per cent, since 1880. The present population is estimated at 1,400,600. The census of 1900 will show a total of 1,600,000.

There are 2,750 miles of railroad in the State—three main lines from north to south, three from east to west, with several shorter lines. Other roads now building or projected will give ample transportation facilities to every section of the State. The service on all the roads is good, and passenger and freight rates reasonable.

The annual death rate is only 12.85 per thousand popu-

lation, outranking in healthfulness Colorado, Alabama, Illinois, Georgia, Kansas, Indiana and several other States.

The new Governor of the State, Judge A. H. Longino, was nominated to the office of Governor of Mississippi by the Democratic State convention in August, 1899, and elected on the 7th of November, receiving 81 per cent of the entire vote

Governor A. H. Longino of Mississippi.

for that office. He was born in Lawrence County, this State, May 16, 1855. His father died when he was five weeks old, and his mother when he was eight weeks old. He was prepared for college in the common schools of Lawrence County, entered Mississippi College in 1872 and graduated in 1875, and was immediately thereafter elected clerk of the county. After four years in that position he was elected to the State Senate and served two terms. During the senatorial term he took a special course at the University of Virginia. He commenced the practice of law in 1881. In 1887 was appointed by President Cleveland United States attorney for the Southern district. He moved to Greenwood in 1890, and has been a citizen of Greenwood for several years. In 1894 was appointed chancellor by Governor Stone, and re-appointed by Governor McLaurin in 1898. He resigned this office when he concluded to offer for Governor. His term as Governor commences January 16, when he will take the oath of office and deliver the customary inaugural address. The Mississippi National Guard and the military companies of the A. & M. College and Mississippi College will make an imposing display on the occasion.

In speaking of the educational advantages and the future of Jackson the Evening News says:

"If there is a city in the State that is entitled to the distinction of being called the 'Athens of Mississippi,' that city is Jackson. It has more and larger schools, colleges and churches than any other one community in the State, and perhaps in the South, for that matter. Unity of purpose and unity of action is what is wanted in Jackson and

we are getting it. The people are more than willing to pull together for the common good for they see that this is the way that the city is to be built up. Nature, that great mother of us all, has done a great deal for the fair capital city of the State, and if the people will but take hold where nature has left off and with a will to do there is no question about the future. Jackson is rich in young men who have the push and the hustle and they have the ability. They are ready to grapple the great industrial problems. They are in business and their quick brains and never-failing energy have done much to advance the city. They are in all lines of trade and in all the business enterprises. They are at the head of employment-giving industries, managing mercantile establishments and making Jackson one of the important jobbing centers of the South. The young men should have the sympathy of the older men, and the News believes that they have that sympathy to a large extent. Old men and young men have great opportunities before them in this city and they should be up and doing. They are wasting precious time, for with a redouble effort the city would in the next few years have a population of thirty thousand people. The News, always for anything that will help Jackson, proposes that during the year 1900, in addition to diligently attending to our own business, spare the time to work some in the interest of the city."

NEW ORLEANS—THE CONVENTION CITY.

This sermon, if heeded, would do a world of good in many cities of the South, including the old city of New Orleans, which was next visited, and that this year looms up in importance to the editors as being the place of the annual meeting—the convention city for 1900, as it was for 1885. A decade and a half have passed since the World's Cotton Exposition, and the organization of the National Editorial Association, and we sometimes feel as though both New Orleans and the association had been simply marking time, though the association has quadrupled in numbers and the city has greatly improved its streets and sewerage and added a few fine buildings. The progress of the human race is slow, up a winding, slowly rising track, like a railroad in the mountains, sometimes going down hill again in avoiding a threatening declivity. New Orleans does that same way. Yet it is an interesting old city, full of old memories, marked by old customs, the Mardi Gras, the masquerades and spectacular exhibitions, the French Market, the French Opera, the old tombs, and in some sections the old tiled roofs. The old, too, is preserved in the names of its streets. It has been having yellow fever scares for the three years past. Yet, with greater attention to general sanitation and more personal care, the death rate has been lower during the months when the plague was said to be prevalent, with all its terrors, than during some other months of the year. It is a healthy city, and now that Cuba is free and the lessons of cleanliness are being enforced to the rooting up of the hatching places of the disease in that island, it may be taken for granted that the days of yellow fever, as a dangerous scourge, are nearly numbered. Cities, like the human body, need absolutely perfect sewerage and to be kept flushed and clean. Half the ills that men are heirs to come from people being poisoned with their own filth, kept in the body to poison the system, or taken in through the stomach, the lungs or pores of the skin. New Orleans has been sewered and her streets paved so as to be successfully flushed.

The fact remains that the death rate in New Orleans is below the average of that in cities of like size in the United

States, and that the deaths have been less during the months of quarantine because of the supposed presence of yellow fever than during other months of the same year, and during the years since and including 1897 of the prevalence of the so-called plague than during the years previous. People take care of themselves when the danger signal is out, are more careful as to their habits and health, and more temperate every way as to the manner of living. Strict cleanliness and sanitation are enforced, besides the per cent of deaths from the purported yellow fever has been very low. Many people here say that they have much greater dread of typhoid fever than of the mild form manifested of late years of the yellow fever plague. The general sanitary condition of the city has been much improved by the complete sewerage, the filtering or distillation of the water and by the asphalt paving of the streets. Nearly a quarter of million dollars is now being expended in additional street paving.

The fact was made more and more apparent, too, as our stay in the city lengthened, that the city has caught the spirit of progress. This was made especially apparent at a meeting of the New Orleans Progressive Union, an organization of business men, only about two years old, with the commendable object of pushing along the city's fame and prosperity.

The annual report of President A. R. Blakely, "mine host" of the New St. Charles Hotel, was full of pith and point. Mr. Blakely is father of the organization, and got his idea and inspiration from the grand success of the business men's organization in Minneapolis, Minnesota. His report showed that the results, so far here, had not met his full expectations, but the true artist, enthusiast, or public-spirited promoter is never satisfied with present achievements, always seeing so much greater possibilities still ahead. One of the noted accomplishments of the organization was the inaugurating and carrying to a splendid success, last May, of a State Industrial and Agricultural Fair. Another branch of work successfully accomplished was that of securing the holding of a number of important conventions in the city, among the rest the National League of Commission Merchants, the Prison Reform Association, National and State Dental Association, Ancient Order of Essenic Knights, National Plumbers' Association, National Board of Steam Navigation, National Brotherhood of Railroad Trainmen, Southern Cotton Growers' Convention, Southern Cotton-seed Crushers' Association, State Pharmaceutical Association, National Editorial Association and the National Travelers' Protective Association.

The first seven held their meetings during the different periods of last spring, and the last five are to convene within the next several months.

This meeting of the New Orleans Progressive Union showed as bright, intelligent, enthusiastic, progressive business men as could be gathered anywhere in the United States, and if they hold together, keep free from personal jealousies, rivalries and politics, and follow the admonitions of President Blakely's address, the Nation will hear of wonders performed in New Orleans' progress in the next ten years. President Blakely said, and it is good enough to be adapted to and followed by every city of the Union:

"Our exposition and fair in May last, the brightest spot in the life of our union, was successfully carried out only through the personal efforts and continuous hard work of its capable and energetic executive committee, to whom the thanks of the association are justly due. This was accomplished not only by written and printed publicity, but by personal appeal and direct contact with those interested. The same labor of love, the same energetic perseverance

similarly applied to the several other objects of our association would net equally successful returns. We should stump the city from Carrollton to the Barracks; teach the people our aims and purposes and their apathetic danger and duty; unify them in the belief that our organization is neither political nor sectarian; not for personal gain; not for a single purpose only, but for the good of all, and that the benefits are mutual benefits, proportionately shared in by every citizen.

"Our people are intelligent, warm-hearted, liberal, readily convinced and with strong attachments. Convince them that it is their duty to stand shoulder to shoulder in united co-operation for our city's progress and prosperity, and I feel assured our association will multiply and strengthen in numbers and in means, to the prompt fulfillment of our aims and objects."

We have dwelt on this because our readers, wide-awake newspaper men, are of necessity, as well as by choice, ever the advance agents of progress, publicity and prosperity, and a new hint or idea from any part of the country always comes in play in every other community.

There is another question, next to progress in all its branches, that will interest editors in every section of the Union, and that is the negro question, or "race problem," as it is called. We had the opportunity of an interview with a colored professor in one of the city schools here. He was a graduate of the Straight College, a school for colored people, and well informed. He stated that the colored people who have a will to do are reasonably prosperous, that there are people who are always seeking that which they generally find—trouble, but the colored people who try to do right would generally find positions. He did not believe that there was a better city in the United States, at least for those who had been raised here, than is New Orleans, and this fact held with regard to all industrious, temperate, well behaved colored people, and would hold true to all unless the city should be overcrowded. Speaking of the new law as to the qualifications of intelligence and learning, he said that while it seemed, in some cases, hardly just and equitable, he believed that it would work good to his people and that in ten years every young colored man would be able to meet all the requirements of the law. It seems that the examination for a voter is the filling out, at the polls, of a blank containing a number of questions as to age, time and place of birth, etc.

His statement was that by the enforcement of the law the negro vote in New Orleans had been reduced from thirteen thousand to thirteen hundred in round numbers. He did not claim this statement as entirely accurate, as this was a comparison of the local election of two months ago with the vote at the previous presidential election. He strongly favored more general industrial education for his people, the training of the hands to do as well as the brain to think and plan.

New Orleans is rich in schools of all grades for both whites and blacks.

The editors will visit New Orleans during the season of the greatest gayeties of the whole year, the world-famed Mardi Gras. This year, by the use of electricity to a greater extent than ever before, the night parades are expected to outdazzle all predecessors. Yet all that pertains to the floats, except something like this, of a general nature, is kept a profound secret.

The carnival really commences several weeks before Mardi Gras, balls and social entertainments of various kinds affording amusement to the pleasure loving. The week immediately preceding Mardi Gras, however, is justly considered the high tide of the season, for, besides the

indoor entertainments, all the magnificent street parades of mystic societies are given. This year the street pageants will be presented in the following order:

Wednesday, Feb. 21, at night.....Nereus
Thursday, Feb. 22, at night.....Momus
Monday, Feb. 26, at noon.....Arrival of Rex
Monday, Feb. 26, at night.....Proteus
Mardi Gras, Feb. 27, at noon.....Rex
Mardi Gras, Feb. 27, at night.....Comus

The parades of Nereus, Momus, Proteus and Comus will be illustrated by The Picayune, one of the leading dailies of the city, that has performed this work for each year, in special editions, of beautifully executed lithograph pictures, in seven colors, giving a perfect conception of the splendor of each pageant. These papers are not issued in advance, but are mailed the day of each parade.

This paper, the New Orleans Picayune, issued on January 15, this year of 1900, a complete new guide of the city, from advance sheets of which, kindly furnished by Mr. Thos. G. Rapier, the manager of the paper, we have been greatly aided in what follows, as everything was brought down to the very day of our arrival in the city, January 1. The guide is more, it is a delightful illustrated description and history as well, and must prove a necessity, a vade mecum, to all future visitors to the city. First, then, a little of a refreshing draught from the

DELIGHTFUL DESCRIPTION.

The writer says in a poetical vein, yet truthfully:

"New Orleans is unlike any other American city. Her very name is a souvenir of gayeties; her breath is as sweet as a willow copse in June, and something about her always makes one think of the opera and the 'bal masque,' the carnival, the palm-leaf fan, the omelette soufflé and the rose. She is not to be known in a day, and she will unfold herself slowly, petal by petal, growing in charm each day, as Venice does—surely not to be comprehended in an eye-flash.

"When you started forth from that beautiful, frozen North, where there are icicles for daggers and snowbanks for roses, and often gray skies pent with rain, you tucked an organdy gown down into your trunk and you thought how, when you came South, you would, perhaps, wear a red rose at your belt and pin a velvety bunch of Parma violets at your throat. But I do not believe you realized the possibility of other charms than climate as belonging to the old Southern city, sprawling like a Victoria Regia, with its petals dipped in the opaline lakes and the great yellow river. In truth, she does float like a lily on her lakes, and she lifts to the skies a wondrous charm of old, red roofs and old churches, narrow streets and curious shops, and a strange and genial life.

* * * * *

"A fine and world-famous Opera House, a season of brilliant French opera; a carnival equaling the Roman in splendor and characteristic gayety; the solemn and picturesque ceremony of the Lenten season (a feature of every Catholic community)—these are such usual bids for favor, such as well-published invitation cards to the city, that it is hardly necessary to speak of them.

"There are famous old restaurants, with chefs who are shrined as saints in the memories of gourmets; there are bizarre attractions of the markets, the picturesque stalls piled up with pineapples and pompano, cauliflowers and calico, garlic and bandanas; there are luggers laden with golden oranges and bananas; there are ways electric-

lighted, and paths where only the fireflies wink in flame. In the public parks you may have a rose; at the market-stall you may have a cup of coffee brewed on a charcoal brazier; in the Opera House, the music of 'Rigoletto' and 'Les Huguenots;' in the church the chanted mass and the perfume of incense; in the ballroom, beautiful eyes in pink domino, and everywhere get a breath of the sweet olive, the soft breathings of the salt wind from the Mexican sea, and overhead the luminous, radiantly blue and tender sky. The picturesqueness of Southern scenery, and Southern architecture, and Southern character, are alike at their best in this city. Behind the pink and yellow stucco and the brick and mortar crust of tall houses in the French quarter are veritable bits of virgin forests, fragments left over from the 'bois dore' of olden times; in the second-hand shops are mahoganies that have sheltered the knees of princes of the blood royal; in the many courts and upon the trailing vines, and by amber and green water jars, fortune for the artist sits and awaits his coming; the courtly Creole, the dialect negro, all are here. The sleepy charm of the public parks invites one's soul to a loafing day in the sunshine."

A LITTLE HISTORY.

New Orleans has a history full of romance. It has undergone four tremendous revolutionary changes, each having left an indelible mark, a new and different coloring, as it were, on the character of the people and the city itself. Located in 1718 by Governor Bienville as the capital of the French Province of Louisiana, of which he was the second governor, was, as recorded by our interesting writer, "a totally different place from Spanish New Orleans, as molded by the iron hand of Don Alexander O'Reilly, and later by the courtly Galvez and the stately Carondelet. American New Orleans, developed after the cession of Louisiana to the United States, is altogether a different place from either; and again the war of 1861-65 threw the wealthy, gay, antebellum New Orleans—the 'Petit Paris,' as it was called by cultivated European travelers—New Orleans, with its gigantic commerce and aristocratic habits, into the past." Yet much remains of all that has been. It was called under the French rule "Petit Versailles." This cognomen was given to the city during the rule of Marquis de Vaudreuil, who established a miniature court, introduced state balls, and "costume de rigueur," and grand dinners and polite speeches. The old Creole songs that have come down to us tell of the increase of wealth and population and the revival of activities of all kinds. The old Creole "mammies," who knew so well how to gauge the standard of manners for the white ladies and gentlemen, even to this day regale the little Creole children with the stories handed down to them by their own mothers of the glory and the pleasures of the days of the "Grand Marquis," as he was called. This was the beginning of that aristocratic coterie which made New Orleans famous in the cities of the Union a century later.

The year 1768 was a memorable one in the history of the colony. In that year Louisiana was ceded by France to Spain, and Don Antonio Ulloa was sent over to take possession of the country in the name of the king of Spain. The French colonists resisted, but were subdued, the leaders of the "conspirators" sent to solitary confinement in Morro Castle, Havana, and Louisiana made a dependency of the island of Cuba.

Kind and beneficent rule followed much severity, prosperity returned, through various influences great splendor flourished, and Spanish rule continued until 1803. But here we can do no better service to our readers than

step aside and let the ready writer of Picayune's guide tell the story:

Napoleon Bonaparte was emperor of the French, and in 1803, as if knowing the temper of the province, the treaty of Ildefonso was signed, and Louisiana, retroceded by Spain to France, became again a French possession. The people were wild with joy. They were "Frenchmen" again. The flag of Spain was taken down from the flag staff in the old Place d'Armes and the tricolor of France again floated over New Orleans. A wild huzzah went up from the old French quarter. The ancient birthright of the city had been restored. But only for a few weeks did the tricolor wave in triumph; for, following quickly upon the news of its restoration came other of a startling nature. France had sold Louisiana to the United States, and it was to be thenceforth an American province.

The proud and haughty Louisianians, with the best blood of France and Spain in their veins, resented deeply this humiliation; they felt keenly the "insult of being sold like a lot of slaves and handed over like a drove of cattle." They appealed to France not to submit them to this galling insult. But Napoleon was too busy with European matters to heed his colony on the far-off Mississippi. On December 20, 1803, the people met again in the old Place d'Armes, or at least the Americans did, for the Creoles closed their doors and badges of mourning floated from the olden portals. De Laussat, the French commissioner, formally surrendered the colony to the commissioners appointed by the United States. The command was given and the French flag came down. Half way down the pole it was met by the American flag; for one instant they remained thus: then the American banner shot ahead, and the Stars and Stripes waved for the first time over New Orleans. Twelve old Creole gentlemen tenderly raised the tricolor, and with uncovered heads and bowed forms carried it out of the old Place d'Armes and delivered it into the hands of the French commissioner. Never again would it wave over the city to which it had given birth.

At this time, however, the spirit of liberty was taking its birth in the hearts of the people, and a few years later we find Americans and Creoles fighting side by side under the Stars and Stripes, uniting in the expulsion of the common foe.

April 8, 1812, the State was admitted into the Union, and Claiborne, who had been the first American Governor of the territory of Louisiana, became the first Governor of the State under the American Constitution.

On November 24, 1814, the British army, under General Pakenham, sailed from Jamaica to attack New Orleans. General Andrew Jackson met the invaders at Chalmette on January 8, 1815, and inflicted a severe defeat. That Eighth of January saw, indeed, a united city. The glorious day eclipsed everything New Orleans had ever seen. Every Creole child has learned the history of that glorious Eighth at its grandmother's knee, and year after year travelers from all parts of the world come to see the spot where Jackson and his band of Creoles and Americans conquered the conquerors of Napoleon.

So much has been given because deemed necessary to the understanding of the great city of the present day and to the explaining of very much that will be seen by the editors. There is a thought, too, that the great Louisiana Purchase met with opposition on the part of those who objected to being "sold like a lot of slaves" as well as in the halls of the Congress of the United States, neither side could foresee the benefits and grandeur of the future.

New Orleans has splendid newspapers. We regret that we cannot give a review of all of them, but our readers

will be especially interested in the morning dailies that are among the best in the United States.

THE DAILY PICAYUNE.

The oldest English newspaper in Louisiana is the New Orleans Picayune. With the exception of a French daily, it is the only one of the city's journals which survived the Civil War. The history of the Picayune is long, eventful and extremely interesting. It was established by two printers, Francis A. Lumsden and George Wilkins Kendall. They came to New Orleans together in 1835, and opened a printing office. In January, 1837, they issued the first num-

Office of the New Orleans Daily Picayune.

ber of the Picayune. The first numbers of the papers were modest four-page folios, with four columns to the page. Its curious name was taken from the designation of a Spanish coin, valued at 6¼ cents. This piece of money was called in the Spanish possessions in North America the "picayune," and after the United States supplanted the Spaniards in Louisiana, the word was applied to the American 5-cent piece. The proprietors of the Picayune probably did not anticipate the immediate success of their venture, but were quick to recognize and take advantage of its growing popularity. The paper was from the first remarkable for its witty and amusing way of treating current events, and this feature, as much as the fact that it was the first cheap daily to be published in New Orleans, soon guaranteed its success. In a few months the size of the paper was enlarged, and the publication offices were transferred to a building on Camp Street. The Picayune's prosperity was greatly enhanced by its enterprise during the Mexican War. Mr. Kendall accompanied the armies under Gens. Taylor and Scott throughout the campaign in Mexico, furnishing the paper with graphic and reliable accounts of the operations. By a system of pony expresses, connecting with steamers specially chartered for the purpose, he was often able to get his dispatches to New Orleans in advance of the governmental news; and as interest in the war was

at fever heat throughout the country in 1846-7, the circulation of the Picayune increased by leaps and bounds. Mr. Kendall was the first of the war correspondents, his service in Mexico antedating the appearance of Sir William Russell in the Crimea, where the art of war-reporting is erroneously supposed to have been first practiced. In November, 1847, the Picayune occupied a handsome granite building, specially erected for its accommodation on Camp Street, overlooking Commercial Alley. For more than half a century the paper has remained in this location, although the original building was burned in 1850, and immediately replaced by the structure which is the home of the Picayune to-day. In October, 1860, the accidental drowning of Mrs. Lumsden in Lake Erie, led to the reorganization of the company. Mr. Kendall, A. M. Holbrook, A. C. Bullitt and S. W. Wilson acquired the paper, under the firm name of Kendall, Holbrook & Co. During the Civil War the Picayune was represented on the field by a large and able corps of correspondents. In 1864 the Federal military authorities then in possession of the city suspended the paper for fourteen days,—the only instance when publication has been missed in nearly 64 years. In 1867 the death of Mr. Kendall in Texas resulted in Mr. Holbrook acquiring control of the paper, and he retained possession of it till his death in 1876. He left it to his widow, a lady who, under her maiden name of Eliza J. Peitevent, had already acquired a wide reputation as a poet and prose writer. A few years later Mrs. Holbrook married Mr. George Nicholson, a journalist of large experience, who had been business manager for years and who was from that time onward associated in the general management of the paper. Mrs. Nicholson was the first woman who ever successfully undertook the management of a great daily newspaper, and her success made her name famous throughout the world. Up to the time of her death she took an active part in the administration of its affairs. In February, 1896, the sudden deaths of the proprietors, within a few days of each other, caused another change of ownership, the paper now being published for the Estate of Mrs. E. J. Nicholson. It is impossible to sketch even briefly the many enterprises in which the Picayune has engaged. In the autumn of 1893, for instance, the paper expended thousands of dollars in relieving the starving people of the lower coast of Louisiana, rendered desolate by the great storm which destroyed Cheniere Caminada and Grand Island, and over 2,000 lives. The Picayune was the first paper to publish the complete story of this terrible disaster. During the recent war with Spain the Picayune had three correspondents in the field, one of whom was with the troops for twelve months, sharing all their adventures, and participating in the occupation of Havana. In order that its readers might have the best obtainable news of the war, the Picayune supplemented its Associated Press service by entering into a compact with the New York Herald, thus obtaining the use of its unequalled cable service. It was thus enabled to publish the earliest complete accounts of many of the most important events of the war. More recently, the Picayune has devoted much attention to the revival of cotton manufacturing in the South, sending representatives to investigate the cotton mills in the Southern Atlantic States, and in New England. The results of these investigations were embodied in two valuable pamphlets, of which over 20,000 copies have been gratuitously circulated. The result of this propaganda is seen in the widespread interest in cotton milling, and the formation of many companies for the construction of cotton mills. In recent political campaigns the Picayune has taken a firm stand in favor of municipal ownership of the water-works, sewer system, and other

public enterprises in New Orleans. It sent a representative to the Northern and Eastern cities where the experiment of municipal ownership has been tried, and published the results of his studies in pamphlet form. This enterprise had an important bearing upon the issue of the election. In addition to these publications, the Picayune has published a valuable guide-book to New Orleans, the work of a thoroughly equipped writer. The fourth edition of this work has just been issued, and is a volume of about 200 pages, illustrated with 100 photo-engravings. The daily edition of the Picayune employs the services of upwards of a hundred men, not including the immense corps of special correspondents, who cover the entire Southern States. Special bureaus are maintained in Shreveport, La., and Jackson, Miss. The Picayune also publishes a Twice-a-Week edition, which has a large circulation. The special carnival editions of the Picayune are widely known. They contain pictures of the carnival pageants, and are works of real artistic merit, printed in the best style of lithography, upon heavy plate paper. The Picayune publishes four of these editions—those for the Nereus, Momus, Proteus and Comus societies—and the circulation that they attain is very large. Annually, on September 1, the Picayune publishes a trade edition filled with statistics of the year's business, compiled by expert writers. This edition is a veritable treasure house of commercial information, and is greatly esteemed by business men. On the 1st of January each year the Picayune publishes a chronology for the preceding twelve months, the work of one of the most experienced chronologers in the country. This feature has been issued annually for fifteen or sixteen years past. A few years ago the paper issued a book containing these chronologies of ten years, under the title, "Ten Years' History of the World."

THE TIMES-DEMOCRAT.

The Times-Democrat dates its origin from December 4, 1881, when the New Orleans Democrat and the New Orleans Times, previously separate, were consolidated into one newspaper. Of the two, the Times was the older, dating from 1863, while the Democrat was born in 1875, during the equally stormy period of reconstruction, and when the people needed a newspaper to defend their rights.

The first number of the Times was issued Sunday, September 20, 1863, and was published by Thomas P. May & Co. It was a small four-page paper at the time, and in the introductory announced its purpose to be to furnish the news. It was authorized to print all official matter, and was thus able to give a great deal of news that the other papers could not get. In 1865 it passed into the hands of W. H. C. King, under whose management it rapidly improved and became the leading and most influential paper in New Orleans. Up to that time the New Orleans papers had depended principally upon the mails for their news, but the telegraph came into far greater use under Mr. King, and there was great improvement in the local information furnished, which had previously been very scanty. The older newspapers had been more or less literary and editorial, with strong editorial articles, literary matter more or less weak, but very little news of any kind. Mr. King recognized the value of news in a journal, and greatly improved the Times in that respect. It was very much enlarged at the same time, the paper ranging from eight to sixteen, and even twenty-four pages on Sunday. It could well afford to do so in view of the fact that it sold at that time for 10 cents, and the advertising patronage was very large, New Orleans then enjoying a career of great prosperity as a reaction from the stagnation of the war; and the

Times, as the leading paper in the city, getting a large share of the prosperity which prevailed. During that period the Times took a prominent part in the industrial development of New Orleans and the South, and in the settlement of its political differences, which were so serious and which acted as such a hindrance to the progress of the community.

The Sunday Times devoted a large space to literary matter, recognizing at that early day the fact that the newspaper, especially the Sunday newspaper, was bound to become, in a country like the United States, the chief literary magazine of the people—a discovery which has since been made by the Northern papers, and is now universally recognized by them, the literary supplements having become in the last half dozen years a distinctive feature of all the leading dailies. From 1865-72, the Sunday Times was practically a literary magazine in addition to a newspaper, and became the chief literary publication in the South, many persons who have since made a success in literature first approaching the public through its columns.

In the election of 1872 the Times strongly advocated the cause of John McEnery for Governor, and opposed William P. Kellogg. Its denunciations of the Returning Board, and particularly of Judge Durell's famous midnight order, whereby he seized the state house and state government, drew on the paper the enmity of Durell, and soon afterward, in a civil suit against Mr. W. H. C. King, the owner of the Times, that paper was seized by the United States marshal. Considerable confusion ensued, and the paper passed into other hands. A number of changes in the management occurred at different times afterward. In 1881 the Times was purchased by the owners of the Democrat and consolidated with that paper as the Times-Democrat.

The New Orleans Democrat, which thus assumed control and management of the older paper, was established December 18, 1875. At that time the people of Louisiana were struggling to free themselves from the carpet-bag rule which had been forced on them at the point of the bayonet; and there was a feeling that a paper was needed which would support the Democratic cause under all circumstances and uphold the principles of the Democracy, whatever the cost. A number of leaders in the councils of the party accordingly decided to establish a paper of whose Democracy there could be no question. The result was the New Orleans Democrat, which became the official organ of the party, with Robert Tyler, son of ex-President John Tyler, as first editor. Several changes were made from time to time in the ownership and management of the paper, which finally passed into the hands of H. J. Hearsey & Co., with Major H. J. Hearsey as editor. Originally established as a morning paper, the Democrat became an evening paper in May, 1876. It had many difficulties to surmount, but it surmounted them successfully, and in 1877, when the Democratic party came into control of the State, it was recognized as having contributed materially to the rescue of Louisiana from Republican rule, and was rewarded by being appointed the official journal of the new State government. With this change it returned to a morning edition.

Injured, as every other property in New Orleans was, by the yellow fever epidemic of 1878, the Democrat, which was then a joint stock company, controlled by its employees, passed, on April 27, 1879, into new hands. On Dec. 4, 1881, the Times was purchased and consolidated with the Democrat, the result being The New Orleans Times-Democrat. The purchase of the Times gave the paper a partnership in the Associated Press and enabled it to secure that efficient telegraphic service which it had previously lacked, and which is so necessary to a newspaper. The new journal,

The Times-Democrat, was a true consolidation of the two older ones, including the good features of both, as well as employing the best men on both staffs.

It met with marked success from the beginning of its new career, soon occupied the position of the leading newspaper in New Orleans, with the largest circulation south of the Ohio and Potomac rivers, and was recognized as one of the great journals of the country. During the period 1881 to 1900 The Times-Democrat has done more than any paper in the South, and probably as much as any in the country, toward improving and advancing journalism, introducing new features and placing it on its present high plane of success.

The Times-Democrat became, from the beginning, a metropolitan paper in the highest sense of the word. Not content with the telegraphed news furnished by the Associated Press, it secured from the latter a far better service and increased the amount of telegraphic news it gave its readers from three to four fold. Recognizing the fact that the Associated Press, while furnishing complete foreign and European news, was weak in the South, The Times-Democrat established a special telegraphic service in the several Southern States, appointing correspondents in all the more important towns, with instructions to them to send all the news. It was the first paper to establish this system, and, therefore, the first to give this news, doing away with the old, slow, uncertain and unsatisfactory mode, previously prevailing, of clipping stale items from country newspapers a week or more old.

The Times-Democrat devoted itself, in addition to this improvement of the general telegraphic and the Southern news service, to encouraging the development of New Orleans and the South, to advancing literary ambitions, to extending trade with Latin America, and to many other projects and enterprises that would inure to the benefit of the city of New Orleans and of the South generally, recognizing that in the prosperity of the surrounding country lay the prosperity of the paper.

Its efforts in making known the soil, climate, timber and other resources of Louisiana, and subsequently of Mississippi, Arkansas, Georgia and Florida, were crowned with success. It was the first paper to publish special editions devoted to showing the resources of these States and giving all the necessary information about them. Its interviews with the Governors of the several Southern States, and the mayors of the leading Southern cities, attracted attention throughout the country; while its trade editions, published at various times, but mainly on September 1 of each year, achieved the purpose of attracting the attention of the Northern and European capitalists to the South, and largely secured the investment of millions here. These various publications contributed very materially to what is known as the Southern "boom," which began in 1882 or 1883.

It began similar work in 1882 toward establishing closer commercial relations between this country and Latin America, realizing how much it meant for the United States, and particularly for New Orleans, which must of necessity become the port for most of the trade between the two continents. The Times-Democrat issued weekly Latin American supplements, giving special attention to all matters that would interest its readers as well as those of the countries to the south of us, publishing a large portion of the matter in Spanish and distributing many thousand copies in Mexico and Central and South America.

In the disastrous overflow of 1882 The Times-Democrat dispatched relief to the sufferers, and physicians, medicine and food. No funds being at the disposal of the State government from which to pay the freight on rations furnished

by the Federal government or to charter vessels or purchase forage to save the starving cattle, The Times-Democrat came forward with an advance of \$15,000, which enabled the State to send forward the rations. This was in addition to what it did on its own account in the way of relieving the overflow sufferers.

The Times-Democrat similarly contributed relief in all cases where it was needed. It sent a special train with physicians, provisions and drugs to the sufferers from the Wesson-Beauregard (Miss.) cyclone, the first train of the kind ever sent out by a Southern newspaper, and perhaps by any newspaper in the world. It promptly sent physicians to Pensacola, Fla., and Brownsville, Tex., on the outbreak of fever at those places, and raised funds wherever there was loss or suffering.

It similarly interested itself in all movements looking to the advance of the South; was the first contributor to the New Orleans Cotton Centennial Exposition of 1884, subscribing \$5,000 to it; sent an expedition to Florida, which was the first to explore and write up the everglades of that State; wrote up at length the mineral and lumber resources of the Southern States, and carried out many similar enterprises of benefit to this section.

There was a similar improvement in the literary character of the paper, which has been continued to the present time, the idea being to encourage home literature, and, at the same time, to give the readers of the paper the best literary matter. With this object in view, the services of nearly all the best known and most promising writers in Louisiana and the South were secured at different times, beginning with 1881, and The Times-Democrat published, particularly in its Sunday paper, an immense amount of matter bearing on the life, literature, history, etc., of the South, and including many poems, stories and sketches. In this respect it has avoided the policy pursued by so many of the Western papers, of depending exclusively on New York syndicates, and thus publishing literary matter which is altogether lacking in local color and interest. The Times-Democrat is perhaps without an equal outside of New York in this particular, publishing more original literary matter than any other paper south or west of New York, and more matter of direct, immediate and local interest to its readers.

In 1888, Mr. Page M. Baker succeeded Major Burke as manager of the paper, which position he has held ever since. Mr. Ashton Phelps was elected president of the company shortly afterwards. Under them The Times-Democrat has continued to steadily improve on the lines it had started out on, but the improvements have been even more rapid than in its earlier years. This is especially noticeable in the telegraphic and foreign news, in the news from the Southern States, in local information, and in the amount of literary matter furnished.

From a paper of eight, or at most, twelve pages on week days, and never over sixteen on Sundays, the Times-Democrat has grown in the last few years to a daily of from ten to sixteen pages, and a Sunday paper of from twenty-four to thirty-two pages, giving almost double the amount of reading matter it formerly furnished. This increase in its size has been rendered necessary by the increased amount of news it is compelled to publish. The telegraphic news, obtained through the Associated Press, has been doubled or trebled. Its foreign service especially has been improved, and it now gives cable letters from the principal European capitals. Nearly all the news of the South is published by telegraph, the mails being no longer depended on, as they are too slow. There has been a similar improvement in the commercial and financial information, particularly the telegraphic markets. The local de-

partment of the paper has been greatly improved, and now every item of importance occurring in or around New Orleans is given in full. In addition, many new and distinctive features have been added—a woman's page, published daily, but of greater length on Sunday; a children's page on Sunday, with stories, puzzles, etc., for the young people; literary pages, devoted entirely to original literary matter; stories, poems, a society page, giving the latest movements of people of social prominence in New Orleans, with similar society letters from all the leading cities and towns in the Southwest. All articles, sketches, etc., needing pictures to explain them, such as sketches of new buildings, scenes, persons, etc., are illustrated in the highest style of newspaper art.

These are among the distinctive features of The Times-Democrat to-day. It has been able to give them only by the increase in its circulation and its business and by the employment of improved mechanical effects.

Leading, as it does, in all such matters, The Times-Democrat was the first paper in the Southwest to utilize the Mergenthaler typesetting machine, by which the type is set up automatically by the operator or printer playing upon a keyboard like that of the typewriter. At the time of its adoption of the Mergenthaler machine the latter was regarded as more or less an experiment, and was in use in only a few offices in the country. Seeing in the Mergenthaler a chance to greatly reduce the cost of composition and thus to furnish its patrons with more reading matter without increasing the cost of the paper, The Times-Democrat put these machines into use in its office in 1891, and thus became the pioneer in what has been one of the greatest improvements in journalism of the last half century, enabling the papers to publish so much more news.

The Times-Democrat to-day speaks for itself. It has the largest circulation of any paper south of the Potomac and Ohio, circulates in all the neighboring States, but particularly Louisiana, Mississippi, Alabama and Florida. It publishes more news and more original matter than any paper in the South; gives more attention to Southern news and information of all kinds, and in all respects ranks with the first newspapers in the world.

It publishes every day in the year; and in addition to its daily, issues a semi-weekly edition.

In addition to the many "features" of The Times-Democrat given above, may be mentioned its work in the line of charity. It raised in the spring of 1897 a very large sum whereby it provided for the support of nearly 30,000 persons in North Louisiana reduced to the verge of starvation by a prolonged drouth and failure of the crops in that section. At all times it investigates any case of suffering reported to it, and it has in this way provided for hundreds of destitute families. Its annual Christmas toy distribution is one of the great events of New Orleans, some 15,000 to 20,000 toys being distributed among the 10,000 poorer children of the city who would otherwise have nothing to recall the Christmas holidays.

These are the features that have helped to make The Times-Democrat "the greatest paper south of the Potomac and the Ohio rivers."

HEADQUARTERS.

The commerce, manufactures and buildings of the city must be left to a later article. However, it is proper to make mention of the new St. Charles Hotel, which is to serve as headquarters for the Association. It is palatial in proportions and appointment, and the equal in elegance of finishing, furnishing and equipment of any in this country. It is under splendid management. Mr. A. R. Blakely, who has personal charge of the house, and who has already been

mentioned in this article, is one of the most enterprising, pushing men of the city. The hotel is absolutely fire-proof and strictly modern, with every essential to satisfy the most refined ideas of comfort and luxury. It contains nearly five hundred parlors and bedrooms, alcoved, single or en suite, affording accommodations for seven hundred

ST. CHARLES HOTEL, NEW ORLEANS.

guests. There are one hundred and fifty private bath rooms with porcelain tubs, marble floors, tiled walls and latest hygienic structural appliances. The Turkish and Russian baths are of white marble with nickel-plated fittings, and the dressing rooms and public and private reclining rooms are handsomely and suitably furnished with every convenience for ease, comfort and repose.

Clear filtered water only is used throughout the house. The drinking water is filtered, distilled and aerated, and the ice made from it on the premises. Both are perfectly pure, and while the water has no specific medicinal quality, it is as healthful as any imported or native mineral water in the country.

The hotel is steam heated and lighted throughout by electricity.

An open air promenade filled with tropical plants and shrubbery, occupying the space between the wings of the building on the second floor, with entrances from the parlors, halls and dining rooms, affords a delightful lounging place in sunshine and shade. The rotunda and dining rooms are considered among the finest in the country.

The hotel is centrally located, with entrances on St. Charles, Common and Gravier streets, within easy access of places of amusement, depots and the shopping quarter.

The officers of the Association wisely concluded that the editors would not want to visit New Orleans at the time of the year set for the Convention and miss the Mardi Gras, so arrangements were made for occupying the sleepers, as the hotels will be overcrowded. Manager Blakely desired the meeting half a month later that he might show deserved attentions, but yielded to the natural desire of the delegates to witness the famed spectacular parades and festivities of the greatest carnival of the world.

From New Orleans we returned to Jackson, Miss., and with President R. H. Henry visited historic Vicksburg, where we were cordially received by the Mayor, the local editors and other leading citizens, and presidents of banks and commercial bodies, with assurances of a cordial reception to the editors. The newspapers gave pleasant and enthusiastic notices of the visit and of the proposed stop of the editors in that city for a day.

The next day was passed in Memphis, where a like interest was manifested. The Mayor of the city, leading citizens and the managers and editors of the papers assured us that Memphis would make the editors welcome in a manner to maintain the city's reputation for hospitality, and

give the editors the information as to its condition and resources, carrying out all and more than is indicated in the programme printed herewith. We gathered many interesting facts and were especially pleased with a showing made by one of the dailies, in some of the advance pages kindly furnished us of a special issue to appear the Monday following our visit. A great many interesting facts, instructive as well, with regard to the newspapers, the histories, industries and railroads, etc., of both Vicksburg and Memphis were gathered that will appear in the February issue of this paper.

Through the aid of President R. H. Henry and the citizens of the places visited, we are able to present the following programme:

PROGRAMME FIFTEENTH ANNUAL CONVENTION OF THE NATIONAL EDITORIAL ASSOCIATION OF THE UNITED STATES, 1900.

February 22. Thursday.—Rendezvous in St. Louis—Informal exercises in honor of Washington's Birthday.

February 23. Friday.—Arrival in Memphis for breakfast—Reception by the citizens under the direction of the representatives of the Local Press and Committees of the commercial bodies of the city and the Common Council, headed by Mayor J. J. Williams. The reception and entertainment will be fully up to the standard of Memphis' hospitality. There will be welcoming addresses, a dinner, and a trolley ride around the city. The editors will have an opportunity to become acquainted with this historic and great commercial city of the South, the largest lumber and inland cotton market of the world.

February 24. Breakfast and reception by the citizens at Grenada, Miss.

February 24. Saturday.—Association will arrive in Jackson Saturday noon and will be given dinner at the Edwards and Lawrence Hotels at the depot; after which they will be given a trolley ride over the city, visiting all the State institutions, the Mississippi Legislature, and an informal reception at the residence of President Henry, at his home on State street. At 7:30 the citizens of Jackson will give the editors a public reception at the Opera House, when addresses of welcome to the National Editorial Association will be delivered by leading citizens: Gov. Lingino, on behalf of the State; Mayor Todd, on behalf of the city; Mr. P. E. Williams, President of the Mississippi Press Association, on behalf of the Press; and by those peerless Southern orators, Col. Charles E. Hooker, Bishop Chas. B. Galloway, Judge A. H. Whitfield, which will be responded to by members of the Association. After the reception a banquet will be tendered the visiting editors at the Masonic Hall, where toasts will be proposed and responded to by President Henry, Bishop Thompson, Hon. Thos. A. McWillie, Col. J. L. Power, Hon. Luther Manship, Mr. W. E. Hayne, Hon. Edgar S. Wilson, and members of the Association. This banquet will be prepared by the ladies of Jackson, and will doubtless be one of the most elegant ever spread in the Capital City. The banquet over, the editors will repair to their sleepers, and will awake next morning in the historic Hill City of Vicksburg.

February 25. Sunday.—Arrive in Vicksburg for breakfast—Trolley ride to view city—Visit the Government Cemetery on the old battle-ground where 16,000 Union soldiers are buried—Dinner and reception—Vicksburg will give the editors worthy greeting and entertainment.

February 26. Monday.—Reception Committee of New Orleans will meet editors at train—Day devoted to witness-

ing "Arrival of Rex" and other exercises, and spectacular parades connected with Mardi Gras, and "Proteus" at night.

February 27. Tuesday.—Mardi Gras "Rex" at noon—Comus at night.

February 28. Wednesday.—View of the city, and rest during the day—At night, welcoming exercises.

1. Music by orchestra and invocation.
2. Welcome and Address by Governor Murphy J. Foster.
3. Music. Quartette and chorus.
4. Welcome by Mayor Walter C. Fleruer, on behalf of the city.
5. Welcome on behalf of the New Orleans Press Club and address by President Norman Walker.
6. Song and chorus.
7. Welcome on behalf of the Louisiana Press Association and address by J. Y. Gilmore, President.
8. Music.
9. Response on behalf of the National Editorial Association of the United States, and address by Hon. R. H. Henry, President.
10. Informal reception.

MARCH 1.—FIRST SESSION OF THE CONVENTION.

1. Call to Order and Invocation.
2. Report of Committee on Credentials.
3. Annual Address by President R. H. Henry.
4. Appointment of Committees.
5. Paper: Advertising. F. H. Greer, Guthrie, Okla.
6. Discussion.
7. Recess.

AFTERNOON.

1. Paper: Personal Experience in Soliciting Advertising. Lynch Perry, Columbia, Tenn.
2. Discussion.
3. Paper: The Editorial Department. H. A. Wheeler, Quincy, Ill.
4. Discussion.
5. Business Management of Daily. Gerritt S. Griswold, Batavia, N. Y., President New York Press Association.
6. Discussion.
7. Recess.

NIGHT.

Celebration of the Fifteenth Anniversary of the National Editorial Association of the United States.

1. Music by orchestra.
2. Opening Address: The Conception and Organizing the National Editorial Association, New Orleans and Cincinnati, by B. B. Herbert, of Chicago, Organizer and first President.
3. Song—America.
4. Anniversary Poem. By a Lady.
5. Song and Chorus—"Newspaper Women," by Janie Garland Stewart Boyeson, assisted by the delegates of the Illinois Woman's Press Association and ladies of the Convention.
6. Short Addresses—The Interstate Commerce Law and The Denver Convention, 1887, Past President C. H. Jones, New York city; San Antonio Texas, and the Convention of 1888, by Past President A. B. White, Parkersburg, W. Va.; Detroit and the Convention of 1889, by Past President James R. Bettis, St. Louis, Mo.
7. Song—The Star-Spangled Banner.
8. Boston and the Convention of 1890, Past President Charles A. Lee, Pawtucket, R. I. St. Paul, the Great Northwest and the Convention of 1891, Past President E. W. Stephens, Columbia, Mo. San Francisco, California, and

the Convention of 1892, Past President W. S. Cappeller, Mansfield, Ohio.

9. Song—Columbia, the Gem of the Ocean.
10. Chicago, the White City, the World's Congress, Convention of 1893, Past President B. J. Price, Hudson, Wis. The City by the Sea, Monmouth Battlefield, and the Convention of 1894, Past President Walter Williams, Columbia, Mo. St. Augustine and the Southeast Coast, the Convention of 1896, Past President A. O. Bunnell, Dansville, N. Y. Galveston; The Empire State of the Southwest; Our Sister Republic and the Convention of 1897, Past President R. H. Thomas, Mechanicsburg, Pa.
11. Colorado and the Convention of 1898, Past President Louis Holtman, Brazil, Ind. "Where Rolls the Oregon," the Great Northwest Coast and the Convention of 1899, Hon. Joseph B. Maccabe, Boston Mass.
12. The Centennial State and the National Editorial Association, Hon. Wolfe Londoner, Denver, Colo.
13. Song—The Battle Hymn of the Republic.
14. Oration.
15. Auld Lang Syne.

MARCH 2.—FRIDAY FORENOON.

1. The News Features. A. J. Kendrick, Fort Smith, Ark.
2. Discussion.
3. Business in Our Business. Past President W. S. Cappeller, Mansfield, Ohio.
4. Discussion.
5. Best Method to Secure Circulation for a Daily. A. W. Lee, Ottumwa, Iowa.
6. Discussion.
7. Influence of the Press Upon Society and Government. E. W. Harris, Greenville, Texas.
8. Discussion.

AFTERNOON.

1. Amity and Reciprocity Among Publishers. T. G. Daniel, Alameda, Cal.
2. Discussion.
3. Do Ready Prints Prove Beneficial or Injurious? Ewing Herbert, Hiawatha, Kansas.
4. Discussion.
5. The Model Weekly, Circulation, Makeup, etc. Hon. R. S. Barrows, Jamaica Plain, Mass.
6. Discussion.
7. Advertising Agents and Foreign Advertisers. M. V. Brewington, Salisbury, Md.
8. Discussion.

NIGHT.

Reception and Theater Parties.

MARCH 3. SATURDAY—FORENOON.

1. How Best to Make Our Papers Popular, Useful and Influential. Past President Louis Holtman, Brazil, Ind.
2. Discussion.
3. Cultivating the Local Advertising Field. Fred Slo-cum, Caro, Mich.
4. Discussion.
5. Rational Business Methods in Journalism. F. L. Ballenger, Jackson, Miss.
6. Discussion.
7. Report of Legislative Committee. W. L. Eaton, Rockford, Ill.
8. Discussion.

AFTERNOON.

1. Report of Committee on Constitution and By-Laws.
2. Report of Committee on Memorials to the Dead.

3. Report of Committee on Officers' Reports.
4. Report of Committee on Treasurer's Books.
5. Report of Committee on Resolutions.
6. Choosing Next Place of Meeting.
7. Election of Officers.
8. Introduction of New Officers and Adjournment.

NIGHT.

Address by a Leading Journalist of the United States.

MARCH 4.—SUNDAY.

Attend Church in Forenoon.

Afternoon—Excursion to Chalmette to visit the National Cemetery and view the Old New Orleans Battlefield, made famous by the victory of Gen. Jackson.

MARCH 5.—MONDAY.

Visit Biloxi, Miss., and enjoy on the coast an oyster roast.

MARCH 6.—TUESDAY.

Visit Hattiesburg, Miss., in center of pine region, and accept hospitality tendered by its citizens.

Beyond this the programme has not been arranged up to the time of going to press, but will be given in full in the February issue of this paper.

OFFICERS AND EXECUTIVE COMMITTEEMEN OF THE NATIONAL EDITORIAL ASSOCIATION.

OFFICERS.

- *PRESIDENT—R. H. Henry, Clarion-Ledger, Jackson, Miss.
 *FIRST VICE-PRESIDENT—Hon. Matt Parrott, Waterloo, Iowa.
 *SECOND VICE-PRESIDENT—F. B. Baillio, Review, Cleburne, Texas.
 THIRD VICE-PRESIDENT—Albert Tozier, Pythias, Portland, Ore.
 *CORRESPONDING SECRETARY—J. M. Page, Democrat, Jerseyville, Ill.
 *RECORDING SECRETARY—R. M. White, Mexico, Mo.
 *TREASURER—James G. Gibbs, Reflector, Norwalk, Ohio.

PAST-PRESIDENTS AND LIFE MEMBERS.

- *B. B. Herbert, NATIONAL PRINTER-JOURNALIST, Chicago.
 C. H. Jones, Paper World, New York.
 A. B. White, State Journal, Parkersburg, W. Va.
 *James R. Bettis, 212 South Third St. Louis, Mo.
 Charles A. Lee, Gazette and Chronicle, Pawtucket, R. I.
 E. W. Stephens, Herald, Columbia, Mo.
 W. S. Cappeller, News, Mansfield, Ohio.
 B. J. Price, Star and Times, Hudson, Wis.
 Walter Williams, Herald, Columbia, Mo.
 A. O. Bunnell, Advertiser, Dansville, N. Y.
 R. H. Thomas, Farmer's Friend, Mechanicsburg, Pa.
 Louis Holtman, Democrat, Brazil, Ind.
 Joseph B. Maccabe, Argus, East Boston, Mass.

EXECUTIVE COMMITTEEMEN.

- Alabama—William H. H. Judson, Bessemer.
 *Arkansas—E. L. Vadakin, Forrest City.
 California—Raleigh Barcar, Vacaville.
 Colorado—J. W. Work, Florence.
 Connecticut—George C. Woodruff, Litchfield.
 Delaware—Robert G. Houston, Georgetown.
 Idaho—S. C. Herren, Moscow.
 Illinois—E. A. Snively, Canton.
 *Illinois Democratic—O. J. Lumpkin, Carlinville.
 Illinois Woman's—Mrs. Sallie M. Moses, Chicago.

- *Illinois Military Tract—J. C. Coulson, La Harpe.
 *Illinois Republican—W. L. Jones, Lebanon.
 *Illinois Southern—H. D. O'Brien, East St. Louis.
 Indian Territory—M. E. Milford, Vinita.
 *Indiana Democratic—B. F. Louthian, Logansport.
 *Indiana Northern—F. W. Willis, Waterloo.
 *Indiana Republican—S. N. Cragun, Lebanon.
 *Indiana Southern—J. W. Cockrum, Oakland City.
 *Inland Dailies—A. W. Glessner, Galena, Ill.
 *Iowa—C. W. Junkin, Fairfield.
 Iowa Fifth District—E. E. Taylor, Traer.
 Iowa Northeast—Sam G. Sloan, Charles City.
 *Iowa Upper Des Moines—A. M. Adams, Humboldt.
 *Kansas—W. H. Nelson, Smith Center.
 *Kansas Seventh District—J. E. Junkin, Sterling.
 Kansas North Central—S. H. Dodge, Beloit.
 Kentucky—J. G. Craddock, Paris.
 Louisiana—J. G. Trimble, Farmersville.
 Maine—J. M. S. Hunter, Farmington.
 Massachusetts—R. S. Barrows, Jamaica Plain.
 *Michigan—Fred Slocum, Caro.
 Minnesota—F. C. Listoe, St. Paul.
 *Minnesota Northwestern Publishers'—Joseph Leicht, Winona.
 *Mississippi—J. H. Duke, Scooba.
 *Missouri—W. T. Jenkins, Platte City.
 Missouri Northeast—John W. Jacks, Montgomery City.
 *Missouri Northwest—H. E. Robinson, Maryville.
 Missouri Southwest—J. G. Newbill, Springfield.
 Nebraska—A. J. Langer, West Point.
 New Jersey—H. C. Page, Bayonne.
 *New England Suburban—Dr. William F. Jarvis, Boston.
 *New York—F. B. Garrett, Syracuse.
 *North Carolina—Henry B. Varner, Lexington.
 Ohio Associated Dailies—H. R. Snyder, Urbana.
 Ohio Buckeye—W. A. Ashbrook, Johnstown.
 *Ohio Editorial Association—C. B. McCoy, Coshocton.
 (Represented by J. F. Lanning.)
 *Oklahoma—W. E. Bolton, Woodward.
 Oregon—B. F. Alley, Baker City.
 *Oregon, Portland Press Club—Frank Lee, Portland.
 Peninsula—F. G. Usilton, Chestertown, Md.
 Pennsylvania—J. Irving Steel, Ashland.
 Rhode Island Press Club—Frank H. Campbell, Arctic.
 Southern California—Charles A. Gardner, Pasadena.
 South Dakota—C. R. Tinan, Kimball.
 *Tennessee—Lynch Perry, Columbia.
 *Texas—Will H. Neel, Dublin.
 *Texas Northwest—W. A. Johnson, Memphis.
 *Utah—J. E. Diehl, Mamoth.
 Virginia—R. E. Freeman, Danville.
 Washington—Will A. Steel, Seattle.
 West Virginia—M. G. Sperry, Clarksburg.
 *Wisconsin—T. J. Cunningham, Chippewa Falls.
 Wyoming—G. W. Perry, Rawlins.

LIBEL COMMITTEE.

- *W. L. Eaton, Rockford, Ill.

DELEGATES TO NEW ORLEANS CONVENTION.

The following is a partial list of officers of different State associations, with the names of delegates already chosen to attend the convention of the National Editorial Association at New Orleans, to be held in March :

Boston, December 29, 1899.

B. B. Herbert, Esq., Chicago:

Dear Mr. Herbert:—Replying to your favor of the 27th inst., I beg leave to send you enclosed list of the officers

of the Suburban Press Association of New England, together with the delegates to the New Orleans Convention.

Yours truly, WM. F. JARVIS, Ex. Com.

Officers.—E. H. Pierce, Revere, Mass., President; Alexander Starbuck, Waltham, Mass., Secretary; C. A. Loring, Boston, Mass., Treasurer.

Delegates.—E. H. Pierce, Journal, Revere, Mass.; E. A. Hall, Gazette, Greenfield, Mass.; C. A. Loring, Mirror, Allston, Mass.; J. S. Smith, Standard, Rockland, Mass.; E. B. Thorndike, Advertiser, Norwood, Mass.; J. O. Hayden, Journal, Somerville, Mass.; G. C. Fairbanks, Bulletin, Natick, Mass.

Memphis, Texas, December 30, 1899.

Hon. B. B. Herbert:

Dear Sir:—Answering yours of December 27, will say that the officers of the Northwest Texas Press Association for the ensuing year are as follows:

President, Cyrus Coleman, Independent, Henrietta, Tex.; First Vice-President, W. P. Blake, Industrial West, Clarendon, Tex.; Second Vice-President, W. S. Cadwell, Signal, Gainesville, Tex.; Third Vice-President, C. W. Hoggsett, Globe, Vernon, Tex.; Secretary, A. W. Collier, Banner-Herald, Bridgeport, Tex.; Treasurer, W. A. Johnson, Herald, Memphis, Tex. Delegates to the National Editorial Association: W. A. Johnson, Executive Committeeman; A. W. Collier, Banner-Herald, Bridgeport, Tex.; J. P. Orr, Globe, Vernon, Tex. They will be on hand at New Orleans. Success to you. Respectfully, W. A. JOHNSON.

Winona, Minn., January 1, 1900.

B. B. Herbert, Esq., Chicago, Ill.:

Friend Herbert:—The following is a list of delegates from the Northwestern Publishers' Association, as far as heard from: W. R. Hodges, Sleepy Eye Herald, Sleepy Eye; W. E. McKenzie, Times, Avokston; Frank Zins, Northern, St. Cloud; J. C. Norby, Norman County Herald, Ada; H. E. Boen, Fergus Globe, Fergus Falls; Phil A. Kaufer, Red Lake Falls Gazette, Red Lake Falls. Which is the last day for completing the list?

Very respectfully, JOSEPH LEICHT.

Dwight, Ill., January 3, 1900.

B. B. Herbert, Chicago, Ill.:

Mr. Herbert:—The meeting of the R. E. A. will not be held until Tuesday, February 6, at the Grand Pacific Hotel, in Chicago, and the delegates are not elected. When is the New Orleans Convention? Yours fraternally,

WM. G. DUSTIN, President.

Scooba, Miss., December 30, 1899.

Hon. B. B. Herbert, Chicago, Ill.:

My Dear Sir and Friend:—Inclosed find a list of officers and delegates as requested.

I sincerely hope to meet you and many of our old and mutual friends at the annual meetings to be held in New Orleans during Mardi Gras. If the weather is good, and I sincerely hope it will be, I am confident all will enjoy it. With my very best wishes and the hope that the New Year will be one of the happiest and most prosperous of your life, I am truly your friend,

JAMES H. DUKE.

List of officers and delegates, Mississippi Press Association: President, P. E. Williams, Headblock, Lumberton; First Vice-President, William Wood, Times, Starkville; Second Vice-President, J. D. McKee, Review, Biloxi; Secretary, J. G. McGuire, Herald, Yazoo City; Treasurer, P. K. Mayers, Democrat-Star, Pascagonla; National Committeeman, James H. Duke, Herald, Scooba. Delegates—J. A.

Richardson, Tocsin, Indianola; J. L. Gillespie, Review, Greenwood; J. G. Cashman, Post, Vicksburg; Charles Moreau, Echo, Bay St. Louis; R. H. Henry, Clarion-Ledger, Jackson; P. K. Mayers, Democrat-Star, Scranton; Colonel J. L. Power, Fayette-Chronicle, Jackson; Dr. B. F. Passmore, Times, Canton.

Lebanon, Ill., December 28, 1899.

Brother Herbert:—Yours of 26th at hand. We have not had meeting to select delegates to New Orleans. When we do will report to you. I append list of officers of Illinois Republican Editorial Association:

President, W. G. Dustin, Star and Herald, Dwight; Vice-Presidents, M. F. Walsh, Herald, Harvard; L. H. Miner, State Journal, Springfield; W. L. Jones, Journal, Lebanon; Secretary, J. R. Stewart, Gazette, Champaign; Treasurer, Cad Allard, Star, Beardstown. Executive Committee, W. G. Dustin, J. R. Stewart, W. F. Calhoun, Republican; Decatur; W. R. Jewell, News, Danville; C. E. Snively, Register, Canton; C. P. Hitch, Beacon, Paris; Leon McDonald, Phoenix, Lockport. A happy New Year!

Respectfully,

W. L. JONES.

Humboldt, Iowa, December 28, 1899.

B. B. Herbert, Editor National Printer-Journalist, Chicago.

Dear Sir:—Officers of this association are as follows:

President, Mrs. Ella Salisbury, Litonka, Lapin; Vice-President, George A. Nichols, Esterville Republican; Secretary-Treasurer, A. M. Adams, Humboldt Independent; Program Committee, winter meetings, 1900, W. I. Branagan, Emmetsburg Democrat; Charles K. Myers, Mason City Republican, Burt Harwood, Clarion Monitor; member Executive Committee, N. E. A., A. M. Adams, Humboldt Independent.

Returns for delegates not in yet. Will forward at once when appointed. Harvey Ingham, Aigona Upper Des Moines, will be one. A. M. Adams, Executive Committee, will probably go. Others will be appointed as soon as returns are in. Winter meeting of the association will be held at Emmetsburg early in February, 1900.

Yours respectfully,

A. M. ADAMS,
Secretary U. D. M. E. A.

Caro, Mich., December 30, 1899.

Dear Mr. Herbert:—I am in receipt of your letter of the 26th, and in reply will say that the delegates from the Michigan Press Association to the National Convention are supposed to be elected at the annual meeting for business, which the constitution provides shall be held during the month of January. No call for that meeting has as yet been issued, and I am to-day writing the officers to know why. Just as soon as I know something definite I will let you know. Until such action is taken the delegates for last year will stand. Yours very truly,

FRED SLOCUM.

NEBRASKA.

W. N. Huse, Norfolk News, President Nebraska Press Association; F. N. Merwin, Beaver City, Nebraska Editor, Secretary and Treasurer Nebraska Press Association. W. A. ASHBURT, Ex. Com.

Danville, Va., December 31, 1899.

Hon. B. B. Herbert, Editor:

Dear Sir:—I herewith inclose pages from our published proceedings, which will give you the information desired. I cannot say which of the delegates will attend. It is my purpose soon to ascertain whether they will attend or select alternates. I have designated Mr. J. H. Lindsay, The Progress, Charlottesville, Va., as my alternate.

Yours truly,

R. E. FREEMAN,
Ex. Com., N. E. A.

President, W. McDonald Lee, Irvington Virginia-Citizen; Vice-President, J. H. Lindsay, Charlottesville Progress; Secretary, J. L. Hart, Farmville Herald; Treasurer, R. N. Robinson, Orange Observer; Historian, Miss Bertha Gray Robinson, Orange Observer. Executive Committee—J. H. Lindsay, Charlottesville Progress; C. E. Thacker, Newport News Press; A. P. Rowe, Jr., Fredericksburg Free Lance; Rhea Crawford, Bristol News; R. P. Barham, Petersburg Index-Appeal. Delegates National Editorial Association—R. P. Barham, D. S. Lewis, R. E. Freeman, E. H. Barclay. National Executive Committeeman, R. E. Freeman.

Kimball, S. D., January 1, 1900.

The delegates from this State to New Orleans are to be selected at the winter meeting on the State Press Association at Sioux Falls, January 18-19. Will send them in from there as soon as they are named.

Respectfully yours,

C. R. TINAN,
Committeeman N. E. A.

Sterling, Kan., January 1, 1900.

B. B. Herbert, Chicago, Ill.:

Dear Sir:—I am Executive Committeeman from the First District, Kansas Editorial Association. Our officers and delegates are Gerald Volk, Register, Wichita; Gerald

Volk, Secretary, Wichita; A. E. Durall, President, Inman; J. E. Junkin, Treasurer, Sterling; W. Y. Morgan, News, Hutchinson. The third member is still in doubt. Our State Association, as you know, meets next month, when delegates will be elected at that time from it.

Very sincerely

J. E. JUNKIN.

Clarksburg, W. Va., December 29, 1899.

Sir:—The following is a list of officers of West Virginia Editorial Association. Cannot yet furnish list of delegates to N. E. A.:

President, E. H. Flynn, Record, Spencer, W. Va.; Vice-President, M. G. Sperry, News, Clarksburg, W. Va.; Secretary, S. P. Smith, Record, West Union, W. Va.; Treasurer, H. C. Sample, Free Press, Fairmont, W. Va. I can send you copy of proceedings of last meeting if of interest or service to you. Respectfully,

M. G. SPERRY.

I am a member of Executive Committee, N. E. A., but did not attend the meeting at St. Louis last autumn. Have you a copy of proceedings of the committee?

Urbana, Ohio, December 29, 1899.

Mr. B. B. Herbert:

Dear Sir:—Our State Convention will be held on the 16th and 17th of this month, and our President, Mr. John T. Mack, of the Sandusky Register, thinks that he had better wait for the appointment of delegates until that time.

Yours,

H. R. SNYDER.

Beloit, Kan., January 1, 1900.

B. B. Herbert:

Dear Sir:—There has been no change in the officers, and delegates not yet selected. Yours truly,

S. H. DODGE.

Carlinville, Ill., January 1, 1900.

B. B. Herbert:

Dear Sir:—Will send list of delegates as soon as I can get them made up.

C. J. LUMPKIN.

Galena, Ill., January 3, 1900.

Editor National Printer-Journalist:

In reply to yours of December 26, 1899, I send you list of officers and delegates of the Inland Daily Press Association:

President, J. E. Sutton, Reporter, Logansport, Ind.; Vice-Presidents, Pierce Burton, Express, Aurora, Ill.; D. W. Grandon, Telegram, Adrian, Mich.; John L. Mahin, Journal, Muscatine, Iowa; Willis Beal, Herald, Laporte, Ind.; J. C. Wilmarth, Gazette, Janesville, Wis.; Secretary and Treasurer, Ira S. Carpenter, News, Michigan City, Ind. Executive Committee, George T. Campbell, Argus, Owosso, Mich.; N. C. Roberts, Democrat, Fort Madison, Wis.; W. Bent Wilson, Journal, La Fayette, Ind.; C. A. Tostevin, Journal, Racine, Wis. Delegates to N. E. A. meeting, James J. LaVelle, Argus, Rock Island, Ill.; P. S. McGlynn, Dispatch, Moline, Ill.; F. R. Gilson, Palladium, Benton Harbor, Mich.; George T. Campbell, Argus, Owosso, Mich.

A. W. GLESSNER, Member Ex. Com.

Macomb, Ill., January 4, 1900.

B. B. Herbert, Chicago, Ill.:

Dear Sir:—Your letter of inquiry to J. C. Coulson, of LaHarpe, has been referred to me. The officers of The Military Tract Press Association of Illinois are: Van L. Hampton, President, Macomb By-Stander; Lucien S. Reid, Vice-President, Dallas Review; Will H. Taylor, Secretary-Treasurer, Roseville Times. The delegates to the National

Association are: L. S. Reid, Dallas Review; B. J. Beardsley, Elmwood Messenger; K. M. Whitam, Aledo Times Record; C. C. Chain, Bushnell Democrat; O. L. Campbell, Knoxville Republican. Yours truly,

VAN L. HAMPTON.

Logansport, Ind., January 4, 1900.

Friend Herbert:—In answer to yours of recent date, will say that our Association,—the Indiana Democratic,—will hold its annual meeting on Thursday, February 1, at which time a full complement of officers, including delegates to the annual meeting of the N. E. A., will be chosen. The present officers are Dale J. Crittenberger, Anderson News, President; and John C. Gorman, of the Princeton Democrat, Secretary. Should be pleased to have you attend our February meeting.

I enclose herewith brief summary of methods employed in our circulation department, which you are privileged to use if of any value. Respectfully yours,

F. F. LOUTHAIN.

Woodward, Okla., January 5, 1900.

B. B. Herbert, Publisher National Printer-Journalist, 334 Dearborn St., Chicago:

Dear Sir: The following list are the elected delegates to the New Orleans convention by the Oklahoma Press Association, at their meeting on December 18. Nine of these delegates have paid the per capita tax and are sure. Of the other five, some may have to be substituted by the alternate elected to fill vacancies which may occur. Here is the list:

W. E. Bolton, Live Stock Inspector, Woodward; F. H. Greer, Daily Capital, Guthrie; L. G. Niblack, Daily Leader, Guthrie; Frank Cook, Herald-Sentinel, Cloud Chief; Jasper Sipes, School Herald, Oklahoma City; Tom Woosley, Enterprise, Mulhall; Harry Gilstrap, News, Chandler; J. W. Lawton, Bee, Arapahoe; T. F. Hensley, Democrat, El Reno; Dan Peery, Globe, El Reno; Lon Wharton, Sentinel, Perry; J. V. Admire, Free Press, Kingfisher; R. Q. Blakeney, Daily Oklahoma, Oklahoma City; Jack Randall, Times-Record, Blackwell.

Our delegation this year is composed of picked representatives of the Oklahoma Press Association, and we hope to have the full number with us at the convention.

Fraternally yours,

W. E. BOLTON,

Executive Committeeman for Oklahoma.

Robinson, Utah, January 2, 1900.

B. B. Herbert, Chicago, Ill.

Dear Sir: Yours of the 27th ult. at hand and in reply will submit the following information:

Officers of the Utah Press Association: President, Fred Nelson; Vice-President, John James; Corresponding Secretary, I. E. Diehl; Recording Secretary, C. W. Jackson; Treasurer, E. G. Rognon; Historian, J. F. Taylor. Delegates to N. E. A.: I. E. Diehl, Executive Committee; C. P. Diehl.

I remain respectfully yours,

I. E. DIEHL.

KANSAS EDITORIAL ASSOCIATION OFFICERS.

Smith Centre, Kan., January 8, 1900.

B. B. Herbert, Editor, No. 334 Dearborn St., Chicago.

Dear Sir: Your note of some time ago to Mr. Junkin has been handed to me for answer. The officers of our association are: President, George W. Martin, Kansas City

Gazette; Secretary, J. W. Morphy, Smith Center Journal; Treasurer, J. Irvin Gabel, Holton Tribune; Vice-Presidents, D. R. Anthony, Leavenworth Times; A. T. Cox, Independence State and Kansan; F. C. Raney, Fort Scott Monitor; W. A. Morgan, Cottonwood Falls Leader; Gomer T. Davies, Concordia Kansan; N. A. Turner, Colby Tribune; M. P. Cretcher, Sedgwick Pantagraph.

The delegation to the New Orleans Convention has not yet been named, and so far as I am informed no arrangement has been made to name it until the meeting at Fort Scott, January 22. Respectfully,

J. W. MORPHY, Secretary.

ILLINOIS WOMAN'S PRESS DELEGATES.

Chicago, January 9, 1900.

Benjamin B. Herbert, Esq., Editor National Printer-Journalist.

Dear Sir: The following are the names of the delegates elected by this Association to attend the National Editorial Convention at New Orleans, March next: Mrs. Fanny M. Harley; Mrs. E. Jeanette Abbott; Mrs. H. Effa Webster, President I. W. P. A.; Mrs. A. Shackelford Sullivan, Corresponding Secretary I. W. P. A.; Mrs. Frances E. Owens, Treasurer I. W. P. A.

Hoping that the above is in time for insertion in your next issue, the January number, I remain yours truly,

A. SHACKELFORD SULLIVAN,
Corresponding Secretary I. W. P. A.

VIRGINIA PRESS ASSOCIATION.

Farmville, Va., January 8, 1900.

Mr. B. B. Herbert, Chicago.

Dear Sir: I am requested to certify the names of the delegates duly elected by our Association to the National Editorial Association, which meets at New Orleans in February.

The delegates are: R. P. Barham, Index Appeal, Petersburg; D. S. Lewis, Spirit of the Valley, Harrisonburg; J. H. Lindsay, Progress, Charlottesville, and E. H. Barclay, Gazette, Lexington.

Our National Executive Committeeman, as stated in a former letter, is Mr. Freeman, of Danville.

Very truly yours, J. L. HART, Secretary.

Vienna, Illinois, January 5, 1900.

Mr. B. B. Herbert:

The officers of the Southern Illinois Press Association are: President, W. W. Watts, Nashville; Vice-President, Fred J. Kern, Belleville; Treasurer, Will J. Seil, Grayville; Executive Committee, L. T. Scott, Carbondale; Chas. Boeschstein, Edwardsville; J. F. Murphy, East St. Louis.

Delegates to N. E. A.: Frank W. Hovill, Mt. Carmel; Bert R. Burr, Murphysboro; Roy Alden, Pinkneyville. Alternates: L. T. Scott, Carbondale; W. M. Goudy, Thos. Joy, Centralia.

Respectfully,

LUCAS PARKER,

Secretary.

Jamaica Plain, January 10, 1900.

Mr. B. B. Herbert, Editor National Printer-Journalist:

MAINE PRESS ASSOCIATION.

The 37th annual meeting of the Maine Press Association will be held this year in Bangor, Wednesday and Thursday, January 24 and 25. Headquarters will be at the Bangor House, and the meetings will be held in the Board of Trade rooms, City Building. Mr. C. W. Robbins, of the Old Town Enterprise, will conduct a "Question Box" at the preliminary meeting (for members only) Wednesday afternoon at 2 o'clock, and it is hoped all will come prepared to assist in making this new feature a success. The Bangor people are planning to give the association a cordial welcome. Mr. M. E. Mudgett, of the Bangor Daily Commercial, and wife, will receive the members and their ladies Thursday evening.

WASHINGTON STATE PRESS ASSOCIATION.

President, O. M. Moore, Times, Seattle; First Vice-President, Orno Strong, New West Trade, Spokane; Second Vice-President, Mrs. Minnie H. Sargeant, Tribune, Pullman; Third Vice-President, E. M. Day, News, New Whatcom; Secretary and Treasurer, Will A. Steel, Post-Intelligencer, Seattle; Executive Committee: President and Secretary, James M. Vernon, Everett; E. M. Day, New Whatcom; Frank R. Baker, Tacoma; Walter Lingenfelder, Walla Walla; A. H. Stulfauth, Ellensburg.

Place of next meeting, Bellingham Bay.

COMMUNICATION FROM THE NATIONAL TREASURER.

Norwalk, O., January 6, 1900.

Hon. B. B. Herbert, Editor National Printer-Journalist.

My Dear Sir: Permit me to use a little space in the January number of your most valuable paper, to urge upon the delegates to the meeting of the National Editorial Association to be held at New Orleans, February 28-March 3, that they send the Treasurer the necessary per capita tax as speedily as possible. The time is getting short, yet up to date I have received remittances from but three associations, as follows:

As usual, the Mississippi State Press Association, through its prompt and energetic Treasurer, Col. P. K. Mayers, was the first to remit, eight delegates being paid for.

The second remittance came from the New England Suburban Press Association, through the genial executive committeeman, Dr. W. F. Jarvis, seven delegates.

Oklahoma was third, the money for eight delegates coming through Hon. W. E. Bolton, the hustler from that region.

Many more returns should come in at once, and this will be a reminder to executive committeemen and delegates.

By the way, don't forget that by the rules, \$2 must be paid for each person accompanying a delegate or officer.

Fraternally yours,

JAMES G. GIBBS,

Treasurer National Editorial Association.

TRADE PAPERS.

Read before the Chicago Typothetae by H. A. Pawly, of the Typothetae and Platemaker.

THE nineteenth century is not only pre-eminently the century of scientific discovery, but also of the application of science to the mechanical and industrial arts. Science is the basis of all modern industry and of all genuine progress. The multifarious pursuits of mankind are so distinct, one from another, that a man may be a master of one and a novice in every other. It matters little how familiar an individual may be with general facts and theories, he is unfit to carry

H. A. PAWLY.

on any business without a minute acquaintance with the details and technicalities of that business. The time was when a workman could pass from one trade to another without much inconvenience or loss of time and money, but that day has long since passed away. Such is the division of labor in our times that it takes all of one man's energies and talents to do well his part in any one of the trades. Prior to entering upon his life trade, it is necessary for almost every man to spend much time and study in mastering the principles, the details and the technique of his business.

So vast and varied are the principles of every branch of industry, that it requires the aid of many men and of many minds to master them. It follows, therefore, as a matter of necessity, that every great industry must bring to its service the experience and the wisdom of men of every age and of every clime. It is needless, therefore, to add that the trade journal is not a luxury, but a necessity. It is an evolution created by the demands of the myriads of workers in the various fields of industry. A journal of general information, so far as it concerns his business, is worth no more to a specialist than a fiddle to a deaf man. However fully the morning paper may report the news of battles, parliaments, scientific assemblages, religious gatherings, social functions, and the like, it does not, in the least, benefit the printer, the engraver, the artist, the florist, or the horticulturist. If the specialist wants information, suited to his peculiar needs, he must consult the journal which makes it a business to cater to his tastes and demands. The trade journal is to the tradesman what the medical journal is to the physician, or the law journal is to the attorney. The lawyer does not look for light and help on his complicated case in a medical treatise or a theological magazine. The need of the age is for special journals and not for the omnium gatherum of bygone ages. We assert that the printer has as much need of a special

journal as does the farmer, the iron manufacturer, the photographer, or the breeder of blooded animals. Moreover, the master printer needs a journal especially adapted to his wants. It matters not how many magazines may come to his desk on the various departments related to his special work as a manufacturer, he should have a journal devoted to his specific duties. He may be interested in the latest discoveries in typography, photo-engraving, presswork, color printing and all the rest, but these cannot make him an efficient and capable head of a great printery. There are multitudes of questions connected with headship that are wholly disconnected with all other questions. More and more as the time goes by and as the great industries of the country concentrate in the hands of corporations and combinations, the question of management grows in importance. We shall not undertake to exhaust what should be the aim and scope of a work devoted to typography. That is a world within itself. The type designer, the type maker, the typesetter, the typesetting machine, and the hundred other things belong to the typographical journal. An employing printers' journal has but little to do with the unions and their problems, except in so far as they concern the economic phases of the printing art. In so far as the unions concern themselves with the work of management, the employers' journal must deal with them, and no further. If the union trespasses upon the ground belonging to the management, then the issues raised become proper subjects for journalistic treatment from the employers' point of view. The employing printer is concerned, first of all, with the affairs of his plant. He must know his office from bottom to top and from end to end. There he should be supreme and there he should be master. He must be familiar with the ever shifting, ever varying aspects of trade, as they affect his office. He cannot expect journals devoted to the interests of journeymen printers to cover the questions which most deeply concern him. He may be vitally interested in certain phases of trades unionism, as it is related to the printing industry, but when he has solved these, he is still in need of aid on questions of deeper import. He cannot learn from the workman's point of view, the lesson which has to do with interest on capital, profits, rent, costs and all the other details of business. Wages and hours form but a small part of the wide field of observation stretching before him. If an employer's journal meets his demands, it must concern itself with what puzzles him and not what puzzles somebody else. How to manage 100 or 1,000 men to the best advantage, how to buy and what to buy, how to curtail expenses, how to economize time, how to save his machinery, and how to compete with other offices, are racking his brain by day and driving sleep from his eyes at night. The employing printers' journal should come to him in this emergency with the fresh thoughts of scores of his fellow craftsmen and expel the mist of these perplexing questions. But the employer has to do with the outside world, as well as the inside world. All his materials and tools are supplied from without. If he does not know who makes the latest and best machines, he is unable to act wisely. Like everybody else he must take a great deal on trust, or else rely on some medium of information which never wittingly betrays him. The candid and honest trade journal does not sell its opinions like the venal political journal, but aims to impart information that can be trusted. It employs the most trustworthy experts to furnish technical information in regard to new inventions and new processes. It enters the office of the bewildered employer with just the facts he wants to know and gives him just the information he needs to guide him in solving

difficult problems. If the trade journal does not render such a service, it has not reached its possibilities, or its efforts are misdirected. While the trade journal devoted to printing aims to give valuable and indispensable information about recent inventions and discoveries, it does not ignore experience. Indeed, here is its peculiar field of activity. It seeks to collect the results of experience from the entire field and to condense them and put them in shape to be used without requiring valuable time to master them. It is by the widespread dissemination of knowledge and experience that enterprises grow and prosper, just as the political press moulds or forms public opinion on questions of finance, taxation and political policy, so a well conducted trade journal guides trades to successful issues. Its business is to shed light and to instruct the uninformed. It does not, however, content itself with pointing out sources of profit, but it also warns against errors and lifts the signal of danger when necessary. In short, the special trade journal represents the combined wisdom and experience of the whole fraternity engaged in its line of work. The employing printers' journal seeks above all things to bring to the light the best thought of the craft and to give every employer facts which he could gather from no other source. It must be left to the imagination to picture what would be the result of such a journalistic policy faithfully carried out. It would revolutionize the printing trade. The tramp printer, the bogus advertiser and the dishonest employer would fall out of line and the printing business would be placed on an enduring foundation. Cut-throat competition would vanish and living profits would be realized. The trade journal is the best friend to the honest manufacturer and a terror to the fraudulent advertiser. It makes friends of buyer and seller and enriches both. We sincerely believe that it is an essential factor in modern industry. It would not be possible without trade journals to carry on the complicated and intricate manufacturing enterprises of the world. If it be asked: what is the best journal to take? the question can only be answered by asking: what do the journals in competition do for their patrons? If they solve their problems and give them invaluable help in arriving at right decisions, they are above price. That journal that deals most directly, most intelligently and most honestly with an employing printers' difficulties and perplexities is the one best adapted to his needs and most worthy of his patronage and confidence.

A HAPPY FAMILY.

For several years past every member of the staff of Hide and Leather, Chicago, both home and branch offices, have been recipients of handsome Christmas presents (in cash) from the thoughtful and generous proprietor and editor, Mr. R. C. Jacobsen. In addition to this, Mr. J. has for several years given his workers the Saturday half holiday, both summer and winter. The employes presented him Christmas Day with a gentleman's traveling toilet set as a slight appreciation of his kindness and good will.

HOW TO ADVERTISE AND WIN.

Many people are misled by the temporary success of blatant advertisers whose grandiloquent phrases swell the sum of rotten publicity. But in nearly every instance of this kind, where permanent success has been secured, it has come in spite and not by reason of these methods. The history of great advertising successes illustrates the fact that simplicity in expression and display, truthful statement, honesty, combined with good judgment and persistency and backed by a good article, are what win.—Shoe and Leather Gazette.

MORE ABOUT WOMEN AND THE LABOR PROBLEM.

Last month, through noticing extracts from a reported sermon of a St. Paul preacher that appeared in the Chicago Tribune, we were led into making a brief mention of the question of women workers. The subject was only touched upon, and more with a view to show the absurdity and superficiality of the statements and reasoning of the minister, than otherwise. On the same day of the writing of the brief criticism, a marked copy of the Kansas City Star was received, containing a two-column news article, of which the following was the text:

"Assaults on non-union printers, growing out of the Typographical Union strike in the job printing offices, continue.

"At 9 o'clock last night, H. R. Ellsworth, a non-union printer who works for Burd & Fletcher, on West Sixth street, was struck down from behind at Ninth street and Baltimore avenue. Ellsworth says he was on his way to

A CHAMPION MISSOURI BABY.

Daughter of R. T. Robinson, editor Appleton City (Mo.) Herald.

meet two friends at the postoffice corner when he was stopped in front of Dixon's saloon by two men. He says he knew one of them slightly by sight as a union pressman, but does not know his name. This one introduced his companion as L. E. Smith, President of the Typographical Union in Kansas City. They tried to persuade Ellsworth to join the union and become a striker, and Ellsworth refused.

"'Smith,' said Ellsworth to a reporter for the Star to-day, 'excused himself and stepped into the saloon, but returned in a moment. There was no quarrel or loud talk. I asked one of the men what time it was and he said it was a few minutes of 9 o'clock. I started to walk away from them eastward to keep my appointment, and that is the last I remember.'

"Ellsworth was struck back of the left ear. He was taken to the police station and treated by Dr. Manahan, who said he could not tell then whether or not the skull was fractured. Ellsworth was still semi-conscious. Mr. Burd was sent for and removed him to St. Joseph's Hospital, where he is resting easily to-day. His skull is not fractured, though the wound is an ugly one and was made with some instrument like an iron bar."

Now women are not likely to go "slugging or to be slugged." The murderous spirit of unionism, the teachings

that employment must be regulated by strikes and boycotts, the spirit of hate inculcated, the saloon habits of drinking, loafing, gaming, smoking, swaggering and vulgarity that seem to pervade the ranks of young men, have much to do with the preference given to young women in many employments. Young women are more conscientious and orderly, cleaner in their habits, better behaved in every way, and more apt to be actuated by ideas of duty, pride in and loyalty to their calling. Yet there is no reason why a young man should not possess all these desirable traits. The human male is not so different from the human female that the young man needs to show his manliness by vulgarity, smoking, drinking and other extravagances, or by insubordination, bad manners, rowdiness, indolence, insolence and disloyalty to the interests of his employer.

Women and girls work because their necessities or their desire to be useful drive them to work, and their work is generally more dignified, improving and healthful, much more so than is too often the drudgery of a large family and the unending servitude to a proud, selfish, thoughtless passionate man, minister or layman, who frequently goes away from home for his sociality, glory and intellectual pleasures, and returns to his loving, trusting wife, who is not an equal because lacking in the knowledge and experience of the world and its affairs, for the gratification of his appetites. We remember visiting a very old cemetery in Connecticut and noticing the graves of seven women, all these the blessed departed of a Rev. Mather, whose tombstone was covered with fulsome praise. It occurred to us that either the minister or the wives had been very unfortunate or else the former days were not better than these. What are to become of the women and girls without the means of support if they are not to be permitted to work?

Are they to be sent to the almshouses, the bridewells or the brothels or be permitted to starve until some worthless lout who now complains that the women have got away his employment gets ready to marry them?

Frequent complaints come from loafing, drinking, walking delegates of union printers—with no ideas about honest toil, for himself, and with no thought of valuable or loyal service to his employer—that women have taken places that belong to men. It is on account of the influence of such thoughtless mouthings, as were quoted last month, and just such falsely educated young men, who are out of employment because of indolence, want of purpose in life, and the curse of bad habits, that violence attends labor troubles.

Such thoughtless words from the pulpit strengthen organizations and unorganized males who are constantly making war on the employers of labor and driving out of business the small employers who have by industry and economy worked themselves into a little capital and can only succeed through the loyal, considerate, helpful service of those whom they employ.

It is not a question with the employers as to the amount of wage so much as it is that the work done should be sufficient in results to allow a margin above the wages on which to conduct the business. If it is permitted to meet criticism with criticism, one great fault is the failure of the church and of so-called Christian homes of the present day to exercise the proper influence over the boys and young men to make them manly, industrious, honest, steady in habits, anxious to thoroughly master some business or trade and to be helpful. There has a wonderful amount of foolish and Satanic pride found its way into the churches and into church schools. Ministers, too many of them, at least, think a great deal more of being D. D.'s, Ph. D.'s, LL. D.'s,

and standing high as to society recognition and salary, than about rendering saving services to each and every member of the flock. The schools breed a good deal of that same spirit. In conversation with a minister, not long since, who has watched the students from one of the leading denominational schools for years, the statement was made by him that graduates would much sooner sit around some insurance, loan or real estate office picking up a bare subsistence than to strike out and do real hard, useful work of any kind. Many church or denominational schools are to-day away behind many secular and public schools in impressing the ideas of manly, useful living. Even ministers often seem to think that if they have not the industry and zeal to go out and build up a church to a self-supporting membership, the good women should get up fairs, suppers and entertainments to piece out their salaries. In other

HENRY CLAY MONUMENT, NEW ORLEANS.

business, as in publishing a newspaper, the patrons are not expected to raise funds to meet deficiencies. The business man or publisher must hustle for business, get more buyers, patrons, subscribers or advertisers. The young men are not entirely to blame. Instruction in schools and at home should be more practical. There should be less of gossip, less that tends to degrade the imagination more that gives employment to hands, eyes, mind and heart, and less study

of the ignorance, vices and vulgarity of the past. Much would be gained by practical manual training for an hour and a half during each school day, beginning with the grammar grades. Such training would give the boy recreation, an idea that life is to be usefully productive, and afford the opportunity to test wherein his work may be made most efficient and from which calling he would derive the greatest pleasure. Besides, this kind of work cures false ideas, teaches the dignity of toil and that the intellect need not be dormant when one is employed about manual labor. Then, churches, supported by Christian homes, should teach, enforce and practice the old doctrine that idleness is a vice, that no particular employments, in themselves, bring any real honor, and that the real end of life is service to fellowmen; that taking wages or property without earning the same or returning a fair equivalent, is robbery; that helplessness and idleness are crimes; that greed and pride in wealth or position are silly idolatry, and the strongest evidence of its existence in the human heart.

Probably one reason that girls and women prove more reliable than do a great many of the young men of to-day, is that they nearly always have some little employment at home; they take care of their own rooms, and clothes, help about the house, do some kind of needlework, or at least play the piano. Making tatting, with ideas that goes with the work, that the hands must ever have something to do, is better than the vapid life of the young man who is raised to think that he must do nothing except it be genteel or on a grand scale where there is large pay and small effort. It is certainly better that girls and women should work and stand independent in life than that they should be driven by necessity to become the slaves of men's passions or whims. Women have sunk to the work of beasts of burden, where they have had no other refuge from want or man's jealousy and bestiality. Independence of women, self-reliance and the power and opportunity of self-support are bulwarks of virtue, preventing ill-assorted marriages. The results are happier, more contented homes. Mother love is not lessened by intelligent work. The girl or woman who has worked in school, store, shop or office, knows much more of the real requirements of life, and is much better fitted to be the equal, loving helpmate of man, to be the mother of girls and boys who soon will have to meet the battles of life for themselves, than is the petted darling who grows up in entire ignorance of the world, its real burdens, its necessary worries, its uncertainties, losses and disappointments. The passion for home and home ties is not lessened by useful employments. The fault as to decrease in marriages and the establishing of homes comes much more from false ideas of living—the teachings that vapid idleness is dignified, that a show of luxury and large expenditure give some special honor or dignity, coupled with what has been said of the false ideas of young men as to employment and earnings, than from girls or young women being engaged in useful work.

ADVERTISING ADVICE.

Giving reasons is an integral part of advertising.—Printer's Ink.

PRINTERS' ARBITRATION DECISION.

GOVERNMENT by classes has been the fruitful cause of oppression and wrong. It matters not whether the ruling class be conquerors, royal families, kings, or clergy. In fact the rule by religionists, popes, priests, and elders, has often been the most selfish, mercenary, cruel, unjust, oppressive, and bloody known to the human race.

Government should be mutual. The rights of each and all must be considered. There must be mutual concession. Free government is in the nature of a voluntary compact or contract among men, in which it is agreed that the rights and interests of each and all shall be considered, protected, and, so far as possible, subserved.

If government by a class, that puts righteousness and the highest ideals of religion first, proves unwise and oppressive, how much more so must be the rule of a class that has only selfish ideas in view. The rule of the rich, the greedy, the selfish is sometimes less to be feared than the rule of those who are actuated by envy, jealousy, and distrust, though the motives of the latter may be higher. The rich man learns that there is more opportunity for accumulation where there is contentment, peace, and security, than where the people are crushed down and discouraged. The rich man also learns to take and abide by good counsel. Yet we would, by no means, encourage government by the selfishly rich. We have too much of that influence in the government of America today, and from the President up to the honest, useful, modest, yet independent and patriotic farmer, take our revenge by picking at that illusive figment of the demagogical brain called a "monopoly," instead of punishing the arrogant, tyrannical controllers of money or wealth, whether as individuals, combines against trade, or as so-called trusts and their trustees or agents for their abuse of power, their extortions, oppressions, intimidations, or business slugging; for their bribes—buying of public positions and the corruption of both the voters and the office-holders. Yet, the rule of the ignorant, vicious, so-called labor leaders is worse in many ways than is the corrupt and criminal influence of the selfishly rich. It is worse, because the so-called labor leaders or agitators take no counsel except of their prejudices, passions, and hate, and are as apt to work irretrievable loss and injury to those whom they claim to represent and professedly seek to benefit, as to those whom they undertake to control in the interest of the class over whom they have secured leadership.

A rule that does not take into account, at all, the interests of the ruled, is more hurtful than was even African slavery. The wise master knew enough to so treat his slaves as not to injure their capacity for work. The modern taskmasters of the small operatives, manufacturers, and printers—the Union bosses—take no thought as to whether their slaves can exist at all under the burdens imposed, and rather glory in seeing them crushed out. These oppressions, however, speedily revert upon those whom they unwisely represent, for the combined workers who rule to ruin are soon without any to bring to them their wages, and walk the streets as mendicants, loafers, sluggers, or footpads, while feeble women take up the burden of bread-winners.

Some States, and among the list Illinois, have provided laws and boards of arbitration by which unwise rule, or attempts thereat, may be checked. Where the law is honestly, justly, and equitably enforced, wrongs may be prevented. It is a sort of arbitrary government made necessary from the fact that the parties to be reached or controlled are too ignorant, selfish, and brutal to attend to

their own affairs by mutual agreement — are not capable of self-government.

The arbitrary arm of enforced arbitration is, like all other government, dangerous and oppressive in the hands of corrupt, narrow-minded, or even weak men. The prejudiced few are apt to do a whole wrong and injustice, while

control the employers of labor; to many arbitrators who had been wholly unjust in their decisions; many more that had done half the injustice asked, and others that — like the present one — had taken a rational view of all the conditions and decided the rights of the parties in harmony with equity and justice. To force a firm to arbitrate unjust and unreason-

Gen. William Henry Harrison Equestrian Statue, Garfield Place, Eighth and Vine Streets, Cincinnati.

the weak are ever inclined to give to the unjust one-half of the unrighteous demands, thereby doing a half wrong.

These thoughts came after the reading of the just decision of the Board of Arbitration of the State of Illinois, memory going back to many attempts to overawe and

able demands is, after all, like forcing one to arbitrate with a footpad as to whether he shall have all or take half of one's valuables, yet any kind of arbitration is better than being slugged or sandbagged. But here, as given in the Daily Illinois State Register, of Springfield, December 10, is

THE DECISION:

The State Board of Arbitration handed down its decision yesterday in the case of the application of the employees of the book and job printing-offices of Springfield for a full ten-hour day wage for nine hours' work.

Last spring the employees asked for a nine-hour day at nine-hours' pay, which was granted by the employers. In October the printers asked for an advance of wages to ten hours' pay for a nine-hour day. The employers demurred on the ground that it was more than offices in other and competing cities in Illinois were paying, and more, therefore, than they could afford and compete with their prices for work, but the proprietors offered to raise the wages of the employees to \$14 a week, which was 25 cents more than the nine-hour pay, and the ten-hour rate of \$15 per week. The printers declined this proposition and asked that the matter be referred to the State Board of Arbitration for its decision. The employers assented, and it was agreed that the decision of the State Board should be accepted and acquiesced in. The petition for arbitration was filed with the Board on November 18 and the case was heard on November 27. The decision (which we print herewith) it will be seen sustains the employers in their declining to advance the scale to ten hours' pay for nine hours' work.

Practically every member of the Springfield Typographical Union joined in the petition for arbitration and every employing printer in the city assented to the reference of the matter in dispute to the State Board of Arbitration. The Board's decision is as follows:

In this case the Board is requested to adjust the differences existing between the employers and their employees with reference to the "book and job scale" in the printing-offices of Springfield. The employees demanded an increase of wages as follows:

Foreman, from \$16.50 to \$18 per week.

Assistant foreman, from \$14.65 to \$16 per week.

Compositors, from \$13.75 to \$15 per week.

During the past year a nine-hour day has been in force in Springfield and a readjustment of wages is demanded upon that basis.

The chief point of controversy appears to be with reference to the compositors' scale. With a reduction of hours from ten to nine in November, 1898, there was a corresponding reduction in wages. The demand of the compositors is practically a restoration of former wages without a restoration of former hours.

In this case, as in every other involving the question of wages, the Board would be pleased, if circumstances permitted, to grant the increase demanded; but the question of practicability is necessarily and manifestly of controlling importance. Can the employers pay the proposed increase and continue to do business without eliminating all margin of profit? If they can not, the folly of a decision by this Board granting the advance demanded must be apparent to all. No person or corporation can be rightfully expected to engage in business without securing a reasonable profit therefrom.

The evidence clearly shows that the local demand for book and job printing falls far short of being sufficient to support the half dozen book and job offices of considerable size now doing business in Springfield. Each of these offices has been built up largely by the temporary expansion of business due to the State printing contract; but, after having lost the State contract, each office has found its facilities much greater than were necessary to meet the ordinary requirements of local patronage. The result has been not only local competition so keen as to render the

business of some of the offices practically without profit, but also to force the several offices to seek a considerable amount of business elsewhere than at Springfield. Their competitors, therefore, are to be found at Bloomington, Decatur, Danville, and other Illinois cities. If the employing printers of Springfield were required to pay wages materially higher than the wages paid by their competitors in other cities, they would manifestly be placed at a serious disadvantage.

At only two Illinois cities, with the exception of Chicago, is the compositors' scale in book and job offices higher than the scale paid at Springfield during the past year. These cities are Peoria and Quincy. At Peoria the scale is \$16.20 per week; but this price appears to have been assented to at a time when, owing to the fact of the location of the headquarters of three important brotherhoods at Peoria, the employing printers found it to their advantage to yield absolutely to the demands of the compositors. It was shown also that the employing printers there have found the scale too high and contemplate an attempt to secure a reduction. At Quincy the scale is \$14 per week.

The following shows the compositors' wage-scale, based on a nine-hour day, at eleven cities in Illinois, Indiana, and Iowa, having a population approximating that of Springfield: Terre Haute, Ind., \$12; LaFayette, Ind., \$14; Burlington, Ia., \$12.60; Davenport, Ia., \$13.50; Joliet, Ill., \$12; Rockford, Ill., \$12; Danville, Ill., \$12; Decatur, Ill., \$12.42; Bloomington, Ill., \$13.18; Quincy, Ill., \$14; Peoria, Ill., \$16.20.

It will be seen that, even including Peoria, where the scale is unusually high, the average for the eleven cities named is only \$13.08 per week.

We are of the opinion that the employing printers of Springfield can not profitably pay their compositors in the book and job departments more than \$14 per week, on the basis of a nine-hour day. Nor does anything appear to justify an increase in the wages of foremen and assistant foremen. It is therefore adjudged:

1. That the scale for foremen and assistant foremen in the book and job offices of Springfield remain the same as during the year ending November 21, 1899.

2. That the compositors in the book and job offices of Springfield shall be paid \$14 per week, consisting of fifty-four hours.

The Board is farther requested to act in a conciliatory capacity with respect to the newspaper scale, the book and job machine scale, the machine newspaper scale, and the machine tenders' scale, which have been mutually agreed upon by the parties to the arbitration. The only function which the Board has to perform with respect to these matters is to affirm the several scales thus mutually agreed upon, and this is accordingly done.

H. R. CALEF, *Chairman*,
W. S. FORMAN,
DANIEL F. KEEFE,
State Board of Arbitration.

J. M'CAN DAVIS, *Secretary.*

A HIT OR MISS WAY.

Advertisers look to circulation. That's what they pay for. The size of the audience is the criterion as to whether an advertisement in a paper is worth more than a handbill.—Greenville (Ill.) Sun.

* * *

The trouble with advertising has been that many men have never gone at it except in a hit or miss way, with the chances strongly in favor of the miss as against the hit.—North Adams (Mass.) Herald.

THE CINCINNATI TYPOTHETÆ.

ITS HISTORY AND ACHIEVEMENT AS AN ORGANIZATION.

The printer's trade in Cincinnati has always been an important one. It was the first Western city which became noticeable in this connection, and is now only surpassed in the quantity of work executed, by New York, Philadelphia, Boston and Chicago, and its quality is most excellent. Originally a military post, begun in 1788, the printing press was put in operation in 1793, before hostilities with the Indians had ceased. It was then the frontier town of American civilization. In 1820 a type-foundry was begun, so great was the demand for type, and since, everything which relates to the art has been there manufactured.

ing printers of Cincinnati that they must meet this demand with counter organizations.

On October 12, 1887, a meeting was held at the office of the A. H. Pugh Printing Company, at which the following firms were represented:

The A. H. Pugh Printing Company, C. J. Krehbiel & Co.; C. Souer & Co., Spencer & Craig Printing Works, Russel & Morgan Co., Sullivan Printing Company, Keating & Co., Ohio Valley Printing Company, C. F. Bradley & Co. and Wm. A. Webb & Sons.

It was unanimously agreed at this meeting that the demand of the International Typographical Union for a shorter day be resisted at all hazards, and that Cincinnati ought to be represented at the convention of the employing printers of the United States called to meet in Chicago,

Band Stand, Cincinnati Zoological Gardens.

Its railroad, label, show and school-book printing has been great, and it is the center of the Western paper manufacturing district.

As a consequence there are hundreds of firms in Cincinnati who are bound up with various relations with type, and the employing printers are thoroughly instructed in their calling.

In 1887 the passage of a resolution by the International Typographical Union, that the nine-hour work day must go into operation November, 1887, convinced the employ-

October 18, 1887, to discuss the question of the formation of a national association. O. A. Russel and A. H. Pugh were selected as delegates to represent Cincinnati.

The result of the deliberations of this meeting of master printers in Chicago was the birth of the United Typothetæ of America, at whose last annual convention were represented twenty-four cities of the United States and Canada.

On October 25, 1887, a second meeting was held at which twenty firms were represented. Messrs. Russel and Pugh

made a report of the proceedings and actions of the convention, and it was unanimously agreed that a Typothetae should be formed under the preamble of a constitution reported by a committee consisting of William A. Webb, R. J. Morgan and C. J. Krehbiel. A nominating committee was appointed, which reported the following gentlemen for office: A. H. Pugh, President; A. McDonald and C. J. Krehbiel, Vice-Presidents; E. A. Bradley, Secretary, and R. L. Morris, Treasurer.

The preliminary work of forming and organizing the Cincinnati Typothetae having been thus speedily and harmoniously perfected, the advantages of organization soon became apparent. The Employers became better acquainted and soon discovered that the experience of the various members recited at the meetings from time to time served as a beacon for others to avoid falling into the same pits, and best of all, since the day of its organization peace and harmony have reigned between employer and employee. The nine-hour day movement that cost so much in time and money in other cities, did not materialize in Cincinnati.

In the seven years of the existence of the Cincinnati Typothetae, many questions of vital importance to the trade have been brought forward and disposed of in a more or less intelligent and satisfactory manner.

Once a month at some hotel, over the toothsome steak and a cup of coffee, an experience meeting is held, and the deliberations and free interchange of views of the different members, is productive of much good, and each participant retires feeling thankful that the actions of the trades unions, fraught with evil to both the employer and the employed, were the instrument that so fortunately cemented the business and social relations of the employing printers.

The question of paramount interest to the craft everywhere, and one which apparently remains as far from a satisfactory solution as ever, is the cost of doing business. The difficulties in the way of a full understanding of the subject appear almost insurmountable and are aggravated by the fact that the number of those engaged in the business is constantly augmented by beginners. Recognizing the difficulty as one that is likely to continue, the Cincinnati Typothetae did what it could toward educating these neophytes, and probably the most elaborate treatise on cost that has been given the craft, has been the work of one of its committees.

The apprentice has received attention at its hands, and as a result some of the printing establishments have now in use, a form of apprenticeship directly in line with the laws of Ohio, which appears to work admirably. Directly growing out of the consideration of the subject was a protracted discussion of the possibility of establishing in Cincinnati a trade school for the apprentice, but the project was finally abandoned, not from lack of interest, but from a conviction that no scheme of the kind could prove successful unless backed by an endowment of goodly proportions.

Probably no stronger protest against that evil practice of press-manufacturers and type-foundries of "setting-up" men in business who are without the capital necessary to purchase their plants, was ever formulated and sent out as a personal appeal to all offenders, than that issued by the Cincinnati Typothetae. It was done quietly without publication, and it is apparent that this attempt to regulate unfair business methods has had some effect and should be an incentive to a renewal of effort in the same line.

At one time it was thought desirable to have a scale of prices to guide employers in the making of bids, but it was discovered that the scheme was impracticable and a detriment to such members as honestly attempted to be guided by it.

An earnest attempt was made to mitigate in some degree the evils of competition by formulating a code of ethics and rule of practice to govern members in making bids on work. The Typothetae considered this matter for a long time in connection with those who were not members, but without any success. The code of ethics, however, has found a better definition in the minds of those who labored and wrestled with it.

Numberless other things has the Cincinnati Typothetae considered from time to time, among which may be mentioned a uniform estimate blank for trade usages, insurance, and a card of recommendation for employees. Papers of value and interest to the trade have been read, and some of them were given a wide circulation by trade journals, and have found general commendation and acceptance.

That the Cincinnati Typothetae is an assured success was evidenced by the manner in which the national convention was entertained by it in the fall of 1891. It points with pride to the fact that every dollar expended in the entertainment of its guests, numbering more than 200, was contributed by the members, active and honorary, of the local society.

The reception by the President, the dinner, the ride to Lexington, Ky., over the famous Cincinnati Southern R. R. that was built by the City of Cincinnati, and the reception at the former home of Henry Clay, by Col. McDowell, will long be pleasantly remembered by all.

Cincinnati has always sent strong and sensible delegations to the meetings of the United Typothetae.

O. A. Russel was elected first Treasurer and was relieved by Chas. Buss. A. N. Pugh was the fifth President, and entered upon his work with both zeal and judgment. He lent all his influence and ability to the Pittsburg employers in their arduous position.

In September, 1896, W. B. Carpenter, of Cincinnati, Ohio, was elected Treasurer to succeed Mr. Buss. In 1897 Mr. Carpenter found he was so bashful and modest that he thought it would not be right for Cincinnati to hold the Treasury forever, and he declined the nomination. Since that time there have been no national officers from the Cincinnati Typothetae, but there have been several members on important committees—one of them R. J. Morgan, on the committee that met at Syracuse, N. Y., in the fall of 1897.

The membership in the Cincinnati Typothetae at present is 44; all in active membership. The monthly meetings are well attended, and the annual Franklin banquet always draws a crowd.

PRINTING MATTERS IN NEW YORK AND ST. LOUIS.

From Geyer's Stationer, New York City.

The journeymen printers of New York have recently equipped a commodious four-story and basement building, 105 East 23rd Street, as a Printers' Club House. It has in view the intellectual and social advancement of members of the printing and allied trades. The club was organized over a year ago. Its present home is large and imposing and will compare favorably with the New York Typothetae headquarters in the Dowling Building on Fulton Street. The basement, one hundred feet deep, will be fitted up with bowling alleys and wheelmen accommodations. The front room on the first floor is the parlor or reception room. Back of this is a pool room with two excellent tables. Then comes the reading room, where, besides a library, will be found on the tables current magazines and newspapers,

particularly those of interest to printers. It is the intention of the board of directors to collect a technical library, the same as the New York Typothetae now has, on matters relating to printing. The second floor will be occupied by the club offices and a large lecture room, where club meetings, entertainments, public discussions, etc., will be held. President Gortnet recently said: "Some of the ablest exponents of economic thought and many of the best known printers in the country will be heard here this winter." The two upper floors in the building are fitted up as comfortable bachelor apartments for members who desire to make the club house their home.

The last number of the National Printer-Publisher, Chicago, devotes several pages to the stationery and printing

Committee of the National Editorial Association of the United States and determine upon a program for their next convention to be held in New Orleans next spring. The writer has been on two occasions a delegate from the United Typothetae to that body, and knows the association to be composed of the most distinguished gentlemen in the profession.

* * *

It is hoped that the New York Typothetae will soon take steps to send a delegation to the Fifth Centenary of Gutenberg's birthday, the discoverer of the use of movable type, which will take place at the historical town of Mayence, on the Rhine in June. It is already attracting much attention from the printing and intellectual world. It will be under the patronage of the Grand Duke of Hesse. It is

Art Museum and Art School, Eden Park, Cincinnati.

interests of St. Louis, including illustrations of many prominent places of that progressive city. Without disparagement to other publications, B. B. Herbert, editor, gives the world the very best journal in his particular line. His genial pen seems to permeate every department from soliciting advertising matter up to writing editorials. He reports and takes part in all the Editorial and Typothetae conventions held in the country, and is one of the most popular and respected printer-journalists in the land. The occasion for his visit to St. Louis was to meet the Executive

hoped that America will send its best men to honor the memory of him who has been instrumental in conferring more blessings on humanity than any other inventor that ever lived. In connection with the event it is proposed to hold a grand exhibition of everything connected with the "Art Preservative of all Arts." The exhibit will be divided into three sections. The Historical Section will comprise productions of the art of printing of all times. The Graphic Section will give a display as comprehensive as possible of the productions of the graphic arts. The Machine Section

will show the machinery and implements for printing. In connection with the exhibition a Gutenberg Museum will be founded. Some years ago the writer had the privilege of visiting Mayence and examining many instructive reminiscences of early printing. Although America leads the world to-day in many departments of printing, yet is it to the older countries we must look for much that is historical and instructive. It is the intention of the writer to participate in the Gutenberg ceremonies while visiting the Paris exhibition on business connected with stationery and printing.

* * *

We beg leave to acknowledge the receipt of the official proceedings of the United Typothetae of America, in book form, at its Thirteenth Annual Meeting, held in New Haven, Conn., September 13 to 15. It was received in New York early last week. Owing to pressure from the technical press it has been given to the printers of the country in a shorter time, after adjournment, than ever before. It was edited and compiled by J. Stearns Cushing, Secretary United Typothetae of America, Norwood, Mass., who has proved a creditable and efficient officer.

* * *

With the close of the old year the writer returns thanks for favors extended during the past four years in New York.

ANOTHER POSTAL INEQUALITY.

There are said to be over twenty thousand men and women in the United States outside of editors and regular employes on newspapers, who seek to live by writing or authorship. All their copy or manuscripts are regarded, by the Post Office Department, the same as personal correspondence or business letters. The members of the Society of American Authors rightly think that some consideration ought to be given to copy before printing as well as to papers, magazines and books, or their copy, after printing. The author is generally much less able to bear burdens than is the publisher, and yet the writers represent to a great degree the intellectuality, the educational force, and the mental activity that have placed this country at the front in literature and learning. The pay of the writer is uncertain and as a rule not commensurate with the necessary preparation, training and work. The same reasons of public policy as to advancing general intelligence seem to prevail with regard to literary productions in manuscript as to newspapers. It is not likely that the privilege of special postal rates to writers would be greatly abused. The "Bulletin," the official paper of the society named, says:

Viewed from without the item of postage may appear a minor matter. Viewed, however, from within it is one of the major burdens of the writer. Frequently manuscripts, whether long or short, have to traverse the anxious way, back and forth, many times before they find a resting place in the printed page. In every case the burden of sending and securing a return is on the author. When, however, the article is accepted and the publisher returns it for proof-reading, it can travel for one quarter the rate of postage borne by the unaccepted manuscript.

The Society of American Authors asks from the editors of the country, not merely a mention of the approaching endeavor in Congress, but expressed editorial approval of the effort, if such can be conscientiously given. To have full effect this editorial should be sent marked to the congressmen and the senators from the state in which it appears, and the Society would be additionally honored if a copy could be sent to its rooms at 71 Broadway, New York.

About Advertising.

By Charles Austin Bates, New York.

Communications to this Department are solicited. Questions will be answered and criticism made on advertising matters.

I am in receipt of the following communication from a young business man in Kentucky:

"I am going to offer you a suggestion. Maybe it will be worth something to you. If so, you are perfectly welcome.

"In reading the ads of the Grand Union Hotel, I have never seen one appealing to a young couple on their wedding tour. For instance, I am a young man who has attended very closely to business. I have not been inside of a hotel more than four or five times. I am going to get married in a few months. I think we shall visit New York. I don't know the first thing about how to conduct myself in a hotel. I can get along all right alone, but with a wife—that's another question. I wouldn't like to go to a hotel and make a goose of myself, yet I do not feel like confessing my ignorance to any of my friends.

"My idea is this: Write one of your ads appealing especially to bridal couples. Bring out the advantages of your hotel from their standpoint. Invite them to send for booklet. In this book meet them at the front door; take them up to the desk and help them to register. Take them into the dining-room. Show them how to order a dinner from one of those bewildering menu cards. Tell them what the prices are—for two; when they are expected to pay up; whether the rates are any different by the day and week, and, in fact, tell them everything.

"Hoping that the above may be of some use to you, and that through it I may find how to act when the time arrives, I remain,

Yours, very truly, ———"

* * *

This isn't a bad idea, by any means. If I have any influence with the Grand Union Hotel they will get out a book especially for young couples on their wedding tours.

However, for a young man who is going to get married in a few months, I think my correspondent thinks too much about other people and what other people think, and too little about himself and his own happiness. When a young man has married the maiden of his choice he ought to be so consumed, enveloped, and wrapped up in his own happiness that he won't care a continental what people think about him, or about the price of the dinner, or whether he has a dinner or not. Anyway, the best thing for a young man to do when he doesn't know about a thing is to ask. That's what my correspondent does. In response, my advice is that he keep right on asking, and not care a copper what other people think. When I go to a hotel and there is something about it that I don't understand, I ask about it. I ask the first flunkey that I meet. That's what the flunkey's there for—to answer questions. If he doesn't answer my questions civilly, I don't waste any time registering a great big kick with the proprietor of the hotel. The fact that I am a "jay from Indiana" or a "yahoo from Arkansas" doesn't make any difference to any employee of that hotel. I am paying good, hard cash to the proprietor, and the fact that I'm a "hayseed" isn't anybody's business but my own.

I am sure that if my correspondent takes his bride to the Grand Union Hotel he will be treated with every

courtesy. He will find that every employee there is there for the purpose of answering his questions. When he goes to the dining-room, if a portion of the menu card is insufficient for two, I am pretty sure that the waiter will so advise him. The better the hotel, the more courteous the employees. If a man wants to find genuine discourtesy and a disposition to look upon him as a greenhorn, he wants to go to some third-rate hotel in a little country town. People in big cities are too much occupied with the serious business of life to care much whether a man wears his trousers in his boots or hayseed in his hair.

When you don't know anything, "Ask a policeman," or the first man you meet.

* * *

A great deal is said and written nowadays about the commercial wonders accomplished by advertisers.

The fact is that as much of the success attendant upon advertising is due to the influence exerted upon the advertisement reader.

The business man who advertises, in his search for favorable points in his business to announce, soon gets into the habit of increasing the number of these favorable points. He becomes more courteous and accommodating to his customers. He learns to give them just as much for just as little money as he can. He gets into the habit of studying his customers' interests as well as his own. He unconsciously gets into the way of doing this in the little things as well as in the big.

This—the self-educating effect—is one reason why advertising pays.

* * *

Most of the advertising blotters sent out don't blot—at least not in the way they are intended to blot. They are supposed to absorb the superfluous ink from the paper. Nine out of ten of them simply distribute that ink over a larger territory of the paper. They don't absorb an atom of it.

When you are going to send out blotters be very particular about the quality of the stock you use, so that the recipient will not have reason to swear at you for spoiling his manuscript. Provocating profanity is not likely to be profitable advertising.

* * *

I wish to assert just as strongly as possible that any good business or good article can be successfully advertised—that a good, strong, clear statement of fact about a good article, placed in a medium that reaches people, will bring results promptly and surely—and the advertisement writer or the advertisement agent, who does not believe this, and can not do it, has no business to be in his business.

CUTTINGS FROM THE SCHEMER.

Make your ads short, concise and right to the point.

Handle articles the people want. The best advertisements will not induce them to buy what they don't want.

Study the ads of your competitors; they will enable you to improve your own; also make a note of the mediums they use; it will greatly assist you when placing your ads.

If your capital be limited, use advertising space accordingly. It is more profitable to use small space and have your ads appear often than to use large space and have your ad appear a few times.

Advertise the right thing at the right time, in the right way, in the right medium, at the right price, and people will write out their orders addressed to you, and I will guarantee that you will do a right good business.

A VETERAN AMONG INK MANUFACTURERS.

DEATH OF MR. JOHN RYCHEN.

The death of Mr. John Rychen, on December 28, 1899, came as a great shock to his numerous friends throughout the country.

Forty years is a long time to be in one line of manufacturing, yet these are the years numbered by Mr. John Rychen, of Cincinnati, in the manufacture of printers' inks. He commenced business as a varnishmaker, but his attention was soon called to the then great need for improvement

THE LATE JOHN RYCHEN.

in printing inks. He began experimenting and, after months of study and patient labor, produced an article vastly superior to anything in the line then on the market. The first batch that came up to his ideal was ground in a hand-mill, and he carried it in an old paint bucket to the office of the Troy, N. Y., Times. It gave the highest satisfaction. The business grew, and in two years was moved to Cincinnati, Ohio. This was in 1862, and in 1877 the now world-famous Queen City Printing Ink Company of Cincinnati, Ohio, was formed, of which Mr. John Rychen has been the able President and General Manager for nearly a quarter of a century. He has ever been a zealous worker in the development and production of the best inks and in the promoting of the sale of the same. Though past the allotted span of human life of three score and ten years, he has continued active, not only superintending, in a general way, the manufacturing, but traveling to the leading cities of the country and keeping a supervision over the branch houses in New York and Chicago.

The circle of his business acquaintances is large, and there is scarcely a printer in the United States that did

not know him. All admired him for his honesty, integrity and upright business dealings.

He lived in a beautiful country place in Wyoming, Ohio, a suburb of Cincinnati.

The Queen City Company are the only manufacturers of the celebrated "H. D." book and half-tone cut inks that are so well known to every printing office in the United States and Canada.

About thirteen years ago Mr. Rychen saw a good field for the Queen City inks in Chicago, and taking advantage of the conditions opened a branch office in that city where a full line of inks could be secured. This being one of the first stocks carried in Chicago by out-of-town manufacturers, the Chicago printing fraternity was quick to recognize the convenience, and the experiment proved conclusively that Mr. Rychen's judgment was sound. The Chicago branch, from a small beginning, has year by year expanded, until at the present day it carries one of the most complete stocks of printing inks and varnishes in the West in the spacious store, at 345 Dearborn street.

AMONG THE TYPOTHETÆ AND EDITORIAL ASSOCIATIONS.

"Uniform Rates" was the topic to be discussed at the monthly meeting of the Connecticut Typothetæ. Rates will never be exactly uniform unless the same man does both the buying and the estimating, yet there can be a uniformity on certain standard articles and all can learn how to ascertain, very nearly, the cost of work, material and incidentals and what should be a fair margin above actual cost to cover wear and tear, interest, insurance, collections, rent and the expenses of management, general superintending, bookkeeping, soliciting and estimating, and still leave a reasonable margin as profit. Some will buy closer than others, will use more skill in handling work so as to have its cost at the minimum while its quality is at the maximum, hence figures must of necessity always vary, but that variance will not amount to business slugging and cut-throat competition, if printers understand and prize their calling and their fellow craftsmen.

The Missouri Press Association is to meet at St. Louis, February 8 and 9, and proposes to wrestle with the trusts. The editors, being accustomed to search out all the facts relating to the darkest crimes in order to make the record complete, ought to be able to discover the roosting place of the genuine birds of ill omen called the trusts. So far these have been hard to catch. Like the ague in the early days of Ohio and Indiana, the trusts are right over in the next neighborhood. We judge that there has been more oppression in the abuse of great wealth by greed of purse-burdened individuals than by combinations. Yet any combination in the interest of extortion should be crushed out. There can be no such a thing as a monopoly in a free country. When any man or class of men obtain special rights or privileges, the right and power to control any article of commerce or manufacture, to the exclusion of the right or privilege of all, or any others than freedom, is lost and plutocracy or monarchy has assumed the control of government. But it does not follow that raising prices of products prove the existence of monopoly, nor that such rise in prices is hurtful. Many branches of business have been conducted at a loss, but if any one is found practicing extortion, viz., a Rockereller, Hanna, Cochran, or Jones—such an one should be prosecuted. Combinations or corporations should be formed among consumers to produce the products, that are held at extortionate prices, at reasonable, honest prices, or to find substi-

tutes for these products. Our idea is that patents in the hands of wealthy manufacturers have been the only real and most hurtful monopolies in this country, and yet these have been limited as to time, and where a too high price has been put on a patented article some other inventor has found a way to do the same thing just as well or a little better. If paper dealers or manufacturers have put up prices beyond what is reasonable the shortest way will be to establish co-operative paper mills. Here our only difficulty lies in the wealthy operators buying up all the water powers. There should be some way to prevent new inventors selling out inventions to rich manufacturers, to be put out of the way. Any invention that is not used within two years after the granting of a patent should be open to be used by any citizen, unless it can be shown that the patentee is making arrangements as rapidly as possible for its use in a competing field to patents already existing. A mill once built should never be permitted to be closed so long as anyone can be found willing to operate it and pay reasonable rental for its use. No one should be permitted to hold a water power and prevent its use, merely in the interest of limiting production and keeping up prices. The same might be said of all needed sunlight, water, air, mines, forests and lands, alike the free gifts of Heaven. The time is coming, too, when the man who uses his superior learning, shrewdness, ability, wealth, political influence or knowledge of state secrets to crush out others will be deemed a felon and be rightly hounded to a prison cell, instead of being allowed to dictate the business of the country, the policy and nominees of parties, or to corrupt and rule legislatures, courts, senates and presidents. But, boys, do not waste giant powder shooting at scarecrows or straw men, or imaginary, indefinable ever vanishing so-called "monopolies." The world has been kept in sin and ignorance through the ages by being fooled into fighting a very real but never present devil instead of fighting out the pride, jealousy, lust, hate, greed, selfishness, deceit and passion of human hearts and the stupidity of human minds. Every man who stands selfishly or greedily in the way of another's rightful opportunity is a "whole trust," all in himself, and should be smote hip and thigh.

This meeting promises to be exceedingly instructive and interesting. Captain Henry King, of the Globe-Democrat; Mr. Joseph Graham, of the Republic, and Ex-Gov. David R. Francis are on the list to address the convention. Members of the association have been selected to read papers on matters of practical interest to the newspaper men of Missouri. The talk was that the summer meeting of the association will be held in St. Louis some time in August and an excursion taken, the itinerary of which embraces a visit to Niagara Falls and a trip taken down the St. Lawrence river to Quebec. It is proposed to discuss measures for relief from the grip of the trusts which are now pinching newspaper men fearfully. This evil is coming home to us, and we want to beat it if we can.

PRINTERS DISCUSS IMPORTANT LAWS.

The Typographical Union met Sunday afternoon in adjourned session, the special order of the meeting being the discussion of twenty amendments to the laws of the International Typographical Union, to be voted on in the different printing offices under the "chapel," or referendum system.

The most important of these laws to the printers is one providing that each of the 40,000 union printers in the United States shall pay 10 cents additional dues per month

to establish a defense fund of \$100,000, which would take about two years. This is to be a permanent defense fund, and the money is to be invested in United States bonds, the interest on which is to be used as a minor defense fund.

Besides the permanent defense fund, the question of empowering the executive council to levy an assessment of 50 cents per member whenever the emergency defense fund falls below \$20,000, was also ordered to a referendum vote.

The question of establishing a five-day law, providing that no member of the union shall work more than five days in one week if a substitute can be obtained, was also presented from the International Union. If this proposition is approved by a majority of the union printers in the United States, it will require ratification by the next international convention before it becomes a law.

It is not thought, however, that the five-day law will receive a majority vote.

Another amendment to the laws of the union expressly stipulates that women printers, as well as men, shall be eligible as delegates to the conventions of the union. The union has for several years had a law which demands that women shall receive equal pay with men in union printing offices, and this law is continued in force.

During the meeting the committee recently appointed to secure a banner for the union, to be used in Labor Day parades and on similar occasions, presented, through Mr. Herman Agricola, the banner to the union. Mr. Agricola, in a few appropriate remarks, congratulated the union on its enterprise in preparing for the next Labor Day celebration, and said that the Typographical Union now had the most magnificent banner ever owned by a labor organization in Atlanta.

The banner is a handsome one, made of silk, the front side of which is solid red, with the words, "Atlanta Typographical Union No. 48," in gold gothic letters, with a waving American flag, under which is the seal of the union, in the center.

At the bottom is shown, to good advantage, the label of the Allied Printing Trades Council.

The reverse side, or back of the banner, is in two colors, blue and gold. On the blue portion is an old-style type case, with the date, 1864, and on the gold part is a Mergenthaler linotype, 1900, showing the contrast between printing in the years 1864 and 1900. The printers were well pleased with their beautiful banner, and with the equally attractive uniforms and badges which they have decided to get, will make as good, if not the best, appearance of any union in the next Labor Day parade. The banner committee consisted of Messrs. S. M. White, Herman Agricola and G. W. Purdie.

"RATTED" ROT.

Indianapolis, Ind., Dec. 25.—President S. B. Donnelly and Secretary J. H. Bramwood of the International Typographical Union to-day returned from a meeting of the executive council of the union in Pittsburg.

"We found that the Pittsburg publishers refused to meet with us or in any way recognize our council," said President Donnelly. "We have as a result 'ratted' the International Association of Machinists and will have nothing more to do with them, either through arbitration or in any other way. The fight in Pittsburg will be fought to a finish. Our council members left there and placed First Vice-President J. M. Lynch in charge of the strike. He will fight it out."

Secretary Bramwood, in speaking of the resolution

passed by the American Federation of Labor at Detroit in providing for a committee of nine to investigate and report on the differences between the typographical union and the machinists, said:

"The first resolution offered provided for a transfer from the typographical union of all machine tenders who are members; also all members of the typesetters' machine engineers of the International Association of Machinists to get all of the transferred members. This was defective and the resolution providing for the committee was substituted.

"The typographical executive council cannot appoint such a committee without a vote. This would take four months. The committee will not be appointed at all—at least, I think this way.

"The stereotypers in Pittsburg were called out, but would not strike. The pressmen are not organized, hence were not called out. We have 'ratted' the stereotypers as well as the machinists at Pittsburg. The machinists have violated the strongest principle of trade unionism in operating machines and teaching others to do so. At Detroit we had a representation of 31,000 members; the machinists were 12,000 strong. There are about 200,000 machinists in this country, but representation is based on fully paid dues in the various organizations represented."

PRINTERS PASSING AWAY.

(From the Kansas City Star.)

It would appear that the sort of printing first discovered and understood is to disappear, that art not being the making of impressions on paper, but the use of movable types. That was the process that Faust, Gutenberg, and the rest discovered, and when there are no longer types to set then there will no longer be any printing in its original sense, nor for that matter any printer.

The day draws near. The machines—as all of the different contrivances that do the work that printers formerly did are called—increase in perfection. They do most of the labor now in what were composing rooms, and before long they will do it all. Then we shall have a new art and a new artisan.

It will not be the first time something of the kind has happened. Whole trades and their implements have disappeared. How long is it since you have seen a man in a field of grain with a sickle or even a cradle? There was such a man once, and he was called a reaper. He cut the grain before and after Boaz for thousands of years backward and forward; then he disappeared. When the word reaper is used now it is applied not to a man, but to a machine. So the word printer will be applied some day. And then, too, where is Humphrey with his flail? Gone to the goodly land. Humphrey no longer wields a flail. He is now called a thrasher. He is one of a small party that runs a thrashing machine. The printer will go where the human reapers and thrashers have gone.

With the passing of the art of printing and the artist will disappear a very ancient calling, and one that retained its original features from antiquity till yesterday. Scarcely any other of the middle-age arts has so kept its first nomenclature. Caxton, the first English printer, set up his office in a chapel of Westminster abbey, and a certain meeting of printers is called to this day a chapel. Many other names and customs are as old. Many things in connection with the art of printing—for example, presses—changed through the ages, but the arrangement of movable types was carried on in exactly the same manner as at first until a recent period, when came the machine. Now we shall have a new

language, for a new art, and the talk of printers for 400 years will be heard no more than the phraseology of the old-time alchemists and astrologists, whose occupation has gone.

A SOUTHERN EDITOR.

Mr. Varner, editor of the Davidson Dispatch, at Lexington, North Carolina, will be remembered as the representative at the Portland convention from his State to the fourteenth convention of the National Editorial Association. North Carolina is a good ways from Portland, but

H. B. VARNER.

there will be no such excuse this year, and it is hoped that every one of the more Southeastern States will be represented at New Orleans. Virginia, North Carolina, Georgia, Florida, South Carolina, Kentucky and Tennessee should come to the front to make up for what was lost through the small representation on one of the grandest trips ever enjoyed by the delegates to any meeting of an association ever held on the American continent; besides, they will have the reputation of their States and of the Southeast to retrieve and maintain.

Mr. Varner has the leading local paper in his State, with a circulation of over three thousand eight hundred copies per week. He promises to be present at the fifteenth convention with a large delegation. He is twenty-nine years of age and unmarried; if, however, he has any ulterior designs on any of the beautiful girls of Mississippi or Louisiana, we have not been informed of the fact, but will vouch that whatever may be his designs, they will prove honorable. He is the executive committee member for his State and also a member of the Legislative Com-

mittee of the National Editorial Association. He has been active in politics, is chairman of the County Executive Committee of his party and has also served as a member of the State Executive Committee of the Democratic party of North Carolina.

SECOND-CLASS LIVES AND FIRST-CLASS FUNERALS.

(A paper read before the Chicago Trade Press Association on December 29, by the Editor of Hide and Leather.)

Soon after I accepted the invitation of our genial secretary to speak to you I was tempted of the evil one. A subtle and selfish suggestion entered my mind.

I said to myself, "Instead of reading a paper of the orthodox and customary kind, I will preach a sermon. This will be followed by a howl of resentment and cause my being inevitably and permanently placed on the retired list of speakers, and thus compelled to spend all my future time at these meetings in ease and indolence."

The verse of my sermon is entitled "Second-Class Lives and First-Class Funerals." It is taken from the book of life, with special reference to aspiring and industrious journalists, whose zeal outruns their discretion.

Gentlemen, it must be conceded that it is difficult to get first-class products or results from second-class materials or methods.

It is difficult if not impossible for journalists to do first-class work if they lead second-class lives.

The profession of journalism is arduous and exacting. Publishers and editors, if ambitious to win enduring reputation, must give the best that is in them to their readers. To do this they must be continually absorbing the best that is out of them and around them, and if they avoid or neglect this duty will remain groundlings all their life.

The work of the journalist is exposed to the full glare of publicity and criticism. I sometimes think journalists are expected to know more about everything than most people know about anything. "Old Subscriber," "Constant Reader" and "Pro bono publico" are ever alert and watchful.

To keep the halo of the editorial "we" from wabbling, journalists should strive to remain fresh, buoyant and receptive; in other words, they must lead first-class lives.

And how do I define the first-class life?

It is not a question of riches or rude health. The first-class life is that which is quiet, peaceful, contented and unostentatious. Moderate in everything, open and receptive to the glory and ever-changing beauty of nature, to the beneficent influence of good literature, the pleasures of music and the society of refined, congenial and educated people. The first-class life takes pleasure in little things, because great pleasures are rare.

The first-class man, by cultivating self-control and philosophy of mind, becomes strong in his strength and wise in his wisdom. The form of religion adopted is immaterial, so long as it does not interfere with one's general good conduct. Above all, the first-class man regards bodily exercise as a prime adjunct to mental exercise. He is well aware that nerve-spending at work must be balanced by nerve-mending at play. He should learn to love games such as golf, riding a horse or a wheel, or tramping across the country, either with or without a gun.

Fresh air, sunshine and ample rest are absolutely necessary, besides mental cultivation, for the production of first-class journalism. And it would be better for the reading public if journalists were compelled to live in country homes instead of amid city noise and distraction, where there is less opportunity for mental and physical rest and

reflection. The first-class man does not neglect everything for business, but is careful that he and those near him in any way lead first-class lives.

And what about the second-class life? Thomas Carlyle must have noticed the large number of people leading second-class lives when he stated that the population of England was 30,000,000—mostly fools. I sometimes think the Recording Angel wonders if the variety of fools that are hauled before him every day will ever end. A short time ago this letter appeared in a prominent daily paper:

THE FATAL AGE.

Vice-President Hobart was just 55, the fatal age for business men, as is shown by the records of the different exchanges and other mortality statistics. Lawyers and clergymen live to a much greater age, but physicians and business men as a rule die in their

He was a busy man, and it is not unlikely that amid his ocean of gold he neglected his health. Probably he had "no time." He has time to burn now, but we refuse to think that this is his fate.

The second-class man lives under perpetual delusion. He dreams of future rest and rational living, and dies dreaming. His passion for wealth or reputation smothers what self-control he may have had. He goes through life handcuffed to the dollars, and it is small consolation to know that their chief function in the end will be to pay for a first-class funeral for him.

We cannot buy new nerves, lungs, liver or digestive organs, or happiness, love of nature and animals, and that sweet serenity that mellows the declining years of a well-ordered life. The man whose journal or business is his

Garfield Statue, Eighth and Race Streets, Cincinnati.

prime. The explanation is not far to seek; hurry, worry, irregular meals and lack of exercise cause many men to break down early who, with more regard to hygienic rules, might have survived to be three score and ten. Let this be a warning to others.

A bright young member of the Republican party died a few weeks ago in Chicago. One of the obituary notices stated that he was cultured and brainy and that he led the hurried life of an American gentleman and burned out at 30 years of age.

Mr. Vanderbilt died a few months ago at the age of 56.

God worships before a tin altar. I admire business devotion, but it must be tempered by moderation. Work and whisky in moderation never kill; but intemperance in either has slain its legions.

Andrew Carnegie once remarked that many men had enough to retire on, but nothing to retire to. He was warning a second-class life. Sooner or later, gentlemen, we fall heir to our six feet of sod, or feel the need of a harbor or retreat from active work. And the man who enters the shadows of old age, knowing nothing but business, holds

wasted hands, as Miss Murfree says, to the years as they pass—holding them out always, and always empty.

Countless numbers of men make a success out of everything but themselves. They grow so incrustated with prosperity that they become blind to everything but business, until with racked nerves and ruined constitutions they recall with despair their omission to cultivate the softer and sweeter side of life in their mad desire to get more business, to get more dollars, to get more business. It is a terrible chain.

He is a poor manager who does not so arrange his affairs that he may leave them for intervals with impunity. One thing is certain—if a man does not get away from his business from time to time it will get away from him.

And we all know men who have prospered and built mansions and offices, and expanded in all directions, excepting the direction of their own souls. Such men may buy liberally of quartered oak and plate glass, but they themselves remain nothing but human two-by-four scantlings.

Thomas Wentworth Higginson says, "Sad and sinful is the life of that man who finds not the heavens bluer and the waves more musical in maturity than in childhood."

It would be interesting to know what our members do for recreation and relaxation. The only exercise some journalists take is throwing rocks at the reptile opposition. I shall not complain, gentlemen, of what you say about my little sermon to you to-night if I may only flatter myself that I have taken one step toward making a journalist a better man, or a man a better journalist.

ADVERTISATORIAL.

Truth is mighty and should prevail in advertising.—Printers' Ink.

* * *

Advertising, if it succeed, must meet the eye of those who read.—National Advertiser.

* * *

Wherever there is excellence there should be advertising. Advertising causes others to know.—N. W. Ayer.

* * *

The best display of all is a good picture of an attractive article that is being offered at an attractive price.—Mail Orders.

* * *

Study the public—your customers—not yourself, when preparing your advertising. You don't want to buy the goods, but to sell them.—Fame.

* * *

The advertiser who curtails his advertising expenditure too much in dull times is likely to find the dullness has come to stay.—Wilmington (Del.) Sun.

* * *

The advertiser who advertises periodically does not get the full value of his space. It requires more steam to start a train than it does to keep it moving.—Printers' Ink.

* * *

The man who tells what he has to sell, why it is good, and just how and why he is able to make low prices, is the man who is going to get the business.—Tobacco Leaf.

* * *

This is the age of low prices. Whoever can supply the people with a good but cheap article will gain at the expense of a competitor who clings to high prices.—R. Michaelis.

* * *

Every man who advertises should read other advertisements. He should train himself in this line. He should be familiar with the tone of every advertiser in the town where he lives, and with as many outsiders as he has time

and chance to study. The most successful men in any line of work are those who know best their own special ropes.—The Wheel.

* * *

Let a man give to an idea the twist of his own individuality and that expression makes it to all intents and purposes, his.—Musgrove's Publicity for Printers.

* * *

A good ad is a knife that cuts the string on many a purse. Perhaps your knife is neither sharp enough nor large enough to fulfill the purpose.—Ad Sense.

* * *

It is better to make a success by adopting good ideas for your own use than to puff yourself up with pride at having discovered a new kind of advertisement.—Boyce's Hustler.

* * *

Dig down to the roots of the matter. Dig down to the best points of the goods. Dig down for the best expression of these points. Dig down and study every side of advertising while you are about it.—Dry Goods Chronicle.

* * *

If you are a man who is not satisfied with a reasonable return for your money—a fair profit on its outlay—don't go into advertising. Returns are often slow, and profits much smaller than over-sanguine advertisers expect.—Fame.

* * *

You cannot make advertising matter too plain, too simple and too explicit. It is always better to underestimate rather than overestimate, the intelligence of the buying public. You must talk to them so that the simplest may comprehend.—Criticisms.

* * *

Get up your ads so as to attract the attention of those to whom you can probably sell goods. Mere curiosity seekers you don't want, so do not advertise so as to attract them. Keep the true object in view, write your ads accordingly and business you will get.—The Schemer.

* * *

Many an advertisement which apparently does not sell a dollar's worth of goods may do many a dollar's worth of good, for it brings the customers nearer and nearer to the establishment, and the next advertisement may bring them in. "The last stroke makes the horseshoe;" the others were merely preparatory.—Benjamin Wood.

* * *

This is the season of the year when the business man on entering his office trips over a pile of calendars, finds another bunch on his chair and has to lift half a dozen or so before he can open his desk. All day long queer-looking individuals keep poking their unshaven faces in at his door and dropping more calendars on his head, his desk and his lap until the office overflows with them.

The advertising calendar habit seems to grow with the passing of the years. Some time ago it was almanacs with which the people were flooded at the beginning of each new year, various patent medicine proprietors issuing the little pamphlets setting forth the phases of the moon and the other information of a chronological nature deemed necessary to human happiness. But the pictorial and highly-colored calendar has taken the place of the almanac to a large extent. Every insurance company, railroad company and printing and engraving firm of any pretensions seems to feel called upon nowadays to get out an annual calendar which will hang above the desk of the business man and keep the name of the firm which sends out the calendar constantly before the eyes of the occupant and his callers.—Media (Pa.) Ledger.

Editorial Notes and Points.

The evidences of the constant improvement of American newspapers in character, in mechanical excellence, the increased care, ability and industry displayed in the editorial and news departments and in the constant efforts to get nearer to the people in sympathy and in every effort toward industrial, educational, social and governmental advancement, are among the pleasing signs of the times at the opening of this year of 1900.

The special issues of the newspapers showing all these evidences of improvements, that have been enumerated, are constant sources of gratification. Every creditable special issue results in the raising of the general standard of a paper for all subsequent regular issues.

As object lessons, we give a number of pages from different Christmas numbers this month, a sort of Christmas aftermath. These have been selected from the copies first after publication to reach this office. It is a matter of regret that we could not give specimen pages from a thousand

tion in a star centrally placed on the page, with a brilliant five-pointed star above, radiating with broad rays of light to the four quarters of the heavens, and dropping a broad flood of rays down over the center star. The body of the publication is printed on highly calendered book paper, with inserts of fine enameled paper, containing half tones of the leading business houses, best residences, churches and schools. There is a goodly showing of Christmas matter of high character on the neatly printed pages. The sketch of "Vinton, the Shire Town of Benton County," is admirably written. The following from the second paragraph of the article, demonstrates the power behind the editorial throne, the influence that enabled the publisher to produce so able a paper. It is in description of the inhabitants of the place and says: "It is peopled by a class of citizens who believe in progressiveness in business and the comforts of home life." Blessed is the condition of the editor who, whether in village or city, is backed by a progressive people. Local correspondence, filled with short, pithy items, is one of the prominent features of this paper. There are reviews of railroad, manufacturing and other improvements appropriate to an anniversary number.

* * *

The Waterloo Press from Waterloo, Indiana, is bright with Christmas illustrations and matter. The novelty and poster effect of its Santa Claus first cover page tempted a reproduction, but the lines had to be drawn somewhere.

* * *

The Bulletin of Linneus, Mo., the first cover page of which is shown among our illustrations, speaks for its own artistic beauty. It was in full accord with its readers in the glad Christmas time. The editor is a thorough believer in Santa Claus and says: "Who cannot remember when, with rapturous eyes, he first looked for the coming of Santa Claus?" * * * "The very essence of the Christmas spirit is unselfish love." * * * "It was the mission of the King of Peace to implant the principles of love and joy and hope within the bosoms of people yet on earth."

* * *

One of the most successful new dailies in the country is the Indianapolis Press. One of the reasons for the sudden success of the paper was the fact of the popularity that had been won by the editor and manager in connection with the Indianapolis News. Mr. John Holliday and Major Richards had very warm places in the hearts of the citizens at the first, and then the paper was put in touch with the people. A whole page and more of this issue was covered with the good words and portraits of prominent residents, including ex-President Harrison, Senator Albert J. Beveridge, Governor James A. Mount and a half hundred others, ministers, local merchants, manufacturers, wholesalers, railroad men, labor union men, judges, lawyers, physicians and many others, not forgetting the noble women. This showed a newspaper enterprise and confidence and a regard for the opinions of readers that is worthy of imitation. Thousands of newspapers would gain much by asking the opinions of the people with regard to their publications. If the result were not so favorable as that obtained by the Press, the criticisms would be equally valuable with the kindly suggestions and recommendations.

* * *

The Sioux City (Iowa) Journal gave in forty-four, seven-column pages, all the current news of the day, foreign, domestic and local, seasoned with editorial comment and miscellany, besides showing all the wondrous resources, development and improvements of the rich region and beautiful city where the paper is published. The account of

papers, but selections were made with a view as to variety and in some cases as to novelty of designs. One of the neatest of the papers not shown by illustration is "The Vinton (Ia.) Eagle holiday number." Its first page is printed in red and green, with a half-tone view of the city of publica-

the city and the region contributory was well illustrated with coarse-grained half-tones. The paper is a valuable model in the way of stating facts in a striking manner and yet keeping within the truth. It is an art that has its limitations and yet can be wisely studied by newspaper makers. The limitation, or danger to be guarded against, is to be careful not to make the truth to appear as mere romance, but to have the truthful statements convincing as well as striking. As a good illustration of forceful statement that yet carries the evidence of absolute truthfulness take the following from the paper, under the general heading, "Nine Lines of Railway Now in Operation:"

"A distance equal to more than two-thirds of the circumference of the earth—that is how far a man might travel on railroads operating to Sioux City, without passing through a single city so large as this, and without traversing any of his routes twice.

"It is an astounding fact that the nine railway corporations having connections with Sioux City operate, on the several divisions of their main lines and branches, exclusive of branch lines east of the Mississippi river, a total trackage of more than 17,000 miles within a circuit in which there is no other city the size of this.

S. C. and W.....	130

Total 17,037

"Take a map and measure on it a line from Chicago to Des Moines, thence to Omaha, thence to Denver, thence to Salt Lake City, thence to Portland and Seattle, thence to Winnipeg (the largest city in western British America, although not so large as Sioux City), thence to St. Paul and thence back to Chicago, and you will find the circumference of the area inscribed to be about 4,400 miles, and within all that tremendous domain there is not a single city with the population and business of Sioux City, and with all parts of the region she has more or less trade. The oval included is 2,000 miles in its longest diameter in an air line, and 800 miles in its shortest, and it contains nearly one-third the area of the whole United States."

The "Gratifying Story Told by Finance" that shows the increase in bank deposits, loans, discounts and clearings; "The Municipality and Its Progress," showing the city's organization, how it pays its obligations, its profitable ownership of its water works, the millions expended for paving and sewerage, the efficiency of the fire department, and "The Federal Government," showing expenditures in buildings and the growth in the postoffice business; "Forty-four Years of Court," giving the succession of judges, incidents of initial terms, remarkable trials, etc., etc.; "The City's Religious Organizations," recording the growth and membership of the different societies, with history and entertaining incidents; "The City Schools" historically treated, as to development, present buildings and organization; "Hospitals and Charitable Homes," enumerating, with incidents and descriptions, the institutions for the care and treatment of the sick and injured, and the benevolent institutions and organizations and homes for young women, for boys and girls, for mothers and babies, and the gratuitous accommodations for the needy; "Semi-Centennial of the Metropolis," telling the city's story from the first white settler in 1849, with all the wonderful growth, with incidents and statistics, not forgetting local geology and topography; "The Street

Cars;" "The City's Industrial Development," with description and enumeration of manufacturing establishments, and of the raw materials used, etc., etc.; "Sioux City as a Wholesaling Center," embracing facts as to regions concerned, the live stock and general merchandise interests, the institutions engaged in the several lines and history of the stock exchange—are all full of suggestions to every wise publisher. This issue of the Sioux City Journal would be of immense value in every newspaper office and to purchase and keep a copy on file as a model and for reference, would prove a wise investment that would repay a thousand-fold the cost and trouble. The complete manner in which every subject is covered and the orderly arrangement of matter and of appropriate illustrations under the several respective headings, make the paper of especial value, interest and convenience.

* * *

There is no self-praise in saying that we sincerely believe the suggestions we have been able to gather and to give in this article with regard to this one newspaper will make this one copy of the National Printer-Journalist, to quote the complimentary words of Past President Walter Williams, "Worth fifty dollars to any editor with sense," accompanied with sufficient enterprise and industry, to use them. And we would be loath to say that there was any American editor or publisher without "sense," as regards matters profitable or valuable to the success of his business.

* * *

In excellence over all others received is "The De Kalb Chronicle Illustrated Souvenir," of De Kalb, Ill. The pages are 8½ by 12 inches, printed on fine book paper. There are two hundred and sixteen of these pages besides the cover.

The De Kalb Chronicle is published by the J. F. Glidden Publishing Company, of which Clinton Rosette is President, Treasurer and Manager. This "souvenir" edition very appropriately opens on the editorial page with the following classical quotations on the value of publicity:

"Advertising is to business what steam power is to machinery—the grand motive power."—Macaulay.

"There is but one way of obtaining business—publicity; but one way of obtaining publicity—advertising."—Blackwood.

The cover page, a reproduction of which is shown herewith, gives a good idea of the scope of the paper.

Work was commenced on the publication over a year ago and the result shows that a wonderful amount of patience, perseverance, industry, taste, skill and no small sums of money have been expended. It is a complete picture of the county, by townships, in excellent word pictures and half-tone illustrations and portraits, from the earliest days to the present. It is a genuine work of art and is so perfect and complete that its value must grow with the lapse of years, as it comes to be looked back upon more and more as authority and as a delightful portrait gallery of the early pioneers and their immediate descendants. The scope that has been carried out in detail is best understood by the following introductory article showing the original plan: "To form a literary panorama of the great manufacturing, industrial, commercial, literary, educational and religious interests of the most thriving and beautiful county in northern Illinois, which is believed to have a future of marvelous growth and prosperity, a vivid and truthful presentation of the superior advantages offered by DeKalb county as a field for prudent enterprise and legitimate investment.

"We hoped that it would contain an illustrated description of every important business concern in the county. We expected to make a place for an excellent portrait of a

Reproduction of First Page of Supplement of De Kalb (Ill.) Semi-Weekly Chronicle.
Suggestive of Topics Treated in Annual Souvenir.

larger number of representative men and women of the county than ever appeared in any other county publication in the world. We assured all who placed their picture in this edition that they would be in good company and have plenty of it. There would be room for the children. The chapter on men and women of 1920 would be interesting and desirable to the little ones of to-day. You were all invited to co-operate with us in making this issue of the Chronicle in all respects a credit to DeKalb county.

"We were anxious to have the work in every respect a mirror of the present, its schools, churches, industries and manners and customs of our people, but we were especially anxious that it should be a means of preserving much that is valuable regarding the past that had as yet never been recorded.

"We are prone, in the midst of the condition of the present, to forget the bold self-sacrificing pioneers and early settlers who amid privations and dangers, founded an empire in the wilderness and thus made possible the comfort and blessings of the civilization that we enjoy to-day. Heirs of the past, we are also its debtors, and it is fit that we often recall to grateful remembrance, the early settlers to whom the present generation are under so many and lasting obligations.

"The facts set forth in these pages, not heretofore having been embalmed in print, had to be collected from interviews with the gray-haired representatives of "the good old days" who, crowned with respect and honor of all thoughtful men, yet linger among us. We deem it fortunate that the work of preserving their recollections of the first days of this county and the life history of these heroes of days gone by, has been undertaken before the last old settler shall be gathered to his fathers.

"Thus we have been enabled to gather from the living the tender memories of those whose sacrifices have opened up this garden of the West. Let the present kneel at the shrine of the past and drink in the lessons that it teaches. Many of them left pleasant homes, surrounded by the luxuries of life, where human toil had garnered much into the store of comfort, and here by their iron wills and correct habits, yet survived the dangers that ambushed their pathway. Many a spot has become sacred because the dust of departed pioneers has been enshrined therein, whose lives were taken in the struggle to bequeath these splendid homes and build up these beautiful thriving cities and villages that dot our land.

"The soldier who risks his life in battle for his countrymen receives the highest praise and glory; but these hardy men and women who battled with malaria and disease in blazing the pathway of posterity through a wilderness of latent dangers, to such a goal of health and happiness as we have reached, deserve to have their memories preserved as we are doing now and handed down to those who follow us. We beg to urge upon the young men and youth whose eyes shall fall upon these pages to ponder well the records of these busy lives, that they may rightly estimate the great inheritance they have received, and thus be led to emulate, and if possible, to equal the virtues of the great generation they are to succeed in this spirit.

"To the pioneers and early settlers—the men and women who laid the foundation broad and deep upon which the DeKalb county of to-day is build—this issue of the Chronicle is affectionately dedicated by its authors."

This plan and these very words with little variation can be profitably adapted to any city and county in the United States. There is a good deal in the paper, too, that is of both local and general interest. Such especially are the articles on "Township High Schools" by Prof. H. L. Bolt-

wood, of Evanston, Ill., who has completed a half a century in high school work and is properly designated as the "Father of the Township High School;" by Professor David Felmeý of the State Normal School at Normal, Ill., and by David Bayliss, Superintendent of Public Instruction of Illinois. President Rosette has accomplished a work of great use to the whole State as well as to his city and county. Every newspaper publisher would find this "Illustrated Souvenir" of inestimable value in getting up a like work.

The article under the head of "Men and Women of 1920," illustrated with pictures of the little children from six months to seven or eight years of age, opens a most delightful field, especially for illustrations or portraits, that appeals to every lover of the beautiful and novel, and to all whose heart goes out toward the little ones. The illustrated article on the "Soldiers of '61" would find interested readers in every section of the Union.

* * *

The materials for good local papers and special issues thereof are almost inexhaustible if a publisher is only alive and keeps in touch with other live publishers through the pages of the National Printer-Journalist. This thought is enforced by the following kind letter received from one of the wideawake newspaper publishers of Minnesota, whose good work we have had occasion to commend on two or three occasions:

Mapleton, Minn., December 20, 1899.

B. B. Herbert, Esq., Chicago, Ill.:

Dear Sir—The last mail brought the National Printer-Journalist and with it the greatest surprise of my life. I thoroughly appreciate the space you have devoted to the Enterprise and believe that it will be the means of encouraging others besides myself to better efforts. When you take into consideration that Mapleton is a town of only a thousand people and located in a county with two dailies and a dozen weeklies, it means something to issue a creditable holiday number, and when the work is finished one feels like saying, "Well, I will never do that again," as the effort does not seem to be appreciated by those about you, but when one receives the encouragement of a publication of the standing of the Journalist he is brought face to face with the fact that "a prophet is not without honor save in his own country." Our efforts this year have been appreciated more than ever before, and in the way of advertising we have had better backing, but this is largely the result of working up a reputation for our special editions. There is a wide field for the wide-awake printer, although it may not pay in dollars and cents. One Christmas we issued an edition giving Christmas in the various state institutions, thereby giving our readers a better idea of the public buildings of the state and their management. At another time we had Christmas in foreign lands, and we were surprised when we went at the work how many persons even in a community as small as this had traveled abroad or were natives of some land across the sea. I found a sailor who had lived in Samoa, a preacher who was from Poland, another from France and a third from Germany, a merchant was from Norway. George Keenan, the explorer, lectured in the community and an interview secured an article on Christmas in Siberia. Then we had our pioneer number, of which you made mention last year, giving an article on the pioneer lawyer, doctor, editor, preacher, schoolmaster, etc.

It means work, but such editions build a reputation for a paper and bring it from the obscurity which develops the paper which is content from week to week to fill its columns with patent medicine notices and matter of not much more importance.

But I have drifted from my original motive in writing you. I wish to thank you for your words of encouragement, and enclosed you will find \$3 for which send marked copies of your last issue to the following addresses. * * * And the remainder to this office. Again thanking you for your courtesy, I remain, very truly yours,

H. C. HOTALING.

By way of comment we wish to especially enforce the points in this letter in which Editor Hotaling speaks of the discouragements at first encountered, but of the subsequent growth in appreciation, in the standing of the paper, and the increasing profitableness of these efforts. An ounce of experience is worth a pound of theory, and Mr. Hotaling gives us several pounds of experience and of valuable suggestions resting on that experience. It is constant, per-

THE REPUBLICAN-ATLAS.

Wanderer's Edition.

YEAR'S
NUMBER

sistent effort that wins in the newspaper field that, as Mr. Hotaling says, is "wide for the wideawake printer," and we believe that such efforts will ultimately pay both directly and indirectly in dollars and cents, and that a hundred fold. But suppose an editor is useful and makes his business self-supporting, even if he does not hoard up dollars, will not the respect in which he is held be as great and his life much sweeter and happier than would be the case were he using his knowledge and talents to overcome and surpass his neighbors in the wild grabbing for pelf, that is generally only a care when obtained?

* * *

Hon. Thos. Rees, the energetic manager of the Illinois State Register, has issued this month a valuable statistical almanac, wholly devoted to the State of Illinois. Besides this he offers to furnish plates of the work or printed sheets with blank pages for advertising or complete books with any desired advertising printed therein, to other Illinois publishers on reasonable terms. We speak from experience when we state that a county almanac or annual in pamphlet form is a profitable enterprise if properly handled. Such a publication ought to prove vastly more valuable if supplementary to a State almanac. Many of our local offices do not make enough of State affairs. Next to local news, a carefully prepared page of State news, prepared with a view to the making of such news of local value by the way of example, precept, encouragement and inspiration—can be made the most popular and useful portion of the paper. The getting out of an almanac shows enterprise, helps piece out work in a generally dull month and is a good advertisement of a newspaper printing office. Much of Benjamin Franklin's early fame as a printer and newspaper publisher came from his "Poor Richard's Almanac." We are not all Franklins, but there is so much material at hand in the way of educational, industrial, building and other statistics, so much that needs preserving in a more convenient form than newspapers, that at least one newspaper man or printer in every prosperous county can profitably be an almanac maker for one month in the year.

BIG MONEY IN STORY PAPERS.

Great were the profits of the old "story papers." The late W. Stevens left a fortune of \$1,250,000 as his share of the property of the English Family Herald. This periodical was started in 1842 for the ostensible purpose of giving work to a typesetting machine, the first completed instrument of its kind, invented by Young and Relcambré. The first twenty-three numbers of the paper were of four double-demy pages. The composing machine, which cost a fortune, proved a failure, however, and its use was soon abandoned. But the Family Herald, which it brought into existence, has been the making of two or three fortunes, and is still prosperous, notwithstanding the competition with which it has to contend. This recalls the rumor that some years ago the publishers of the Family Story Paper of New York netted each week the sum of \$2,000.

LIKES THE DEPARTMENTS.

Logansport, Ind., December 23, 1899.

B. B. Herbert, Chicago.—Dear Sir: I shall certainly take great pleasure in reading the experience of others in the department of circulation. I want to compliment you on the department features which you have been establishing lately and yet every one knows who takes it that there is no publication superior to the National Printer-Journalist for newspapermen and printers. Yours truly,

J. E. SUTTON.

By O. G. WOOD, Chicago.

Publishers who wish criticism on their newspapers are respectfully requested to direct the same to this department.

KANSAS has always been well represented in this department, and now comes the Girard Press from that State. Brevier old-style antique is the largest type used for display in the reading matter on the first page; it is not large enough; there should be more headings on the first page among the reading matter. Four columns of straight reading without a break is too much, and is exceedingly likely to be the cause of some person turning away from the page—a thing to be avoided. The Press has six columns, and so has the Weekly Clarion-Ledger, of Jackson, Miss.—a reproduction of which appeared in the last number of the National Printer-Journalist—which is a good example to follow for makeup. Several bad errors in proofreading are easily found, and they are not "style" either, but wrong letters. The presswork could be improved. The ad display should receive more attention, as the selection of type is good and proper use of it would help the appearance of the paper. It is not intended by these criticisms to mean that the Press is a poor paper, for it is far from it, but these are suggestions offered for its improvement.

* * *

In the department of Editorial Notes and Points last month appeared an extended notice of the Blue Earth County (Minn.) Enterprise, stating that the paper would be criticised in this department. Many nice new faces of type are to be found in the pages, such as Jenson, De Vinne, Bradley italic, Livermore, and Quentell, of various sizes. In the desire to make the paper look nice, there is a tendency to over-ornamentation, in the ad display, but many of the ads could be copied to advantage by papers much more pretentious. Some of the display is really good and artistic. The makeup and presswork is fairly good, and the local news field well covered.

* * *

Locals are the special feature of the Bloomfield (Ind.) News, and the whole of the first and nearly all of the second page is devoted to this important department of a local weekly. Double-column department heads appear in the first and second and fourth and fifth columns. Quentell is used for the headings—8, 12, 18 and 24-point—and it makes a very clean appearance. The News is a dignified, well-arranged paper, and a credit to Bloomfield, and therefore to Messrs. Lamb & Maddock, the proprietors.

* * *

Frank Vernon, the man with so many irons in the fire, as well as being the publisher and proprietor of the Cisco (Tex.) Round-up, speaking to delinquent subscribers in a recent issue of his paper, says:

TO WIVES OF SUBSCRIBERS.

If the Round-Up doesn't visit your home after January 1, please don't accuse us of carelessness until you first ask "hubby" this question:

"Say, hubby, how long has it been since you paid the Round-Up any money, or wood, or corn, or any condiments on subscription?"

THE LINCOLN COUNTY CLARION

A JOURNAL DEVOTED TO PUBLISHING ALL THE NEWS.
THE LARGEST NEWSPAPER IN LINCOLN COUNTY.

Note his reply, and the chances are that all will then be clear, at least as clear as we can make it.

The fact that the Round-Up subscription account has gradually been getting deeper and deeper in debt forces us to part company with some of our dearest friends.

No one expects the Dallas News, the St. Louis Republic or the Houston Post to be sent them unless they pay the cash in advance. Why not entertain the same feelings for the Cisco Round-Up?

We merely mention this as a business comparison, and we are beginning to learn that in justice to those who pay for the Round-Up in advance will have to ask the others to, else we cannot give as good service to our cash customers as we otherwise could.

Taken as a matter of sentiment we would be glad to carry every one who wants the paper and never ask or expect them to pay a

indifference. It has been stated a thousand times, and just as many times truthfully stated, that there is no other factor which does as much for a small city as that of the local paper, when well conducted by a man not suffering from liver complaint.

* * *

A copy of the Republican, Oakland, Md., along with the following letter, has arrived at this office:

Oakland, Md., December 23, 1899.

O. G. Wood, Chicago, Ill.:

Dear Sir—Under separate cover I send you a copy of the current number of the Republican and invite criticism as to its general makeup and ad display. I think the department under your charge in the National Printer-Journalist is one of its best features.

With the compliments of the season, I beg to remain, very respectfully and sincerely yours,

BENJ. H. SINCELL.

This is very nice, and "we" sincerely hope, Mr. Sincell, that you may live long and prosper, you and the Republican. It is very gratifying to know that this department has been a success in your opinion; others have said the same thing about it. When Mr. Herbert suggested that I take hold of this department a year ago I asked him what he wanted me to say about the different papers, he replied: "Say anything you like—tell the truth," and the blue pencil has never passed over any of the lines of criticism offered; the truth has ever been the motto, tempered with kind consideration for those who so often labor under difficulties in many printing offices. But what about the Republican? Well, take all the ads off the front page just as soon as your contracts will admit of this being done; set the display heads for the reading matter larger, and also the heads for the local news—let the towns or places stand out in good bold type. The Republican is well made up and the presswork is above the average.

* * *

New Philadelphia, Ohio, is this month represented by the Tuscarawas Advocate, of which two copies have arrived, and this letter:

New Philadelphia, Ohio, December 22, 1899.

O. G. Wood, Department Comparison and Criticism:

Dear Sir—I send you by mail herewith two copies of the Tuscarawas Advocate for such criticism as you may think they merit.

Yours, etc.,

J. L. McILVAINE, Editor.

In view of the fact that the paper was established A. D. 1819, it makes a person who was born several decades later feel like being very careful in his criticisms. If Mr. McIlvaine has been running the Advocate ever since it started, he no doubt knows a thing or two about the newspaper business himself. The Advocate is well printed and the makeup is good. Nine columns to the page, however, is seldom seen nowadays, and by giving the paper an additional fold, a more handy size would be obtained, which would result in eight pages, instead of four, as at present, and six columns would fit the same stock, run the other way, of course. Cutting the column rules and buying a few additional ones would be about all the expense necessary in order to make the change, and as the same size of stock would be used, no change in the press or anything in this line would be required. The first page could then be devoted exclusively to news and the "next to reading matter" fellow have a better chance—in fact, just double the chance.

* * *

The Donaldsonville (La.) Chief recently had a birthday, and Mr. Bentley, the editor said:

Last week's issue completed the Chief's twenty-eighth volume, and with to-day's edition begins the twenty-ninth year of the paper's existence. It has been issued weekly and without interruption since the autumn of 1871 under the ownership and management of its present editor and proprietor. Beginning as a six-column folio,

First Page of Twice-a-Week Republican, Geneva, Ill.

dollar, but our printers refuse to accept sentiment in payment for wages and the paper dealers say they can't cash it at their banks.

So, my friends, if you have been taking it through sentiment we have been entirely ignorant of the fact.

If, on the other hand, it was a business proposition and the good man of the house took the paper because he thought it was worth a dollar a year, it would seem to us good business policy to get right on our books as quickly as possible so that we shall be able to keep the paper coming to you.

We are going to keep it running just the same for the benefit of those hundreds who have paid in advance and as a business enterprise of our own, but we dislike very much to see any of our friends dropped from the roll on January 1, as they surely will be unless settlement is made between now and that time; for we have some new features to inaugurate with the beginning of the new year which you would appreciate. So take this matter up with he who carries the purse before you lay aside this paper, then all will be well. Yours affectionately,

THE PUBLISHER.

It is nothing more or less than a crying shame that so many people look upon paying for the local paper with

it has been twice increased in size, first to a seven-column, and subsequently to an eight-column folio, and to-day witnesses its third enlargement and a change of form to six-column quarto, thus adding nearly 200 inches to the aggregate length of its columns.

It has never been our practice to indulge in lengthy retrospect or to make elaborate promises for the future and there is no occasion for doing so now. The established character of the Chief is a sufficient indication of its future course. It would be strange indeed if in the period of more than a quarter of a century, witnessing some of the most remarkable political transitions in the nation's history, a newspaper endeavoring to keep abreast of the times in politics as well as other matters pertaining to its mission, should not have become amenable to accusations of inconsistency, particularly from the thoughtless or shallow minded, who fail to remember or appreciate the truth of the adage that "Consistency is the virtue of fools." The Chief has never feared such criticism, because its positions have always been founded upon what seemed best under existent conditions and contemporaneous circumstances, for the public good and its own welfare.

The part the paper has played in encouraging the moral and material advancement of the community we leave its readers to judge. Its course in that regard will not be changed.

No increase in the subscription price or advertising rates will follow the enlargement of the Chief's dimensions. Thanking our readers and advertising patrons for past favors and soliciting a continuance thereof, we make our annual bow and strike out for milestone No. 30.

The foregoing is taken from one of the copies which arrived at this office along with the following letter:

Donaldson, La., November 26, 1899.

Mr. O. G. Wood, Chicago, Ill.:

Dear Sir—I mail you two copies of the Chief for criticism, the first number of the quarto form dated Aug. 19, 1899, and the latest issue, dated yesterday. The first is a poorly printed one, but the only one I have available at the moment without invading my shelf-life. Yours truly,

L. E. BENTLEY.

The Chief is well made up, fairly well printed, and possesses an extensive advertising patronage. The presswork, however, is a little below grade; the color being very uneven, and the cuts not brought out in good shape.

* * *

A man has but little force of character unless he makes some enemies, and would cut little figure in the world. This is from the Russellville Democrat:

Every editor makes enemies. A little squib aimed at no one in particular will hit some hollow-headed individual and he at once declares himself "agin the paper." The paper may have given him many complimentary notices, but the imaginary thrust puts him on his dignity. He at once establishes himself as a critic; but he hasn't enough nerve to go to the editor with his supposed grievance. Just notice, and you will see that the men who are "agin" their home paper are men who would not be missed if they would leave the community forever. On every question of local interest the home paper stands ready to make a fight for the best interests of the greatest number and has always the greatest number of the best citizens at its back.

It is not a good plan for an editor to go around with a chip on his shoulder, but he must consider himself too old a dog to be afraid of every pup that barks at him.

* * *

Here is a paper with a word to say about the credit "Ex." The cutting is from the Odd Fellows Review:

We observe that a great many of our exchanges, in copying articles from the papers, simply follow them with the abbreviation "Ex." This we consider almost as bad as failing to indicate in any way that the articles are copied. It shows, it is true, that they are not original, but it robs the real author of the credit that is his or her due, and is therefore a wrong to such author. Furthermore, it is inconvenient, many times, to another publisher who sees it for the first time thus published and desires to use it, but desires to do so only by giving proper credit to the true author. If an article is worth copying at all, it is worth crediting clearly to the true author. A recent letter to the publisher of this paper from an esteemed brother publisher shows that his authorship of an excellent article published by us was unknown through the discreditable failure of some one who first copied it to properly credit the article to him. It is time that the failure to credit copied articles at all,

or to simply credit them to an "Ex." was stopped, as all honorable men will even "give the devil his due."

It is just as easy to give proper credit as to try and skin out of it by putting "Ex." The value of an article is in no way increased by using the abbreviation, neither is the standing of a paper improved by not giving proper credit.

* * *

The Enterprise Liberal, Mo., was printed on the yellowest of yellow paper on Friday, November 17, 1899. At the close of a long editorial about the Enterprise being now seven years old, Mr. Martin says:

Friends, the color of paper adopted this week does not, as generally supposed, denote jealousy or envy, for we know of no paper in this neck o' the woods of which this office or paper should feel in the slightest degree envious. We simply adopted it as an anniversary change.

It requires some courage to print a "yellow" paper in these days.

* * *

The Tipton (Mo.) Times-Gazette stands on its merits, as the following editorial denotes:

The Times-Gazette does not give chromos, a month or two more subscription for a dollar, or any such appeals for public favor, but continues to strive to please its readers, as a reliable, fair and newsy paper. The friendship and good feeling exhibited toward the Times-Gazette is appreciated and is a source of great pleasure to us.

There are two sides to this question of giving chromos; many papers have reached enormous circulations through "special offers."

* * *

The Joliet (Ill.) Weekly News adopted the following plan to improve its advertising patronage:

The Joliet Weekly News will make a New Year's gift of \$5 to the person living the greatest distance from Joliet who buys during the month of December, 1899, goods amounting to \$5 or more from any merchant advertising in its columns during that month. All you have to do is to get the Joliet merchant from whom you buy to fill out and sign one of the coupon blanks. Bring or send it to the News office, and on January 1 these slips will be sorted out and the \$5 sent to the party found to live the longest distance from Joliet.

The Joliet Weekly News will also give \$5 in gold to the person buying the largest bill of goods during the month of December from any merchant advertising in this paper during that time, no matter where they live. Get certificate from the merchant, same as explained above.

This is not a bad idea and could be adopted for any month in the year, January or July—it makes no difference.

* * *

In celebration of the beginning of the fifth year of publication the Lincoln County Clarion, Lake Benton, Minn., enlarged to twenty pages. The ad composition is particularly good and is the work of Mr. R. A. Turner, who is also editor, who says:

In closing this form, the last of this edition, we are conscious of a thousand things we might have done differently, of many errors in phraseology that ought to have been corrected, of many things that might have been mentioned that are not, all because time would not permit some, and space would not permit others. The entire edition has been prepared under pressure of time and all the work, except photos taken by A. E. Tasker and making of half-tones, is a product of the regular Clarion force. When it is taken into consideration that this is the busy season when job work is rushing and the regular edition requires extra attention, the magnitude of the undertaking can be realized.

This is true enough, and any practical man who looks over the paper must admit that the result of the undertaking is astonishing. The getting out of one of the great Chicago papers does not compare to this for individual effort. Just think of it: writing the editorials, setting the ads, making up, locking up—and doing it well—a twenty-

page seven-column quarto, and all done with only the force used for an eight-page paper. Mr. Turner further says:

The rapid growth of the paper has not been accomplished by magic, but is the logical result of continuous and unremitting labor to give the people a newspaper that they would appreciate.

I am inclined to think this is a true statement—the evidence is before me in the paper sent for criticism.

* * *

The Columbia Missouri Herald of December 15 was full of letters from the children to dear old Santa, and also one from the Herald's Editor-Man. This one I have cut out

and tucked away in my scrapbook in the hope of again reading it some Sunday afternoon when all is warm within and when the snow is deep on the ground and the wind is chill without.

* * *

The South seems to be in the way of making improvements in newspaper circles. The Evening Post, Charleston, S. C., is preparing a new home, according to this paragraph:

The Evening Post has purchased the building at 111 Meeting street, which is now being remodeled and transformed into a suitable home for this newspaper. A fast printing perfecting press has been ordered and will be installed in the new establishment within the next thirty days. The Evening Post will thus begin the new year in a permanent establishment, and, with the full equipment of a modern newspaper, be able to serve deservedly a public whose support has made possible the advancement attained.

The Post looks very well now, but no doubt many improvements will follow as the result of new quarters.

* * *

The Crawley (La.) Signal has moved into its own building, put in a Mergenthaler, and made a number of other

improvements. It is a clean and bright paper and a credit to the State where the next meeting of the National Editorial Association is to be held.

* * *

Here is an editor in favor of the farmer as against the politician:

The farmers in Oklahoma are far more generous to newspapers and newspaper men than the politicians. One of the peculiar traits of an Oklahoma politician is his stinginess. If we are ever called upon to address the press association upon any subject, we propose to investigate and report on this subject and how to remedy this matter.—Newkirk News.

A communication to the National Printer-Journalist on this subject would receive attention.

* * *

I fail to see how any editor can feel very well in health when he writes long editorials on the great benefits to be derived by young ladies attending a certain college or seminary, and then immediately follow this eloquent flow of sweet words by an ad headed "Piles Cured Without the Knife." This is a hint to the editor of the Princetonian, Princeton, Ark.

* * *

A substantial appearing and well printed paper is the Plymouth (Ind.) Democrat. The makeup is good, the local news field well covered, and it possesses a first-class local advertising patronage. The Democrat has the appearance of being full of life, push and activity.

* * *

A copy of the Pleasanton (Kan.) Observer has arrived; the front page being printed in red and black, very much out of register; perhaps only a few copies went out printed like this, but it certainly spoils the appearance of the paper, which is very nice otherwise.

* * *

If the business manager of the Purcell (Ind. Ter.) Register would issue orders to have all the type used on that paper thoroughly washed out, a great improvement in its appearance would be the result.

* * *

Religious and medical papers, as a rule, are anything but well printed, and The Life, a weekly journal of Christian Metaphysics and Healing—published at Kansas City—is no exception to the rule.

* * *

The editorial column of the Wamego (Kan.) Times should be moved to the fourth page. It now appears on the second, which is not customary.

ADVANCE IN PAPER.

Ewing Herbert, speaking of the recent advance of paper, says in the Hiawatha World recently: "News paper advanced ten per cent a hundred last week and notice is given by the jobbing houses that prices on all lines of paper stock are subject to advance without notice. The traveling men are all in deadly fear that the whole business will soon be absorbed by the trust and that they will soon all be out of a job. And what worries the long-suffering publisher is that he cannot advance the price of his newspaper no matter how much the prices of news paper goes up. It is a badly balanced world. And there must be some way to bust the trusts."

EMPLOY THEIR OWN COLUMNS.

Some newspapers haven't discovered how they may employ their own columns to increase the value of the paper, while others have discovered such method and are making the most of their opportunity.—Fame.

This department is intended as a clearing-house of suggestions and opinions as to the best means of securing, handling, and retaining subscriptions to all kinds of newspapers. Communications are solicited.

MANSFIELD, OHIO, December 27, 1899.

Editor NATIONAL PRINTER-JOURNALIST, Chicago, Ill.:

My Dear Mr. Herbert:—Answering your favor of the 26th, I am glad to know that you have concluded to open a department on circulation in your valuable journal. This matter of circulation like that of advertising lies nearest the hearts of newspaper publishers and it is about as difficult to find persons who agree upon the methods of obtaining and maintaining circulations as it is to find two faces alike.

The first proposition, however, is to make a good newspaper, and when I say "a good newspaper" I mean a newspaper which aims to give all the news free from envy, malice and party prejudice.

I aim to give my readers the benefit of eminent divines like Talmage and others, and at the same time give equal attention to the baseball fans, the bicycle cranks, not overlooking the women's and children's departments, horse notes, markets, and above all, make a good strong local paper.

Along with doing all this the next thing to do is to let people know what you are doing and to that end we canvass this city and adjoining towns twice a year. We employ our own carriers and keep subscription accounts of the Daily at the office, giving the carriers their books on Friday evening for each week, on which they make collections on Saturday.

We have tried all kinds of book, picture and garden seed schemes, but the only good scheme in my judgment is that noted above, namely, a good newspaper. The field of inland daily newspapers is a peculiar one; to get the confidence of the people and a good circulation we must give all the local news and be at all times honest, fair, fearless and upright. Very truly yours,

W. S. CAPPELLER,
President News Co.

CIRCULATION AN IMPORTANT PROBLEM.

LOGANSPOUT, IND., December 28, 1899.

Editor NATIONAL PRINTER-JOURNALIST:

Dear Sir:—There is no doubt that the circulation of a newspaper is the important problem that must be solved before success can be achieved in publishing. I believe that circulation cannot be secured without personal canvassing. I know of no paper that has been able to secure a circulation worth speaking of by the mere act of advertising or of making a good newspaper, which was so long thought to be the method by which a large subscription patronage could be secured. Competition is responsible for the fact that the newspaper with the largest circulation is the one that has constantly at work solicitors for subscribers. The paper may be even inferior to some of the old style journals whose editors believe in making a good newspaper and letting the public come in and subscribe. In these modern days the public expect the solicitor to come to the house

and get their subscription. I have found in my own case that it has paid to support the work of a circulator and assistant circulator who are always on the alert to secure subscriptions by solicitation, with a special canvass made by outside experts every spring and fall. At these "round-ups," as they might be called, the entire city is covered by a house to house canvass. It is at these times that sample copies are put out to the best advantage. It does not pay to put out sample copies without following them up with a solicitor. In our case we have found that the carrier boys very rarely follow the sample copies up with enough vim to get many subscribers. It must be a regular solicitor who follows to make the sample copy distribution pay.

One of the most important duties about circulation is to keep it steady after it is secured. It is for this reason that the Reporter has maintained its semi-annual canvass of the city, and still the heaviest part of the work falls upon the circulator who makes it his duty to follow up every case where a subscriber stops and find out the cause and get him to renew if possible. It is a curious fact that even where cause has been given within a month's time the offense has mellowed to that extent that by a little suave attention the subscriber is renewed and becomes a stronger adherent to the paper than ever before. Some subscribers in towns of twenty thousand or less are sensitive plants which must be treated and cultivated with the closest possible attention to their feelings. If they are saved they are generally enthusiasts who brag up the paper, but if they are lost they are generally knockers who give the paper much adverse advertising. Improvements are necessary, too, to keep the interest up and maintain the circulation at the top notch. But without solicitation and personal contact with the subscribers no paper could maintain a large circulation, no matter if the paper was metropolitan in its appearance and ability.

J. E. SUTTON,
Publisher Daily Reporter.

OFFICE OF THE DAILY PHAROS,

LOGANSPOUT, IND., January 3, 1900.

Editor NATIONAL PRINTER-JOURNALIST:

Dear Sir:—In answer to your inquiry, will say that our method of obtaining new subscribers for The Daily Pharos and holding old ones has nothing new or novel to commend it. We have learned from experience that the best way to obtain new subscribers and the most effective way to hold the old ones is by making the paper of general local interest. The Daily Pharos was established twenty-five years ago. Its circulation reached high water mark during the year 1899, although no special effort, further than to give our readers an abundance of news, was put forth to secure the increase. We employ a circulator, whose business it is to look after the circulation. His duties are many. He oversees the collection of subscriptions, looks after delinquents, and, in case a subscriber stops, inquires into the causes that prompt such action. Our papers are delivered by carriers, who do the collecting monthly. Each carrier is provided with a receipt book and stub. The receipts contain the names of every subscriber on the carrier's route, with the amount due from each. The stubs are retained by the carrier and returned to the office with the receipts of such subscribers as did not pay. When the amount due from a subscriber reaches a certain sum, the circulator looks after the collection. The carriers are paid so much per month for delivering the papers. Their compensation is based upon the number of papers carried.

In addition to this, they are paid a small per cent for making the collections. This per cent is uniform. It serves as an inducement for all to make good collections.

LOUTHAIN & BARNES, Publishers.

PROSTITUTION OF THE PRESS.

(From the Sacramento Bee.)

If the skin of yellow press publishers were not so scarcely supplied with sensory nerves it would smart under the judicial rod lately laid on, with no light hand, by the supreme court of Idaho. The castigation was administered to those journals which upheld the miners of the Coeur d'Alene in their reckless violations of law and order.

The court declared these journals were conducted by persons "whose moral principles are governed and controlled by what is for their gain." The Bee concurs in that opinion.

Everything seems to go with the yellow press provided there's money in it. Cash bows conscience out of the business office and the editorial rooms, refusing to be disturbed by the presence of so unwelcome a visitor. The events of the day and the personalities connected therewith are exploited with such scant regard for truth, justice, and decency that public and private purity and faith are corrupted at the source of knowledge, and a baleful cynicism is begotten and bred in minds not strong enough to scorn the lie, not keen enough to see its motive. It is characteristic of the yellow press. What is the inevitable result? It is that the papers guilty of such offences gradually lose what influence for good they had or might have had. These papers may make money, they probably do, but they do not make men. They do not make honest, helpful citizens. They do not encourage that happy home life which is the basis of national strength and social well-being. How can they do so when boldly claiming to be the censors and uplifters of public morals, they insinuate into our homes, and before the eyes of our sons and daughters, the unsavory specimens of the corruption of others, and of their own professional venality?

Woe to them if they do not rise to the high dignity of their calling! Woe to them if they truckle and pander to the mob! Woe to them, if, intrusted with the ten talents of an unparalleled influence, they bury them in the dungheap of political corruption or in the muck of filth of sensational semi-obscurity! Woe to them if for gain they prostitute truth and honor!

That The Bee feels strongly on this matter is because it would ever magnify the power and dignity of the press. According to the possibility of its influence for good is the enormity of its perversion of that influence to evil ends. Justly may it be said to the press as to every individual it addresses:

"Thy strength shall be as the strength of ten,
If only thy heart is pure."

FROM AN OLD CRAFTSMAN.

JAMESBURG, N. J., December 18, 1899.

Editor NATIONAL PRINTER-JOURNALIST, Chicago, Illinois:

Inclosed please find postal order for two dollars for renewal of subscription to JOURNALIST.

The JOURNALIST grows better with each succeeding year, and I cannot afford to be without it. Its reports of the doings of the various associations are of great interest to me, an old craftsman—both printer and journalist.

To the order enclosed I enclose another dollar so as to close my account at the end of the year, when I can better keep track of it. Please return receipt, and oblige,

Yours fraternally,

JOHN F. BABCOCK.

By WILL OWEN JONES, Lincoln, Neb.

Questions, criticisms, and experiences are solicited for this department.
Address Mr. Jones as above.

VISUALIZATION IN SOCIETY REPORTING.

READERS of Miss Bullock's article on "Descriptive Methods of Newspaper Writing" in the October number may be interested in following the subject and ascertaining how much these theories may be used in everyday work. Miss Annie L. Miller has conscientiously applied the principles in her

descriptions of "society events" for a daily newspaper, and has reached the conclusion that only occasionally is it worth while to go to the trouble of creating a vivid picture in doing this kind of reporting. When it is needed, however, as in the case of an important wedding, reception, or other unusual affair in the social world, it will vastly add to the reporter's power to know just how to create living pictures in the mind of the reader. In doing ordinary little parties, dozens of the same kind occurring every week, the reporter must usually confine himself to doing straight catalogue work. Miss Miller writes:

The increasing amount of space allotted to social affairs in the daily papers renders the question pertinent whether the quality of the work might not be improved. The ordinary society column is an inane recital of parties and weddings all similarly worded. To realize its vain repetitions and utter foolishness it is only necessary to glance through such a department in a paper when the names are unknown and no personal knowledge lends a fictitious interest to the reports. It would seem that the principles of visualization used in literature might easily be applied to social affairs. Any large function has an abundance of the form and color which are such important elements in visualizing material. The difficulty to the reporter lies in the necessity for an unusual combination of these elements to make the picture distinct. The majority of entertainers are apt to copy what has been done and is considered good form. A description that would give a distinct mental picture, from its novelty at the beginning of the season, by many repetitions would make no impression upon the brain.

When an element of originality exists the reporter is apt to blur the picture by a conscientious endeavor to give all the details. Visualization is an appeal to the imagination and a too minute description leaves nothing to the imaginative faculties. All artists recognize the necessity of avoiding excessive detail in paintings and the impressionists seek to stimulate the imagination through vagueness of form and color. But what is the aim of the society reporter to give all the facts or to produce a mental picture? Both cannot be done.

The society column is principally read by women—the future givers of parties or friends of the brides who have been given away—and they pore with intense absorption over the details of functions even when unacquainted with the hosts and hostesses. These women wish to know the exact decorations of each room, just what colors were used and where, the arrangement of the dining room table—even the way the bows were tied to the corners and whether of satin or tarlatan—with a dozen other details that leave

the mind of the general reader hopelessly confused. But the would-be entertainer follows the description as she would a fashion plate and mentally notes the points to copy. There is no doubt that the department would be much more interesting to the average reader if presented in a condensed form with only the distinguishing features of each party given—in some cases this would mean little more than the names, places and dates—but to do this would necessitate the disappointment of a large body of regular readers who are after all the chief ones to be considered.

QUESTIONS AND ANSWERS.

The readers of the Printer-Journalist have not sent in many questions connected with the work of the local department of a newspaper. A dozen questions, criticisms or suggestions every month would greatly add to the value of this column. If editors will send in specimens of reporting for criticism and comment the result may be mutually advantageous. The following inquiries cover all that have been sent in during the last few weeks:

"Where can I learn journalism by mail? Would you advise this method of preparing for newspaper work?"

The art of newspaper writing is taught by a "Correspondence College" at Detroit and by another at Washington. A third has been founded within the year at New York. They may do good work, but the promises in their advertising matter are a little hard to fulfill. The cost is all the way from \$15 to \$50 for a term of lectures by mail, including corrections of manuscript and individual advice. An aspirant for journalistic honors who has money to spare may not go astray by taking one of these courses. Preparation of almost any kind will be of some service after apprenticeship on a newspaper has begun. This would not be a bad place to suggest that if a young man has a foundation of good horse sense and a fair education, his best preparation for undertaking the work of a reporter is to read, analyze and compare the local writing in a few of the best papers within his reach.

"How much shorthand must I have before I can get a place as reporter on a city daily?"

Not any, unless you intend to seek a place in England. The idea prevails in American newspaper offices that to keep up shorthand requires so much attention that a man will have little energy or originality for the more important work of a reporter. When a speech is wanted entire the rule is to get the manuscript, or to send out for a professional stenographer—preferably a court reporter—who will be able to take it down correctly and transcribe it without much delay. In his ordinary work a newspaper reporter would not get enough practice in rapid writing to keep him in efficient condition. The ability to condense a speech in a rapid and legible and accurate "long hand" is a vastly more important accomplishment in the eyes of the average city editor than any ordinary ability in handling shorthand. Some of the most successful reporters develop a system of abbreviating which helps them greatly when they have sentences here and there in a speech which they wish to take down verbatim. Sometimes these systems are based on shorthand and sometimes they are arbitrary little marks that the reporter has learned to associate with certain things. Any man will be able to develop a system of his own without the slightest knowledge of shorthand. Thus "e" can be used for "the," "a" for "that," and a dot above the line can stand for "ing." Some men take the Phillips telegraphic code or some other similar abbreviations, and by developing the idea still further manage to get a very rapid and workable cross between long and shorthand. The advantage of this sort of system is that it

grows under one's hand while he is doing his regular work, and no time is spent in studying principles and systems.

"In your description of the work of gathering election returns you say nothing about sharing the work of getting the figures with a competitor. Would you not recommend co-operation in a case of that kind?"

In the case mentioned co-operation was not attempted for the reason that there was no morning competitor to share the labor. When any strictly routine matter like the collection of election figures, the printing of a message or the presentation of public statistics is on hand, editors and reporters would be foolish if they did not divide the work and share in the finished results. As a rule nothing is to be gained by quarreling with the men on the other paper. It is entirely right to be always keenly on the lookout to secure superiority in the finding of news and in the style of its presentation, but this does not necessarily bar the members of the different staffs from being agreeable always and often mutually helpful. One of the pleasantest little items in the Nebraska press after the late election was the rejoicing of a country editor over having "skinned" his vile contemporary in their annual game of seven up to determine who should set up the election table of the county for the joint use of both papers. It would have been foolish for both offices to set up this big table, and the boys simply engaged in a social game to decide who should do the work. That is a form of co-operation that is both pleasant and profitable.

THE PAPER TRUST ROBBERY.

(From the Chillicothe (Mo.) Constitution.)

The paper trust has doubled the price of printing paper during the last six weeks and newspaper publishers are seeking relief from the trust's merciless exactions. The publishers must be relieved of the present high prices of paper or advance their subscription rates. The trust is "holding them up" for most outrageous prices on paper and the publishers will suffer if there is no relief from the highway robbery. A bill was introduced in Congress Tuesday by Congressman Bellamy, of North Carolina, repealing the duty on material used in the manufacture of writing paper and reducing the duty on printing paper one-half. It is an important measure to every newspaper in the United States and promises relief from the robbery they are now subjected to by the paper trust. The bill should be passed without delay.

SOMETHING HAPPENED TO HIM.

(From the Pomeroy (Iowa) Herald.)

It isn't very often that the Herald has anything to say about its editor, but something happened Sunday evening that will amuse the reader if it didn't us. Mrs. Larmon went to church and left us to take care of the baby during her absence, as has been her usual custom. All went well until the infant woke up. The baby howled and nothing would stop him. Finally we concluded to resort to strategy and donned our wife's night robe in the hope that the youngster would think we were "mamma." This had the desired effect, but when peace was restored and time dragged wearily we concluded that we must have a smoke. But when we had comfortably seated ourselves beside the cradle, with a cigar in our mouth, even the infantile mind penetrated our disguise and set up a howl that continued until his mother arrived. Even babies know that Pomeroy mothers don't smoke. Thus it is that man's appetite has got him into trouble almost since the time of Adam, and frequently interferes with the accomplishments of genius.

THE JOB PRINTER.

By Charles H. Cochrane, New York.

I WISH that every job printer in the country could have heard a paper read recently by C. A. Frailey, foreman of the John Polhemus Printing Co.'s composing room, before the New York Typothetae, on "The Management of a Composing Room." In that house a great deal of rush work is handled, and, with a force of fifty to seventy-five compositors, the getting out of several large rush jobs at the same time without confusion or collision, is accomplished by dint of excellent system. Imagine a composing room run on the plan of a fire department, with all the material instantly available, and every man ready for action, and you have the conditions that prevail under Mr. Frailey's management. He has instituted a simple method of bookkeeping to inform himself as to the number of full cases of each sort of body type in the office, and the amount of dead type of each kind available. When a rush job, as a law case, comes in, he consults the entries on his list, and knows at a glance how many full cases there are of the required type, and how much dead type is to be had. The cases are all numbered, and the record also shows where they are, so that there is no time wasted in looking them up. The plan is so simple that a new compositor in the office can grasp it in two minutes, and know where to find type and cases as quickly as the oldest hand. If sorts are wanted, these are also kept in boxes, marked on a system, so that they can be had without loss of time. Cases of display type are cared for with the same system, so that there is never any such thing as losing track of a case, or not knowing where dead sorts may be found. Of course the system in its entirety would not be suited to offices of a different class, or to small offices, but the principles involved are applicable to all composing rooms, which should be so arranged and systematized that every workman may know without hunting, where anything or everything in the way of type is located. In the average printing office the men know pretty well where the cases belong, but there is no way provided for a compositor who finds a case missing from a rack to know where it has gone to, except the laborious and wasteful one of passing from stand to stand and yelling out the case he wants. In any office where more than three or four compositors are employed, some method should be provided by which the compositor who removes a case from a rack to his frame shall leave some evidence behind him, as a ticket, to show who has the case. The following out of this idea, in a system suited to the size and needs of an office, will save an immense amount of time.

No man should call himself a job printer unless he can run presses. A compositor can afford to remain a compositor, but he has no business to insist that he is a printer unless he can print. Only the man who knows cylinder and platen presses thoroughly, in short a pressman, is entitled to be called a printer. The job printer who works altogether on composition requires to be a pressman also to know how to impose his forms to best advantage, and to do a score of little things that make the work easier for the pressman. For instance, he should know when it is desirable to lock up bearers with a form for a job press, and when to leave them out. In some job offices it is a rule to put bearers in the chases for all Gordon work, provided of course that there is

room for them in the chases. This is a good rule, as the bearers make it easier to get the impression, and insure a ready rotation of the rollers. The real job printer will also know when to lock a job in the center of a Gordon chase and when out of center. Of course they usually go in the center, but if a job is all solid type or cuts at one end, and a few light rules at the other, it is often best to throw the heavy part in the center, disregarding the position of the rules or light work. If bearers can not be used on such a job, it is then commonly a necessity to have the job locked up in the way described to get a proper impression on a Gordon.

The real job printer in imposing a form will also exercise more care, to observe that any cuts or plates going in with the type are of the proper height, than will a compositor who is not a real printer. The pressman cannot be expected to print a cut that is a six-to-pica lead high or low in any proper manner without unlocking the form. He can adjust a few thicknesses of paper one way or the other, but when it comes to a considerable difference, it requires to be made right in the form, and the compositor should be pressman enough to see to this when the form is first locked up. The real job printer in imposing book pages will be more certain to lock them squarely so that they will back properly than will the compositor or stone hand who has never tried to back a form skewed in the lock-up.

The modern pressman who knows nothing of type, and the compositor who knows nothing of presswork, are each a trial to the real job printers who know both branches of the business, for of necessity they do many things wrongly, through a lack of knowledge of all the requisites of the other branch. Every young man in the composing room who feels a lack of information as to the details of presswork should make it a point to hang about the pressroom, and learn all he can theoretically, and every press-feeder and young pressman should try to gain knowledge of the composition end of the business in the same way. Time spent out of hours in studying up the other branches of the trade is time well spent, for the more a workman knows the more salary he can command.

Paul Nathan has been writing a book for job printers, and from an advance sheet I take the following as to getting out paper for the job room:

"In determining the required amount of paper for a job, first be sure of your size, then the weight, quality and price. Beginners sometimes forget that if sixteen pages go on one side of a sheet that it is necessary to allow but one sheet to thirty-two pages, and until a habit is established of regarding this simple point any estimator is apt to make a big bungle in figuring his paper on a job. Five per cent. should be added for waste of paper in printing. In calculating on paper that has to be cut from larger sizes, one must bear in mind that if the job is to be run two or four on a sheet that it may not cut as well, involving more waste. Sometimes the paper can be got out more economically by making up a form the long way. If a certain job cuts conveniently nine to a sheet, and several are to be run at once, it will probably be better to run three at a time than to run four and waste paper; but it may be practical to secure a larger size of paper of the same grade and run in fours. All these things have to be borne in mind when making the estimates."

The man who makes progress in this world is the man who thinks. This is as true of printers as of any other class of trade workers. If you want to get ahead in the job room use your brains and common sense. Do your work well, and look out for advancement. First observe things, and

then consider. If you are under an incompetent foreman, remember that some day the proprietor will ship him, and that if you are known to be capable and thorough that you may get the place. If you are under a competent foreman, try and make him your friend, and get him to instruct you in any niceties of work in which he is your superior. Try and relieve him of any details of oversight of your own work, that he may come to rely on you. Then when an assistant foreman is wanted, or when the foreman is promoted to a superintendency or partnership, you will be the next man in line. If you find yourself under a foreman who is personally very antagonistic, and you see that there is no chance for promotion in the office, look out for another place. The man who gives up the effort to advance never will be advanced. When you once confess to yourself that you have reached your limit of progress, be sure that others will look upon you as a "hasbeen."

"How can I always be sure to set a job so that it will be tasty and attractive?" This is the sort of query often put forth by the young job printer. You cannot always make good display of a job. You may not have the type or sorts, or the wording may be such as to preclude the best effects. But you can always make a decent looking job if you have tolerable taste, and if you will study the effects of the best printers. Once you grasp the essential idea of harmony in type effects, you are all right; if you cannot get that, you are sure to be all wrong. No one can tell you just how to do this; you must observe and study. If you find that it is not in you, give up trying to be an artistic compositor, and devote your efforts to excellence in other directions. A good stone hand or a man known to always set a good proof from difficult copy is as useful and commands as much pay as the fellow who twists rules and plays fancy tricks with the types.

A NEW KIND OF CHASE.

CHICAGO, ILL., December 15, 1899.

Editor NATIONAL PRINTER-JOURNALIST:

Dear Sir:—Returning from the Philippines I purchased the November number of your excellent journal for the purpose of getting in touch again with the art of printing, and to feel the pulse of my Brother Craftsmen who have been devoting their lives to the profession while I was helping at San Francisco, Cal., to mobilize the volunteers for service in the Spanish war, and afterward caring for them away off in the Philippine Archipelago.

Among the other articles which attracted my attention was "The Job Printer" by Charles H. Cochrane, of New York. Being a practical printer myself, I cannot refrain from endorsing the very practical suggestions offered by Mr. Cochrane, and I sincerely wish that every printer in America may read and profit by adopting his suggestions.

I would like to add to the article something that has just been brought to my notice by my old foreman. It is an entirely new device for locking up forms, and will be known as D. S. McGreal's Combination Chase. Some twenty years ago I adopted in my printing office, after conferring with Dominick S. McGreal, who was then my foreman, the Hemple Quoins; later I adopted steel furniture instead of wood furniture, and now comes McGreal with his latest and the very best invention for the saving of time and furniture. It will prevent the springing of the form which is so apt to throw something off its feet or loosing leads, quads, etc., to work up, thus spoiling paper and delaying the press.

Every printer knows what an immense capital is tied up at present in the old wrought iron chases—almost dead

capital because of the different sizes of chases required to be kept in readiness for various forms, and even then forms have to be unlocked and presses kept waiting and sometimes the forms become "Pi" before they can be taken care of. The new invention of D. S. McGreal will be found a blessing.

I take pleasure in bringing this combination chase to your attention, and hope that you will investigate the same and aid Mr. McGreal in placing his invention on the market.

Yours very truly,

JOHN B. JEFFERY,

Formerly Manager of the Chicago Evening Journal.

TOM B. WOOSLEY.

The subject of the following sketch was born in Iowa in 1875. When very young he manifested newspaper instincts, and was correspondent for the home papers when but a boy. Soon after the opening of the Oklahoma Territory, he went to the new country. He identified himself with the printing business, and began the work of learning the profession from the bottom. In 1896 he joined Typographical Union No. 258 at Guthrie, O. T., and was employed on the State work of the Territorial Legislature. Soon after the adjournment he became owner and editor of the Mulhall

TOM B. WOOSLEY, MULHALL, O. T.

(Oklahoma) Weekly Enterprise, which publication he still owns and continues to improve. Mr. Woosley has the distinction of publishing the only all-home print weekly in Oklahoma in a town of less than a thousand population. He has conducted his paper on a strictly home policy, too, and refuses to accept advertising from firms outside of his own town, when such advertising will affect his merchants.

Mr. Woosley was chosen a delegate to the National Editorial Convention at Portland from Oklahoma, and has just been elected as a delegate to the convention at New Orleans.

NEW OWNERS OF THE KANSAS CITY TIMES.

The purchase of the Kansas City Times by A. A. Lesner, J. S. Sullivan and Judge Chrisman, with Mr. Lesner, an old newspaper man who wandered from the fold only for a short time to accept a state office, in editorial charge, seems to be considered very fortunate for the paper and to promise well for the new editor and proprietors.

THE ADVERTISING MANAGER.

MR. W. E. HERBERT, the son of the editor of this paper, has accepted the position of Advertising Manager and will open an office in New York city the 1st of May next. He has been familiar with printing-offices from boyhood, having been connected with offices in Red Wing, Minn.; Indianapolis, Ind., and Chicago, Ill. He chose for himself the profession of dentistry and took a thorough three years' course in the Northwestern Dental College of Chicago and has had two or three years of successful practice at Evanston, Ill. Yet, like nearly all others who have had the touch of printers' ink on their fingers, he felt a desire to get once more in touch with the art that serves every other calling and that contributes to the pres-

DR. W. E. HERBERT,
Advertising Manager of the National Printer-Journalist.

ervation and advancement of all other arts. We feel that the National Printer-Journalist can cordially recommend him to all friends of the paper, and especially to all who wish to secure business publicity through its pages. He is now absent in New York city and his portrait is presented herewith to make more complete his introduction to our friends, the friends of the paper, of the calling, and of the National Editorial Association, to advance the interests of which this paper exists and to which for the past twelve years it has rendered faithful service.

CUP FOR MR. DE VINNE.

Theodore L. De Vinne, dean of American printers, was the recipient of a solid silver loving cup, a token of esteem from his fellow printers of the Typothetæ and a souvenir of his seventy-first birthday, which occurred on December 25. For more than thirty years Mr. De Vinne has been one of the most active master printers in New York and has been

indefatigable in his work for the advancement of trade interests and bringing the book and job printers into a harmonious organization. A year ago Mr. De Vinne retired from the presidency of the Typothetæ, and the members decided to express their appreciation of his services in some substantial manner.

A PAPER "UP TO DATE" AS AN ADVERTISING MEDIUM.

Up to Date, by the Up to Date Publishing Company, J. H. Everett, manager, Indianapolis, Ind., is all that its name implies. It believes that advertising should be proved remunerative to advertisers and has a system of record cards, to which reference has been previously made, to establish just what direct returns in letters of inquiry and then of purchases are realized. This paper shows and proves its circulation through the best known methods and refers with confidence to present advertisers for proof of advertising value. The way in which the claims of Up to Date are stated carries conviction. Take, for example, the following: "Ask any of our advertisers this question: 'Do you know of any agricultural paper that will pay me better, cost considered, than Up to Date Farming and Gardening?'" The paper is always on top as well as up to date, with a circulation of 75,000, advertising rate of thirty cents a line, and results good for advertisers.

PRIZES FOR FINDING TYPOGRAPHICAL ERRORS.

The Nebraska Press Association meets at Lincoln, Neb., January 23 and 24, at Lincoln, the State capital, with a splendid programme. We have very pleasant recollections of meeting with the Association in Lincoln in January, 1888, notwithstanding the blizzard that opened up the afternoon of the first day of the session. The Secretary offers \$10 to the member in attendance who finds and marks the greatest number of typographical errors in the programme, and \$5 as a second prize.

TRAGEDY IN A PRINT SHOP.

(From the St. Joseph Daily News.)

Sunday night Charles H. Harris, editor of the Belden News, shot and instantly killed Hark Blenkiron, of Atkinson. The News office was the scene of the crime.

Blenkiron, an old resident, took exceptions to an article printed in the News and called upon Harris to have him retract it. During the excitement that followed Harris drew a revolver and, as Blenkiron advanced, shot him. Blenkiron walked but a few steps and dropped dead. Blenkiron leaves a wife and family, who are now at Atkinson. Blenkiron was a giant in size and a bully in character. Harris claims that he shot in self-defense.

WELL-CONSIDERED LIST OF SUBJECTS.

The holiday issue of The National Printer-Journalist (National Editorial Association, Chicago) is handsomely printed, of course, and in the course of a well-considered list of subjects in its line shows how wonderfully civilization's advance has carried on the art of printing and illustrating books and papers during the past fifty years. The cuts shown afford an astonishing contrast with the handsome half-tones of the following pages in the same number. The printer-journalistic folk, to judge by their trade magazines, are studying night and day to make perfection more perfect. In 2000, A. D., what will it be?—Boston Globe, January 3, 1900.

CHICAGO, - - - - - JANUARY, 1900.

It is wise in newspaper personals to always connect each item with some fact or circumstance of general interest. If a traveling man is to be mentioned, see him, if possible, and get some fact with regard to trade or the places he has visited. Traveling men gather a good many items of value as well as stories of interest. There should be life-blood in every item in a newspaper.

In what we have said elsewhere this month on "monopolies" or "trusts," we do not want it to be understood that we are indifferent to the fact that there are wrongs to be righted by an earnest, conscientious press. There can be no exclusive rights in a republic. Yet through great wealth, either in individuals or corporations, oppressions are possible and should be resisted. Any man who selfishly stands in the way of another's rightful opportunity is in one sense a greedy monopolist. Every one who accepts pay for services not rendered or for goods not furnished is a thief. In this sense a man of small means, to the extent of his power, may constitute himself a "trust" as much as may a great corporation or a man of wealth. Whoever tries to crush out another by unfair competition is guilty. If any man deliberately declares—or acts on the principle, whether declared or not—that he will ruin the business of a man who does not buy his goods or through his establishment, such a man is an offender against the rights of trade and should be jailed or fined. Illinois has a law that the officers of corporations shall report under oath

as to whether connected with a trust or not and pay a dollar for the privilege of filing such affidavit. Such a law is ridiculous and unconstitutional. Corporations, through uniting small sums of money, may be effectually used as a means to successfully resist the power and oppressions of the selfishly rich, as well as for the promotion of some needed local industry and the affording of employment for idle capital and idle labor, for the benefit of all. The press should discuss such questions in an intelligent manner and not permit demagogues to get into power through a meaningless cry against corporations, trusts, and monopolies while their palms are tickled with the gold of the greedy rich.

On the day that the present issue of the National Printer-Journalist is being mailed the printers throughout the United States are uniting in the celebration of the one hundred and ninety-fourth anniversary of the birth of Benjamin Franklin, printer. His name should be alike the inspiration of the journalist and craftsman. He was a printer-journalist of the highest order and may well be taken, now, a hundred and ten years after his death, as the highest and most perfect model in both branches of the calling. His close sympathy with humanity and his genuine love of the art made him all that he was. He has had some noble successors in such men as Horace Greeley, George D. Prentice, William Cullen Bryant, Henry W. Grady, George W. Childs, Charles A. Dana, and Henry Watterson; but none have reached to the broadness, the height, the all-around completeness, fullness, and greatness, in the art and profession, of Benjamin Franklin. He stands forth as the unequaled idealization of all that lends dignity, greatness, unbounded usefulness, influence, and success to the calling and to the man. It has been recently well and truthfully said by the Pioneer-Press of St. Paul:

Among successful living journalists there are several who keep up a constant flow of gifts, quietly bestowed, which enrich the records of benevolence in the communities where they live. The generous spirit of Benjamin Franklin, "the patron saint of American printers," seems to have permeated very nearly the whole of his trade posterity.

It was this "generous spirit" that secured Franklin's greatness. No man whose heart does not warm toward the hearts of his fellows has any place as a newspaper man. The mere commercial spirit that counts only costs and gains in dollars and cents is like the chill of the cold summer, that blights, withers, and kills all vegetation, bringing want and hunger. It is the commercial spirit that reaches everywhere that is destroying the benevolent influence of the press, degrading the pulpit, venalizing and corrupting the judiciary, the legislative, and executive departments of government, and making the oppressions of wealth and unholy combines possible. The editor who has no love of art for its ennobling and inspiring effects and influence, no idea of duty above gain or personal thrift, no aspiration above self and the overthrow and climbing over and

above his fellow men, has already found a hell within himself and will soon convert the community in which his paper circulates into a blazing hell of strife or a pit of hopeless corruption, or a poisoned pool of stagnation and death.

The idea that an editor or publisher should of necessity be unpopular is as foolish as it is injurious. The newspaper man who finds himself generally disliked needs to devote a liberal amount of his leisure to the study of himself and his methods. There is an offensive self-assertion, a falsely claiming for oneself the originating of all improvements, reforms, or worthy measures, that will render any man or newspaper disgusting. On the other hand, there is a weakness, a subserviency, a dull conservatism, a slavish following some clique or political demagogue that will bring loathing. A newspaper stands, to a very great degree, as a representative of its city. If it is so slovenly in its mechanical execution or so conducted in its editorial, news, or local department as to be a cause of shame to the citizens, there is every reason to expect its editor or publisher will reap the full harvest of dislike that is richly deserved. There is a certain necessary degree of discretion and diplomacy, as regards the personality of the editor, that should never be forgotten, yet there is no field in which more honest independence and the manifestations of more earnest personal conviction are allowable. The editor may even be a terror to evil-doers and still retain their respect and a very substantial kind of good will. No other calling has the ability or the opportunity for so general or effective service as has the newspaper, and if the editor really has a heart in him he ought to be a brother to every worthy man in the community, immensely popular with both the men and women. He is circumscribed by no church, no one interest, no one industry or establishment. The whole vast realm of human efforts, interests, purposes, plans, hopes, and aspirations are his to foster and to help. The people will not fail to discern a true spirit of helpfulness, nor fail to recognize industry, ability, manliness, independence, zeal tempered with reason, public spirit, and honesty. If a newspaper man is indolent, selfish, vain, unmindful of the interests of his community, or of any interest therein, showing his disregard for his constituents by printing a dirty sheet typographically, dull and lifeless as to matter, he deserves to be unpopular and should quit the business and hire himself out as a stable boy or to feed swine. The man who thinks that because he owns a newspaper he must be permitted to loaf around and claim support merely because he has a local publication that misrepresents the very best possibilities of the town and county ought to be drummed out of the calling. If a man finds that he can not win the friendship of the best people in the community, and the respect by fair treatment of even

those whom he is compelled to publicly censure for their wrongdoings, then he had better give up the vocation.

The types and the printing press have often been pointed to as the great enlighteners and civilizers of the world, and next June the five hundredth anniversary of Gutenberg, the inventor of printing by movable types, is to be celebrated at Mayence on the Rhine. An international exhibition of printing will be one of the important educational features of the occasion, and the erection of a suitable monument will be the means of preserving an ever-present ocular reminder of the event through coming centuries. The occasion should be made the means, through comparison and suggestion, of farther advancing the art which has become the treasure-house of all knowledge. The types have for the most part been used as a means for general enlightenment and the advancing of the condition and rights of man. This anniversary should cause all good citizens, and especially all master or employing printers, to unite in driving from the sacred chapels or precincts of the art all the ignorant, brutal, and dissipated; all who would use their connection with the calling, either directly or indirectly, to corrupt, vitiate, or demoralize the people; all who would seek, through false teachings and the holding out of false hopes, to bind those whose faith is unfaltering in the printed page with chains of slavish superstition, prejudice, envy, jealousy, or hate; all who through combinations, brutality, and violence would seek to establish injustice or to interfere with the liberty and rights of others. Woe to the people should the types ever come more than now to be controlled by the immoral, unjust, and vicious. This is not to be expected; and the meeting of intelligent craftsmen—the masters of the art—ought, as suggested, to be made the occasion of grand advances in knowledge and true enlightenment, of greater and more general art feeling and intelligence in the calling, of higher standards of ethics, of art and of virtue, and a broader liberty that is considerate of the rights of all.

Although not intended for publication, we can not deny the pleasure to our friends that will come from the reading of the following graceful note from Mrs. Eugene Field permitting the printing from the copyrighted book "Lullaby-Land" of that little poem "Good-Children Street" in our present issue:

B. B. Herbert, Esq.

CHICAGO, January 17, 1900.

DEAR SIR: It will give me much pleasure to have the little poem you propose to use used in this particular way. I remember so well my husband's fondness for Mr. Baker's little girl, and also the joy and pride she is to her father and mother, and if your arrangement of the verses give them momentary pleasure I shall have great pleasure in the thought. I thank you very much for your wish to aid the little book from which the poem is taken, and for your useful protection of our interests.

Most respectfully, MRS. EUGENE FIELD.

DEATH OF THOMAS MAC KELLAR.

In the death of Thomas MacKellar, Ph. D., of Philadelphia, the printing trade of America has lost one of its most worthy, useful and famous members. He was at his death the senior member of the MacKellar, Smiths & Jordan, or Philadelphia, branch of the American Type Founders Company. His life had been largely devoted to enthusiastic and successful efforts toward the advancement of the printer's art. He died at his home, "Woodnest," 5305 Boynton street, Germantown, Pa., at 4:10 a. m., December 29. The immediate cause of his death was heart disease, hastened in its work by a severe attack of pneumonia. He would have been eighty-eight years of age next August, he having been born in New York city, August 12, 1812. His many years of hard work, of twelve to fourteen hours a day, shows that enthusiastic labor, inspired with

The Late Thomas MacKellar, Ph. D.

noble purpose and a love for one's calling, is conducive to long life and happiness rather than detrimental. He died full of years and honor, blessed with troops of friends and wealth, leaving an estate estimated at a million dollars. The Philadelphia Bulletin gave an extended history of his useful career, from which we glean the following:

He learned his trade in the office of a weekly newspaper, the New York Spy. The first day he entered the printing office he learned the case, showing evidence of a clear head and retentive memory. The paper was printed on an old Ramage press, which had a stone bed and a wooden platen; the platen being only half the size of the bed, two pulls were needed to print one side of the sheet. The inking balls were of felt, and two men were required—one to ink the form, the other to run the press. The Commercial Advertiser, in the neighborhood, was printed on a one-pull Columbian press, invented by George Clymer, of Philadelphia. This was an imposing machine, with many levers, the last one with an eagle on its end rising and falling as each sheet was printed. A skillful pressman ran off two hundred and fifty copies an hour on it, printed on one side only. This was considered a fine performance. It was his inordinate thirst for reading that first induced him and fixed his determination to become a printer. Here a large field was open to him for the gratifying of his desire for reading. He had, in a literary sense, devoured everything at home, and committed to the storehouse of his mind all the contents of the books he could borrow, and his craving for knowledge seemed almost insatiable; but, as to the key of success, he saw that the end he aimed for was to be won through the medium of hard, intense work.

Death carried off his father and mother within a space of seven weeks of each other, when he was eighteen years old. Being the oldest son of the family, he assumed a large portion of its cares and responsibilities. His energy and talent soon made him the acknowledged leader among the youth of the establishment, and he became the peer of the best workmen. He then devoted himself to the practical

part of printing, the handling of type and forms, and working the press. The difficult and perplexing work which was given to him he delighted in, as plain, solid typesetting was too monotonous and devoid of interest to his active mind.

Having served a thorough apprenticeship in the establishment he was graduated a skilled artisan. April 27, 1833, Thomas MacKellar arrived in Philadelphia and three days later he began work as a proofreader in the type and stereotype foundry of Messrs. Johnson and Smith. His purse was slender, but he felt that hard work and well-earned character would become his capital.

Then began the struggle of his life for success. Eleven hours a day, sometimes fourteen, proved a heavy task for young MacKellar, but he felt that close application and a good reputation would in the end win, and they did. After performing his double duties for some years, he relinquished proofreading and devoted himself to the management of the composing-room, where more than twenty books were sometimes in hand at the same time. Many volumes by native and foreign writers passed under his eye—works in Greek and Hebrew, such as the Greek Testament and Hahn's Hebrew Bible. For the latter, as well as for music typesetting, he had to train special compositors. The various sorts of literature which passed under his supervision made his brain a composite encyclopedia, and he acquired an amount of general knowledge that served him well in after years.

In 1845 Mr. MacKellar was taken into the business as a partner, together with the two sons of George F. Smith, the title of the house becoming L. Johnson & Co. The business grew in importance and magnitude, but competition was unscrupulous, and over forty years ago Mr. MacKellar proposed that the publishing house should send out an exploring agent to South America. Mr. Johnson favored the proposal, and books were sent in advance to various points, followed by the traveling agent, who went down one side of the continent, crossed the Andes and returned home on the opposite side of the country. As a result of this enterprise South American orders for material are seldom absent now from the order books of the house. After the death of Lawrence Johnson, in April, 1860, his interest was bought by the three junior partners, Thomas MacKellar, John F. Smith and Richard Smith. Peter A. Jordan was also admitted into the new organization.

In 1855 Mr. MacKellar bought out the Typographic Advertiser, which shortly became famous among printers at home and abroad for its beauty and for its specimens of the new styles of type produced in the foundry.

This periodical was edited by him for thirty years, when he transferred the labor to his son, William Brasher MacKellar. Mr. MacKellar afterward issued the American Printer, which has been published for twenty years.

Mr. MacKellar had now reached the pinnacle of his ambition, being the chief of the largest and most celebrated type foundry in the world. In those latter years he has seen this foundry extending its ramifications over the civilized surface of the globe. Depots of supplies reaching from the east to the far west, and from the north to the south, have been established in various parts of North America. In its sphere also is embraced an agency in London, and another in Australia. In point of excellence the quality of the productions of this foundry is unsurpassed.

In the rare leisure intervals afforded by an exacting business, on walking home to dinner, or in a quiet evening home, the poetical spark which in his younger days he was forced to hold in abeyance, now, as he gained in years and position, burst forth into flame, and his heart gave utterance to the genuine eloquence of poetry. His first piece, "The Sleeping Wife," was published in the Public Ledger, and was written while yet unmarried. Rev. John Hall, D. D., now of Trenton, early encouraged him and published several of his poems in the Sunday School Journal. Mr. Joseph R. Chandler also was very friendly to the rising young poet, and inserted several of his effusions in the United States Gazette, but at first added the doubting introduction, "This piece comes to us as original." With the genial Mr. Joseph C. Neal he had a close acquaintance and literary sympathy. For nearly two years Mr. MacKellar wrote a weekly piece for Neal's Gazette, under the nom de plume of "Tam," and which created no little stir at the time.

He had thus acquired considerable reputation by his contributions to periodicals, before he ventured to launch a whole volume upon the uncertain ocean of literary criti-

cism. But the success of his first enterprise encouraged others, and he is favorably known to the public as the author of several volumes. His first publication was "Droppings from the Heart;" then came "Tam's Fortnight Ramble," followed with "Lines to the Gentle and Loving." In his latter years he revised these works and compiled them with other writings, and issued them under the title of "Rhymes Atween Times."

His "Hymns and Metrical Psalms" came from the press at a later period. Two editions of the former and three of the latter have been printed.

The following is a characteristic selection from "Hymns and Metrical Psalms:"

Sometimes in quiet revery,
When day is growing dim,
The heart is singing silently
A sweet unwritten hymn.

The strains are not to measure wrought
By cunning of the mind,
But seem like hymning angels brought
From Heaven, and left behind.

The misty hills of bygone grief,
Once dark to look upon,
Stand out like blessings in relief
Against the setting sun.

The rain may fall, the wind may blow,
The soul unhindered sings,
While, like the bird 'neath sheltering bough,
She sits with folded wings,—

A brief and pleasant resting space,
A glance at Beulah land,
Before she girds herself apace
For work that waits the hand.

Then giving thanks to him who pour'd
Refreshments in her cup,
She hears the calling of her Lord
And takes her labor up.

Mr. MacKellar was married in 1834, and he then became a member of the old Pine Street Church, twelve years later being ordained an elder. Later he was elected an elder in the First Presbyterian Church in Germantown, and served for many years as president of its board of trustees. He has been a director of several insurance and trust companies and was president of the Type Founders' Association of the United States. Up to the time of his death Mr. MacKellar was also a member of the Historical Society, the Academy of Natural Sciences and other organizations. The honorary degree of Doctor of Philosophy was conferred on him some years ago by the Wooster University of Ohio.

No words will perhaps better describe the man than his own:

A POET AND HIS SONG.

He was a man endowed like other men,
With strange varieties of thought and feeling.
His bread was earned by daily toil; yet, when
A pleasing fancy o'er his mind came stealing,
He set a trap and snared it by his art,
And hid it in the bosom of his heart.
He nurtured it and loved it as his own,
And it became obedient to his beck;
He fixed his name on its submissive neck,
And graced it with all graces to him known,
And then he bade it lift its wing and fly,
Over the earth and sing in every ear
Some soothing sound the sightful soul to cheer,
Some lay of love to lure it to the sky.

A large part of the fortune amassed by Richard Smith, for many years the partner of Mr. MacKellar, was left by will for the establishment of a children's playground in Fairmount Park and a memorial arch of massive proportions which is now being erected near Belmont avenue, in West Fairmount Park. The money devised for these two purposes exceeds \$500,000. The children's playground has been fitted up in the East Park and is being maintained by a trust fund for the enjoyment of those for whom it was intended. The memorial arch, when completed, will be one of the most remarkable architectural structures in the country. It includes two commanding towers, at the ends and

in the center a series of colonnades, upon which there will be the statues of distinguished generals and citizens of Pennsylvania.

We have given so much because we feel that his pure, earnest, industrious life, with a general devotion to his work and to objects that were ennobling, should prove a benison to all printers. He had no time to quarrel with employers, to find fault with his wages or condition, or for dissipation. He made himself useful and necessary, and became the helpful friend of those for whom he worked and, very soon, their valued associate in business. He had no need for vapid idleness, nor for loafing, nor unemployed leisure, but found a healthful recreation that gave both mental and physical vigor in the pursuit of knowledge and literature. He experienced in all his long life no ennui that had to be enlivened by trifling, vulgarity, folly, fault-finding or dissipation. There is a glory and a joyousness in such a life that makes this earth next to heaven, through the open door of which the broad beams of faith and hope shine forth on an illuminated pathway until the soul takes wings and rises to the glorious throne, and eternal companionship with the good, the wise, the great, the noble and the true for which earth life has proved a perfect preparation.

ABOUT CINCINNATI.

A representative of this paper visited Cincinnati in December and was so pleased with the Queen City of the Center West as to think that the readers of the National Printer-Journalist ought to know more about it, and the result is some very fine views shown herewith and an account of the Cincinnati Typothetae. For the former we are under especial obligations to J. E. Richardson, of the Ebbert & Richardson Co., and for the latter to Mr. George C. James, Secretary of the Cincinnati Typothetae. Our readers, and especially the older members of the National Editorial Association, are not ignorant of the many attractions of Cincinnati, as one of the very enjoyable conventions of the association was held in that city in 1886. Pictures in this issue tell more than words, yet there is romance as well as much of fact that cannot be made known in this manner. The first settlement of Cincinnati was in 1778, but it is stated that its early destiny was influenced by the attractions of a "black-eyed girl," whose early residence here caused a young army officer to report to the United States Government its superior natural advantages over those at the mouth of the Great Miami River. The city was made the seat of government of the Northwest Territory in 1790, and so remained until 1801. Here, too, was located Fort Washington, the principal military post of the territory. These advantages of being both the military and governmental headquarters added to local advantages gave the place an early start that led to the queenly name that she has since borne, though the great expansion through the Louisiana Purchase, the acquisition of Oregon and of Texas and California seem to have rendered the designation "of the West" scarcely appropriate. Hence we have modified the old name by the addition of Central. It is a question whether or not even this appellation ought now to go to some city on the Missouri River. The queenly characteristics of the city still remain. It is a center of music as well as of commerce and manufactures. The early settlers of the region were Revolutionary soldiers, many of them personal friends of George Washington, and they laid the foundation of the city and of the State deep in the ideas of education, religion and freedom. Its parks, monuments, churches and school buildings, its academies of music and art, its great printing offices and publishing houses mentioned more at length in our article on the Cincinnati Typothetae, show the rich fruits of the ideas first implanted in the new settlement. It would take a whole volume to describe these, to say nothing of the great manufacturing establishments, its many railroads, its great commercial buildings, hotels and theaters.

The success of the two great ink factories—the Queen City, mentioned at some length in this month's issue in connection with the sudden demise of John Rycken, the honored manager, and the Ault & Wiborg Company—have made the name of the city as a household word in every printing establishment on the American Continent. The latter, the Ault & Wiborg Company, is not less widely known than its earlier rival. It has been but recently that even printers have seemed to recognize the value of good ink

for the securing of satisfactory results in the "art preservative of arts," which certainly ought to stand right along by the side of the other fine arts, printing, engraving and sculpture, in the perfection of work. Both Mr. L. A. Ault and Mr. F. B. Wiborg are practical men and have devoted their entire time and personal attention to the business. With the latest machinery, the most approved processes, experienced management and a skill that has come through patient investigation and experiment, coupled with liberal advertising, the Ault & Wiborg Company has been able to reach a success that seems almost phenomenal. There is a good deal more in ink-making than most even good printers realize. As was stated in a Souvenir of Cincinnati and Its Resources, published by the Cincinnati Times-Star Co., in 1891: "For fine work it is imperatively necessary to use the best and most carefully prepared ink obtainable, ink that shall have the qualities of permanency, brilliancy and purity of color; that will distribute freely and not smear; that will have such an affinity for the paper that it will dry almost immediately upon it and still remain moist upon the type and rollers; that, in fact, shall be proof against the destructive influences of time and chemical re-agents and shall never lose its color. To make such ink extensive facilities are required, and a long observation of climatic influences and the action of different colors taken in order that the ink may be adapted to the demands made upon it. One feature should be largely expatiated on as a point of difference between this and most other printing ink establishments on this continent; all dry colors used in manufacturing are made direct in its own plant, with an especial reference to their use for printing ink purposes. Buying almost wholly from manufacturers of paints the dry pigments which they use for their inks, the printing ink makers generally, speaking of the United States, are subjected to a disadvantage it is impossible to overcome. Printing inks, to be good, should be made from a better grade of pigments than is found in the factory of any dry color manufacturer, and the faulty properties of the inks now on the market can be directly traced to this source. On this particular feature the Ault & Wiborg Company lays great stress, claiming pre-eminence in adaptation of ink to the work in hand. Every ounce of color is made especially for the printing it is to accomplish. When sent away from the factory, the blacks as well as colored inks have been subjected to a test that has brought out their exact inherent defects or merits and all the faults, if any, have been corrected."

Another establishment in the printing line that has added to Cincinnati's fame is that of the Van Bibber Roller Company. This company is equipping its plant with a full line of cylinders, the finest steel rolls, together with the latest hot and cold water and compressed air systems. Courteous treatment, close application to work and to the needs of customers, and the best possible products, are the rules that control in both the business and manufacturing departments of this old and widely-known house. Van Bibber's "Pressman's," "Regular" and "Rough and Ready" compositions have found their way to the satisfaction of users, into printing offices all over this land. A pamphlet issued by the company on "How to Make and How to Keep Printers' Rollers" furnishes very valuable information. The following from the book on the "Cleaning of Rollers" will prove of value to our readers:

"To clean rollers properly the fluid must fulfill two conditions—it must freely dissolve the ink, and it must not in any way affect the roller itself. No fluid should be used that has any effect on the roller. It sometimes happens that old rollers need wetting or sponging, but you don't want to clean them with a substance that compels you to wet them every time you clean them.

"Both good rollers and new rollers are damaged by sponging.

"No type-wash or any trash advertised to clean rollers should ever be used.

"Anything containing water will affect the roller. Inks are soluble in oils and roller composition is insoluble in oils, therefore oil is the proper substance to clean rollers with. Oils, like alcohols, range in consistency from the state of gas to that of solid. Natural gas is a gaseous oil, paraffine is a solid oil. Lye and alkalis are not true solvents of ink at all; they merely saponify the oil of the ink and enable the ink to be then washed off with water. Probably as good oils as any to clean rollers with are benzine or kerosene; they dissolve the ink freely and have no effect on the roller itself. Notwithstanding the assertion

of ignorant persons, benzine has no effect on rollers, and does not affect the composition in any way."

In the engraving business the City of Cincinnati is well represented by the American Process Engraving Company. This house does all varieties of photo-engraving in the highest style or the art, furnishes plates for the printing press in half-tone, zinc-etching, wood and metal engraving, black or colors. It also makes embossing dies and furnishes designs on any subject or by any method of illustration desired.

The recent consolidation of the Helleberg Photo-Engraving Company with the American Process Engraving Company, under the name of the latter, has created the largest and best equipped photo-engraving plant in this section of the country. The most skilled artisans, modern labor-saving devices and the newest machinery enable the new concern to execute promptly the very best quality of engravings at reasonable prices. It is especially prepared for prompt handling of very large orders and would be pleased to have the editors visit the new establishment.

RESOLUTIONS ON DEATH OF THOMAS MACKELLAR.

NEW YORK, January 11, 1900.

At a special meeting of the Board of Directors of the American Type Founders Company, held in New York on January 10, 1900, it was

VOTED, That the Directors of the American Type Founders Company recognize in the death of Thomas MacKellar the passing of one who was a master of the art to which he devoted a long and honorable life.

In private life a man of strong and upright character, who led and sustained those around him; of enlightened justice and personal benevolence, he commanded alike respect and appreciation.

In his work he did much to lay the foundation upon which the present worth and prosperity of this Company rest. In appreciation of his character and worth, the Directors extend this minute upon their records, and order that a copy be sent to his family.

A true copy from the records.

Attest: JOHN T. MURPHY, *Secretary*.

The Illinois Woman's Press Association will give its annual banquet at the Palmer House, Chicago, February 8. It is expected that a large number of the members of the State Press Association will be in attendance.

BUSINESS NOTES.

Barnhart Bros. & Spindler, Type Founders of Chicago, sold an order of six or seven thousand dollars worth of their SUPERIOR COPPER-MIXED type to Ganpatrao, Gandhi & Co., of Bombay, India, who will in the future represent them in that country. These capable and progressive East Indians report a largely increased demand for American goods in India.

J. S. Hoerner, of Highland, Ill., has on the market a "Little Wonder" in the way of a sharpener for paper-cutter knives, whereby they can be sharpened without removing from the machine. The cost is small, and the great advantages are that it is easy of application and keeps the knives always in tip-top condition. It is a time-saver and insures evenness and better work.

A very handsome number of the Musical Courier of New York city has reached this office, a number of pages of which containing halftones are printed on Tymphalyn. The work shown is of very high quality. The Tymphalyn is a wire blanket so arranged as to bring out the finest lines of halftones without the use of overlays. A fuller description of the process will be given at an early day.

Mr. Stevens, manager of the Duplex Press at Battle Creek, Mich., is on a visit to Europe, and will return about the 1st of February. He will doubtless give the Europeans

an opportunity to reap the benefit that may be derived from the purchase of the printing press that he represents, but we understand that the direct object of his visit was to pass the holidays with his daughter, who is completing her education abroad.

Under the firm name of Charles Helmuth the well-known ink manufacturing agent, in New York, of United States and Canada for Kast Ehringer's Lithographic Inks and Dry Colors, a branch supply house has been opened in Chicago at 357 S. Clark Str., Wells Building. This house was opened up January 1, 1900, for the further convenience of the rapidly increasing Western trade. The same lines of goods are handled by the Western as by the well-known Eastern house.

The F. Wesel Manufacturing Company, of 82 Fulton street, New York, has a new catalogue in press, under the supervision of Mr. H. L. Bullen, a prince in artistic and effective advertising. It will be a work of art as well as a book of information with regard to the many lines of goods handled by this company that has had a most gratifying growth during the past twelve years, and now ranks among the largest establishments of the United States. The company makes everything for electrotypers, stereotypers, and linotype offices, and machinery for photo-engravers, and handles one of the largest lines of printing material in the world. Messrs. Bullen, formerly with the American Type Founders Company, and Greer, for many years the successful manager of Golding & Co., two most successful and thoroughly informed gentlemen in all lines of printers' supplies, have been added to the force of the business office of the F. Wesel Company during the past year.

The Ebbert & Richardson Company, through whose courtesy we are able to present the excellent half-tone illustrations of Cincinnati, is now an incorporated company and succeeds to the widely-known printing establishment of Ebbert & Richardson, Mr. Richardson of the old firm having bought the entire plant and business and founded the new company. The reputation for fine printing will be maintained. Mr. Richardson writes: "We expect to continue to produce the best work in Cincinnati." For the highest grades of color printing this office has a reputation as broad as the continent.

The Dexter Folder Company are placing on the market what they believe to be the only up-to-date and perfect feeder. It is remarkable what satisfaction these machines are giving and the large number of orders that have been received. Among the recent shipments there are machines for Rogers, Hall & Co., E. C. DeWitt & Co., of Chicago; J. J. Little & Co., Wm. Green, of New York; Bechtold Printing & Book Manufacturing Company and James A. Cassidy Company, of St. Louis; West Publishing Company, of St. Paul, and others. The Dexter advertisement in this issue shows a cut of their Rapid Drop Roll Jobbing Marginal Book Folder with their automatic feeder attached. For this combination of machines a great many orders have been received, and for jobbing plants are an especially profitable investment.

A line of machinery that printers generally should know about is that of The Challenge Machinery Co., of Chicago, makers of the "Challenge Country Cylinder," "Advance" cutter and "Challenge-Gordon" jobber, in each of which classes this enterprising concern has combined superior excellence with decided reasonableness in price.

Mr. James L. Lee, President of The Challenge Machinery Co., who is well known to the printers of the U. S., is an expert in his line; and to his untiring efforts is due the evolution of the Challenge Country Cylinder, which has already been commended by many printers who have put it to the test on news, book and job work, and found it to exactly fill all their requirements, quite as well as expensive and more complicated machines.

Not less interesting to the investigator of improved machinery is the Challenge-Gordon Job Press made by this company. All the fundamentals of the good old Gordon are retained in this jobber, and as a result of experience and applied inventive genius many marked improvements have been added; noiseless ink disc mechanism; perfectly balanced platen, which minimizes the wear of cam and cam roller, and permits of higher speeds on all kinds of job work; the larger sizes have folding feed boards, steel pinions and center impression screws.

From the line of "Advance" and "Challenge" cutters it

ought to be an easy matter for any printer to choose. They are made from the \$50 hand lever machine, squaring 16 inches, to the 36-inch power cutter.

That the Challenge company should be so busy, making machinery for the entire printing world, is convincing evidence that their products are popular.

A destructive fire destroyed the Electrotpe and Engraving plant of the Sanders Engraving Company, of St. Louis, on December 10. During the past few weeks they have completely refitted an entire new and modern plant in the Howard Building, with offices in the fire-proof Holland Building. These two buildings are separated by a small alley, over which the Sanders Company have built an iron bridge connecting the same. This location is in the center of the business section of St. Louis and while the buildings are much better lighted and located than their former location they also have about one-third more floor space. Chicago secured the order for the new electrotpe machinery which was of the latest pattern and will be fitted for the direct motor system using the Lundell Motor.

While the fire caused Sanders a heavy loss we are glad to find they have overcome all of the difficulties and have a new plant with greater facilities than ever before. By connecting the two buildings with a bridge the Sanders Company will have their entire business practically on one large floor. The photographing department will be covered with skylights and arranged for using either electric or daylight for photographing. Eight new Bogue 5,000-candle power electric lamps will be fitted in this department. In their new location Sanders will lay claim to having one of the largest and finest fitted electrotpe establishments in the country.

The Hamilton Manufacturing Company, of Two Rivers, Wis., and Middletown, N. Y., has put on the market a new improved wooden quoin, which will no doubt be extensively used by the best printers. It is the idea of Mr. Heber Wells, of Paterson, N. J., and it is known as the "Wells Long Wood Quoin." It has one distinctive feature never possessed by any wood quoin before: that is, it can be used with straight ordinary furniture, and no side-sticks are required. This is accomplished by the quoins having the bevel on one side only, and they are used in

pairs, as shown in the illustration. Contrary to general opinion, the days of wood quoins are not over, and the Hamilton Manufacturing Company report an increasing demand for them by the best printers, as there is absolutely no damage to the type by accidents in dropping the quoins on type forms. The chief advantage that a modern metal quoin has had over a wood quoin is the long bearing surface. This is met in this new long wood quoin. They are provided on top with a notch, which assists in unlocking them. They are made in four sizes, of boxwood and hickory, and are put up in neat boxes, holding one hundred quoins, and are sold at moderate prices. All dealers will have them in stock. A descriptive circular of these quoins will be mailed by the Hamilton Manufacturing Company on application.

THE VAN BIBBER ROLLER CO., Sixth and Vine Streets, Cincinnati, will give you the best rollers that can be made for any season or press. Our facilities are the best, and we use the latest compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

Artists and Engravers

THE merchant, manufacturer, publisher, or advertiser who appreciates the fine points of illustrating and engraving will be interested in the facts about our business.

In three years we have grown to be the largest and most perfectly equipped engraving house in America.

The reason for this, we believe, is the peculiar service we render our patrons.

We are not satisfied with mere mechanical excellence. We study a customer's work from *his* viewpoint. We give him intelligent service and help him attain the results he is after.

We have sixty artists working in pen and ink, wash, sepia, stipple, crayon, and oil.

We have eighty-five engravers, trained in all the latest processes: halftone, zinc etching, and wood.

Whatever your line, the work entrusted to us will be handled understandingly.

Whether we furnish the idea or execute yours, you will get a new notion of what an engraving house can do for its customers.

We would like you to test this by sending us copies of your printed matter. Tell us your present difficulties. All literature will be promptly returned if desired.

CHARLES AUSTIN BATES,
Vanderbilt Building, New York.

"Mr. Bates' masterpiece. It is interestingly and readably written—more readable than one would believe possible on so hackneyed a subject as advertising—and it is illustrated by pictures intended to lend a humorous turn to many of the sentences in the text. For those who want a general idea of advertising principles, the book will be found valuable, and even the readers to whom its subject is more than familiar will find it an interesting companion for a leisure hour. It is full of apothegms, every one of which rings with a true note."—Geo. P. Rowell.

Printers and Journalists Appreciate Perfect Typography.

THE December cover design of PROFITABLE ADVERTISING AND ART IN ADVERTISING, Boston, is executed by the Barta Press. This fact alone will commend the magazine to your attention. The contents (80 pages) are also in keeping with the superior excellence of the cover and will prove of great value and interest to you.

A sample copy will be forwarded upon receipt of 10 cents. We would, however, suggest your sending \$1 for a year's subscription, in which event you secure the December issue FREE.

The cover designs for 1900 are alone worth the subscription price, while great advance will also be made in the quality of contents.

Subscription price, \$1 per year.

Foreign price, \$1.50 per year.

Address PROFITABLE ADVERTISING AND ART IN ADVERTISING, 227 Washington Street, Boston.

THE VALUE OF WEIGHT

Fitzsimmons lost to Jeffries because he lacked weight; therefore strength and durability.

THE CHANDLER & PRICE
PRESSES EXCEL ALL
OTHER GORDONS IN
WEIGHT, STRENGTH,
AND DURABILITY.

THE CHANDLER & PRICE GORDONS have fifteen malleable-iron parts in their construction. All have steel rocker-shafts. All sizes larger than Eighth Medium have forged steel fly-wheel shafts. What has yours?

Were it not that WEIGHT, mechanically distributed, is necessary to obtain strength and durability, we assure you that with present high prices for material, we would take advantage of lightening the construction of our machines.

The record, of which we are justly proud, proves that WEIGHT, as well as careful construction, is a requisite the printer can not afford to ignore in a durable, money-making and money-saving machine.

THE SAME RULE APPLIES TO THE CHANDLER & PRICE PAPER CUTTER.

Assuring by its superior WEIGHT, RIGIDITY, STRENGTH, ACCURACY, and DURABILITY.

SHIPPING WEIGHT OF CHANDLER & PRICE MACHINES.

7 x 11 C. & P. GORDONS, . .	1,000 lbs.	23-inch PAPER CUTTERS, . .	1,050 lbs.
8 x 12 " " " . .	1,200 lbs.	26-inch " " . .	1,100 lbs.
10 x 15 " " " . .	1,800 lbs.	30-inch " " . .	1,750 lbs.
12 x 18 " " " . .	2,500 lbs.		
14 x 20 " " " . .	3,000 lbs.	What is the weight of yours?	
14½ x 22 " " " . .	3,100 lbs.	How about repairs and breakages?	

WE WILL NOT LIGHTEN OUR MACHINES BECAUSE MATERIAL HAS ADVANCED.

EXPERT OPINIONS.

The December, January, and February numbers of the National Printer-Journalist are to hand. I have had some opportunity to learn the merits of various similar publications, and I have no hesitancy in expressing the opinion that yours is the best of any of which I know. It thoroughly covers the field and meets the wants of publishers. It acts as a constant and strong stimulus to greater and more successful endeavor.—R. L. HAMMOND, Fremont, Neb., Feb. 14, 1899.

I wish to express my appreciation of the National Printer-Journalist by inclosing payment for one year's subscription. I have been a reader of the Journalist for the past seven or eight years. I now consider it as important in the success of my business as any part of the office. I assure you that with it I have the advantage of my competitors. The National Printer-Journalist has improved from year to year, and I wish it success in the future.—W. G. YATES, Pierre, S. D., March 2, 1899.

“No More Cheap News Ink for Me.”

THE newspapers of this country for the past two years have been solicited, drummed, and almost persecuted by Printing Ink manufacturers who, having no reputation and no sales for Fine Grades of Inks, have been forced by their necessities to obtain a market for that grade of Ink which is easiest made and turned out in largest quantities. The result has been that so-called “News” Inks have been offered at a price so close to the cost that the manufacturer has been unable to turn out a properly made article, and in consequence there has arisen the greatest dissatisfaction among newspaper publishers at the muddy appearance of their papers and the filling up of their fine type. We have determined to give newspapers an absolutely first-class, dense black News Ink, and charge a fair price for it. The quotation at the top of this page is taken from many letters we have received from newspaper publishers who have written us asking for a News Ink that “will work free and clean, and print black.” One of the best printed newspapers in this country—the New York Commercial Advertiser—is printed with Ink of our manufacture. Any newspaper publisher who thinks this paper looks better than his own, we will be very glad to furnish with quotations for the same grade. Publishers who are satisfied to use an Ink solely because it is “cheap” we think will find from experience that there is no real economy in using anything but the best that can be made. Why spoil good paper—the item of cost of which is very large—with poor Ink, when the difference in cost between a good and poor Ink is so trifling?

Fred'k H. Levey, Pres't.
Chas. E. Newton, Vice-Pres't.
Wm. S. Bate, Sec'y.

Fred'k H. Levey Co..

59 Beekman Street, New York.

THE TRUTH

the NATIONAL PRINTER-JOURNALIST is told in a few unsolicited testimonials given below that have been sent to the magazine and picked out at random from among scores of others:

A valuable and indispensable journal of knowledge.—H. B. HALE, Weekly Gazette, East Hartford, Conn., Oct. 27, 1899.

The National Printer-Journalist is all right and full of good things each month.—HARRY BASFORD, Austin, Minn., Oct. 14, 1899.

We congratulate you on the appearance of your December issue of the National Printer-Journalist, just received.—THE CHALLENGE MACHINERY COMPANY, Chicago, Dec. 21, 1898.

Mark me up another year. Can't get along without it. The National Printer-Journalist is better every number.—GEORGE C. WOODRUFF, Litchfield Enquirer, Litchfield, Conn., Feb. 7, 1899.

I wish to say that I watch for the coming of the Journalist each month with increased interest. I find it invaluable to me in my work—in fact, one issue is often worth the price of subscription.—WILLIAM F. FOLSOM, Argus, Brinkley, Ark., Dec. 15, 1898.

It has given me a great deal of pleasure to note the steady progress being made by the National Printer-Journalist. I don't see how any printer can get along without it.—J. Y. GILMORE, Sugar Planters' Journal, New Orleans, La., March 7, 1899.

We have been receiving the National Printer-Journalist for some time, and we desire to take this opportunity to express our appreciation of the improvements which have been made in your journal, particularly during the past year.—KATE E. GRISWOLD, Profitable Advertising, Boston, Jan. 20, 1899.

The National Printer-Journalist is one of the journals I can not be happy without. It improves greatly with age, both in contents and appearance, an indication of prosperity that is decidedly gratifying to me. May it long continue to flourish as the best journal of its class.—JOHN F. BABCOCK, Advance, Jamesburg, N. J., Dec. 15, 1898.

Send on the National Printer-Journalist. It is the essence of delight to me to peruse its beautiful pages every month. Its columns are so full of practical thoughts relative to the editor and printer that I am at a loss to imagine how a fellow can "keep shop" without its monthly visits.—W. W. LOWIS, Greenville Advocate, Greenville, Ill., Jan. 20, 1899.

I thank you very much indeed for the January number of the National Printer-Journalist, containing beautiful illustrations of the University and of Columbia. It really does your skill in printing and engraving great credit. I thank you heartily in behalf of the University and in my own behalf.—R. H. JESSE, President University of the State of Missouri, Columbia, Jan. 18, 1899.

The National Printer-Journalist is like old wine, it improves in quality with age, and I consider it one of the best, if not the best, journals published in this country for the editor and printer. I desire to congratulate you upon the excellent report you gave of the forty-second annual meeting of the New York Press Association on Long Island last summer. It was by far the most extended and best-written report of any newspaper containing an account of our meetings.—L. B. GREEN, Argus, Patchogue, N. Y., Jan. 19, 1899.

about anything, when plainly and simply told, needs no argument nor grand introduction to make it clear and forcible. The Truth about

We are in love with your excellent journal, and we would scarcely know how to keep house without it.—C. L. BITTINGER, Ocala, Fla., Oct. 20, 1899.

The February number of the National Printer-Journalist is splendid throughout.—F. N. MERWIN, Secretary Nebraska Press Association, Beaver City, Feb. 14, 1899.

The Public Library has received your publication for some time and has made good use of it. We find it one of the best journals of its kind published.—JOHN PARSONS, Librarian Public Library, Denver, Dec. 27, 1898.

The National Printer-Journalist should be in the hands of every editor and publisher in America, for it deserves a hearty and liberal support.—J. SLIDELL BROWN, West Virginia Editorial Association, Kingwood, Dec. 5, 1898.

If Brandon Printing Company's name is not on the subscription list of the National Printer-Journalist, please put it there and keep it there, sending us bill for the subscription. We don't want our name off of your list as long as the paper is published.—BRANDON PRINTING COMPANY, Nashville, Tenn., June 30, 1899.

I wish to congratulate you upon the excellent report of the annual meeting of the Massachusetts Press Association. I am sure all of our members will appreciate the efforts you made in their behalf, and I feel that it ought to insure you a very large circulation in this section of the country.—A. C. DOWSE, New England Grocer, Boston, Feb. 20, 1899.

Allow me to express my appreciation of the excellent and unsurpassed qualities of the National Printer-Journalist as a newspaper-man's professional paper. It is the representative of all trade journals for the publisher. The reports of the different State Press Associations are especially interesting.—E. S. DANFORTH, Vermillion, S. D., May 1, 1899.

The Mead household thinks a great deal of the National Printer-Journalist, and all the members, young and old, read it. Personally, I consider it the most complete journal devoted to newspaper work and material printed in America today, and it is worth twice its cost, every issue, to the publisher who cares to get above the ground floor in his profession.—CHARLES B. MEAD, Geneva Republican, Geneva, Ill., Feb. 14, 1899.

The writer has subscribed for and read nearly all the papers and magazines of our country devoted to the graphic arts and allied branches. None proves of more interest to me than the National Printer-Journalist. You deserve much credit for your efforts in behalf of the Typothetæ, and your paper should be in the hands of every member of this Association. With best wishes for your success I remain, JOHN W. CAMPSIE, Milwaukee, June 29, 1899.

Allow me to congratulate you on your splendid March number of the National Printer-Journalist, filled as it is to the brim with highly interesting matter, and gotten up with all the delicacy and taste of a wedding card. I have been looking over it and comparing it with one of the early numbers issued after it was first started, for I have been a subscriber from the first, and have preserved most of the numbers, and I think it is remarkable how it has grown. I used to think the first numbers were models of interest and neatness, but there is hardly a comparison between those and what you are now issuing.—M. P. RINDLAUB, Grant County Witness, Platteville, Wis., March 17, 1899.

PRINTING PRESSES

FOR ALL CLASSES OF LETTERPRESS WORK.

The Miehle

HIGH-SPEED, FOUR-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in eleven sizes, from 26 x 36 to 48 x 65. This press is built to do the finest class of printing, and is specially adapted for halftone work both in black and in colors. It is the standard Flat-Bed Press of the world today, as the producer of a greater quantity and finer class of work than any other press on the market.

The Miehle

HIGH-SPEED, TWO-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in six sizes, from 30 x 42 to 45 x 62. This press is designed for a little cheaper class of book and job work than our Four-Roller, differing only in the number of form rollers, having two instead of four; otherwise it is similar in all its other features, and is faster.

The Miehle

HIGH-SPEED, TWO-ROLLER, REAR DELIVERY, "RACK AND PINION" DISTRIBUTION JOB AND NEWS PRESS. Made in five sizes, from 30 x 42 to 43 x 56. Its method of distribution is "rack and pinion cylindrical" instead of "table." The class of work to which it is more specially adapted is newspaper and poster work. Felt packing used. It is very fast.

The Miehle

HIGH-SPEED PONY PRESS, TWO-ROLLER, REAR OR FRONT DELIVERY, "RACK AND PINION" OR "TABLE" DISTRIBUTION. Made in two sizes, 25 x 30 and 26 x 34. This press has a well-earned reputation for remarkable speed and the superior quality of work it does.

OUR NEW SHEET DELIVERY

Which delivers the sheet PRINTED SIDE UP OR DOWN, as may be desired, we put on all our presses with the exception of the "Job and News" and the smaller sized "Pony." This adds but little to the cost of the press to the purchaser and is a great convenience.

BENEDICT & CO.
ENGRAVERS & ELECTROTYPERS
175-7 CLARK ST.
CHICAGO.

The scene was changed about the place,
The wall came tumbling in,
And the roof let in the sunshine and the rain—

also a few million gallons of other grades of water, including Chicago River water, Lake Michigan water, chemically charged water—32 streams in all played by the Fire Department constantly onto this wreck for hours.

The stock on the four remaining floors below, in all stages from damp to soaked, and the stuff in the basement, under water and out, has all been taken by the insurance companies—*every sheet of it*—we couldn't use it. They can dispose of it, for that is their business—our's is to sell only GOOD paper—THE BEST.

We have three large warehouses full of bright, new stock, and 150 more cars on the road. There never was in the history of paper dealing such a large, clean stock of all kinds of paper anywhere.

There are no fag ends, no dead ones—and if right prices, prompt service and get-there methods will effect it, there *will* be none, for we shall issue each month a special sale sheet on remnants with terms that will wipe them out. You want paper and want it RIGHT. Let's get together.

Our Slogan:

EVERYTHING IN PAPER,
FROM THE CHEAPEST THAT'S GOOD
TO THE BEST THAT'S MADE.

J. W. BUTLER PAPER COMPANY,

A New Type Case

Designed by
Mr. Heber Wells,
of Paterson, N. J.

WE show here a new improved Job Case with extra large cap boxes, designed to hold two fonts of caps and figures. The boxes in this case are so arranged in size that there is no waste room, and we believe that printers will be quick to recognize its superior advantages. In dividing this case to hold fonts of capitals, figures, and points, the aim has been to get as large boxes as possible for the letters, while the figures, points, and odd characters have been disposed of in boxes no larger than their importance demands. By this means the greatest economy of space has been obtained. This excellent case was designed and placed on the market by MR. HEBER WELLS, of Paterson, N. J., and by him turned over to THE HAMILTON MFG. CO.

The Wells
Two-Font
JOB CASE
with
Extra Large
Cap Boxes.

List Price
90 Cents

Subject to
Usual
Discount
on Cases.

The cap boxes in this case have each an area of $5\frac{1}{4}$ square inches, which is about one-third greater than that of a box in a regular news cap case. No change has been made in the "lay" of the case. The boxes are all in their regular positions, the same as in an ordinary cap or job case.

The figure boxes are all in the back row, it being the most convenient, as it is evident that when figures are not needed they are farthest removed. When these cases are used in a cabinet, this feature will be appreciated. One side of the case can be used for lower-case, if desired.

Made in the "New Departure" style, with three-ply bottom, like all other cases manufactured by us.

This case can be substituted in any of our cabinets, in whole or in part, *without extra charge.*

THE TWENTIETH CENTURY SUPERIOR ELECTRIC WELDED CHASE.

WHAT USERS SAY OF IT:

"Electric welded chases are the best we have ever used. They are everything that you claim for them."—THE AMERICAN PUB. COMPANY, Owosso, Mich.

"GENTLEMEN: Some time ago we bought from you several pairs of your electric welded chases, and would like to express our satisfaction with them. We find them very true, firm, and perfectly welded, and by far the best chase we have ever used, and we have given them a severe test. We certainly would recommend them to any one wishing to purchase a first-class chase."—REPUBLICAN Ptg. COMPANY, Iowa City, Iowa.

"GENTLEMEN: When on receipt of a new dress of type from you for the Banner I received the electric welded chases, I was at once satisfied that they will prove a success. Since then I am bound to say I have found them fully up to my expectations in every respect—in fact, I regard them as the best chase I have ever seen in the many years I have had anything to do with the printing business."—H. MAHRAUN, Iowa Banner, Iowa City, Iowa.

"GENTLEMEN: Am using four of your electric welded chases and find them better than anything I have ever handled. The four when placed one on top of the other lined up so perfectly that it demonstrates the absolute accuracy of the manufacture. In your 'Points of Superiority' you say nothing about the economy of these chases. They will certainly outlast a half dozen of the old style."—C. E. STEWART, Editor Williamsville Times, Williamsville, Ill.

Strength

IS AN ESSENTIAL OF A
PERFECT PLATEN PRESS.
IT IS ONE OF THE LEAD-
ING CHARACTERISTICS OF
THE

CHANDLER & PRICE..... **JOBBER**

ONE  REASON

Thickest at point of greatest strain.

IS FOUND in the construction of the platen. It has more metal than the platen of any other make of Gordon presses. The construction is convex, heavily ribbed, and thickest in the center at the point of greatest strain — as shown in the illustration. The tympan rests on a perfect surface and the gripper bars and platen ears are of malleable iron, a metal much tougher and more expensive than cast iron. The construction secures firmness, rigidity, perfect impression — making possible perfect register and perfect work in every way besides insuring

JUDGES REPORT ON SCOTT PRESSES

"The press is a fine example of ingenuity, and bears evidence of the most careful attention to the details of construction which go to make an easy-running, rapid-working press of the highest type. It has many points of merit, original and valuable. Special mention may be made of the new bed motion; the sheet delivery, delivering the sheets printed-side up without the use of a fly; interchangeable form and distributing rollers; improved ink-distributing system; ample air-cushioning cylinders, easily and uniformly adjustable while press is running, and other excellent features of value to the user and reflecting great credit upon the manufacturer.

"The Silver Medal and Diploma are recommended."

THERE ARE STILL A FEW
advertisers, advertising men, pub-
lishers, and printers who have not
yet subscribed for **PROFITABLE
ADVERTISING**. They are doubt-
less victims of procrastination. They know,
of course, that it is the leader of all adver-
tising magazines published today, and they
intend to send along their dollar when they
"get around to it." But in the mean time
they're missing the superb numbers now
appearing, which they will regret. Our
readers say that each number, with its artistic
cover, its wealth of illustration, and its inter-
esting articles, is alone worth the price of a
whole year's subscription. For the present,
however, we shall continue sending it at the
old price—one dollar a year. Why not get
around to it today?

If you want a sample copy send 10 cents
and mention the National Printer-Journalist.

PRINTERS' MACHINERY MATERIALS AND TOOLS

IN our salesrooms, conveniently located in all the principal business centres of the United States, there is in stock the most complete variety of machinery and material ever exhibited by any supply concern catering to the wants of the printer. Therefrom a printing plant of any magnitude or for any purpose can be furnished complete in every detail, from the insignificant bodkin to the pretentious cylinder press. Buying as we do, in immense quantities, our cost prices are minimized, and the purchasing printer is assured of all possible advantages in prices and prompt service. An order for a can of ink or a carload of machinery treated identically.

IMPORTANT QUESTIONS DISCUSSED.

Connecticut Typothetae Celebrates Franklin's Birthday and Talk Over Trade Matters, the Press, and Trusts.

In celebrating Franklin the printers of the United States discussed many things wise and otherwise.

The Connecticut Typothetae was especially happy in the after dinner speeches. The New Haven Evening Register says:

TRUST SWINDLES.

Gov. Lounsbury complimented the Typothetae upon the success of the National Convention held in New Haven last fall and upon the innovation of the dinner in having both employer and employee present. The Governor then passed to a discussion of trusts.

"The State," he said, "is bound to be hostile to any trust which aims at a wrong object or which is dangerous to society. I know myself of the formation of a few trusts. With hardly an exception every one was formed by men whose first object was the making of money rather than the pursuance of any special policy of good. One trust, formed with \$8,000,000 capital, issued stock of water to thousands of unsuspecting purchasers. It perpetrated a swindle upon the people and the stockholders. Upon such a wrong, such a monopoly, a State has no right to stamp the broad shield of its incorporation."

The speaker said he did not know what remedy can be applied by a State in such a matter, but he felt that one must exist. "In the first place," he said, "let the State ascertain whether there are honest assets, and on the whole business allow the light of popular curiosity to be thrown. Then if any franchise be invoked let the value of that franchise be always exacted. When the State has done this work, and done it well," he concluded, "there will be so few trusts left in this country that they will not endanger the people nor dwarf the nation."

COMMON INTERESTS OF EMPLOYER AND EMPLOYEE.

Henry O. Houghton, of the Riverside Press, Cambridge, the next speaker, dwelt on "The Common Interests, Employer and Employee," and gave one of the soundest talks

of the evening: "It often occurs to me," said he, "whether the public at large realize that printing is now so necessary in every walk in life, commercial, social and in matters of trivial importance. We have emerged from the primitive condition of furnishing a luxury into furnishing something all must have. The printer has come to be the greatest man on earth. Capital must be practical in order to secure permanence, and permanence means all that conduces to happiness."

HIGH WAGE VERSUS STEADY EMPLOYMENT.

High wage and unsteady employment is not so valuable as lower wage with assured permanency. The employer must conduct his business on honest lines to secure this, and supply an adequate return to all in his employ. Both sides have their obligations and duties and they should be respected. Employers must insure permanency and safety, employees must be faithful, watchful, stop the leaks and do their work fairly. The moral obligation is very great and is essential to the business. The employer should have a willing ear for any complaints or suggestions from any man in the employ. Where such methods are in force the results are more than satisfactory. Careful consideration of differences and misunderstandings always bears good fruit. Great care should be taken in the education of young men for the trade. A printer's life is one constant school of education until he is buried."

LETHARGY OF PRESS ASSERTED AND DENIED.

Mr. Deming, of New Haven, said in part: "He felt impelled to reminiscence somewhat and to speak of the old days of the printers and newspaper men—the time when every citizen of this great commonwealth of ours took a great and active interest in the political questions of the day. It led him to ask if that condition of affairs exists to-day. Do the citizens, old and young, take the same interest in the conscientious exercise of the duties of citizen-

ship now as then? Do they all do their duty at the polls? And you, Governor of Connecticut (addressing Governor Lounsbury), you speak of trusts, you strike at the proper treatment of the evil—taxation, capitalization and publicity—but is such a course possible, I ask you, while such an antithesis exists between the present day and 30 years ago? And the press. The press seems to be enjoying a sort of lethargy. When we see to-day corporations enjoying the rights they are, fleecing the public and pursuing their way unquestioned, we are forced to ask, “where is the press?” In one case we see the water turned in upon a gas company—watered two or three times. Not a word of criticism brought out by the press. It is, I say—I speak in general—as if they had lost their boasted power of freedom.

“Within the last 20 years I have seen the lobby in this State advance through its successive stages. The last stage appears in the assembly together of all the lobbyists, with the captain at their head, dictating legislation and laying wires and dictating elections for years ahead. And all this time the press is dumb. I wonder that the time has not yet come when the editors of the Connecticut press will realize that the public will welcome these disclosures as a matter of personal right.

“Gentlemen of the press: When you awake to the realization of this, then and then only can you refute the charge that the power of the American press and of Connecticut journalism in particular has vanished.”

THE PRESS.

Colonel N. G. Osborn responded to the toast, “The Press.” He said: “My friends, Mr. Deming has touched upon the press. I listened to him with great care and very great interest. While I don’t want to appear too serious in what I say, I feel that there are some things to be said. When he says the press of this city and of this State has proved itself utterly lacking, when he says that it has failed to produce a newspaper that has pointed out the fallacies of the government, he is mistaken. He brings a broad charge when, in view of the fact that the financial success of a paper depends entirely upon public approval, he says that they proved weak. But I repudiate it with every drop of blood in my body. I want to say right here, not that there is no body of men more self-sacrificing in their work, but that they are a self-sacrificing body, and how much so no man knows until he stands behind the scenes himself. Of my friend I will say I have never read from his pen an article that glowed with such fire as that which glowed in his remarks tonight. So, sir, put into your pen the noble sentiments you have expressed before us here assembled, and we’ll meet on common ground to unite in saving a tottering humanity.

TRUSTS, SO-CALLED, BAD IN ABUSE—NOT IN PROPER USE.

“And, let me say, there are weaknesses in other business besides the newspaper. It is evident from a common meeting of employer and employee here to-night that it is so in the printing business. I admit that were I of the Governor’s cabinet I should have taken some exception to his statement in regard to trusts, for in my opinion it all lies in the abuse and not the principle of the thing. I’ve got great faith in feeling that this country is going to work these things out for itself. I’m built on that plan of optimism. Men have some good in them; some probably more than others. For instance: Why wasn’t the feeling shown here tonight in the friendly relation of master to man evidenced before? As a preceding speaker has said, the conflict between capital and labor is like a conflict be-

tween truth and conscience. I hope this is but the beginning of a series of assemblies of this character.”

Rev. Watson L. Phillips responded to the toast “Benjamin Franklin,” and pointed out the relation between the writers, the talkers and the printers, and asked the question: What would one do without the other? It’s a stirring spectacle to an outsider, to see employer and employee sit down together. It reminds one of the time of which the prophet spoke when the lion and the lamb shall lie down together. “I don’t know which is the lion and which is the lamb, but I assure the lamb of my sympathy. I congratulate the master printers of the Typothetae that they have conceded the nine-hour day without a conflict, without trouble such as has marked such concessions in other parts of the country.”

The speaker then spoke of Franklin; of his life at the court of France, and styled him one of the figures that never grow smaller. The figure of “Ben” Franklin stands out to-day more massive, more beautiful, than when he was in life among his fellow citizens. Franklin was one of the great Americans. He had the power to put himself in the right place at the right time, and he was constantly at the disposal of the people whose welfare he was seeking. Franklin and those men with whose names his was associated gave out the best types of American manhood. He put the truth into character; he lived the life that was right. He cancelled his obligation to society, and no more can be expected of any man.

“All these questions that have been hinted at tonight can be settled if people nowadays will only imitate Franklin. I know of no better thing for a man to learn from your patron saint than to be a good citizen; to do the utmost that is in him for the uplifting of society.”

Mr. Wilson H. Lee, President of the Typothetae, presided and acted as toastmaster. He referred to the fact of the presence of the journeymen printers at the banquet and said he was more than glad to see so many employees present. Their interests and the interests of the employers being the same, he was glad to see all seated at a common dinner table.

Other speakers treated this as being something new, but it is only new in places where the false teachings of unionism have raised a barrier between the workmen and employers and since the existence of walking delegates, organizers and intermeddlers, false teachers who have inculcated the doctrine that the employers are the enemies of working men and that laborers are to be held back from doing their best for fear of benefiting overmuch the men from whom they receive their wages—the doctrine of grumble, hate and the highwayman who proposes to take by violence or intimidation what could more easily be obtained by industry and a conscientious care for the rights of others. All over this land where the selfish spirit of anarchy has not made its appearance, employer and employee frequently sit down around the same board, are to each other helpful and confidential friends, attend the same church and Sunday school, belong to the same Bible class, take communion at the same altar and conduct themselves like sensible Christian gentlemen. It is not strange that those who have no religion except to prey upon their employers, no Sunday except one on which to meet and curse those whose bread they eat, no humanity that reaches beyond the members of their own guild, demanding that who will not submit to their authority be denied and be permitted to starve, and if they undertake to work be excommunicated, anathematized, beaten, clubbed and murdered, should not always be welcome guests at the tables of those whom they publicly denounce as enemies, even if they could comfortably

sit in their remorseless enmity and treason at the tables of those whom, by their organization and their contributions thereto, they seek to injure, malign, terrorize, and betray.

A FEW REQUISITES TO SUCCESS IN A COUNTRY NEWSPAPER.

Paper read before Kansas State Editorial Association, Fort Scott, January 22-23, 1900, by GOMER T. DAVIES, editor of The Kansan, Concordia.

Several years ago my esteemed friend, Dell. Valentine, who, by the way, is one of the most capable newspaper men of the State, inaugurated the cash in advance or "no dollar no paper" plan of collecting subscription accounts, and as Mr. Valentine did not immediately go to the poorhouse there was not a meeting of an editorial association for two or three years thereafter that Mr. Valentine was not required to tell all about it. If our friend had settled that momentous question, we all wanted to know how it was done. He said to me one time: "I should like, some time, to be put on the association programme for some other topic, because I fear that my friends will get the impression that I don't know anything else."

I am in a position to crave his sympathy, without being qualified to give as satisfactory an answer to my topic as he did to his.

The question is a vital one, of course, or it would not be so frequently asked, and is entitled to consideration at every meeting—else the meetings are valueless.

I shall take the liberty, at the outset, to say that I will not assume that I have made a success of my business—at least not that success I hope for and which I pray you all labor for.

The country weekly newspaper is a queer concern—it requires a man peculiarly fitted by nature, I believe, to make of it a moderate success.

I am reminded by this of a remark made by a friend of mine, when he heard of my going into newspaper work. Said he: "Davies, I am glad to know you have gone into newspaper work. I am confident you will make a success of it—in fact, I am sure of it, and would bet on it." That was a good many years ago and your humble servant was, perhaps, a little more modest than he is now.

I am sure I betrayed my emotion in the crimson blushes that rapidly chased each other in quick succession over my beaming countenance.

I thanked him very cordially for his frank manifestation of confidence.

"Yes," said he, "I am a firm believer in the declaration that 'God has made nothing in vain.' You ought to make a good newspaper man, because I am sure you are not worth a tinker's obstruction for anything else."

My friends, I want to say to you that a good newspaper man is not worth much at anything else, in my opinion.

I should add, right here, perhaps, that I do not wish to be understood as declaring that a man wholly unfit for anything else, though, will necessarily make a good newspaper man. Yet this is an idea prevalent in some quarters.

The successful country newspaper man must needs have as many different qualities of gray matter in his skull as has the proverbial turtle varieties of meat within his shell.

Assuming this to be true, the first requisite of success is the proper start and the use of the correct sort of mud when God created the would-be newspaper man.

It is a hard matter to define newspaper success. We may not all be working for the same line of success.

If you, my brother, bought a newspaper to be used as a lever to land yourself in an office and you have got

the place you sought, then you have been successful, because you accomplished the desired result.

If you started an opposition newspaper to chase another fellow out of town and he is now gone, you have made a success.

There are those who strive solely to make their papers strong factors in a political way, and bemoan their fate as unsuccessful if they do not secure the recognition they deem they merit.

For myself, I deem it a successful newspaper that has the general respect of the people among whom, and for whom, it is published.

If it brings financial returns to reasonably remunerate the labor expended and to pay a fair interest on the capital invested, it is a financial success.

To obtain the first desired result the editor himself must be respectable—he must have a conscience, with will power enough within himself to assert what his conscience prompts to be right.

For, be it known, there are many temptations and snares to beset the editor with an India-rubber conscience—so many men do not hesitate to use the editor to their own selfish purpose, little caring for the ruin their action may bring to his business or to his life.

The individuality of the editor of a country newspaper is inseparable from his paper—the paper cannot possibly be respectable nor considered so, unless the publisher is also respectable.

It should be the first duty of a newspaper to give the news of the county in which it is published.

The very name, "Newspaper," implies that much.

It should be given as complete as it can be procured and with perfect impartiality.

Let us be plain about this. Though you are publishing a partisan paper, it is your duty, in my judgment, when the opposition party holds its conventions to give the proceedings as complete and unbiased a report as you would of your own party convention.

Your own readers, members of your own party, require it and are entitled to it, without any bias or distortion.

If you have opinions to express, comments to make, or distortions to weave, leave that to your editorial columns.

I will freely confess to you that I have learned that the "hammer and tongs" style of editorial writing does not accomplish the desired result.

I have never been able to convince a man to my way of thinking by jumping onto him with both feet every week in my paper.

I have never seen or heard tell of newspaper men succeeding in doing a rushing business as an advertising solicitor, who roasted people because they do not advertise. It's old, of course, but nevertheless true, and will bear repeating—Molasses will catch more flies than vinegar.

It would ill become me to advise an editor to supplant his back-bone with a fishworm—I am not built according to that sort of plans and specifications myself.

Neither do I suggest that an editor should fear the result of an honest expression of his views.

If there is anything that I utterly abhor it is an effeminate, emasculated, jelly-fish editor.

If you are right sure you have something to say, say it, of course—but use discretion in the manner of saying it.

I find that the public have a kindly regard for a conscientiously radical and positive editor, but have no patience or use for an intolerant, abusive one.

So much for that side of it.

Speaking of the practical or business end of the country

newspaper work, I believe the greatest bar to the financial success of the country newspaper lies in the credit system.

The evil of not collecting the money due us, at stated times and regularly, is bad enough, but the evil of running bills everywhere ourselves is infinitely worse.

Such contemptible, slipshod methods on the part of many newspaper men does incomparably more to lower the dignity and efficiency of newspaper work than any other one thing I know of.

The most independent man in any community should be the editor of the local paper—no editor may be independent if he owes half the people in the town.

The editor who owes no bills has no trouble in collecting those due him.

One cannot reasonably expect prompt payment of bills due unless he pays promptly, in cash, the bills he owes.

I run no accounts with the merchants who patronize my advertising columns or give me job work. But I spend all my money required to meet my needs with those who patronize me—and with no one else.

I pay them cash for what I buy and take their business on the same basis.

The merchant who advertises in a newspaper so as to get even on the bill due him from the editor, is never satisfied with the result. Instead of impressing him with the value of advertising, and of the dignity of newspapers in general, he has become disgusted with the whole business—and I do not blame him.

There are newspapers who follow the opposite course from the one I have advised, but it is my humble opinion that they never can hope to be classed among the successful ones.

I cannot hope to touch on all the requisites to success in a country weekly newspaper. There are a great many little details that make up the sum total of success which no man can impart to his fellows.

Too many of our craft do not give sufficient attention to small details. I do not hesitate to say that in a majority of cases the line of demarcation between success and failure has been a line of dirt—dirt on the type, dirt on the inking rollers, dirt on the machines, dirt on the finished job or the printed newspaper, dirty editorial work and a dirty wrapper on the paper when it is mailed.

If you take a man's money on subscription it is thereby implied that you will furnish him the news of the county in a manner that he can read with pleasure.

It should be well printed, neatly folded, securely wrapped to properly protect it from damage in transit, and delivered to him at the time he expects it and when you agreed to deliver it. A newspaper that can be a day late in its publication and not create disappointment isn't much of a paper. The paper that causes a roar to go up if it is an hour late can not afford to be that hour late.

A poorly printed paper cannot compete these days with one that is well printed.

Old and obsolete type can not compete with new and stylish type—neither with the subscribers, the up-to-date advertiser, nor the man seeking job work.

If you have a printer in your employ who says, about an ad. or a job: "Anything will do," or "It's good enough; he won't kick," you should give him his getaway papers and get one who will give your customers the better statement: "I'll give you the best I can do."

By the way, that isn't a bad thing for the editor to practice, too. In discussing the question, "How to Make Our Papers Better," before the North-Central Association, a couple of years ago, a competitor said: "I think our papers are now better than the people pay for or are entitled to."

That, coming from a competitor, was music to me. I resolved to make my paper better than it then was—that is easy competition. No man can win in the newspaper work or anywhere else who harbors that sort of an idea. It is not doing that brother an injustice to say he is not a glittering success.

The newspaper must needs have new life breathed into it every week or down goes its apple-cart.

There is no piece of property on earth that will get shot all to pieces quicker, under bad management and neglect, than a newspaper plant.

The requisite to avoid such a catastrophe is a plain case of everlasting hustling and work.

Misguided zeal in the arena of politics has been the downfall of a large percentage of newspapers who have gone where the woodbine twineth.

The memory of the average politician is exceedingly short. The fellow you dug out of obscurity and sacrificed valuable friends and perhaps much business in booming for office is the fellow who will soonest forget you when he has attained the zenith of his political glory.

It does not pay to make much of a sacrifice for the political ambition of men.

You will be printing a newspaper—primarily, for the purpose of procuring groceries for your family—after all the present breed of professional politicians are politically dead and in the place where they ought to be.

I hope I may not be misunderstood in this. A requisite to success is to follow a correct conscience in politics, but not blindly following of the political fortunes of an individual. This is given as a principle and not in relation to any acute case now agitating the minds of the politicians of Kansas at this particular time.

Speaking of the editor's relation to politics prompts me to repeat what I had written to say at a meeting of the Reform Press Association at Emporia, nearly three years ago, but which I did not succeed in saying on that occasion because of a belated train which prevented my reaching the meeting before it adjourned. It is this:

I do not think a country editor should aspire to any office within the gift of the people.

Since I wrote that I am more confirmed than ever in the correctness of that position. In fact I have proved the absolute correctness of that proposition. I ran for office myself, and when the returns came in I was in that class generally designated by the papers as "John Jones also ran."

As soon as an editor trims his sails and runs his paper with a view of securing for himself an election to an office, in my opinion, he ceases to be an effective newspaper man.

He and his paper are both likely to become the shuttlecock of every politician who desires to domineer over him or to shape the policy of the paper, whenever he becomes a candidate for any office, except, perhaps, an appointive one.

Do not listen to the siren song of the bee that buzzes in your bonnet, my brother—I know what I am talking about, just now.

I am a firm believer in the honesty of statements concerning circulation. It has paid me well, in the face of the most mendacious lying of competitors. And while I think about it, I am going to say that this honesty I have endeavored to instill into this paper and for the purpose at hand, is purely from a selfish standpoint—a plain business proposition. Simply because it pays.

One of the most intelligent and effective advertisers in our town is a patron of the paper called "Brains," a pub-

lication devoted to advertising and the discussion of modern advertising.

It was a compliment to my theory on this matter that he should mark an article in a recent issue of that journal, substantiating my method in that direction.

As it is the testimony of an expert in such matters, I thought it might be profitable for me to quote a portion of it here. It was under the caption: "Advertising a Publication." The writer said that most publishers were content with the statement: "Our circulation is constantly increasing, therefore ours is a good advertising medium."

This, he said, was unsatisfactory, and, continuing, said: "What the exact circulation is, was, or is likely to be, is a subject surrounded by heavy silence and Egyptian darkness. And upon that point is the advertiser most desirous of obtaining information.

"There are three things a publisher is most anxious to obtain, viz.: Advertising patronage, circulation and influence. The first naturally follows the latter two. A publication with a limited circulation may have a wide influence by reason of the force of its editorials and other newspaper excellences. Its field may be limited, hence it has a circulation. A publication may have a wide field with a wide influence and circulation, and frequently not get the advertising patronage due it because advertisers are not made acquainted with its exact circulation and approximate influence.

"I have always believed such matters should be made known to the advertiser, who, as a rule, is a clear-headed business man, thoroughly familiar with the exact measurements, weights and numbers of whatever else he buys.

"This is a commercial age, and a man wants to know what he is giving his money for, and in every case he wishes a good money's worth."

In closing the article the same author says: "But after all that is said and done on the subject, a sentence will hold all the milk in the cocoanut. So here is the sentence: Get up a good paper, and then let readers and advertisers know it."

I am sincere in the belief that this is one of the requisites of success.

I cannot hope to touch all the requisites of success in a country weekly newspaper.

I have mentioned a few of those I deem most important and may be summarized as follows: First of all, and most important, print all the news of your county that you can possibly secure. Inject into it a pleasing, spicy style of expression—the world much prefers to smile than to weep.

"Laugh, and the world laughs with you;

Weep, and you weep alone."

Infuse earnestness into your editorial utterances, but, withal, be courteous and fair with those with whom you differ on matters of public concern.

Insist on payment, in cash, or its equivalent on a cash basis, for all your work. Meet your every obligation promptly, with money—I am sure it pays to do business that way.

Give an honest statement of your circulation to those who are entitled to have it, and you will be the gainer thereby.

Print your paper well if you possibly can do so. I have never seen a poorly printed paper in my life that could not have been better printed with the facilities at hand the very time the job was botched, and without the outlay of a penny.

Prompt service in every department of the establish-

ment—in the delivery of job work and in the publication of the paper.

I cannot resist the temptation to give you my own definition of success, or rather the measure of it to which I aspire, in quoting to you the language I used on a similar topic, before the National Association, at its meeting at St. Augustine, Fla., in 1896:

"It is the country paper, edited by sterling character and a sprinkling of brains, that has influence in the hearts and homes of the people. To have that influence is to be successful in the conduct of a country newspaper. This has been my aim in the conduct of my paper. I have given you my way of doing these things; it is for others to say whether I have been successful or not.

"There, in the country town, amid a rural scene in as fair and fruitful a valley as ever the sun shines upon, my lot is cast, and where I expect my remaining days will be spent; doing what I can, in my humble way, to be a credit to our honorable profession; content, if I may be able, to give my family a reasonably wholesome living and my children a good education, such as our own Kansas schools afford. If I can accomplish this, I am fulfilling the highest duty of American citizenship."

THE COUNTRY EDITOR; SHOULD HE BE A POLITICAL PHILANTHROPIST OR A BUSINESS MAN?

By LEVI D. WAIT, Democrat, Howard, S. D.

Philanthropic editors, like the poor, are always with us. Some are so full of philanthropy that they will run an account, if allowed to, with the home merchant, and the merchant to get his pay must run an ad. in the paper or get beat out of it altogether. They owe everybody, consequently they have to be philanthropic. It is just here that the "business editor," wishing to grow broader in his views, sweeter in his temper, to lose his self-conceit, the intolerance and incapacity of former years and to generalize the detailed experience he has gained in the business from long years of hard work and study, and to be fit, in a word, to accomplish the work he has planned to do, that he runs bump up against the philanthropic editor, who owns a "junk shop," has his patents come C. O. D., never pays his bills, but just the same gets enough work away from a legitimate institution to keep it from pushing ahead, as it otherwise would.

True, I can say I have been a philanthropist in one sense—a philanthropist from force of circumstances—but not in that sense which I have just outlined—a sense which characterizes it as a stench in the nostrils of the better element of the profession—a detriment to progressive journalism—and I doubt some if there are many here to-day who have not also at some period in his business career found himself in the same capacity as I have—dishing out editorial space and great gobs of benevolence for the benefit of some political aspirant because obuged to. As a publisher we must certainly be philanthropists—and political at that—until we have acquired by dint of hard labor and forced economy a competency sufficient to warrant our becoming independent in mind as well as body. The publisher out of debt, with a few hundreds to his credit, is recognized as a successful business man, and the necessity of being such is one of the subjects I have been asked to discuss here today.

During the decade in which I have hustled for ads., solicited job work, worked for subscribers and paid the "devil," I have at some time dreamed that newspaper suc-

cess is a favorable termination of an attempt—the crowning attainment of well directed effort. It is the opposite of failure and confers great honor on him who successfully wins it. With industry and economy I entertain strong confidences that a man engaged in a vocation of a country publisher can succeed; but indolence and inattention to business will be sure to result in ruin and disgrace. The man who is industrious is the man who invariably meets his obligations promptly and earns his money before he spends it. A man in this age and year can not practice running into debt unless he is positive of seeing a way in which to get out again. Neither can he put off until tomorrow that which can be done today. Money costs too much if not honestly acquired. Merchants do not appreciate the necessity of being obliged to carry an ad. in the columns of a newspaper or of placing job work with a defunct institution in order to clear up some old score. It is better to deal with patrons as one business man deals with another—not in begging our way through, but in giving to the world a little compensation for a right to a place within its boundary.

I am aware that many a country editor is being deprived of work on which he could realize a nice profit if given the opportunity to handle it. There are men holding public positions in the State who ignore the publishers who have shouted early and late for their advancement when it comes to dispensing the crumbs of public patronage. As a traveling representative for a year of a large publishing house, I positively am acquainted with officials who send everything in the way of printing they can to outside houses because they can realize a ten per cent cash rake-off or its equivalent in premiums, while the home printer has to be satisfied with an occasional order for a thousand envelopes or letter-heads and what little legal printing the Legislature has prevented the ungrateful official from farming out to a Sioux City or St. Louis concern at so much per farm.

And that's why I contend that a newspaper man in debt, or even with the board, is a political philanthropist, pure and simple, while one with a good paying plant and his home and a few hundreds in the bank can have things more his own way. He will be in a position to dictate—not in the sense of a boss—but as to whether or not he will support this or that man for office. I don't wish to infer that I am speaking from the standpoint of one who has been more severely dealt with in this respect than others—on the contrary I am speaking from a personal knowledge acquired while rubbing up against such practices six days in the week.

So long as a publisher is in debt he will be obliged to cater, but once on a sound financial basis with a few cents in the reserve fund, the other fellows will commence to cater, and patronage, both political and commercial, will come his way without his having to sacrifice his individuality and independence in trying to obtain it.

But how to reach that desired goal is another proposition. A man may have the imagination of a Jules Verne, the wit of a Petronius and the inclination of a Nero, but without the instinct and judgment of a business man his nose will ride the grindstone from one year's end until another, and here I must contend that the country editor should be a business man instead of a political philanthropist if he is to succeed in life—and success means all.

GOOD FOR WILLIAMS.

Walter Williams, a millionaire resident of Columbia, Mo., edits two newspapers, is President of the school board, trustee of the State university and teaches a Sunday school class of 150 scholars.—From Knoxville, Tenn., "Journal and Tribune," January 2, 1900.

PRINTERS' PUBLICITY.

By THE EDITOR.

A copy of *Publicity for Printers*, by "Musgrove" (E. St. Elmo Lewis), reached our table some time ago, but a pressure of other matter has prevented earlier notice. The book is published by the Enterprise Printing Company of Winchester, Va., and is copyrighted by the author. Its dedication is happy and suggestive. It reads as follows: "To the Seventeen Thousand Printers in the United States and Canada who taught me all I know about the advertising and printing business."

The man becomes wise and successful who gathers wisdom from all sources. It is a very poor printer or business man who has not some good idea worthy of adoption. This booklet is a collection of scores of valuable methods of, and ideas about, publicity for printers who need publicity, as do men in other branches of business. This booklet of 108 pages tells "the how" which we often think is more difficult in this than in many other lines. Mr. J. Clyde Oswald, of the Printer and Bookmaker, in the "Introduction," says: "I do not care where the printer may be who reads these lines, or what his circumstances are; he can build up a business that will enable him to live in a castle if he will go about it in the right way. He may say that he does not understand how, but he can learn. Let him read this book, read the trade journals and consult advertising experts." He might have added, let him also study the methods of the most successful and try in every way to improve thereon. The author, in speaking of "The Printer's Opportunity," justly says: "A printer is the richest advertiser in the world. He is richest in opportunity. He has an opportunity in every press, every stick of type, every quire of stock, every pound of ink. The business man pays him for his opportunity." This is the method of advertising through the artistic excellence of the work turned out. A printer should look upon every output from his press as a sample of his art, as an advertisement of his facilities and his ability, and not merely see a job done to the satisfaction of a customer who may be no judge of the higher possibilities, yet would be much better pleased with more attractive work that would cost the printer but a very little more, but bring better results to his customer and serve as most valuable advertising for his own establishment. It is not business wisdom to take work at the lowest possible figure to beat competitors out of the work and then strive to make a profit by cheapening the cost through the use of rapid, slovenly composition, cheap paper, cheap ink and too rapid, careless presswork. It is much better to convince customers by explanation, reasoning and example that good work is much more profitable to them and that such work requires good material and skilled workmanship at every step. It has been, as the author quotes, a wise boast of successful printers, "We are advertised by our loving friends," yet as valuable as is this kind of advertising, it is not sufficient, as the author demonstrates, in this age of push and progress.

The printer must be an instructor, an educator in the possibilities of advertising, in order to reach success or competency. He must produce and advertise something that others may wish to buy or have adapted to the wants of their particular lines of business and produced by the printer who has shown himself an artist with brains. Whatever may be said or thought of combinations, unions, fixed or agreed prices as retarding or helping success, active brains, trained minds and skilled hands, aided by artistic eyes and tastes, win the prizes in the printer's calling. These must have fields, or galleries, if you please, for exhibition and display. "Publicity for Printers" points out

many of the methods by which the pleased attention of customers or prospective customers may be secured and held. The enumeration of the methods proposed, without going into details, are an education in themselves, not because the methods are new, but because suggesting in one collection all the most approved plans of printers' publicity. These are monthly blotters in colors, artistically executed, enumerating the various lines of work sought from those among whom the blotters are circulated; booklets and folders describing how special lines of work are done and enumerating facilities for doing the same; novelties bringing out something new each month in the way of booklets, cards, calendars, blotters, all made interesting. This is enough to suggest the rest. The last chapter of the useful little work, entitled, "Some Experiences Told by Printers," is especially valuable. One thought by the celebrated printer, Paul Nathan, of New York, should ever be kept in mind by printers as well as others in advertising. "To be most effective, printers' advertising should be done regularly and systematically."

We wish to add right here that in this publicity the newspaper press should not be slighted by printers any more than by any other class of people. The newspaper is the most effective means of reaching business men, manufacturers and those of all other callings. Blotters, cards, booklets, calendars, folders, etc., may be overdone. They have been used in many places until they have become a burden and find their way to waste-baskets almost as soon as they reach the desk of the business manager, proprietor or buyer. Life is too short even to glance at these products of the printer's art intended to force the attention in order to secure trade. Unless the printer has the skill, genius, knowledge and the broad information that will enable him to furnish something that will really interest and instruct those whose trade is sought, in matters pertaining to their own business, or suggest something that will catch the eye and fix the attention, as a new idea or a better method of securing publicity in their own lines, these efforts are worse than wasted. The newspaper—which we believe the author does not mention—however, is always available. Herein many of the readers of the *National Printer-Journalist* who own newspapers as well as large job printing offices and binderies are fortunately situated. Those who do not own newspapers will find it profitable to buy space therein. Newspaper advertising by a printer should be in the nature of a department carefully edited. The matter should be changed every issue, if possible. It should talk about printing; tell of novelties, of new designs and illustrations, new methods and machinery; give news about important jobs of printing, with reproductions by etching or halftone of anything especially worthy of showing. There is scarcely any other calling in which so many people are interested as the art of printing, newspaper and book making and illustrating, for these branches are so closely connected today that they may be broadly classed as one art. A double half-column could be made interesting and instructive to all classes of retail and wholesale dealers and manufacturers, every issue of the paper. Yet we notice that those newspaper men who do advertise their job offices put in display advertisements that bear every mark of being used as mere filling and kept standing without change. This is not the way to advertise and would be condemned in any other branch of business. A department heading enumerating different lines that are desired to be kept prominent might be permitted to be kept standing, though even here a change of type and arrangement would be found profitable. Mr. Lewis's book will be found especially valuable in the thoughts and directions as to how best to

handle the different varieties of printed matter, what the same should contain, the preparations for profitable distribution and the quantities to be used.

MISLEADING AS TO LIBEL LAWS.

Editor National Printer-Journalist, Chicago:

In the December issue of your magazine appeared some remarks made by President Frank H. Burhick at the meeting of the South and West Texas Press Association. As the question as to what is libelous and what is privileged is very largely the same in every State of the Union, the remarks of the gentleman are very misleading, and consequently are harmful. The remarks in question are in the form of little quirks or quips and contain such expressions as "confusion and chaos," "the law is a sealed book," that the trend of legal decisions in Texas has been to contract the liberty of the press, "that we demand a law that will define the liberty of the press," "star chamber courts," etc.

The writer can see no particular reason for the remarks in question. The law of libel is not a sealed book. The common law gave us ample information on the subject. No lawyer can understand any branch of the law by reading a definition, and editors likewise must understand the interpretation given to the subject by the courts of the country, for they are probably no more fortunate in their understanding than are lawyers. While we should have legislation in some of the States, such legislation would not enable us to understand the question except in the most limited extent.

The State of Texas has given us as large a number of decisions on the subject of libel during the past three or four years as has any other State. As these decisions are instructive and are of equal value to the editors of all parts of the country, it will no doubt be profitable to review some of the more important ones at this time.

In 43 S. W. Rep., 78, is reported the case of Jones vs. State. Jones was the publisher of a newspaper, and in his paper appeared an attack on the conductors of the Galveston street railway.

The articles referred to them as a set of "pimps," "greasy curs," "foul-smelling scavengers," "Irish snides," etc. The publisher did not name any conductor, nor make any exception among such conductors. The editor was convicted of criminal libel. The article was written by W. H. Noble, who was also convicted of criminal libel.

The case of the State vs. Noble is reported in the same volume at page 80.

The Houston Post of date November 22, 1894, contained the following: "Giddings, Texas, November 21.—Cy. Dement, formerly of Washington county, and who was at one time a Baptist preacher, was jailed last night on a charge of horse-stealing. His son-in-law, Joe Holland, was jailed as particeps criminis. The horses alleged to have been stolen were the property of J. C. Hillsmon, of Ledbetter."

The Texas Civil Court of Appeals decided that a judgment of \$1,000 against the publisher was not excessive, the charge being wholly untrue.

In 41 S. W. Rep., 382, is reported the case of Moulden vs. The Houston Post. On the 26th day of January, 1895, the Houston Post contained the following article:

"INDIGNATION WAS EXPRESSED AT THE CHAINING
TOGETHER OF A MAN AND WOMAN.

"Considerable indignation was expressed at the Grand Central depot yesterday at a species of brutality which ought to deserve some punishment. A young man and his

wife were chained together by the necks, and were in charge of an officer en route to some town in North Texas. The young man, it seems, lives at Beaumont, and in order to get a license to marry the girl he swore falsely to her age. The girl herself had committed no offense known to the law, and yet she was treated just as a convicted felon. It is the policy of the law to encourage the assumption of the conjugal yoke, rather than to punish those who have assumed its responsibilities."

The Post relied upon the statement of R. R. Kelly, a Texas newspaper man, who simply judged from appearances that the man and woman were chained together as stated. As soon as the publisher discovered his error two articles of retraction were published. The first of these was as follows: "The Post regrets extremely that it should be led into publishing the statements that the sheriff from North Texas had handcuffed the young wife who was going with her husband in charge of the sheriff to answer to a criminal charge. The statements were made by reputable persons who claimed to have seen the situation with their own eyes, and hence the misrepresentations as to a highly esteemed officer and gentleman."

J. L. Moulden, the sheriff of Colin county, brought an action against the Post. His name had not appeared except by the designation of "some officer from North Texas." He recovered a judgment against the Post for \$1,000, and the judgment was sustained by the Supreme Court. The name not appearing might affect the degree of publicity and consequently the measure of damages. The retraction under the principles of the common law are only for the consideration of the jury, as affecting the measure of damages. It is possible that the judgment was excessive, but that matter is so far at the discretion of the jury that courts do not disturb them unless the result of prejudice or passion.

In 42 S. W. Rep., 850, is reported the case of Smith vs. A. H. Belo Co., for publishing an article which appeared in the Galveston News and Dallas News, two newspapers published by the corporation defendant.

"ARRESTED IN KANSAS CITY.

"Kansas City, Mo., Aug. 22.—C. R. Smith, of Gainesville, Texas, a stockman of considerable means, was arrested here last night on a warrant sworn out by the Armour Banking Company of this city. The banking company brought suit in the Circuit Court in April, 1894, against Smith to recover \$14,057, which, it was alleged, was advanced to him several years ago, but as Smith had not been in the State since, the papers could not be served."

The judgment against the publisher in this case was sustained by the Supreme Court of Texas. The opinion does not record the amount thereof, but announces the language to be libelous per se, which means that the plaintiff is not required to prove special damages in order to recover. The common law justly recognizes the fact that where a serious offense is directly charged there is a damage to character, and the plaintiff is not required to prove it specially.

A. C. Baldwin, one of the editors of the Texas State Democrat, was convicted of criminal libel for publishing a charge of embezzlement. The name of the person did not appear in the article in question, but the court permitted evidence to show that another article appeared in the same paper referring to J. D. Field. The Travis County Court assessed the fine at \$200, and the Court of Criminal Appeals sustained the verdict. There was another point decided in the opinion which is of importance to newspaper men. Baldwin protested against its publica-

tion, but upon an agreement on the part of G. G. Guthrie, his partner, to assume any responsibility for its publication, Mr. Baldwin consented to its publication. Publishers should remember that parties can not contract for indemnity from the penalties of a crime or a tort, no matter if such contract is in writing; they are against public policy and void. 45 S. W. Rep., 715.

There is nothing in any of the decisions of the courts of last resort of Texas to be condemned so far as can be discovered. The courts have dealt with the same questions the same way in every other State wherever these questions have appeared, and whenever they shall appear they will be dealt with the same way.

The fact that so many libel cases appear from Texas indicates a careless disregard of the most common principles, or it may indicate that a few of the publishers believe that the term "freedom," as so often used, means license. I believe that editors who stand in the relation of officers of associations and all others who assume to be leaders of thought should learn to look upon this question more in the judicial spirit.

Legislation can be brought about more easily and more rapidly by some sort of an effort on the part of the press to confine itself to some sort of a rule of responsibility to the public. By learning what principles of law govern, the publishers will be greatly benefited. It is not the purpose to condemn newspapers in general, but we must recognize that the many must suffer by reason of the faults of the few. The editor should know what to publish, as well as what not to publish.

D. M. BUTLER.

Lincoln, Neb., January, 1900.

THE COST OF CARRYING THE MAIL.

Astounding Facts If Established.

The printers and publishers of books and newspapers are interested in proportion to the amount of mail matter sent out, probably more than any other calling, in the question of postal rates and service; for this reason anything relating to the subject has to them especial value. Every incoming Postmaster-General of late years has claimed that the mails are burdened with second-class mail matter, the carrying of which causes great loss to the Government. It is easier to make this charge than to prove the condition alleged to be necessary. This cheaper postage on newspapers has been granted by the Government on the ground that it was the means of disseminating valuable information, of educating the people and of making them more intelligent and better citizens. We never could see why the same reasons did not apply to the distribution of good books,—and, of course, neither bad, vile nor demoralizing books or newspapers should be permitted to be sent through the United States mails at any price. Advertising sheets of firms meant only to secure trade should have no special privileges. We could never conceive of any difference, however, between the reasons for carrying good newspapers and good books at reduced cost, unless it might be that newspapers are possibly able to serve the causes and ambitions of politicians more effectually than are good books.

If the facts and reasoning of the following testimony by Mr. Finley Acker before the Congressional Commission are correct, then there is no need for any deficit in the postal service, but there should be a large annual surplus. Railroads ought to be well and liberally paid for carrying the mails, yet there is certainly no reason why the Government

should pay forty-five times as great a price as that paid by railway passengers on our trains, or seventy times as much as is paid on first-class freights, and at the same time pay a heavy annual rental for the use of the cars in which the mails are carried. Now, we print the following as it comes to our hands and would like very much, if the same is false or misleading in any way, to be placed right.

Last February supposed, it is stated, reliable Postoffice statistics were quoted which showed that at the average haul of 328 miles, mail was being paid for at the average rate of 40 cents per ton mile. But since then railroad experts and Prof. Adams have submitted tables and testimony which indicate that the average haul of mail is about 813 ton miles, and the rate consequently reduced to about 12½ cents per ton mile.

Mr. Acker frankly accepted the revised railroad data in place of that previously furnished by the Postoffice officials, but to the surprise of all, made out a much stronger case than he had previously done on the old data. In fact this was done so effectually that one member of the Commission was disposed to take Mr. Acker to task for accrediting to Professor Adams the 813 mile data.

The distinctive points submitted were, in brief, as follows: That the primary factors which enter into the cost of any form of transportation are: First, Proportion of "dead" to paying load, and space accommodations; second, speed; third, length of average haul; fourth, weight of average shipment; fifth, character of service, whether daily or spasmodic; sixth, cost of all the details inherent in the securing, handling and managing of the respective classes of traffic.

As to the proportion of "dead" to paying load and space accommodations, it was shown that mail occupied an intermediate position between freight and passengers.

As to speed, mail was similar to passenger service.

But as the average haul of a passenger is but a trifle over 26 miles, and the average haul of a ton of freight is about 130 miles, while the average haul of a ton of mail is now said to be 813 miles, it follows that the average haul of mail is six times greater than the average haul of freight, 30 times greater than the average haul of a passenger, and 300 times greater than the average haul of a ton weight of passengers and baggage. Official rates were submitted which showed that for a haul of 821 miles the freight rates were 70 per cent less per hundred miles than for a haul of only 105 miles on the same route.

Official tables were also submitted which showed that when passengers contracted, as in the case of mail matter, for transportation for the entire year, a discount of 80 per cent was allowed on the single trip rate for a distance of 60 miles and a discount of 90 per cent for a distance of 101 miles.

But an analysis of the sixth factor, which represents the cost of the details inherent in the securing, handling and managing of the respective forms of traffic, showed equally astonishing results. Heretofore it had been found difficult to segregate from the 53 different items of railroad expenditure those items which applied exclusively to mail or to passengers or freight, just as it would be difficult to segregate similar items of expense in a business where three different classes of trading were carried on under one management, such, for instance, as commission or agency business, wholesale or jobbing, and retail. But the problem is solved very easily by simply calculating what costs would necessarily be incurred provided the business were exclusively commission, or exclusively wholesale or exclusively retail. This analysis would show that while a small office would answer for the commission business, a large

warehouse would be required for wholesaling, and palatial salesrooms would be required for retailing; while, in addition, the carload of merchandise which, in the commission business, could be sold to one buyer, might be distributed among fifty buyers in the wholesale department or among thousands of buyers in the retail departments, and by equating these differences with their attending expenses, one line of business could show an expense element of only 3 per cent, the second 8 per cent and the third 15 per cent. Exactly the same analysis can be made of the railroad business. If passenger business alone were transacted sumptuous stations would be required; also advertising; ticket agents and auditors; outside agencies and commissions; conductors and baggagemasters; and all the expenses proportioned to securing and handling 50 customers to one customer for a corresponding weight and haul of freight; or 300 customers to a corresponding weight and haul of mail. The necessary costs attending the passenger business exclusively are very analogous to the retail mercantile business.

On the other hand, in the handling of freight, exclusively, plain but substantial warehouses would be required; also the cost of switching; loading and unloading; trackage in stations, and non-productiveness of cars while being shifted, and while being loaded and unloaded; advertising and solicitors; clerical help for notifying consignees, calculating each shipment and receiving and discharging it; also liability as bailee in case of loss or damage. The costs of conducting the freight business exclusively are very analogous to the wholesale commercial business.

But if mail transportation is considered exclusively, all the expenses of luxurious stations, gigantic warehouses, advertising, solicitors, baggagemasters, conductors (but not brakemen) ticket agents and auditors and all the other expenses connected with the handling of millions of customers are eliminated, because in handling mail matter the railroads deal with but one customer (the Government), and the business is secured without the necessary expenditure of advertising or solicitors. In regard to speed, however, this slightly increased cost is similar to that of the passenger service, and the cars are probably better lighted and also heated. In addition at about 20,000 stations the mail is delivered to and taken from the Postoffice where it is less than 80 rods distant, and at 10,520 way stations catchers are furnished which cost about \$15 each and last from 10 to 15 years. When all the conditions are carefully analyzed for conducting the mail business exclusively, the comparative cost will be found strikingly analogous to the commission business—with the two exceptions of ratio of "dead" to paying load; also quality of cars, which latter feature, however, is much more than counterbalanced by the fact that a rental is paid each year for a Postoffice car which exceeds the entire cost of its construction.

And yet in spite of the comparatively cheap cost for hauling mail the fixed government rate for hauling 200 pounds mail daily the full length of the average mail haul is \$94.77, while the cost for hauling the same weight of passengers the same distance would, at the lowest commutation passenger rate, be but \$2.07; or at first-class freight rate be \$1.36, or at the sixth-class freight rate only 45 cents. The above represents the rates for the lightest mail routes, but jumping to the opposite extreme and taking the heaviest mail route, which is approximately 300,000 pounds daily, it will be found that the rate fixed by the Government for hauling this weight the full distance of the average mail haul (813 miles) would be \$7,317, while a similar weight of passengers carried the same distance would be at the lowest commutation rate \$3,121.02,

or at first-class freight rates be \$2,048.76, or at the sixth-class freight rates \$682.92.

The above comparison was suggested by an examination of Professor Adam's first table, but an examination of all the invaluable tables compiled by this careful statistician (which relate to railway mail pay) fully corroborate the belief that the present rates for transporting the mail are disproportionately high in comparison with other forms of traffic.

The second table shows that while the ton mileage of mail had increased 555 per cent since 1880, the operating expenses of railroads had increased only 221 per cent, passenger mileage 224 per cent and freight ton mileage 313 per cent, and yet no change in the law fixing railway mail rates had been made for 20 years.

Professor Adam's third table shows that the law fixing the present rate was enacted in 1873. In 1876 when the ton mileage had increased 46 per cent a reduction of 10 per cent was authorized in the rates. Again in 1878 when there was another increase in ton mileage of 15 per cent, another reduction of 5 per cent was made—but no reduction has since been made, although the ton mileage has since that time increased nearly 1,000 per cent.

The fifth table shows an apparent reduction of nearly 40 per cent in mail rates per ton mile—but this apparent reduction is due in every instance to the hauling of wholesale instead of retail quantities, and had each route hauled only the same weight as formerly there would not have been the slightest reduction.

The sixth table shows that the percentage of mail earnings had increased from 1.879 per cent in 1878 to 2.747 per cent in 1898, or an increase of over 46 per cent, and confirms the claim that the proportion of mail earnings to the railroads had increased in a greater ratio than the passenger and freight traffic.

The seventh table is significant because it shows that 82 per cent of the entire mail tonnage is carried on only 195 Postoffice car routes out of a total of 2,400 railway mail routes. These 195 Postoffice car routes average over \$100,000 per year in earnings, while the other mail routes average less than \$6,500 per year. This table also suggests the significant comparison that, while the average passenger car (in use and in reserve) earns but \$10,528 per year, the average mail car (in use and in reserve) earns upon one basis of computation \$15,586 per year, and upon another computation \$19,427 per year.

The ninth table shows that while the ratio of cost for mail transportation to the aggregate expenditures of the Postoffice Department was but 28 per cent in 1878, the ratio had increased to 35 4-10 per cent in 1898.

Having analyzed all the tables bearing upon the subject of rates for mail transportation, attention was called to a feature which had not been previously referred to. An impression prevails among some that the railroads should be paid an extra high rate because of the great benefit of the mail service to the general public. But Mr. Acker demonstrated that the greatest beneficiaries of a prompt and efficient mail service were the railroads themselves. One of the important and fundamental factors which has stimulated our internal commerce to an unprecedented degree, and developed in a corresponding ratio the transportation traffic, has been the aggressive advertising efforts of enterprising manufacturers and dealers—advertisements in the form of newspapers, magazines, price currents, pamphlets and circular letters, and were it not for this display of enterprise and great expenditure of money, the demand for freight transportation would be curtailed to an alarming

degree; and if the mails were stopped *entirely* every railroad sooner or later would be *forced* into bankruptcy. Most firms would consider themselves very fortunate if they could have their advertising done for them at no cost to themselves, but few would think of following the example of the railroads in demanding that a greater profit be made on their own advertising matter than they make upon their regular merchandise.

Up to this time every argument advanced in support of the present rate of railway mail pay, has, upon close analysis, only strengthened the opposite view; and while new arguments will in all probability be submitted by the railroad interests which, on the surface, may seem very plausible, there is little doubt but the inherent character of the facts themselves will, when carefully scrutinized, also convert these new arguments into fuller and stronger testimony for the opposite side.

One cent letter postage, which means the saving of a dollar a year to those who write only two letters a week; and a cheap parcels post system, which means a convenience to every family in the country and a great stimulus to our commercial industries, are the two practical objects which warrant such an exhaustive treatise of the question of railway mail pay, and it is Mr. Acker's hope that when the situation is clearly and fully comprehended the railroad interests will join hands with the commercial interests in securing these important postal advantages.

MASSACHUSETTS PRESS ASSOCIATION.

Thirty-first Annual Meeting held in Boston.

The thirty-first annual meeting of the Massachusetts Press Association was held at the United States Hotel, Boston, Monday, January 8. After the business meeting the gentlemen were joined by the ladies and a social hour was spent before the banquet, which was set for 3 o'clock, at which time nearly two hundred were seated at the boards, one of the largest meetings in the history of the Association.

President Dowse was the toastmaster and the first guest of the afternoon to be introduced was Gen. W. W. Blackmar, who told delightfully an incident of the Civil War in which he was concerned. The old story of love and daring, which is ever new, added a touch of romance to the tale of the recovery of the love letters of Libbie Bacon, written to Gen. Custer before she became his wife; these letters having been captured and held at Petersburg, Va., until Gen. Blackmar had the honor of reclaiming them from a Confederate family and placing them in the General's hands.

Rev. Peter MacQueen, who has risen to some prominence in his work as correspondent from Cuba and the Philippines, also spoke on war, but from a different standpoint. He paid a glowing tribute to the work of the American army and a personal tribute to Gen. Lawton, with whom he was associated. Mr. Sam Walter Foss, the poet, gave two selections, and he was followed by Hon. George A. Marden and Dr. A. E. Winship. Both of the latter gentlemen spoke in a humorous vein, and as the company dispersed the banquet hall was filled with merriment.

During the afternoon there was music by an orchestra, also vocal selections by a contralto soloist. In the evening almost the entire company availed themselves of the invitation of Manager Tompkins, of the Boston Theater, and had the pleasure of seeing Mme. Modjeska in the historic play of "Mary Stuart."

A WORTHY PRIZE OFFER OF \$100.

The Only True Way to Build Up a Business.

No man has of late made greater efforts toward raising the standard of ethics among those engaged in competitive business and who employ labor than has Mr. George H. Benedict. The folly of taking work below cost merely as fillers to keep the machines running has been demonstrated by him so thoroughly that no printer or engraver in this country can sin along this line without sinning against light and reason. Mr. Benedict has not only written wisely himself, but by liberal premiums has induced others to write. He now presents the article printed below on

editors may deem proper to make, is to appear in all the leading papers of this calling in the February issues, hence all who have at heart the true advancement of the calling by bettering the relations and improving the methods of employers will have an opportunity to contribute, and we hope the readers of the National Printer-Journalist will not be behind in this effort to improve the calling in the most sensible way possible; that is, through an education that will lead to the adoption of fair, equitable, honorable, intelligent, progressive business methods:

RIGHTNESS AND OUGHTNESS—ETHICS OF OUR BUSINESS.

ORGANIZATION.

The greatest good to the greatest number is the foundation of all legislation. An equitable unison in the conduct of business is a just and direct duty, as much so as complying with the rules of action and conduct by legislative enactment. Co-operation in the support of a harmonious alliance is organization. Without organization the tendency is constantly downward; without organization, envy and suspicion put us at the mercy of whipsawing methods, leaving everything to reckless rivalry, uninfluenced by any other consideration than a struggle for individual supremacy.

As an association, we unite for a common purpose, for advancement and improvement, with an earnest desire to increase our comfort by working in harmony and subordinating self-interest. In contrast is the theory that man's supreme effort should be the systematic pursuit of selfish ends, regarding only self-interest and self-advantage, and limiting endeavor to personal aims.

"Factions among yourselves, and preferring such
To officers and honors and a saving policy
Is to prefer to practice all the principles
That usher to destruction."

THE ASSOCIATION.

Believing that in the conduct of our business no individual or concern should act regardless of his neighbors and competitors, and that the interests of the individual are identical with the interests of all; that as a body we should have for a common purpose the progression and promotion of the craft, with a combined disposition to promote the welfare and best interests of each other, and that while the spirit of competition has been so keenly sharpened by the methods of the past as to cause it to enter into and influence every transaction, at the same time we recognize that there are methods of competition which are clean, honorable and legitimate, whereby we can compete without wronging others and without demoralizing the business in which we are engaged, we offer the following rules and recommend them to the craft:

"Nothing can be lasting when reason does not rule."

OUR DUTY TO OURSELVES.

The code of ethics best calculated to elevate the status of our trade must be evolved by the development of moral and intellectual manhood. We should, therefore, resolve to test every transaction by the standard of truth, justice and equity. The success of the association depends entirely upon the honesty and loyalty of its members. If we, individually and collectively, are staunch, steadfast, and incorruptible, we cannot fail. We should strive to demonstrate conclusively that we are, as a body of citizens, entitled to the highest consideration, that its members are

GEORGE H. BENEDICT,

Of Geo. H. Benedict & Co., Engravers and Electrotypers, Chicago.

the "Rightness and Oughtness of Our Business," and backs the article with the offer of a prize of \$100, at the rate of \$1 a line, for short paragraphs on how to best improve the ethics of the calling. The paragraphs written will be submitted to a committee of publishers of papers devoted to printing, publishing and engraving. This committee will carefully examine the contributions and decide as to which are entitled to the price of \$1 a line. It is not intended that any one paragraph shall be of the length of one hundred lines; on the contrary they must be short and to the point. If a paragraph of ten words, the length of line contemplated, should be the best, that one line will be entitled to a prize of \$1, or the best five lines or ten lines to \$5 or \$10 respectively. The article printed herewith is given to suggest ideas, or rather to stir up thoughts, but the paragraphs submitted are not to be repetitions in word or thought of this matter. The following, which appeared in a recent issue of the Journal of Engraving and Electrotyping, with such comments as the several

as trustworthy and intelligent as can be found in any line of business.

We should associate freely with the members of the craft, study their ways and methods, and endeavor to win a reputation as a firm with whom people can trust their work without competitive bidding. It is an absolute essential in honorable competition that we prove ourselves as straightforward in every particular as we would have our competitors.

"Who reasons wisely is not therefore wise;
His pride in reasoning, not in action, lies."

COMPETITION.

The application of the competitive principle is the main cause of the constant lowering of prices in the past; it has been the greatest evil of our business, and one which, having no influence on the volume of our work, is unwarranted, unnecessary, undignified and ruinous to the welfare of ourselves, confusing and embarrassing to our patrons and a menace to our employees.

The practice of taking orders as fillers for the purpose of keeping men and machinery busy is a most baneful and pernicious policy that educates the customer to want and demand the same treatment on every future order; and further, the figures given on a filler are quoted in a way that conveys the impression that those are the regular prices on any order, at any time.

The expense of doing business, such as the wear and tear of machinery, interest on money invested, bad debts, rents, taxes, insurance, bookkeeping, and all other items of expense, should never be forgotten, and these must be as surely levied on each particular order as its labor cost. Never, under any circumstances, should the entire cost plus a fair profit be departed from.

"There can be no profit if the outlay exceeds it."

PRICES AND ESTIMATES.

Every establishment should have a thorough knowledge of what it cost to produce the work it sends out, and should determine what percentage of profit it will be satisfied with. Based upon these two items, it should establish its prices for all work undertaken, whether secured by estimate or without a price being named in advance.

Do not assume that every one who asks for an estimate has an idea of jewing you down; in the majority of cases he only wants to know in advance what the bill will amount to.

When requested to make estimates for work, the intelligent proprietor should endeavor never to lose sight of the fact that the only proper price to make is the one that he would make were the work intrusted to him without an estimate having been requested on it, always consoling himself when he loses an order with the thought that if he had incumbered himself with the work at a low figure he would have incapacitated himself from doing what may presently come along at a remunerative rate.

Always have the courage to ask a fair price for any work offered, resting assured that it will be more profitable to be without an order than to secure one in which there is liable to be a financial loss in its execution.

Estimates calling for detailed specifications of separate value of the work should always be refused. These details the customer has no right to; they are your property, and giving them away is one of the surest methods of provoking unfair competition.

A firm should always contend that it is entitled, when asked for an estimate, to know the names of all who are to be requested to figure on the work. A glance at the

names is often sufficient to show whether it is worth the trouble to make the estimate.

The man who asks for a bid upon work, and before receiving it shows the figures made by another bidder, should be marked; it can be depended on, if he will show you another's bid, he will show yours to a third party. He wants you to do the work, providing you will do it for less than any one else.

When estimates are asked for by any person on work done by another concern, they should be invariably declined. It is not safe to criticize any price until one is in possession of all the facts.

In making estimates we may unwittingly wound some of our best friends when we have least intended it. If the aggrieved person thinks he has been injured by an estimate which has taken away a valued customer, his proper course is to seek an explanation. In most cases he can reach such an explanation as will prevent a repetition of the error if it does not bring the lost work back.

Make no rebates or allowances to brokers or middlemen. It is a fallacy to have favored customers. No line can be drawn between the large and small customers that will not be unjust to others in the same line, and if a special rate is made to anyone in a certain trade, everyone in the trade will protest against the discrimination.

On no account consent to pay commissions to bookkeepers, secretaries, or others who have work to give out. It is demoralizing to both the giver and the taker. Money is passed without the proper equivalent. The agent is selling something he has no right to sell, and unless the seller has a better conscience than is ordinarily met with, the commission is added to the bill, and the customer pays more than he should.

"Reckless rivalry brings success to few, misfortune to many."

OUR DUTY TO EACH OTHER.

When a young competitor enters the ranks welcome him as a new soldier to the field, and help him to any information and assistance which will enable him to overcome the difficulties we have had so much trouble in surmounting. In this way the element of ignorance, which does so much to demoralize the craft, may be partially eliminated and one of the most dangerous factors of competition destroyed.

The young employer who starts with a small capital, and does most of his own work, should ever remember the honorable nature of his calling, and never make the mistake of supposing that because he does his own work he can do it for less than his neighbor who employs a large force of workmen and expert superintendents and foremen. He should rather insist that the work which he does with his own hands will be better done, and therefore he should receive more for it.

If it is possible to help a neighbor out of an extra rush of work, do it cheerfully, and divide with him the profit on the work. In this way the temptation to add to the facilities will, very often, be overcome. Idle machinery makes it almost impossible to maintain any standard of prices which may be adopted.

"With other men's follies before our eyes, we should not put our own behind our backs."

OUR DUTY TO OUR WORKMEN.

In the conduct of our establishments it should be our constant endeavor to elevate the moral character and ameliorate the financial condition of the workmen who are engaged with us.

While it should be the firm and unalterable determina-

tion of every proprietor not to be dictated to by labor organizations when their demands are unfair, we should always remember that the proper place for us to look for remuneration is from the business we do at a legitimate profit, and not from what we can save on the wages of the workmen, or from what we can make out of each other.

In the treatment of apprentices or boys who are in our employ, it should be considered our duty, if they prove inapt or unteachable, to advise them to seek another line of trade. It often occurs that a poor workman in our line would have made a good workman in another line.

When we conclude that the apprentice we have taken is competent to learn the business, and that he will learn it in such a manner as to reflect credit upon those who taught him, as well as himself, no effort should be spared to make him all he should be as a workman and a good citizen. By so doing we add to our own happiness and his prosperity, and help the future generation of our craft along a very troublesome road.

"Every man is a debtor to the profession from which he seeks to receive countenance and profit. So ought he of duty and by way of amends endeavor to be a help and ornament thereto."

NURSING HOME ADVERTISING.

By EMERSON P. HARRIS.

Most local merchants use less space in their local papers than they might profitably occupy. What they need is not soliciting but nursing. Suggestions for some, literary help for others, encouragement for all.

First, they should be made to realize that the advertisement is the modern engine for selling goods. If the publisher does not believe this already and exhibit it in various ways through his columns and in the conduct of his own business, he ought to get converted. A genuine belief in advertising, faith in its value to the reader as well as to the advertiser, changes the whole attitude of the office toward the matter. Encouragement of changes in copy takes the place of checking such change, and new life is infused into this department of the paper.

If the publisher does not have a man to visit advertisers, he should go himself and he will be surprised how much he can do in a short time if he be prolific in ideas, and also how little the heavy editorials are missed which he is thus hindered from writing.

One plan I have found to work exceedingly well to insure fresh copy in the ad. space of the smaller dealers is this: Get from such merchants as do not change copy regularly, the data to write up a series of ads enough to last quite a number of issues, write them up yourself and have them nicely set when the ad. man has plenty of time to do it. Then run, in the order arranged with the advertiser. This insures the appearance of an announcement in each issue, which gives the impression of there being some life behind it. Of course, each ad. should be pertinent, timely and useful.

Where the smaller advertisers are left to think of their advertising each week, they will forget it and so become indifferent to the whole matter. But this plan fixes it so that an occasional interview insures continuous good advertising. In fact, the advertiser thus helped is quite apt to get into the habit of mailing in suggestions, or perhaps a series of ads written out.

There are lots of things that will suggest themselves to the publisher who is moved by faith in printers' ink and the spirit of helpfulness, but there is no one idea that in my own case has been so useful as this.

About Advertising.

By Charles Austin Bates, New York.

Communications to this Department are solicited. Questions will be answered and criticism made on advertising matters.

A writer in the Men's Outfitter publishes an article in which he purports to give the experience of a successful business man. He asks the business man whether a man, being perfectly honest, can get rich in business.

Then he (J. G. S.) makes the business man say:

"When I first started in business I fixed up a motto like this: 'Justice; I accord it to all men and exact it of them.' Very good. A lot of men came in and bought things, man fashion, and went out, and I said to myself: This is easy—doing business—just like Sunday school. By and by I noticed a whole lot of other men who wouldn't do business that way and I found I wanted their trade, too—I needed it. So then I began to reflect that there are two sides to a bargain, and perhaps the buyer has as much right as the seller to say how the trade shall be conducted. After that I began to let them dictate. I began to take lessons in the 'art of doing business.' My motto would work all right on the first class, but they were so few you could handle them all yourself—you wouldn't want any clerks hardly. And the other class was so large and had so many ways of wanting to trade that it took me a long time to learn their whims.

"One man has to be petted and flattered, so I call him Colonel —, because he is a captain in a high-toned organization. Another comes in and he wants to buy everything a little cheaper than anyone else; can't help it; he was born that way and seems to consider it a right of his, a prerogative. Well, I ask him a little more to commence with and give him a chance to haggle. Another has a notion that everything must be made for him; and although I have a silk hat in stock that fits him and suits him in every way, he says: 'No, you must make me one on my block.' So I set that hat aside and made it for him. I try to suit them all. So now I've got another motto, but I don't hang it up on the wall, and I hope it is a righteous motto, too. It reads like this:

"I'll treat you honest as long as you'll treat me—and a little mite longer. But not much."

I guess there's some human nature in this. Just the same, it's painted with a little too broad a brush to "gibe" with the facts. Diplomacy is necessary in business. But diplomacy doesn't necessarily mean dishonesty. It isn't dishonesty to call the conceited man "Colonel" when he comes into your store any more than it is honesty to call him an infernal scoundrel and refuse to sell him goods because you don't like him and he doesn't belong to the same church. Every business man has to learn to be tolerant of all the little oddities and vanities of human nature. But in this day and age I'm sure more men make a success by marking the prices on their goods in plain figures and sticking to them than do so by following the old plan of haggling with the customer over the price.

Of course, it depends to some extent on where you are doing business. At the county fairs in Ireland a farmer will bring his pig to the fair to sell it. Another farmer will come along and want to buy it. The two will start in and haggle over the price of that pig. They'll start in

early Tuesday morning, and, with intervals for drinks, they'll still be arguing and haggling at 6 o'clock Tuesday afternoon. To hear them you'd imagine they were fighting instead of driving a bargain.

Now, this way of doing business may be all right for the country districts in Ireland. If J. G. S. had a pig for sale and took it to an Irish fair for the purpose of selling it, he would probably make a great mistake by labeling it at the outset with the lowest figure he was willing to take and then sticking to that figure. It's quite possible that the pig might die of old age before he managed to sell it. However, if other men imitated him and kept coming to the fair and labeling their pigs with the bottom price at the outset, and this was kept up and kept up, eventually the country Irishman might see the saving in the matter of time, breath, profanity, drinks and lies, and adopt the one-price plan.

That's exactly what has happened in this country. In backwoods sections there may still be a few people who aren't educated up to the one-price plan of doing business and who prefer to buy their goods on the county-fair plan, but they are few and far between. Most Americans live in a hurry. To haggle over the price of anything is a waste of time. That is really the biggest question at issue. The one-price-in-plain-figures plan saves time, and time is money, and money is what Americans are after.

J. G. S. writes a very entertaining little story that rather tickles one's funny-bone. But when you get right down to business, the merchant who does business on the "haggle" plan in America at this time is a chump pure and simple. He's hopelessly behind the times.

The little anecdote about making the hat is very amusing, but the merchant who takes it for a guide and tries to practice it has a moral cinch on eventual bankruptcy. It is a mistake to imagine that your customers are chumps. Try to fool them by selling them ready-made silk hats on the pretense that they're made to order, and eventually one and then another and then many of these customers will find that you've been fooling them, and they'll take a whole lot of customers, whom you've possibly treated squarely, along with them.

J. G. S. writes a good funny story, but I hope that none of the readers of the Men's Outfitter will be sufficiently foolish to try to do business upon the plans that his stories lead to.

Be honest about your goods and your methods of doing business—be just as diplomatic as you please in your treatment of a customer.

SOUTH DAKOTA DEMOCRATIC PRESS ASSOCIATION.

The following letter has been received at this office announcing the formation of a Democratic Press Association in South Dakota, with a list of the officers:

Howard, S. D., Jan. 20, 1900.

National Printer-Journalist, Chicago, Ill.:

We organized a Democratic Press Association at the Sioux Falls meeting with the following officers: President, Glenn M. Farley, Madison Outlook; Vice-President, T. W. Taibman, Plankinton Herald; Secretary, Levi D. Wait, Howard Democrat; Treasurer, C. R. Tinan, Kimball Graphic; Executive Committee, Harry Wehtzy, Pukwana Press; H. S. Volkmar, Milbank Review; J. W. Peekham, Alexandria Journal; C. Boyd Barrett, Aberdeen Sentinel; C. C. Fletcher, Aberdeen Democrat; J. C. Palmer, Yankton Herald; Mark Scott, Sioux Falls Journal.

Yours fraternally, Levi D. Wait.

THE JOB PRINTER.

By Charles H. Cochrane, New York.

Are job printers really the artists they commonly consider themselves? Does the trade require a superior grade of intelligence? Is the man who handles display types any better equipped than the joiner, the machinist, the photo-engraver, the electrotypist, or the average man in other callings? I used to think so; I used to glory in the fact that printing required an intelligence that placed the men in it beside those in the professions. I used to believe that the manipulation of types developed an education that was better than that of a high school. Lately I have been looking into some other trades and noting the great amount of skill, technical knowledge and intelligence required to perform the work correctly, and now—I don't know. The influx of machinery and new processes in all trades has required a higher grade of ability to produce the desired results. This ability has been found, and hence the average of intelligence in trades has been raised materially. As a result I question very much whether the job printer ranks much above the average of trade workers, for in very many cases he has been standing still, while in other trades there has been an advance. This being the case, what must the job printer do to elevate his craft into an art proper, so that the line may be drawn that separates him from the crowd of mechanical workers, and elevates him to a producer of the artistic?

* * *

I conceive that every job printer who desires to be in the van of progress should take instruction in drawing, perspective, color, etc., and learn the rules and principles that underlie the work of the illustration artist. With such knowledge he will be equipped for the production of really unique and picturesque work in type and display. There never was such a demand for high-grade commercial work as there is now. Never were so many business firms aware of the trade-drawing power of a superior grade of printing. Never were so many firms advertising and seeking to bring in trade with printer's ink, instead of the more costly drummer. Here is the job printer's opportunity; here is the harvest ripe for his sickle. There always will be employment at extra large wages for men who can do a grade of work that will attract general attention; work that shall be as much above the average as the National Printer-Journalist is above the typographical average of newspapers.

* * *

The job printer can not expect to have to do this extra high-grade work without a course of hard study in the details that lead to perfection. A man must be better than his fellows to lead; a job printer must travel the road of long and earnest endeavor before he can rise above the crowd of other typesetters. Printing is undergoing a change—a growth of original, artistic reproduction is setting in and becoming stronger. If you, job-printer reader, feel that you have undeveloped talent, get to work and learn, learn, learn. Use your brains and cultivate your talents. The time will come when you will find your place and will be glad that you dropped the trifling pleasures of yesterday to gather the knowledge that brings tomorrow the fruit of intelligent industry.

* * *

It is not always easy to make register on a color form. Especially is this true with a large sheet on a cylinder press. When a difficulty occurs in making register at the

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

Principal buildings which will form the main group of the Pan-American Exposition at Buffalo, N. Y., 1901.

second or third impression on such a sheet, the pressman should inspect the paper carefully to learn whether it is still flat. If it has been warped out of shape by the previous printings so that it will not lie snugly against the cylinder at all points this is a certain cause of variation in register, and it becomes necessary to make the paper flat in some way, as by dry pressing. If the paper is all right it is well then to examine the packing, which may be bulgy at some place. The remedy of course is to reduce the packing at the point of bulge, and to compensate by underlaying. Sometimes the trouble in register is that a large plate tends to run long or run short, as compared with the impression in a previous color. The pressman measures the plates and finds that both are exactly the same length, and he then knows that there is something wrong between the cylinder and the bed. If the impression is running too long on the present color, he must build out the cylinder packing and then adjust the form and impression to it; if the impression is too short it can be helped by a reverse course, reducing the thickness of the packing and letting down the bearers and cylinder. Of course these things are makeshifts, contrary to the correct principles of presswork, but they are sometimes necessary to save a job. The need for them does not arise unless something is wrong in the first place. The job printer who once gets into his head the theory of the method in which a cylinder press takes the impression, and the reason why the diameter of a cylinder should not be changed by adding to and taking from the tympan, will be much better equipped for dealing with difficulties in register. When the cylinder of a press is properly tympanned and properly set, and the guides are right, it should produce good register. If it does not, there must be play in the bearings, as is usually the case with well-worn or old-fashioned cylinders.

* * *

Not long ago I saw a job of three-color work done on oil silk. It was a fine job, too, in good register. I had the curiosity to inquire how it was done, and the printer told me that he resorted to the almost forgotten method of pointing the work, and that it went through the press almost as readily as so much paper. He was afraid to tackle the job at first, until he thought of the pointing. Then he decided to try it, and named a price on the presswork about three times what he would have charged if it was three-color work on paper. He manufactured points by driving short pins in the feedboard and cutting off the heads. With these aids to register, the job was put through smoothly at 800 impressions an hour, yielding him a comfortable profit for his bright idea.

* * *

It pays to have bright ideas in the job printing business. I know another job printer who had a job in agate that included occasional characters in Chinese. The copy for the Chinese character was much larger than he was allowed to make them in his agate work. He made a price on the job based on having little cuts made of each of these characters. Afterwards he had the happy thought, and set the job up in small pica, making the pages double size both ways. Then he got a perfect proof of each page, and pasted in the Chinese characters of the copy where they belonged, and sent all to his photo-engraver with instructions to reproduce half size. In this way he got nice plates to print from, and the cost was about half what it would have been done in the other way.

* * *

Mr. George E. Lincoln, the man who has filled up so many printeries with linotype machines, is quoted as saying recently that the time was not far distant when a machine

would be produced for doing job composition as well as straight matter. I remember that Tolbert Lanston outlined a method of doing this in theory some years ago. He had a machine in mind that would cast its own type and produce anything from 6-point to 18-point at will; but I believe he never built one. I suppose that Mr. Lincoln makes the statement on general principles, believing that there is nothing that cannot be done by a machine. In this he is about right, for the possibilities of mechanics are seemingly boundless, and, if a machine is wanted to do any particular thing, it can be made, if only enough patience and experience is brought to the task. Somehow my own notion is that we shall print without type before a typesetter is invented that will handle a variety of faces and sizes with commercial speed and economy. The composing machines we now have are adapted in many ways to assist the job printer, as they will reduce the labor on almost any class of composition except the display. In every large job office it seems to me that eventually they must come to using one or more machines of each class, as each has special advantages for certain things. The Linotype is most economical for many classes of composition, the typesetting machine for other things, and very likely the type-casting machines will prove to be most economical for other classes of work. At present the Linotype holds the field, and the type machines proper are coming into increased use, as they are about to be made self-justifying. The casters, that is the machines that cast type and set it, are scarcely in the commercial stage as yet. Some day there will be more machines forming line-slugs like the Linotype, and with all the new machines coming in the prices of machines will be lowered. If the machine to set display type comes along, it yet is far enough in the future not to worry the job compositor, who will continue to hold his own for many years to come.

BACKING REPORTERS.

It does not seem to be always understood that a paper must, at least, maintain a reputation for reasonable reliability, for telling all the news with truthfulness and accuracy. There is another element in human society that is not always recognized or appreciated, and that is the fact that "no man liveth unto himself." While there are certain privacies of the home and of personal affairs that may be held sacred from public scrutiny, there is such a close bond in modern society and government that what concerns one is likely to concern and interest many others who are entitled to a knowledge of the facts. The failure to recognize these principles often adds to the burdens of both the reporter and the editor.

The Waterbury (Conn.) American recently had the following to say on this subject that pictures the troubles of more than one editor:

"One of the hardest of my duties," said the editor, "is to back up my reporters and keep on good terms with some of my friends, especially if the latter are in charge of a large business like a factory. They want to keep everything secret, and resent the inquisitiveness which I am bound to encourage in reporters. In general, I sympathize with the reporter in all proper means he may employ to unearth news. In particular cases, however, I may sympathize with the other side, especially when the interested party is a friend and he appeals to me to protect him from the news sleuth. If he is reasonable, I can usually manage it. It is only when he is pompous, insulting, and abuses the young man who asks him questions never so politely, assuming that he has no right to approach him at all, that I have difficulty. Then, for the

sake of the good paper, to maintain esprit du corps among the reporters, to convince them that they will be backed up in any legitimate enterprise, it may be necessary sometimes to tell one's friend that he has exceeded right and propriety. It may be impossible to convince him that he has no business to treat a reporter as though he were an impostor, even though he be a little earnest in his manner and exigent in his question. Some men don't care. Others don't know. The teachable man will learn by experience that reporters will respond to pleasant manners as other men will, and will resent abuse and contemptuous treatment. When they haven't learned that, and won't learn it, it is sometimes necessary for the editor to back up the reporter in teaching the unlearned lesson."

CONNECTICUT EDITORS MEET.

The annual meeting of the Connecticut Editorial Association was held at New Haven, Monday, January 8. At the morning session the officers were elected for the coming year as follows: President, C. H. Scholey, Jr., of Guilford. Vice-Presidents, M. F. Slattery, Hartford; W. C. Sharpe, of Seymour; W. S. Jones, of Westport; A. E. Knox, of Woodbury; C. A. Kirtland, of Deep River; N. W. Kennedy, of Killingly; Lewis McLaughlin, of Stafford Springs, one for each county of the State. Secretary-Treasurer, E. S. Ela, of Manchester. Delegates to the meeting of the N. E. A. at New Orleans: H. B. Hale, of East Hartford, and J. A. Bolles, of New Milford. Alternates: J. S. Jones, of Westport, and T. S. Pratt, of Rockville.

It has been the custom of this Association to make matters pertinent to the business or management of the country office the topic for discussion, but on this occasion this plan was departed from. Most of these editors conduct their business in large towns or young cities, so that it was eminently fitting that "The best form of municipal government for large towns" come before them. Talks on three phases of the subject were given, that on "The City," by T. S. Pratt; "The Borough," by Geo. C. Woodruff, of Litchfield, and "The Town," by J. A. Bolles. These talks and the discussion that followed brought out many facts of value regarding sewerage, street lines, sidewalks, etc.

The Association has acceded to a suggestion from the Rhode Island editors to join with them in a summer meet at Block Island, a spot where the sea breezes always blow with rejuvenating effect not found at any shore resort, where the surroundings are many of them unique, and the environment redolent of the festive lobster and the sedate clam.

ARTISTIC AND INTERESTING.

The National Printer-Journalist, published at Chicago, is the official journal of the National Editorial Association. It is a most elaborately and artistically gotten up publication, beautifully printed, and entirely devoted to the interests which it represents. It circulates among the printers of the United States.—*New Orleans Times-Democrat, January 5, 1900.*

The writer has subscribed for and read nearly all the papers and magazines of our country devoted to the graphic arts and allied branches. None proves of more interest to me than the National Printer-Journalist. You deserve much credit for your efforts in behalf of the Typothetæ, and your paper should be in the hands of every member of this Association.—*John W. Campsie, Superintendent Job Department Milwaukee Sentinel, June 29, 1899.*

This department is intended as a clearing-house of suggestions and opinions as to the best means of securing, handling, and retaining subscriptions to all kinds of newspapers. Communications are solicited.

Springfield, Ill., Jan. 17, 1900.

National Printer-Journalist, Chicago, Ill.

Gentlemen: We have tried several plans on the City Circulation Department of our paper. It is a vexed question of how to run the city circulation of a paper to the best advantage. Most plans that we have tried have been unsatisfactory. In fact, it appears that all plans are unsatisfactory on this branch of the newspaper business. We are now and have been for several years operating directly from the office, believing that it is more satisfactory than to sell the papers to newsboys or to carriers. We have the town divided into four districts. We pay the carriers by the week and have four young men (each of whom carries a route) to collect on a percentage, and each looks after the general welfare of the paper in his particular territory. We also do some canvassing from time to time in addition to the work done by these young men for the purpose of securing new subscribers. We have found it very unsatis-

PLEASE PAY COLLECTOR for the paper promptly, where the paper is left. Payments should be made to the carrier. Pay no money without taking a receipt: no claims allowed unless you can show receipt.

factory to make collections through the carriers, deeming it best to put the collections in the hands of four responsible persons. We now have over three thousand circulation in the city at 13 cents per week for a seven-day paper, which I think is as well as most papers do in towns the size of Springfield with a paper at so high a rate of subscription as we charge. We have one man who puts up the mail, has charge of the books, gives out the papers to the carriers and settles with the collectors. I inclose you a form of bill

which we have used very successfully for several years. As you will notice, there is one coupon for each of 13 weeks (we make these bills out quarterly). When the subscriber pays, the collector tears off the coupon on which is printed the time for which the subscriber pays. While these coupons are all printed the same on all the bills, and it would seem that one subscriber might take the coupons from some other person's bill and claim a payment, this is hardly possible as the irregularity in tearing off the coupons makes it impossible for the coupons torn from one bill to be brought up against another bill. We have found this form of bill very satisfactory, and have never had any trouble with it to speak of.

Yours respectfully,

THOS. REES,
Manager.

* * *

SEND THE BILLS.

Some newspaper subscribers become offended when a bill for the paper is presented to them, while others accept the non-appearance of a bill as evidence that their account is overlooked, or that the editor doesn't want their money. —Texas Coaster.

* * *

TO BUILD A CIRCULATION.

Don't try to make a "good paper," just print what your readers want.

In a local paper, local matter is worth more, ten to one, than any other kind of stuff. It is read by all while anything else is only read by a few.

Get subscribers. Get them any way; but it is better to pay three dollars for canvassing or advertising than one dollar in chromos or reduction in price to the subscriber. A subscriber is demoralized when he gets a present or a reduction in price that is not going to be extended to him when he renews. It is one thing to get temporary readers and another thing to build up a circulation.

One subscriber who comes on the merits of the paper at the regular price is worth four attracted by ulterior inducements.

A subscription as large as the field and the right kind of a paper will justify is the true foundation for a valuable publishing property in any field.—Publishers' Guide.

* * *

ABOUT CIRCULATIONS.

If there is one subject which bothers publishers more than another it is the question of circulation. Advertisers persist in calling for figures when, perhaps, the newspaper owner does not want to give them. General statements are not always satisfactory and many people have the exasperating peculiarity of wanting to know just what they are getting when they pay for publicity.

If there was not so much lying about circulations ninetenths of the owners of newspapers would be perfectly willing to print the number of copies sold each day at the head of their editorial columns. As it is now the publisher who can stretch his conscience the most, names the largest figures and makes ridiculous the claims of his honest contemporary who names his actual circulation.

Then, again, there are many advertisers to whom large circulations are everything. A paper selling a million copies a day is to them a much better medium for publicity than the one putting out only half that number. And yet it may be a fact that, in point of merit, the paper of the smaller circulation is much the best business producer.

It all depends upon what a man wishes to advertise. If he is selling a popular article of consumption, such as a breakfast food, a laundry soap, or a brand of flour, the

paper with the largest field of readers is the most desirable medium to use. On the other hand, the high-grade daily, with a small but select circulation among the wealthier class, is much the best medium for the merchant who has diamonds, sealskin saccos, or canvasback ducks to offer.

Quality, not quantity, should be the standard of merit in fixing up the value of a periodical, and yet there are many advertisers who seem to lose sight of this fact. There is not now so much ignorance in the business world on this topic as there was a few years ago, but there is still chance for improvement.

When publishers are willing to let the world know just how many copies of their papers are printed and sold; when seekers of publicity will judge the value of a newspaper by the quality of its circulation, then one great source of annoyance to both will be eliminated.—The Fourth Estate.

TITLES TILL YOU CAN'T REST.

The Kansas City Times recently published the following about the Recording Secretary of the National Editorial association:

Bob White was in town last night. Of course, it's useless to say Bob White, editor of the Mexico (Mo.) Ledger. Everybody in the State knows him and has known him for years—everybody that knows anybody.

Mr. White has come to Kansas City with several other representative citizens of Mexico to help the commission appointed by Governor Stephens choose a location for the new State Home for the Feeble Minded, which is to meet at the Coates Hotel to-day. Mexico will offer a choice of sites in the suburbs, worth \$24,000. This sort of work is right in Bob White's line, laboring might and main for something in which he has not himself one cent's worth of personal pecuniary interest. He is famous all over Missouri as the man who holds more offices carrying no salary than any one else in the State. Here is a partial list of the things he is—besides being editor, proprietor and devil of the Mexico Ledger, daily and weekly:

Superintendent of a Sunday school.
Deacon of the Presbyterian Church.
Member of building committee "that put up the handsomest Presbyterian Church in the State."
Director of the Mexico Building and Loan association.
Director of a bank.
Director of the Mexico Fire Insurance Company.
Director of the Old Ladies' Home.
Director of the Westminster College, Fulton, Mo.
Eminent Commander Crusade Commandery, Knights Templar.
Corresponding Secretary Missouri Press Association.
Recording Secretary National Editorial Association.
Member of the Executive Committee for Missouri of national anti-polygamy movement.
Vice-President Western Federation of Editors.
Director of the Mexico water works.
Director of Business Men's Association.
Director of Bond and Trust Company.
Director of Eugene Field Monument Association.
Member of something like a dozen standing committees.
There are several other titles that don't come to mind right now. But any one who is very anxious about them can undoubtedly get a complete list by applying to Mr. White himself. For, strange to say, he is an active worker in every branch of enterprise he goes into.

Poor advertising is an extravagance at any price.—Printers' Ink.

By O. G. WOOD, Chicago.

Publishers who wish criticism on their newspapers are respectfully requested to direct the same to this department.

S. A. Pierce, speaking of country newspapers in Pointers, writes:

It is a noteworthy fact that the number of really excellent country newspapers is increasing, while the opposite sort, which were altogether too numerous a few years ago, are becoming a rarity. Every publisher now seems to have an ambition to make his paper as good and as handsome as he possibly can. The spirit of improvement is epidemic among the newspaper brethren, and it is a contagion that no one should feel it necessary to quarantine against.

The papers arriving at this office clearly indicate that this statement is true; comparison of papers printed today with those printed but a very few years back show marked advances in typographical arrangement and a more careful selection of reading matter.

* * *

Three copies of the Mulhall (Okla.) Enterprise have arrived marked "For Criticism." Better ink and more attention to the presswork would help the appearance of the paper very much. The type is badly "filled-in," and it looks as though the rollers were hard and worn out. The ad composition is fair, but the two ornaments used in the ad of Thomas Sloan, in the number dated January 5, are entirely out of place, and in no wise help the appearance of the ad. Plain rule looks better than fancy dashes nine cases out of ten in a newspaper advertisement.

* * *

The receipt of two copies of the Renville (Minn.) Star Farmer and the following letter is acknowledged:

Renville, Minn., December 29, 1899.

O. J. Wood, Esq., Chicago. Dear Sir: Under separate cover I send you a sample—two issues—of our paper for criticism in the National Printer-Journalist.

Respectfully,

W. A. REID.

The paper is very clean and nicely printed, is dignified, and has a highly respectable appearance. Try to arrange the makeup so that the editorial column comes on the first column instead of the third on the same page as at present. There should have been a dividing rule between the half-page ad of the Lion Drug Store and the reading matter in the issue of December 22, and the burr should be cut off the plate matter. These little things don't take much time when once the rule is established, and they all help the general appearance.

* * *

From far distant Calgary, Alberta, Canada, comes the Daily Herald. Many nice new faces of type appear in the ads, but the display could be greatly improved, and the presswork is very inferior. A Chinese laundry ad appears in its columns.

* * *

Color work in newspapers is no good unless it is well done. A copy of the Norfolk (Neb.) Daily Times-Democrat comes for criticism printed in red and black. It is a couple of picas out of register and looks bad; slugs and furniture are worked up; a quad pulled out and smashed a line and the whole thing is a failure and poorly printed. A lot of

trouble and time wasted without any benefit to the paper. The editor should read page 921 of the December (1899) issue of the National Printer-Journalist.

* * *

The editor of the Texas Coaster, in a recent number of his paper, says:

Like actors, newspapermen are expected at all times to be the same. The world cares naught for their private troubles and griefs, but expects from them a faithful portrayal of their parts. Though the canker of anguish may be eating at his heart, the clown is expected to be funny and produce mirth for his audience. The newspaperman is expected to drown the cries of his anguished soul that others may only know of things which interest them, and that they may not be burdened with his griefs. He must share their sorrows, weep with them and extend condolence to them when their hearts are heavy laden with the burden of sorrow, and at all times be as a ray of sunshine through the misfits of a murky day. And this he generally does, even

An Attractive Front Page.

The original was printed in colors with good effect.

though before his vision he sees in distant lands a loved one lying with her cold hands crossed upon a stilled breast which in days gone by pulsed with throbs of joy or grief at the recounting of his boyish pleasures and troubles. And so will it always be.

Quite often the editor smiles when his heart is overwhelmed and he is beset with difficulties which require a tremendous amount of courage and self-denial to overcome. But the paper must be gotten out on time, and it must be up to the highest standard every time or down comes the critic with his cuts and gibes.

* * *

The Savanna (Ill.) Journal recently printed an "Improvement Edition" with marked success, and Mr. Greenleaf, the editor, is to be congratulated on the good showing of the Christmas re-union letters. The Journal seems to

be all right every way. It is a good plan to send a sample of the paper to be used on a special edition to the engravers so that they may know what kind of a screen to use on the halftones.

* * *

The Swift County (Minn.) Monitor recently got out a special edition to celebrate the thirtieth birthday of the organized county. It was well-printed and clean looking, and the editor of the Monitor is somewhat of a critic himself, as the following, taken from the editorial columns, give evidence:

MINNESOTA JOURNALISM.

Quite a number of the country papers of the State came out with special holiday editions last week. The Northfield News reached our table with 24 pages of well selected Christmas matter and a number of fine halftone illustrations. The News has a splendidly equipped office, enabling it to produce better results than a majority of its contemporaries.

The largest paper of the week was the Redwood Gazette, which contained 24 pages enclosed in an illuminated cover. The distinctive feature of the Gazette was its supply of large and well arranged holiday advertisements, in which respect it surpassed every weekly paper in the State that has come under our notice.

A very neat piece of work was turned out by the Fairfax Standard last week. It was a Christmas illustration in three colors, run as a front page centerpiece, and was printed in the Standard office. This is a class of work that the Standard handles with unusual ability, and the office must be especially equipped for the work, or it has a printer who is an artist.

Last week's Madison Independent Press was devoted to an illustrated writeup of Madison and the leading citizens and institutions of that enterprising town. It consisted of 16 pages of choice matter, the text being prepared by a gentleman who makes a specialty of the work. The illustrations were principally halftones, which are by far the most satisfactory illustrations that can be used, when well printed. From this issue outsiders can obtain a very good idea of the appearance of Madison.

The Morris Times of last week published a very creditable illustrated edition, giving the improvements of the town during the year and also considerable matter of an historical nature. The Times is an enterprising paper and did itself proud.

The Morris Tribune came out last Saturday with one of Crane's birdseye sketches of the town. It was a 16 page issue, gotten out for immigration purposes.

The indications are that the special number of the Monitor was a great success, and it was deserving of it.

* * *

Here is a brief cutting from the Topeka Capital:

Papers may be divided into three classes: Those that go forward and blaze the way; those that, like the billboards, never move; and those that, like the crawfish, make best time backward.

Generally speaking, the papers arriving at this office seem to be of the class that blaze the way.

* * *

Nortonville, Kan., sends a nice paper in the News, and claims to be "all home print." It is an eight-page paper and four of them are set in 10-point modern, while the inside four consist mostly of solid brevier, and look mightily like plate matter. The News may be printed at Nortonville all right, but it does not have the appearance of being "all home set." Is there some catch intended?

* * *

With characteristic enterprise The Patriot, Carrollton, Ill., sent letters all over the world to late residents of the city for their experience of an American holiday "aboard and abroad." These letters of inquiry were sent out last October intended to be used for Thanksgiving; but the answers are still pouring in and no doubt prove of great interest to the readers of The Patriot. For instance there is a fine letter from Cape Town in the issue of January 19. The letter is dated November 30, and no doubt contains a great deal of truth about the Transvaal from an unbiased

source. Other letters are from Yokohama and Osaka, Japan; and one from Badaun, India. The Patriot is all right both editorially and mechanically.

* * *

January 13 the Waterloo (Iowa) Daily Reporter—published by Matt Parrott & Sons—got out an extra "Improvement Number." It was full of halftones showing the many improvements of the city, and was well printed. By the way, the halftone is now in common use among newspapers, and seems to be about the only method of illustrating. Like setting type by machinery, this was thought impossible a very few years ago.

* * *

The Madelina (Minn.) Messenger credits the following paragraph to "Ex.":

Running a newspaper is just like running a hotel only a little different; when a man goes into a hotel and finds something he don't like, he does not kick the table over and tell the landlord to "stop his darned old hotel," but just sets the dish down and wades into the next one that suits his taste. Not so with newspaper readers. If they find an article they do not like, not stopping to think that it may please a whole lot of people, or get themselves into trouble and land them in the police court, and the paper gives the facts, they make a grand stand play and stop their paper and then sneak around next week and borrow their neighbor's paper just to see if it is published yet, you know. The press grinds on, however; and new subscribers line up to take the place of dyspeptics who stop the source of their information because a small part of it does not suit them.

* * *

Twenty-eight pages is a good showing for the holiday edition of the Ogle County Press, Polo, Ill., and though the paper was started as far back as 1858 it is well up to the times in type faces, and particularly good stock is used. In a short introduction to the readers the editor says:

Our Christmas edition this year has been almost too much for us. We were hardly prepared for the generous patronage of our wide-awake business men. The whole Press office force have worked to the limit of their capacity to get it out and have done their best to make it what it ought to be, a fitting representative of the business and professional men and mechanics of Polo. We don't pretend it's perfect, but it's as good as our boys could make it in the seven or eight days we have had to get it up, and we hope it will be kindly received.

It may not have been perfect, but it is a mighty hard matter to find much fault with the Press, after reading the above.

* * *

The Fremont (Neb.) Daily Tribune recently got out a special edition of thirty-six pages and cover. It was issued to commemorate the erection of a beet sugar factory near Fremont and other industrial enterprises. The department headings were set in MacFarland and the smaller headings in MacFarland italic with music-face rule around them; they looked well. Good paper was used and the halftones were well brought out. The cover was printed in red and green on white paper. The work was a credit to Hammond Bros., and fully up to the standard they have been maintaining.

* * *

The Quincy (Mass.) Patriot recently published a souvenir edition of eighty pages and cover setting forth the advantages of the Granite City. The heavy enameled stock used could not admit of anything else but good work on the halftones, and no doubt many of the citizens of Quincy are proud of their pictures in the Patriot.

* * *

A number of copies of the Franklinville (N. Y.) Journal have arrived at this office and all show uniformly good work. Six display headings—one in each column—is found in No. 47, January 5; a better makeup is seen in No. 43,

Money That Was Spent in Waterloo in 1899.

HOUSES, STORES AND FACTORIES

Year of Great Improvements Made Everywhere.

Details of the Progress Made in the City in One Year—The Story by Wards Showing One Continuous Advance in Every Line—Good News for Everybody Who is Interested in Waterloo.

First Ward.....	\$180,765
Second Ward.....	49,790
Third Ward.....	162,220
Fourth Ward.....	99,785
General.....	50,705

Total.....\$543,265

The year 1899 was one of great fulfillment of promises when the advancement and progress of the city is considered. A great many big undertakings in a building way were carried to a successful conclusion, and the money expended represents almost entirely capital of private parties or business institutions. No improvements of great magnitude were undertaken by the municipality or by the county.

To review of what has been accomplished the most striking item is the large number of elegant new homes which Waterloo citizens have erected during the year. The development of new industries and the expansion of old ones has not been of small account by any means, and it is not overshadowed at all by the building of homes. The latter is an indication of the stability of the former, and it is not intended to convey the idea that the nation is brighter than the source from which it springs.

During the year 133 new residences were erected in the city, and they were of a better class than were ever built before. Less than one-fifth of the buildings were erected at a cost below

In the Wards

The most notable improvement of the year has been made in the first, third and fourth wards. The first ward received the benefit of most of the Rapid Transit Co. improvements this year in the extension of its track to Home Park. The Home Park association invested \$4,500 in improving its grounds with buildings, etc. Henderson Drug Co. invested \$13,000 in making its building, the modern and beautiful structure that it is. The Hall house, built by W. H. Marquis, is a monument to the \$10,000 invested in it, and stands as a credit to the city. The Congregational church society built its addition at a cost of \$4,000. Other notable improvements were the store buildings of B. F. Bailey and the Cedar Valley Telephone Co. The new houses were among the most elegant of those erected anywhere in the city, and constitute one of the most valuable and permanent improvements of the year. The first ward also enjoys the distinction of having invested more money in building operations than any other division of the city.

The third ward contributed the largest number of new houses, as well as the most expensive single improvement. There were 38 new residences built, and in that number is included many of the finest that grace the city's thoroughfares. The magnificent four-story building of the Waterloo Saddlery Co. is the most notable of the year's operations in this ward. The water company also made some large expenditures in new buildings and equipment, and is

YEAR AMONG THE JOBBERS

OVER \$3,000,000 IN SALES

Old Year Paid Good Dividends to All, and New Year Promises Better Than Ever—List of Business Houses That Sell Goods All Over Iowa.

Every dollar of capital invested in wholesale trade in Waterloo earned a good dividend for its owner in the year 1899. Business in all lines has been exceeded, and the first days of 1900 find the managers of the several institutions scanning the changes that have been made in the railroad map for more territory to invade and eventually to conquer.

Waterloo as a city is proud of a great many things, but in no particular is the feeling more true than when it is applied to the wholesale institutions, which are rapidly becoming one of the most important branches of industry for our people. Every institution in the city is on a solid basis, and the way each and all are growing is one of the wonders of the commercial world in Iowa. The business done by Waterloo wholesale houses in 1899 amounted to more than \$3,000,000, and is divided among 78 institutions. The greater bulk of that vast amount, however, found its way into the coffers of less than a dozen

and the state in general. Some advantage of considerable importance will be gained to Waterloo jobbers by these new lines, for it enables them to commercially annex a considerable portion of contiguous country, with the consequent addition of a large number of towns that former railroad facilities would not enable them to reach directly.

These lately acquired advantages have not been overlooked by the business men, and arrangements are making in nearly all the larger houses of the city to press the claims Waterloo has upon the trade which is already established in old and new towns. The promise which the new year and the new field holds for Waterloo jobbers is held by both of them.

For the Smith, Litchy & Hullman Co. Mr. E. B. Smith and the prospects were good. The territory for traveling men has been arranged to include the new Onabala line of the Illinois Central, and the Northwestern line into Minnesota, extending the territory considerably. The Woodruff & Westfall company has arranged to extend its territory over all of western Iowa and southern Minnesota, accommodating the employing of one, and possibly two, additional traveling men. Mr. Woodruff and the products of Black Hawk Mills have been very kindly received by the people, and for their first year they were well satisfied with results. He looked forward to the coming year for a greatly increased trade.

The Waterloo Saddlery company have spread out during the past year until now they are ready to begin the new year with a new building and five floors of their new goods and a big shop in full blast. The year promises to be the biggest by far in the history of the company. F. E. Carter of the Cedar Hardware company, says the year promises to be a good one, for building prospects were

MEANS MANY HAPPY HOMES

Factories Kept Pace With the General Improvements of the Year.

WILL BRING PROSPERITY TO CITY

Scores of Wage Earners Added to Pay Rolls of Our Industries.

Cedar Valley Manufacturing Company Rises from the Ashes—Waterloo Saddlery Company Builds Finest Shop in State—Tallerday Pipe Company a Big Thing—Other Institutions Promise Equally Bright.

Articles of incorporation were filed early in December of an institution which gives Waterloo a new manufacturing establishment of no mean proportions. The incorporation is known as the "Tallerday Steel Pipe Company," and its purpose is to manufacture and sell steel piping for various uses, such as well casing, well pipe, sewer convey pipe, etc. The capital stock is \$20,000 of which \$10,000 is paid up. The incorporators are F. G. Tallerday, J. M. Grosch and C. R. Campbell.

A site for the factory was donated by the Waterloo Improvement syndicate, the location being in Riverside addition, facing Syracuse street and running back to the Illinois Central side track to the packing house. An entire block is thus secured, containing about one and one-third acres. Work was commenced at once and a large force of men pushed the work of raising the necessary building. By the middle of the year the main structure is enclosed and the engine and boiler house, a separate structure of stone, is completed.

The factory building is 48 by 160 feet, and the engine room 16 by 24 feet. Special machinery for the making of the product has been under construction simultaneously with the building and

factory. Carload business is already in sight. Seventy-five tons of galvanized sheet steel have been purchased, and is on the way now, and by the first of March twenty or thirty men will be actively employed in the manufacture of this product, with every prospect for a steady increase. To the year 1899 should be given the credit of this excellent improvement, as the plans were all made and the money invested before the new year.

The incorporators are all well known in the city, and their characters and business ability is a guarantee that the new business will be pushed to a successful issue and to Waterloo will be giving an industry that will be a benefit and pride to its citizens. F. G. Tallerday is the manager of the Waterloo Steel Pipe Co., and this institution has grown steadily since its establishment.

J. M. Grosch, ex-mayor, needs no introduction. He is prominent in business and politics, and is one of the largest and best political circles of his community, and a gentleman respected by all who know him.

The new venture will in no way detract from the American Steel Tank Co., of which Mr. Tallerday is manager. The tank company is doing a big business and will continue to push the manufacture and sale of steel tanks. The Tallerday Steel Pipe Co. is independent and separate from any other concern.

CEDAR VALLEY MFG. CO.

A Modern Shop, Door and Store Fixture Factory.

The hum of planers, the buzz of saws, the whir of wheels and pulleys, the thrumming of engine and machinery and the rush of many men proclaiming that the Cedar Valley Mfg. Co. is driving the business for which the company was

WATERLOO SADDLERY COMPANY.

firm. The balance of the institutions are comparatively small, and have not made wholesale the exclusive business, but is the object of the more pretentious houses.

The greater portion of the business was done in the line of groceries and fruits. Harness and leather findings, hardware, drugs, creamery supplies, less coffee and sugar, and one or two other lines represent the extent of the larger houses, each line being responsible for trade way beyond the amount that can be told by five figures. A number of the smaller houses were passing through the first year of business life and experienced the difficulties that beset the pathway of a new concern of modest pretensions in comparison with the larger and longer established houses of greater cities which have heretofore looked upon this section as territory of its own. That they have been able to make headway against these disadvantages is one of the wrong arguments that can be advanced in favor of Waterloo as a location for a jobbing business, as well as most convincing proof that the men behind the enterprise have the ability and the energy that is so necessary to the success of business undertakings.

While the past year has brought a great increase in trade in the established institutions, it has also brought increased territory which has lately been opened up through the medium of increased railway mileage in this section

good. The company will cover more some of the present office force going on the road.

The Creamery Package company has been working during the past month to increase their territory and business in 1900. Two traveling men have been engaged—W. F. Mack of Rockford, Ill., who has just returned to Waterloo, and S. B. Reed of Des Moines. This gives the company five traveling salesmen and E. W. Chandler, the manager, looks for a greatly increased business with a corresponding increase in the number of men employed in the factory.

Corbin and the Cedar Valley Mfg. Co. expects to double its force during the year. Prospects were good for outside business. Some big jobs are now being figured out and if secured will require an increase of workmen immediately.

RESIDENCE OF LOU SMITH

\$1000, and in most of those above that sum are equipped with modern ideas that were at one time, not so very long ago, considered as luxuries only for the opulent. The new homes were built in the several wards in the following numbers:

First ward.....	10
Second ward.....	32
Third ward.....	38
Fourth ward.....	33

Total.....133

The cost of these structures ranged from less than \$1,000 up to above \$6,000. Nearly one-half came in between the \$1,500 and \$2,000 marks, but there are a goodly number at the prices which indicate elegance and special comforts. The number built and the range of the cost is given herewith:

Under \$1,000.....	33
\$1,000 to \$2,000.....	42
\$2,000 to \$3,000.....	32
\$3,000 to \$4,000.....	19
\$4,000 to \$5,000.....	9
\$5,000.....	3
\$6,000 and over.....	3

Total.....133

among the heaviest contributors on the roll. A number of the new houses in this ward are the homes of working men, and the fact that only 13 out of 38 cost less than \$1,000 is good evidence that most of them have been able to earn good salaries and to accumulate considerable after paying their living expenses.

The Fourth ward made a number of the very finest improvements that were credited to the year just past. Considerable of the money expenditures was placed in commercial enterprises, and the only school building erected in the city was built within its borders. Thirty-three new houses are among the buildings. The Cedar Valley Mfg. Co. (invested \$1,500 in a new plant, and the Cushman store building on Fifth street is one of the numerous good works that were done. The Gasser double store room is also one of the large items that help make the big total creditable to this section of the city. Two disastrous fires occurred in this ward during the year, and the destructive work of the flames cost \$71,000 to repair.

RESIDENCE OF A. C. BRATNOBER

is being installed as rapidly as the building will permit.

The product which the company will make is the invention of Mr. Tallerday, a patent having been granted a few months ago, and it is being tested in the laboratory at the time. It consists of rolling steel sheets into tight, strong, gas-tight, and is considered better for many purposes than the gas pipe method. The accompanying illustration gives a good idea of its appearance. The cost to manufacture is much less than that of Mr. Tallerday has made the piping the size for some time and it has proved a remarkable success and the demand has been good. The 34 inch pipe, made of No. 30 galvanized steel, has been subjected to a test of 200 pounds pressure, and is also air and water tight, making it practically for use where the standard gas pipe has been used. The ease of installation is also a great factor in its favor, the new piping weighing only two pounds per foot, as against five pounds of the old style.

Letters of inquiry from all parts of the country have been received, one from California, stating that if the product was up to what was expected hundreds of car loads could be sold in that region for irrigating and water conducting purposes. This illustrates the possibilities of the future for this

organized. June 8, 1898, a devastating fire destroyed every vestige of the old factory and the company, which was organized in 1889, found itself with only a charred heap of ruins for assets. The managers, members piously went to work, reorganizing the company with increased capital, bought a new and larger building, started work on the factory about the middle of April, 1899, and the result is that today is erected in Waterloo one of the largest and best equipped cash, door and molding factories of the northwest.

The piping is one of a large tract of land on East Water and Sixth streets and a strip along the river front. The main building is 124 feet long, two stories and basement. The engine room is a detached brick structure 32 by 10 feet, including a dry kiln and glue room, which is two stories. Over 300 feet of stock and lumber occupy the space on the opposite end of the street, and a strip along the river front. All the basement and engine floor are cemented. The power is furnished by a steam engine and boiler of horse power. The two doors are filled with the latest new machinery, there being planers, molders, sanders, saws of all kinds and a machine for doing stair work, the latter being some-

The Children's Christmas.

It was a very cold night, and the Smiths, a family of four children, Grace, Bob, Lucie, and best of all, baby May were sitting around a little fire in the dining room when their mother entered.

"Children," said she in a very sad tone, "I wish from today to Christmas and it will be a very sad one to us in the way of good things, because we know it is Christmas Eve, and everyone should be happy and joyful on that day."

"Yes," said Mrs. Smith, "that is true." "Children, it is nearly eight o'clock, so come, let's make good night, and go to bed and ask God to give you nice Christmas."

"Mamma," said Grace, "may I ask you one question before I go to bed?"

"Yes, dear, what is it?" "Mamma," said she, "I want to ask you if you will let me fix a little treat for the children."

"Grace, it is a very kind of you to try to make your sisters and brothers happy but I don't think you could do it."

"Mother," Grace pleaded, "please let me do it." "Well, if you want to do so badly you may."

"So Grace kissed her mother goodnight and went to bed. But, before she got into bed, she knelt down on her knees and asked God to bless her mother for letting her try to make a little Christmas for her family and also asked Him help her to do it. So Grace went to bed in high spirits."

Grace was a child of only nine, but she had a kind heart and was always looking for pleasures for other people to enjoy.

Her first thought, when she awoke was about her poor father, who worked so hard to get a living for them.

Grace had resolved to have Bob, (the next to her) in the secret, and when they were going to school she told him of it and he was very glad to help her.

All that day Grace was thinking what she could do and so was Bob. Their mother had said they could say up half an hour later than the other children, and tell one another their plans. Bob said he would try to earn a little money for doing things for the neighbors, and he could cut a fir tree down. If Grace could make a few things to hang on it.

And Grace said she would do nothing but thing Grace said to Bob was don't forget to ask God to help us and I know he will.

The next day after school Bob went to the store for three different kinds of apples and had them for his Christmas.

When Dr. Gray gave him ten cents, each a happy Christmas. Bob's face, that the doctor asked him what made him so happy and when he told him, the doctor said, "you come around to my house, and I will give you four things." Then the doctor jumped into his carriage and drove off.

Little Bob was so overjoyed that he ran all the way home. When Grace heard it she was happy as he was. All the time Grace and Bob could spare was engaged.

Bob went to the doctor's and he gave him some things. The doctor said that he would help them with their Christmas. Bob went home and took the stuff to Grace, and she began to make things. At last after a good deal of labor Christmas Eve came.

Bob and Grace got permission to stay up and fix the little fir tree. The last thing Bob said was, "I wonder if Santa Claus will come." After May and Lucie had gone to bed, Bob put up the little Christmas tree in the dining room; then he helped Grace to fix the things.

When they got through the tree looked quite pretty. There were paper oranges, which Grace had made out of the stuff the doctor gave her; a few popcorn balls, which Bob bought out of some of the money he earned; a little doll for baby May, and a few tin dishes for Lucie. Then there were a few red apples. Grace and Bob went to bed very tired. In the morning Grace said, let us go into the dining room and see if Santa Claus has been there. So they went in, and sure enough he had been there. It did not take long before before the whole family were in the dining room looking at the tree, and all were overjoyed. Grace said, "we will thank God for our happy Christmas." They did so, and when they were enjoying themselves the most a knock was heard at the door, and when they went to the door, behold there was a box of goodies and Dr. Gray stood there saying "Merry Christmas, merry Christmas to all."

They opened the box, and there were a lot of good things in it. Dr. Gray had brought good luck, for he had got a better position for Mr. Smith, and now they could move into a better house and have better things. So you see, they had a happy Christmas after all, and only for Grace they might not have had any Christmas. The mother and the father looked with happy eyes upon their children, but especially upon Grace.

Grace knelt.

The Two Sisters.

One lovely morning in May two little sisters were playing near a high precipice at the foot of which rolled a deep, dark river. The names of these little children were Beatie and Lilly. Beatie, a dark haired little girl of a very passionate temper, and Lilly, a bright golden haired child, whose sweet face and kind, gentle manners were so very different from Beatie's.

They had played there some time when they began to pick some little red berries that grew on vines around the rocks. They were quite near the edge of the precipice when Beatie, who was always afraid Lilly would get the most, ran to grab some from her, and she got angry and struck Lilly so hard that she fell over the precipice. As Lilly was falling she cried out.

Poor Beatie was very much frightened. She looked over the precipice and there she saw little Lilly floating down the river with her little hands stretched out as if imploring help.

You may be sure Beatie shed tears over her rash conduct. Her grief was so great that she became crazy.

She lived to be an old woman, but could always hear the last words that Lilly said: "Oh, it is sad!" When the wind would blow she thought it was saying: "Oh, Beatie!" And when the birds were singing she imagined they were saying: "Oh, Beatie!"

At last she died a poor old crazy woman. We should all learn from this not to strive against, but to be kind and patient with each other.

Eleanora Gerlach.

God's Penitence.

In a little village there lived a girl of about twelve years of age named Gertrude. Outside of the village there stood a large tree with five or six birds on it.

Little Gertrude stood near the tree with her cousin on a cold winter's evening, the very evening before Christmas.

All at once she let go her hand and ran into the house. Soon she came out with some small pieces of bread, which she threw on the ground so that the little birds would also have something to eat and not starve in the cold weather.

"Cousin John," whispered she, "will the dear little birds see this, do you think? I hope if one does it will call the others that they may eat together."

Just then Mr. Smith came walking down the street. The children ran to meet him; he greeted them with "Merry

Christmas to you all. What do you think my dear children. Mrs. Brown's house was burned down to the ground today."

Mrs. Brown was a widow and her oldest girl was Gertrude's little playmate. Gertrude was thinking what to do and Christmas Mrs. Brown and her children would have and what she could do to help them. She made up her mind that she would give her some of the presents that Santa Claus would bring her.

When Christmas morning came Gertrude awoke very early. She looked out of the window and there she saw everything covered with snow. Gertrude began to think of her poor playmate and of her Christmas presents. She jumped out of bed, barefoot, and ran to the door to see her presents. With a little scream of joy she took her things and went back to bed. Among her Christmas presents was a beautiful doll with eyes as blue as Gertrude's own. A little while after she got out of bed and dressed herself, took the doll in her arms and was ready to carry it over to her little playmate. Gertrude was trying with might and main to lift the heavy latch, when the door was opened from the other side and her Cousin John entered.

"A Merry Christmas, little cousin," he cried. "Why, where are you going so early?"

"Cousin John," she said, softly, "I wanted to give this doll to my playmate for a Christmas present."

Gertrude was never so happy in all

hastened to the girl's house, gave her the doll which lightened her little heart and made a happy Christmas for both of them.

Mary Rupp.

Gertrude's Little.

There was a very little girl whose name was Gertrude. She had some lovely lilies growing in her garden which she attended very carefully. In the next house there lived her little playmate whom she loved very much.

Gertrude always played. One day when Gertrude came running into the house her mother told her that Ida was dead and that her mother was bending over her coffin and was very sorry to see her only child dead. Gertrude said, "mamma, now I will have lilies to play with any more."

Then Gertrude went out, picked her lilies, and brought them to Ida's house. When Ida's mother saw her she cried: "What do you want, my child? Do you come to see the pale face of Ida once more?" Gertrude said: "Please, mamma, may I lay these lilies on Ida's breast?"

Ida's mother took the lilies and put them on her breast. Then she took Gertrude and kissed her and pressed her to her bosom and then let Gertrude go home. Gertrude was thinking of how Ida would go down under the ground and then get covered with dirt, just how she saw her grandfather.

Gertrude was never so happy in all

her life as she was then, because she had given her playmate the only lilies that she had grown in her garden.

Lizzie Bree.

The Husher Bootblack.

A boy about 9 years old stepped up to a man in New York and said: "Want a shiner?" The man said: "Yes, but I am in a hurry. I want to catch a train for the Hudson river." The boy hurried up and began to blacken his shoe, when the man pulled out his watch and saw that it was just time for the train. He put his hand in his pocket and gave the boy 50 cents; then ran as hard as he could. The boy saw how much it was and ran after the man, but just as he reached the place the train pulled out and the man was gone.

The boy kept the money, and two years after the man came back to New York. The bootblack was still there, and when he saw the man he thought he knew him and said: "Two years ago I shined your shoes and you gave me fifty cents; here is your forty cents change." The man looked at the boy and when he saw that he was so honest he would not take the change, but took the boy home and sent him to school. He grew up very smart and the man gave him part of his business, and he now owns a large store in one of our Western Cities.

FOR THE HOLIDAYS,

191 Ave. D,

BAYONNE, N. J.

December 8. In the date line under the heading I think the month should be spelled out—a trifling matter, of course, but it was the first thing to strike my attention. The liberty is taken of reprinting a short editorial from the Journal:

We frequently hear that the country weekly will some day be a thing of the past. That the big city dailies will crowd it out of the field. In regard to the news of the world that is already true, but the country weekly has its own field and all the city papers in the world can't encroach upon it. Here is an illustration. On November 6 the Buffalo Evening News printed the following item, thinking it of enough importance to give it space: "Rev. N. B. Randall of Orange, N. J., is conducting a series of revival meetings at Franklinsville."

That was a news item of more or less value, but the News didn't get hold of it until just one week after the close of the two weeks' meeting. This don't look much like crowding out the country weekly, does it? A city newspaper that covered thoroughly in a news way all the smaller towns it circulates more or less in would have to be about a 114 page paper.

* * *

"First page for criticism" is marked on a copy of the King City (Mo.) Democrat, arriving here. The page is all right with the exception of using an em dash at the beginning of every paragraph. I could never understand why the dash is used in this manner. Why not put a pointing fist or an exclamation mark? One seems as reasonable as the other.

* * *

It was impossible to publish reproductions of all the different features of the special holiday editions which reached this office in the January number of the National Printer-Journalist, and some had to be left over for this number, of which the Bayonne (N. J.) Herald is one. However, it is never too late to publish a good thing.

* * *

An attractive way of arranging ad display is shown on the opposite page, reproduced from the Christmas Industrial Edition of the Beardstown (Ill.) News. The portion of the paper which was worked in red and black was much better than the average color work on newspapers.

* * *

Eight pages on Saturday and four pages on Wednesday, six columns to the page, for \$1 a year is what the subscribers of the Delawarean get. The front page is particularly well made up, and there is every indication that the paper is making a success. It is published at Dover, Del.

* * *

Farm and Factory is now the title of what was formerly the Independent, published at Binghamton, N. Y. It is devoted to the interests of the International Farmers' Union and other organized workers,

* * *

If I was running the Purcell (Ind. Ter.) Register, I would be inclined to change the heading to plain type. The engraved heading now in use seems a little off some way or other.

* * *

The Rawlins (Wyoming) Semi-Weekly Republican was resplendent in a colored paper cover for the close of the year. It no doubt paid well, as it was full of good advertising.

* * *

The Red Wing (Minn.) Argus has moved into larger and more convenient quarters at 207 Plum street, and the publishers intend to make the paper better than ever.

* * *

Colorado produces lots of other things besides gold and silver, according to Field and Farm, which is a good agricultural paper.

THE INCREASED COST OF NEWSPAPER PRODUCTION.

Announcement was simultaneously made in all four daily newspapers of Denver in their issues of yesterday of an advance in their rates of subscription that will be put into effect January 1, 1900. The reasons given for this concerted action are set forth as follows, identical statements appearing in the Republican, Times, Post and News, signed by K. G. Cooper, president of the company owning the Republican; by Earl B. Coe, president of the Times company; by H. H. Tammen for the Post and by R. C. Campbell, business manager for the News:

"Within the last ninety days the cost of every kind of material that enters into a daily newspaper has increased from 15 to 50 per cent. White paper has increased 30 per cent; ink, 15 per cent; stereotype and linotype metals, 50 per cent; and all the different articles used in picture making and about the machinery, 20 per cent. Outside of the

Newspaper office of President R. H. Henry, Jackson, Miss.

rise in prices the cost of making a newspaper in Denver is 25 per cent greater than in Chicago, St. Louis, and the Missouri river cities. Denver telegraph tolls are 100 per cent higher, labor is higher, while freights upon paper, metals, inks and other material rank about in the same proportion.

"Six months ago the Chicago daily papers, anticipating the rise in material, doubled their subscription rates. The Denver newspapers were content to await the rise.

"For the past ninety days every Denver daily paper has been printed at a loss. Facing the rise in prices, one of two alternatives was presented to the publishers—either to reduce the size of the papers, cut down telegraph news and reduce the number of employees, or to increase the subscription rates. Neither could be done without the co-operation of all the local dailies. After consultation between the papers and also with many of the enterprising and public-spirited men of Denver, it was concluded that to

raise subscription rates would better please the public, especially that portion of it which works for prosperity."

The new rates that go into effect in a few days are given as follows:

Morning papers by mail, postage prepaid:

Daily, with Sunday issue, one year.....	\$9.00
Daily, without Sunday issue, one year.....	6.50
Daily, with Sunday issue, six months.....	4.50
Daily, with Sunday issue, three months.....	2.25
Daily, with Sunday issue, one month.....	.75
Daily, without Sunday issue, one month.....	.60
Sunday edition, one year.....	2.50
Weekly, one year (in advance).....	1.00

By carriers—All parts of Denver:

Daily, with Sunday issue, per week.....	\$.20
Daily, with Sunday issue, per mo.....	.75
Daily, with Sunday issue, per year.....	9.00

Evening papers, by mail, postage prepaid, every week day afternoon and Sunday morning:

Per week.....	\$.15
Per month.....	.65
Per year.....	7.80

Delivered by carrier, every week day afternoon and Sunday morning:

Per week.....	\$.15
Per month.....	.65
Per year.....	7.80

The present rates for the morning papers are as follows, by mail, postage prepaid (in advance):

Daily, without Sunday issue, one year.....	\$6.00
Daily, with Sunday issue, one year.....	7.50
Daily, with Sunday issue, six months.....	3.75
Daily, with Sunday issue, three months.....	1.90
Daily, with Sunday issue, one month.....	.65
Sunday edition (thirty pages) one year.....	2.50
Weekly, one year (in advance).....	1.00

By carrier—All parts of Denver (invariably in advance):

Daily and Sunday, by carrier, week.....	\$.12½
Daily, with Sunday issue, per month.....	.55
Daily, per year.....	6.50

Afternoon papers (strictly in advance):

Daily and Sunday, by carrier, week.....	\$.10
Daily and Sunday, by mail, month.....	.50
Daily and Sunday, by mail, year.....	6.00

It will be seen that the increase in the rates by carrier for the morning papers in Denver is from 55 to 75 cents per month, and for the afternoon papers from 45 to 65 cents per month, in each case an increase of 20 cents per month, or, in the case of the morning papers, almost 37 per cent, and, in the case of the afternoon papers, almost 45 per cent. The higher rates will no more than meet the added cost of production, which cost has not been covered in Colorado for some years by a reasonable margin of profit by reason of the lasting results of a fight inaugurated some years ago and continued at various times for various reasons, subscription rates not having been in Colorado for years in proportion to the rates elsewhere, the greater cost of materials here and heavier expenses being kept in mind.

The facts set forth by the Denver dailies yesterday are absolutely accurate and apply to every daily newspaper in the State. Nor are the prices of the materials used in the production of a newspaper yet as high as they are likely to go. Commodities of all kinds have increased in cost to the consumer during many months past. It is but natural and unexceptionable that these greater charges falling upon newspaper publishers should cause them to raise their subscription rates as the Denver dailies have announced they will do the first of the year.—Pueblo (Colo.) Chieftain.

ADVERTISATORIAL.

Saying that wares are superior, cheap, splendid or fine, is not half as effective as telling why they are so.—Advisor.

* * *

A small key will open a large door. A small advertisement, if it fits the reader's requirements, will bring satisfactory returns.—Printers' Ink.

* * *

A single advertisement may do no visible good, but it is the magnet which draws the reader to the next one, and finally to become a customer.—H. L. Goodwin.

* * *

We insure 365 days in a year, for we do not know on what particular day the house may be destroyed. Advertise 365 days a year, for you do not know on what day you may supply some one's wants.—Newspaper Talk.

* * *

The one great trouble with the new advertiser and the majority of advertisers is, they expect too much too quick. Are not willing, haven't the courage of their convictions enough to take hold and hold on to the finish.—S. D. Creedon.

* * *

"There is no disputing about tastes." Much of the current criticism of advertisements is merely the expression of a private opinion and is of value only in showing what one man thinks. The highest authority on the subject of advertising is the bank book. The ad that pays is a good ad.—Agricultural Advertising.

* * *

A Northern magazine offers the Coaster a subscription to its fifty-cents-a-year publication in exchange for \$30 worth of advertising. As many papers will, no doubt, accept this proposition it doesn't require much study to understand why the foreign advertisers justly consider country publishers asses of the veriest kind.—The Texas Coaster.

* * *

We are glad to note, says the Athol (Mass.) Chronicle, that the merchants in many cities and towns are getting restive under the "stand-and-deliver" demands of canvassers for church and society programme advertising. In a measure it approaches blackmail, and the way to stop it is to stop it short. The same amount of money spent in legitimate advertising would bring five times the result of the programme advertising. The latter is a snare and a delusion.

* * *

The newspapers of larger cities are a veritable mine of hints for the local retailer, if he will read them carefully and use their contents intelligently. There are hundreds of apt phrases and tricks of expression which serve to brighten up the advertising and make it interesting. There are arguments that the retailer himself would not think of. All these things are good material for the advertiser to study and to use when they are appropriate.—St. Louis Grocer.

* * *

The reason why the newspapers are the best mediums for reaching the people and securing business is that they come into closer touch with the public than any other kind of publications. They greet the reader's eye 365 days in a year. It is the persistency, if we may so call it, of the newspaper that gives it value. Every day it is new and must be read, and every day the advertiser is making a direct appeal to the reader for his patronage. It is the constant dropping of water that wears away the hardest stone.—Fourth Estate.

Half a Century's Advance in Illustrations.

A STORY OF TYPE AND PICTURES.

PART SECOND.

THE FUTURE OF ILLUSTRATION AND ENGRAVING.

It might well be asked in this closing year of the century if we have arrived at the highest excellence of engraving and illustration by present methods? And so, what comes next?

Nine years ago it was a hard matter to get a printer to print halftones properly. Printing halftones in a newspaper was not considered practical, even using screens of only eighty lines to the inch, and yet to-day newspapers are printing full-sheet halftones from screens of 120 lines and upwards and printing them better on the rapid news press than they were printed on the best made ready press nine years ago. The halftones now made are of a very high average, and there is little probability of a return to wood engraving, which was all the talk ten years ago. It is quite probable that if halftones and halftone printing had not improved during these years that publishers would have returned to wood, but the day is past and the new order of things stands firm till some new and better method is discovered. What that new method will be is hard to imagine, but photography, which has made so many changes and improvements, is not suddenly going to stand still and teach us nothing.

Is the next century to be one of color? Are all our magazine illustrations to be in color? Color photography and printing have advanced greatly within five years, and it is reasonable to suppose that during the next five years it will advance still more. And as methods improve and cheapen, the demand for a color-picture magazine must be met.

The writer well remembers discussing with the head of an engraving department of a large printing house this question of color, and his opinion at that time was that it was of no commercial advantage. Yet to-day that firm would be glad of a tenth of the photo-color work which is done in the country.

It is impossible to doubt but that color-work will be cheapened and made easier with fewer manipulations and the getting nearer the original than the present cumbersome and mistake-making methods. Of these methods and improvements we hope to speak in the near future, and although in writing on technical subjects it is necessary to use technical language, still we hope to make the matter as interesting for the master as the man, and in this department we will try to give our readers whatever is best and most interesting from the world over.

This month we give specimens of wax engraving by Geo. H. Benedict & Co. Next month the Binner Engraving Co. have promised something in the way of illustration of modern manufactures, etc., by halftone process.

THE WAX PROCESS.

This process is utilized for making every variety of railroad, geographical, State, county and town maps, mechanical and architectural diagrams, intricate rule work and fine

script. By it is produced plates for the uses named which can not be surpassed in beauty, clearness of line and exceptional printing quality. All ordinary designs in ink or pencil, blue prints or photographs, answer for copy as well as finished drawings. The following will illustrate its peculiar adaptability to the class of illustrations for which it is used:

A polished copper plate is stained black with a chemical solution. It is then coated with a thin composition of wax and resin, rendered opaque by the addition of a mineral oxide. A photograph of the copy is made on the surface of the wax or the copy is traced on the wax by placing tracing paper between the copy and the wax and going over the lines with a steel point. The lines and shading forming the design are cut in exact imitation of the copy through the film of wax to the surface of the copper plate with steel tools shaped like a "V" set in wooden handles. Circles and ovals are cut in the same manner with tools set in spring compasses. Tints and color plates are ruled on a special machine. When the lines have been cut, if the object is a map or diagram with lettering, the words, letters or figures are set up in type and pressed word by word into the wax and through it to the surface of the plate, the type being held in a clamp. The lettering being completed, the work is then compared with the copy, errors when discovered are corrected by melting the wax over the words or lines, thoroughly obliterating them, and recutting the lines or pressing the words in their proper places. After the plate has been gone over, the open spaces are filled with beeswax to give the necessary relief to the printing plate. When the building up of the spaces has been done, and defects corrected, the plate is coated with plumbago and placed in the electrotype battery. A strong shell is deposited, which is backed up and blocked in the same manner as an electrotype from a type-form or wood-cut.

No general prices are given for wax-process engraving, each subject requiring a special estimate. The copy should be sent with a request for prices, which vary, with the size, style and amount of detail in the subject to be engraved, from twelve cents per square inch for tailor's diagrams, subdivision plats, open rule work, etc., to twenty-five cents per square inch for town and ordinary county maps, mechanical diagrams, etc. For fine geographical and railroad maps, script, etc., the price may be as high as one dollar per square inch.

[TO BE CONTINUED.]

TWO POINTS ON WISE ADVERTISING.

We can learn as much from one advertiser's failure to succeed as we can from another's success.—Mail Order Journal.

* * *

From the letters that come in answer to his advertisements the wise advertiser is able to gather material for future advertisements.—Advisor.

Specimens of all kinds of job printing, books, and pamphlets will be reviewed in this department. It is desirable that they be mailed flat when possible. If only favorable notice is desired it should be so stated in a letter accompanying the work, and should the specimens not be deemed worthy of praise no comment will be made. Address all communications to the office of this paper plainly marked on corner "OCTAVO, for Review."

Samuel Bingham's Son Mfg. Co., Chicago, is sending out a beautifully printed oblong booklet which gives a brief history of printer's rollers, as well as a few remarks or hints on their importance and care. The contrasts and comparisons between the crude methods of early times and the magnificent improvements of the present afford the reader of the pamphlet an opportunity of seeing and appreciating what has been accomplished in this line during the past fifty years. An important feature, and one which is sure to make the work of lasting value, is a treatise on the care of rollers. Here are some of the chapter heads: "Essential Qualities of a Good Roller, Seasoning Rollers, What Rollers are the Cheapest, When to Order Rollers, Setting Rollers, and Cleaning Rollers." The cover is embossed, the work is well done, and the contents interesting and profitable to printers.

* * *

David L. Gorham, typographer, 340 Dearborn street, Chicago, says: "Octavo: Dear Sir—I send you herewith a few samples of my work for criticism." It is a batch of stationery, cards, etc., showing excellent taste and judicious use of colored ink. I regret that the samples were of such a nature as not to admit of some of them being reproduced, as they show a thorough grasp of the prevailing fashion in up-to-date printing. Perhaps Mr. Gorham can favor this department with samples of job work that the engraver could make an etching from without spoiling the effect of the work.

* * *

Ordinary every-day cut work is shown on a large specimen sheet now being sent out by the Clark Engraving Company of Milwaukee. Halftones of 133-line for fine enamel stock and those of 80-line are compared. Wash drawings, zinc etchings, and fine lettering are shown, the whole proving of great interest to anybody who desires to inform himself on modern methods of illustrating.

* * *

Specimen sheets of the Inland Border Series No. 91, the Palmer Series of type—showing the script effect without the delicacy of the joining lines of script—and circulars telling how embossing can be done and its methods of advertising have arrived from the Inland Type Foundry, St. Louis. All the printed matter sent out by this house is of a high order.

* * *

The Chicago office of the John Thomson Press Company, Broadway, New York, sends a pamphlet setting forth the advantages of its platen press. The embossing of the cover is a fine piece of work, and the halftones inside are well printed. They are vignettied and the machines stand out almost like wood cuts.

* * *

A unique and pleasing piece of work comes from the American Type Founders Company entitled "Prevailing Type Fashions." A very ingenious arrangement of folding allows it to go through the mails for one cent postage, though it comes pretty near being sealed up. Sending for

a copy of this might save a whole lot of postage to printers mailing circulars.

* * *

A specimen sheet from Barnhart Bros. & Spindler, Chicago, shows Faust Text, which that firm is now putting on the market. It is of the early English or Bradley style.

* * *

A business card from the Gregory Printing Co., art printer, Dearborn street, Chicago, on a red ground with embossed letters in bronze, is showy, but is rather indistinct and the bronze used does not appear to be of a good quality.

* * *

The Mansfield (Ohio) News sends a folder giving an elaborate and detailed statement of the circulation of the paper in table form. It is not intended to be a specimen of fine printing, but it is well executed and possesses many good features as an advertisement.

* * *

Bradley italic and Jenson is the combination of the little circular which the Sanders Engraving Company of St. Louis is mailing, telling of the new location, where the company is better equipped than ever for fine work. Sage-green ink on fawn-colored paper looks well.

* * *

Calendars have been received from the Maury Democrat, Columbia, Tenn.; the Liberal (Mo.) Enterprise; the Osceola (Wis.) Sun, and the Independent, Winona, Minn. Good calendars are still a popular form of advertising in spite of some adverse criticism now going the rounds.

* * *

A complimentary card from H. C. Hansen, printed in silver on a bright-red card, looks well, and has a calendar for the month of January in the upper left-hand corner. It might have been better if the word "Boston" had been printed on the card under the two words "type founder."

* * *

A small booklet showing the advantages of the McGinty adjustable feed gauge for platen printing presses fills the bill exactly. It comes from Doylestown, Pa., and is issued by the McGinty Feed Gauge Co. It is neat, but makes no pretensions at being elaborate, which is correct when advertising a small article.

* * *

A neat piece of advertising has just been issued by the Michigan Farmer, Detroit. It is in booklet form, with halftone illustrations of the office and plant. A vast sum of money is annually spent on booklets, and no doubt it pays, for many firms use this form of advertising that are not in the habit of wasting their money.

* * *

Alfred Mudge & Son, printers, Boston, have printed one of those nice long booklets on deckle-edged paper and old-style type, tied with floss silk. Black and red are the colors of ink used and the brief but pointed reading matter appears on the right-hand pages only. The busiest man could hardly pass it by without reading the contents, and it wouldn't take him long to do it and get all the facts about this printing house.

* * *

"Historic Monterey and Its Surroundings" is the title of a forty-eight-page souvenir, issued by the Monterey (Cal.) Cypress. It is set in brevier Ronaldson, solid, twenty-eight ems wide, and made up two columns to the page, the reading matter on the even and the illustrations on the odd pages. The cover is blue with embossed title in gold. It is a credit to Wallace Clarence Brown, and is certain to prove a lasting souvenir.

ECHOES FROM THE SOUTHLAND.

What Southern Papers Say of the Convention of the National Editorial Association and of the Visit of the Editor of the National Printer-Journalist.

From the New Orleans Times-Democrat, Jan. 5, 1900.

Mr. Benjamin B. Herbert, representing the National Editorial Association of the United States, is on a visit here. Mr. Herbert was the organizer of the Association and its first President, and in the course of an interview with a Times-Democrat reporter last evening he explained fully the scope of the Association and the object of his present visit.

"I came down," said Mr. Herbert, "in order to look around your historic city, survey the different points of interest and interview your prominent citizens and business men with a view to preparing an article preliminary to the holding of the Convention which will be sent out with the official programme. The Editorial Association was

Cincinnati. The whole region of country contributory to these different points has been generally traveled over and the leading interests made subjects of special articles by the editors, so that the readers of newspapers throughout the United States have been educated in all these matters as well as the editors themselves."

Asked as to his impressions of New Orleans, Mr. Herbert said: "I have been very much pleased with what I have seen of the city and with the evident improvements that have been made during the last fifteen years, which indicate that New Orleans is thoroughly abreast of the progressive spirit of modern times, and I was especially pleased with the report made at the meeting of the New Orleans Progressive Union held last evening, showing that a genuine spirit of progress is abroad in your city."

"How long have you been making these trips in the interest of your association, Mr. Herbert?"

"For twelve years, during which I have written up the local attractions and the itinerary and local arrangements

In the Cotton Field.

originally organized for the purpose of comparing experiences, theories and opinions in regard to the conduct of newspapers, but as a result of its meetings there has arisen the practice of visiting different sections of the country and investigating matters of local, industrial, educational and social interest, so that while it is first and foremost an editorial body, organized for the building up of the profession, it has also become the means of informing the editors with regard to existing conditions in all sections of the Union. The association was first formed in 1885, on the occasion of the World's Cotton Centennial Exposition, and since that time meetings have been held in every section of the Union—in Boston, San Francisco, Portland, St. Augustine, Chicago, St. Paul, Denver, Detroit,

made for entertaining the editors, together with the official literary programme. In these preliminary visits I have personally met with the chambers of commerce and boards of trade of the principal cities from San Diego, Los Angeles, Cal.; Portland, Ore.; Seattle and Spokane, Wash., on the western boundaries of our country, and St. Paul, St. Louis, Cincinnati and Detroit among cities in the interior, and from St. Augustine and Jacksonville, Fla., to Asbury Park and New Jersey and other points on our eastern coast. It was at New Jersey that one of our most successful meetings was held in 1894.

"I have found that everywhere," continued Mr. Herbert, "where there existed a live active Board of Trade, Chamber of Commerce, or association of the character of your Pro-

gressive Union, that new life has been infused into all city enterprises. For this reason I feel certain that this new organization of yours, I refer to the Progressive Union, will be of benefit beyond the expectations of the most sanguine. A striking instance, by the way, of what can be accomplished by just such organization is shown in Minneapolis and of late in St. Paul and St. Louis. California even has a State organization, co-operating thoroughly with an organization at San Francisco."

Mr. Herbert then proceeded to unfold the plans of the association of this year. "We will," he said, "rendezvous at St. Louis February 22. Will pass one day at Memphis, another at Jackson, Miss., and a third at Vicksburg, arriving here in New Orleans on the morning of February 26, just in time to participate in and enjoy your magnificent Mardi Gras festivities and spectacular parades. Arrangements have been made on account of the crowded state of the city at that time to occupy the sleepers, the Illinois Central having agreed to place them in a central position on their tracks in the city.

"As for our programme here, three days will be given

the United States on topics connected with the publishing of newspapers, each paper to be followed by discussions. Each discussion will be led by three speakers named prior to the opening of the discussion. First the opening paper and then the two speakers named, after which general discussion will follow."

It is understood that arrangements are already in progress here for a series of entertainments to be tendered the Association, as also to show the visitors the sights of the city and generally to extend to them a hospitable welcome. It is also expected that at the opening meeting of the Convention the Mayor and prominent citizens and business men of the community will extend a cordial address of welcome, which will be fittingly responded to by the members of the Association.

Special arrangements have already been made at Jackson, Miss., for the entertainment of the editors, who will be tendered a dinner on their arrival in that city, and subsequently taken on a trolley ride round the city, visiting also the principal institutions. An informal reception will be given at the residence of Colonel R. H. Henry, of the

At the City Cotton Sheds and Market — Away Down in the Land of Cotton.

up to the festivities and viewing the city, then on the evening of February 28 will be held the fifteenth anniversary occasion, a public literary performance, at which one of the leading editors of the United States will deliver an address, original poems will be recited, and there will also be short addresses by Past Presidents of the Association, the whole interspersed with music. It is proposed that this entertainment shall take place at one of the halls and it will be open to the public. March 1 the sessions proper of the Convention will be opened, and three days will be devoted to the immediate work of the Association, which will consist of papers by editors from different parts of

Clarion-Ledger, Jackson, Miss., who is the present President of the Association. There will also be a banquet given in honor of the visitors at the Masonic Hall, with the Odd Fellows' Hall as a reception room, both of which have been granted for the purpose, under the auspices of the ladies of Jackson.

The following are the present officers of the Association: President, Colonel R. H. Henry of the Clarion-Ledger, Jackson, Miss.; First Vice-President, Lieutenant-Governor Matt Parrott of Iowa; Second Vice-President, Colonel F. B. Ballio of Texas; Third Vice-President, Albert Tozier of Oregon; Corresponding Secretary, J. M. Page of Illinois; Recording

Secretary, R. M. White of Missouri; Treasurer, James G. Gibbs of Ohio.

The National Association now represents no less than sixty-two State and sub-State press organizations. The rule of representation is one delegate for every twenty-five newspapers represented in the State organization. The number of delegates is about 375, representing in that way from 8,000 to 9,000 newspapers, and all the delegates are prominent and thoroughly representative.

It is proposed to publish shortly in the *Printer-Journalist* a descriptive article on New Orleans, giving complete data regarding the principal points of interest. The article will be beautifully illustrated.

Mr. Herbert has traveled the continent from Mexico to Winnipeg, and both he and the visiting editors have always been very enthusiastic in writing up the sections visited.

A committee from the National Press Club, with the President and other representatives of the Progressive Union, met at the St. Charles Hotel yesterday and outlined the following programme in connection with entertaining the National Editorial Association:

A committee of citizens and representatives of the Press Club will meet the Association delegates at Jackson, Miss., February 24, and accompany the party to Vicksburg and thence to the city. On arrival in New Orleans a reception committee will meet the editors at the Illinois Central Railroad depot. February 26 and 27 (Mardi Gras) will be devoted to viewing the Mardi Gras celebration. Wednesday night, February 28, address of welcome by Gov. Murphy J. Foster, Mayor Walter C. Flower of New Orleans, President Norman Walker of the Press Club, President J. Y. Gilmore of the State Press Association; responses by President and members of the Association.

There will be a musical part of the programme furnished by the leading musicians of New Orleans.

Business sessions will begin on March 1 and continue on March 2 and 3.

The hosts—the Progressive Union, the New Orleans Press Club, the Cotton Exchange, the Sugar Exchange, the Chamber of Commerce and the Board of Trade—will arrange a supplemental programme to make the visitors feel acquainted with New Orleans.

(From the *Daily Herald*, Vicksburg, Jan. 7, 1900.)

The *Herald* yesterday noted the arrival in the city of the Hon. R. H. Henry, President of the National Editorial Association. He was here, as stated, with Mr. B. B. Herbert, the representative and advance agent of the excursion which the Association has projected and which has Vicksburg on its itinerary of scenes to be visited. The visit of the editorial fraternity, including men of national repute and usefulness, will be an event which the city should, and of course will, receive with all due ceremony and hospitality. Nothing less would befit the reputation and renown of Vicksburg—the chief city of the State and a place of historic fame.

The following timely and suggestive remarks upon the occasion are quoted from the *Evening Post*:

"On account of the great historic interest attached to Vicksburg the Association will visit our city. Our people and officials should make its visit one of the most pleasant and notable events of the itinerary to New Orleans.

"The Board of Trade and the Mayor and Aldermen will no doubt be called on to make modest appropriations to pay necessary expenses that will be incurred in entertaining these distinguished visitors, and we hope both bodies will

generously respond, and that the people of Vicksburg will do everything possible to make the Association's visit pleasant and interesting."

(From the *Vicksburg Evening Post*, Dec. 28, 1899.)

From a circular received from President R. H. Henry, we learn that the National Editorial Association will visit Memphis, Jackson and Vicksburg when en route to New Orleans next February, where it will hold its annual session.

This Association is one of the most important and influential organizations in the United States, and its membership extends to every State in the Union, which send delegates to the annual meetings.

The Association met at Portland, Ore., this year, and honored Mississippi by electing Mr. R. H. Henry, of the Jackson Clarion-Ledger, as its President, and also honored the South by selecting New Orleans as its place of meeting. It is right and proper that the cities visited by the Association should extend to it all the courtesies and hospitalities possible. The National Editorial Association asks for no advertisements or business contracts, as did the New England combination last year, but its members pay their way and seek only the advancement of knowledge, good fellowship and fraternity of the sections.

The Mississippi cities to be visited by the Association next year should give it a warm and cordial reception, as usual on such occasions, and also in recognition of the honor bestowed on one of their citizens.

We suggest that President Henry visit Vicksburg within the next few weeks, and assist in arranging or suggesting preliminaries for the entertainment of the Association while here.

We take the following interesting paragraph from President Henry's circular:

"The itinerary has not been fully decided upon, but it is now expected that the delegates will rendezvous at St. Louis on February 22; leave there that evening on the Illinois Central Railroad, reaching Memphis next morning and spending the day there as the guests of the city. Leave Memphis on the night of February 23 and reach Jackson next day, where it is intended to give the Association a dinner, drive around the city, visit the Legislature and State institutions; reception and banquet at night; leaving next morning for Vicksburg, where the day—February 25—will be spent in such way as the city may decide. I presume visits will be made to the old breastworks of Grant and Pemberton and the beautiful National Cemetery; probably a short excursion on the Mississippi River, with a reception and banquet that evening; leaving that night over the Yazoo and Mississippi Valley division of the Illinois Central Railroad for New Orleans, reaching the Crescent City early on the morning of the 26th of February."

(From *Vicksburg Evening Post*, Jan. 5, 1900.)

Our city was honored today by a visit of Mr. B. B. Herbert, of Chicago, and R. H. Henry, of Jackson.

Mr. Herbert is the editor and publisher of the *National Printer-Journalist*, a splendid monthly magazine, which is the official organ of the National Editorial Association. He was the founder and first President of this grand Association, which now has a membership in every State and Territory of the Union. He is gathering material for the February issue of his publication, which will be especially devoted to the coming trip to and annual meeting at New Orleans.

Mr. Henry is the well-known editor and publisher of the *Jackson Clarion-Ledger*, and is the President of the

National Editorial Association for the present term. He is one of the most successful publishers in the South, and is deservedly popular with the newspaper fraternity.

The association, to the number of three or four hundred ladies and gentlemen (the newspaper men always take their wives or sisters along on their annual trips), will leave St. Louis on February 22; will stop at Memphis on the 23d, at Jackson on the 24th, and at Vicksburg on Sunday, the 25th.

Jackson is preparing to give the visitors a grand entertainment, and no doubt Memphis will do likewise.

On account of the great historic interest attached to Vicksburg the Association will visit our city. Our people and officials should make its visit one of the most pleasant and notable events of the itinerary to New Orleans.

The Board of Trade and the Mayor and Aldermen will no doubt be called on to make modest appropriations to pay necessary expenses that will be incurred in entertaining these distinguished visitors, and we hope both bodies will generously respond, and that the people of Vicksburg will

representatives from all the States and territorial press associations. There is one delegate to every twenty-fifth member of the Press Association, making a membership of 375 to 400 visiting delegates. It is expected that with their families and friends the delegates will bring fully 600 visitors to New Orleans. This year they will rendezvous at St. Louis on the 22d of February, and will travel south in a special train over the Illinois Central. They will stop at Memphis on the 23d, where a reception will be tendered the journalists and their friends. On the 24th, at Jackson, Miss., the home of Colonel R. H. Henry, present President of the Association, a grand reception and banquet at Masonic Hall will be given, at which the Governor of the State and his staff and the State officers will be present.

The next stopping place will be Vicksburg, and thence the party will journey to New Orleans, arriving here on the 26th of February. From the 26th to the 28th, inclusive, the whole time will be devoted to enjoying the festivities of the carnival season. The headquarters will be at the St. Charles Hotel. A committee on entertainment from the

A Family of Twelve.

The children of Mr. and Mrs. William Goodwin; they are all alive and well and living at home with their parents at Petaluma, Cal.

do everything possible to make the association's visit pleasant and interesting.

(From the New Orleans Daily Picayune, December 31, 1899.)

Col. Benjamin B. Herbert, of Chicago, editor of the National Printer-Journalist, official organ of the National Editorial Association, is in the city as the representative of that Association, for the purpose of writing up the programme for the fifteenth annual meeting, which will be held in New Orleans on the 1st of March, and will last four days. The visitors will be here, however, in time to take in the Mardi Gras festivities.

Regarding his visit here, Mr. Herbert said that each year preceding the Convention an article is prepared for publication in the official paper, giving a description of the itinerary and the programme, together with local entertainments, and a "write-up" of the places of interest in the convention city. This article is accompanied with illustrations of sites, park views, public buildings and any scene of interest. The attraction of the New Orleans carnival will be specially dwelt upon in the elaborate article that will be prepared by Mr. Herbert.

This Association is a delegated body, made up of repre-

Press Club and the Progressive Union will have charge of providing recreation for the visitors. On March 1 the Association will hold an "anniversary meeting." It was organized in this city fifteen years ago, Mr. Herbert being its first President. Eighteen States were represented at that meeting. Now all the States in the Union have delegates in the Association. On the first day addresses will be made by past Presidents, and by leading journalists. The anniversary poem will be read. The next day routine business, such as appointment of committees, will be undertaken, together with stated topics.

On the third day, reports of officers, stated topics again and discussion, and the report of the Committee on Legislation.

The fourth day will be taken up with reports of officers, legislation on topics, and election of officers for the ensuing year.

The National Editorial Association first organized in New Orleans in 1885, held its second annual meeting in Cincinnati, and subsequent meetings as follows: Cincinnati, San Antonio, Detroit, Boston, St. Paul, San Francisco, Chicago, Asbury Park, N. J., with a banquet at New York city; St. Augustine, Galveston, Denver, Portland, Ore.

Entered at the Chicago Postoffice as Second-class Matter.

BENJAMIN B. HERBERT, Editor.

Official Paper of the National Editorial Association.

CHICAGO, - - - - - FEBRUARY, 1900.

The "Question Box" took up an hour or more at the session of the Kansas State Press Association, and was under the direction of the editor of this paper. The time allowed was not sufficient to answer the numerous questions submitted, hence, pursuant to promise, the answers are given here.

First Question.—What can be done as to the high prices for paper demanded by the paper trust? Answer.—Ascertain as to whether the prices are too high. Many things in this country have been too low, and paper, I believe, has been sold for less than cost. There were one hundred and twenty-five less paper mills in the United States in 1890 than in 1880. In the year 1882 I went as a member of a committee to visit the paper mills of Wisconsin to ascertain as to whether the citizens of Red Wing, Minn., would be justified, as a matter of helping to build up the industries of the city, in putting their money into the building of a paper mill. Some twenty-six paper manufacturing plants were visited in Wisconsin and Northern Illinois. It was ascertained that paper was then so low compared with the cost of production that there was little or no profit left unless the factory had superior facilities. Red Wing people did not build a paper mill. Last fall I visited one of the mills in Wisconsin, where, in 1882, they boasted that they had an abundant flow of the purest water for paper-making purposes, that had not varied more than three or four inches in depth in ten years—to find that this favorable condition no longer existed; that the supply of water at some seasons of the year had to be supplemented with steam power. Besides a decrease in the water supply in many places, the supply of timber along the banks of streams from which timber was once floated to the mills, had been lessened and the material for pulp had been made more costly. Yet I have been informed that through com-

binations the price of print paper has been advanced beyond reason. I do not claim to be a paper expert, but on general principles, if it should appear that extortion is practiced, through a combination of those who control the paper manufacturing industry, then there are three means to which paper users have legitimate recourse. First, to demand that all protection shall be removed from paper and wood pulp. This is on the principle that any classes of men or manufacturers who combine to do injustice or to practice extortion upon the users of their products have forfeited all right to any benefit from a protection of such products through revenue or other laws. Second, let the newspapers proclaim the immense profits that are being made, the extortions that are being practiced, and encourage men with capital to embark in the business and create new competition. There is an abundance of capital seeking profitable investment, and, with a promise of good profits and the advantage of having the good will, or the power of competition of old-established factories lessened, through a knowledge thoroughly disseminated, that they had practiced extortion by selfish combines, capital will flow into this legitimate industry. Let the press encourage new factories, new inventions and the use of other material. Third, through legislation and taxation. If it is found that a combination of wealthy firms has monopolized the streams, the land and forests required in this or any other industry, to furnish needed products for the people, it is the duty of the State and Nation by enactments and taxation, and even offering bounties in extreme cases, to protect the people and defeat the iniquity. While not believing entirely in the single tax idea, I do believe that no man nor combination of men has a right to monopolize and hold with or without use, for the purpose of extortion, any of the free gifts of heaven, the air, the sunlight, the forests, the land or water, or any of the rights, privileges or franchises created by or incident to government or society, for the purpose of practicing wrongs or extortions upon the inhabitants of the earth or the citizens of a country. This question and many others arising out of it lead to a considerable discussion. Some were certain that manufacturers had entered into combinations to demand prices that were extortionate and that would bring immense wealth to them every year, and that taxes ought to be so adjusted that all above a net profit of six per cent per annum on actual investment should go to the Government. Others believed that with money abundant and seeking investment at three per cent per annum, manufacturers would not be making extortionate profits, else others would be rushing into the business. The questions were so numerous that we have made the substance of them the subject or occasion of a separate article, covering cost of material, protection, etc.

Second Question.—Are all the paper mills in the combines? Answer.—No. There were in March, 1899, between thirty and forty plants in what is termed the International Paper Company. These plants were all in Massachusetts, Maine, Vermont and New Hampshire. There are other groups of manufacturers united in the sale of their output, but of course I could not now give the names of these to any degree of certainty.

Third Question.—What are the exports of paper from this country? Answer.—According to a report made to the convention of paper manufacturers held in Philadelphia last summer, the exports of paper for the previous year had been between six million and seven million dollars in

value, and plans were considered by the manufacturers to increase the amount of such exports.

Fourth Question.—Can a country weekly be furnished for \$1 at the present price of paper? Answer.—No. One dollar a year is not enough for a good country weekly; that price has always been too low.

Fifth Question.—Should this association go on record as opposing the Paper Trust, and pass a resolution calling upon our representatives in Congress to support Champ Clark's bill or other similar good bill to remove the tariff upon paper and materials used in making paper? Answer.—I think it would be better to appoint a committee to thoroughly and dispassionately investigate the subject and then report to the members of this Association, so that action might be intelligent, properly directed and united. The power of the press is always respected when backed by facts and exercised with calm judgment.

Sixth Question.—Have you known anything of the use of flax in combination with wood pulp? Answer.—Flax, or rather linen rags, are used with pulp to make paper of a higher quality than wood paper. There are five hundred different varieties of vegetable substances from the fibres of which paper has been made, though I believe none, up to the present time, has been found cheaper for print papers than those from spruce or poplar logs. It is possible, however, that some of you users of paper, feeling the pinch of higher prices, may discover a new method or a new material or a new combination of materials that will cheapen the cost. It is one of the methods always present for escape from extortionate prices. If the Standard Oil Company, for instance, puts too high a price on kerosene, we can use candles, gas, electricity or something else for lighting purposes.

Seventh Question.—What per cent of income ought country (weekly) newspapers to pay on the investment? Answer.—Certainly as great as the legal rate of interest, above all expenses, wear and tear, and a reasonable salary for editor or publisher. A paper should be made to pay all that is possible by industry and the use of all legitimate means. It is claimed that the Chicago Tribune has paid a net annual profit of \$500,000 a year, or ten per cent on five million dollars. Most of us would be satisfied with a smaller amount. The value of a paying newspaper consists in its good will. I do not suppose that the Chicago Tribune has over \$250,000 actually invested in type, presses and machinery, yet if the profits stated are regularly earned it would be worth five million dollars. Most of the successful newspapers of the country represent years of hard work that have gone into the building up of the paper to a profitable business, and to figure the investment at merely what is represented in the type and machinery would be unfair. It is a difficult question to answer definitely. I would say that a weekly paper, such as I suppose to be meant by the questioner, or a country weekly, if you please, should pay at least from twenty-five to forty per cent on the money actually invested in the material; that is, in type, presses, racks, cases, imposing stones, power, etc.

Eighth Question.—Should a country weekly accept foreign advertising at a cheaper rate than home advertising, and how much? Answer.—As a rule, I do not think that

foreign advertising should be accepted at much, if any, less than home advertising. Much of it should not be accepted at all. No editor or publisher should, for a beggarly pittance, go into partnership with some patent fraud to swindle his own neighbors, friends and customers. Do not accept the advertisement of any drug or medicine without taking steps to ascertain that it will not be injurious. Many argue that home advertisers receive a constant as well as a more general benefit from the papers, and hence can afford to pay higher prices, but it should be remembered that most foreign advertising depreciates the value of a paper as an advertising medium quite as much as home advertisers are benefited. However, discretion is to be used always, but never should advertising be taken for less than cost from any one. It is wiser to make a better paper and then hustle for home advertising. Every inch of space in a paper is valuable as a winner of subscribers and a means to secure a better price for the paper and for space therein.

Ninth Question.—What rate per inch ought country papers to charge for advertising per 1,000 circulation? Answer.—As I have just said in answer to the other question, the rate should certainly never be below cost. A newspaper is maintained for the benefit and pleasure of a community, though it is a private business. It is from its character a better means of reaching consumers than are handbills or circulars. The better and more popular a paper the better it is for all the advertisers, and each should expect and be willing to pay his share of the cost of getting it out. If it costs \$36 a week to get out an ordinary weekly paper of one thousand copies and the average advertising available is twenty columns an issue, or four hundred inches, I would figure that the cost is nine cents an inch, \$1.80 a column, each insertion, or \$90 a column a year for the space alone. There should be a profit above this. There is an added cost in setting and in the make-up on short time and on small advertisements, so that I do not think in a country paper of a thousand circulation a column should ever be run for less than \$100 a year. This is for the space occupied, so that the cost of composition of smaller advertisements and for changes of them should be figured. It is doubtful whether a single one inch advertisement can be set up, proof read, corrections made, place found for it in the make-up of the paper, then the advertisement taken out and distributed and the make-up again changed to accommodate reading matter and other advertising, for less than seventy-five cents, so that a single inch one time would cost very nearly eighty-five cents. These items should all be taken into account and a scale arranged from eighty-five cents or \$1.00 for a single inch, one time, to \$100 for a column for one year.

Tenth Question.—Should subscription payment be invariably required in advance? Answer.—I think that all subscriptions should be due and payable in advance, and should be so charged and bills sent out each year on that basis. Yet I think a publisher should use his own judgment as to allowing time on what is due him. You should not trust a deadbeat for your paper any more than you would take a dollar or two dollars out of your pocket and loan him. There must be business discretion used here as in other branches of business, only do not be remiss in collections, but never collect through the columns of your paper. Send bills and statements. If men living in the country, where they can not be profitably seen, are perfectly good, yet behind, do not cut them off. Wait. It

pays. At least, this is my idea or view from personal experience. But do not run any dead people on the list.

Eleventh Question.—What is the best form for a country paper? Answer.—My experience was best with a six-column quarto—a paper of eight pages, six columns to the page. Yet I am much taken with the new idea of the sixteen-page form of four columns to the page. The greater number of pages give better opportunities for the display of advertising, for a systematic arrangement of departments and for enlarging when there is too much matter for the regular pages. It makes a handsomer paper, too, and more convenient. I think that it is more likely to be preserved. There is better opportunity for typographical effect and illustration. Beauty of appearance or attractiveness is no small item in a paper. Unless an office is fixed for folding, binding and trimming such a paper the expense must be more. Yet I think better advertising rates can be obtained and that the same advertising space is worth much more on a small than on a large page.

Twelfth Question.—Is any advantage gained to the publisher by representing his circulation to be larger than it really is? Answer.—Not as a rule, though no one likes to acknowledge a circulation less than that claimed by an esteemed contemporary, even if positively sure or reasonably convinced that the contemporary's claims are false. It is not pleasant nor always business wisdom to say that the other publisher lies. It sometimes pays by a canvass to show just how many copies of each paper in a city are taken. If, however, you have a circulation of which you are ashamed, make a better paper and hustle around and get more subscribers. Then you can always claim the larger list and stand ready to prove this assertion without stating the exact number, and thereby, among those who will believe your friendly rival, get the benefit of his magnificent claims. However, among local advertisers there is not much doubt but that if your paper really leads it will be pretty generally so understood and recognized. As to foreign advertisers, you can convince them of your standing by charging and insisting on good rates. A paper is taken very generally at the estimate put upon itself.

Thirteenth Question.—What is the best way to conciliate an advertiser who is offended at a news item? Answer.—Show the advertiser that you are perfectly fair, candid and unprejudiced. If you have been drawn into error acknowledge the same in a manly, straightforward manner, and, putting all pride aside, make amends openly and fearlessly. If you have occasion to criticise a man for a wrong act be just as quick to commend him for a good deed.

Fourteenth Question.—Would this not bring a reputation for being vacillating and two-sided? Answer.—Not among thinking people at least. You can hate and expose sin and wrong-doing and yet love the sinner and make him respect you. If a man puts up a job to defraud the public, or does any other wrong, condemn the act. If he gives a thousand dollars for a public library commend this. Show that your paper is above prejudice, personal spite or malice. Be judicial. It requires higher qualities of mind, judgment and heart to be a good editor than to be a judge. Speaking from experience, men whose ill deeds I have had to condemn most severely in the newspaper, and yet whose good acts have been heartily commended, have become my

warmest friends. This, however, will not be the result when dealing with sneaks and hypocrites. Their whole stock in life and business is cant, hypocrisy, deceit and a claim to goodness, and they can never safely admit that they are ever wrong, or ever anything but perfect in piety. They never understand either bravery, truthfulness, manliness or candor. Such people are of no use anyhow in this age, except to be exposed and held up as horrible examples as were the Pharisees by the Great Teacher in days of old. Canting hypocrites generally steal their newspapers and then hold their hands up in holy horror at the lack of sanctity, lack of reverence for show and pretense, on the part of the press.

Fifteenth Question.—Do you think paper stock has been advanced a larger per cent than iron and all other lines of goods? Is the advance not general? Answer.—The advance on book and other high-grade papers, so far as I know, has not been greater than on other lines of goods, though the advance in newspaper or print papers is said to be nearly if not quite one hundred per cent. (For the reasons claimed for this advance see article on "The Paper Question.")

Sixteenth Question.—Can a newspaper be run "In His Steps" and uphold the tariff system? Answer.—As I understand "His Steps," they were all to help and to uplift mankind. This is ever the mission of the press. The successful, worthy newspaper is the servant of all, the faithful brother and counselor, the encourager and aider of every noble and worthy undertaking, of every needed charity, every industrial enterprise, everything intended to give honorable employment and to bring substantial prosperity, wealth and plenty to the community, of every real reform, of every means to succor and care for the weak or defective, to provide for those in want, to spread abroad to every house and every individual information and education, to promote purity, public and private virtues, honesty, truth, morality, justice and equity. If a newspaper is run, as it should be, along these lines, it will be pretty close in the steps of the Great Teacher, who taught that "men to men should brothers be," mindful of the one Father with ever-present, yearning love for all. As to the "tariff system," we do not deal in partisan politics at this convention.

Seventeenth Question.—Should an editor be a Christian? Answer.—In a nation founded on the fundamental principles of Christianity he certainly should not be a heathen, though he need not be a crank. As a matter of patriotism, it is but right to stand by the recognized principles of religion. As a matter of gentlemanly conduct, it is right to respect that which is generally held sacred by others. As a matter of business, a newspaper man and his newspaper should have a part in all the means used for making people better, more prudent, loyal, obedient to law, kind, considerate and useful. All this is the mission of true Christianity, which is above all creeds or churches, yet works, in this age at least, most effectively through them. Yes, in the broad and true sense, in this land at least, in justice to himself and to his business, an editor should be a Christian and his life, which in no small sense belongs to the public, should be characterized by sobriety, uprightness, humility of the genuine kind, willing zeal in, and love for and service to humanity.

Eighteenth Question.—Do first-class country newspapers scold their competitors? Answer.—Not now. Press

associations have brought about a better feeling among publishers. To scold competitors or at competition does no good, unless it be to advertise the competitor, and even then it is not a very courteous or commendable way to do good to others. It is a kind of advertising that should be discouraged. Editors who imagine that the public are interested in their business or private quarrels with rivals in newspaper editing or printing are generally youthful and inexperienced, or are afflicted with very large bumps of self-esteem. This, however, does not prevent them attacking the wrongs fostered or upheld by a competitor with all vigor at command. Even then no feeling of envy, jealousy or vindictiveness should be shown. An editor has only to do with questions of public interest and welfare.

Nineteenth Question.—Is it better to make a local paper partisan, independent or neutral? Answer.—I believe it is better to make a paper independently partisan. In a republic every citizen is expected to have or hold certain principles or views as to public policy. It is natural that his newspaper should reflect his views. "No man liveth unto himself alone" in this world, and those of like views naturally act together for what they deem to be the public good. Yet every editor, as well as every other citizen, should carry his sovereignty under his own hat. Slavish subservience to party or to partisan leaders is degrading and injurious to a paper and to its business.

Twentieth Question.—How then can editors expect party support? Answer.—You do not need party support as such, but the support of the people. A party platform may have a rotten plank, which it is the editor's duty to point out, yet the raft as a whole may be viewed as more desirable and safer for the political voyage than any other presented. Be earnest and honest in your belief, but always courteous to the other side. Show no partiality in the news columns, give all the news without bias or shrinking and you can make a newspaper success though not ten in a hundred of your subscribers hold the same political views as those advocated by the paper.

Twenty-first Question.—Is a dollar a year a sufficient price for a country weekly with a thousand or less subscribers? Answer.—It is not. The country paper exists to give news of local events to a limited number of people, and the first cost can only be distributed among a few hundred. It should be understood that if a paper costs a thousand dollars a year for one thousand circulation one dollar a year from each subscriber means starvation. If the paper costs more than that then this price means early bankruptcy, while fifty cents a year more means in the first case five hundred dollars profit. It is only the amount above cost that the publisher gets. Selling for cost means only trading dollars for other people and boarding and clothing yourself. You get nothing and generally lose your own self-respect and the respect of the community.

Twenty-second Question.—How can the subscription price of a country weekly be raised from \$1 to \$1.50? Answer.—The most essential thing in advance is to have the courage of your convictions, then announce the advanced price and stand by it, giving plainly and succinctly the fact that the paper has been too low. Now is a good time, when paper and everything else is going up. But do not stultify yourself by advertising that you can not afford to print the paper for less than \$1.50 or \$2 a year and

then set a date ahead and extend the time, urging every one to get in before the raise at the dollar rate. By such a course a publisher only advertises himself a liar and hypocrite and the worker of a confidence game upon the credulous, greedy and unthinking, or as pandering to those who want to get something for less than cost. A good country weekly ought to sell at \$2 a year. Fewer would find fault with such a price than would be thought. A few would discontinue, but if the paper was made so good as to be desired these would come back. Publishers are too frequently cowardly, and yield to the demands of the noisy few. I have known good country papers to be maintained at a price of \$2 a year against opposition papers at \$1 a year, and the \$2 papers were not the ones that failed, but where the \$1 papers went down the lists of the \$2 papers were no less than when the others began that "were so soon done for that it was a wonder what they were ever begun for."

(Our Kansas friends were prolific in questions, and a few, with the answers, must go over to the next issue of the National Printer-Journalist. In the mean time, if any others have any questions to submit, they will be courteously answered in this department.—Editor.)

THE PAPER QUESTION

The sudden advances in the prices of print paper, preceded by the uniting of manufacturers in combinations, corporations or trusts, have naturally aroused, among the users of paper, feelings of indignation and a cry of extortion. The paper manufacturing establishments must suffer more or less in public esteem, if not in business, even should the claims that the advances of prices have been made necessary by causes beyond control be established. Selfish competition that seeks to undermine or to destroy competitors naturally results in either bankruptcy or combinations.

Selfish combinations to put up prices are at once resented. This resentment often extends to innocent corporations. These beneficial methods of uniting small sums of money for the building up and carrying forward of great enterprises, factories, transportation lines and banks, are condemned without discrimination. A bread knife is a very innocent and useful utensil in a home, that each member of the family and each guest may have proper and convenient portions of bread. Yet a bread knife may be and has been used as an implement of murder. Yet all use of the bread knife should not be condemned for this reason.

Corporations and co-operation in manufacturing and selling of goods have proved means most beneficial in employing idle capital, building up industries and commerce, furnishing employment and affording better markets, yet corporations may be abused and made the means of robbery. Those who use corporations for robbery, for selling stock without value or watered stock, are simply vulgar confidence men and thieves. Yet private individuals are able, through a show of wealth, to accomplish like robberies and oppressions. Co-operation and corporations, then, should not be condemned and their great benefits be destroyed, but their abuses, like all other abuses and wrongs, should be punished. So much by way of introduction. Now as to the so-called paper trusts and the reasons given for higher prices of paper. There are several of these organizations or combinations of manufacturers having the same agent.

The principal of those representing print papers are the

International Paper Company, composed of print and manila paper plants, between thirty and forty in number, in New York, Maine, New Hampshire and Vermont, and the Manufacturers' Paper Company, representing four large print paper plants of the West and a number in the East. The names of the plants represented in these organizations we are not able to give at the present writing, but hope to secure the same for our March issue. Nor have we the plan of their organization at hand, though we give those of two others.

Their representatives claim that the rise in the price of paper is owing wholly to natural causes. There has been a failure of water supply by reason of which many mills have been compelled to shut down. The lack of snow has prevented getting out timber from the forests. By reason of a combination of these two causes Canadian pulp mills, which now supply between fifty and sixty per cent of the wood pulp used in this country, have been unable to keep their contracts, and the supply from this source has been largely cut off. Hence a scarcity of paper has resulted and a paper famine is threatened, that, unless there is a change in conditions, must grow worse instead of getting any better.

On January 26th, a meeting of paper manufacturers was held in Chicago, which was claimed to be for the sole purpose of averting this paper famine as far as possible. Such a famine would hurt the producer, it is asserted, as much as it would the consumer. In an interview, published in the Chicago Inter Ocean on January 27, A. D. Schaeffer, of the Hartford City Paper Company, who presided over the meeting, is reported as saying:

"Not for twenty years has such a serious condition confronted the manufacturers of paper, and there is great danger that we may be forced to close our mills for lack of material.

VARIOUS CAUSES, THE PRINCIPAL ONE BEING THE LACK OF WOOD PULP.

"Various causes are responsible for this condition. The principal one is that wood pulp, from which the lower grades of paper is manufactured, is so hard to get that there is a constant scramble for material. Recent inquiry of the pulp mills at Sault Ste. Marie, the largest pulp mills in the world, develops the fact that there is not a pound for sale there, and other mills are as hard pressed. The rapid cutting of the forests of the Eastern and middle Western States and the stopping of the supply from Canada is largely responsible for the threatened famine. Added to the scarcity of timber is the recent mild weather, which has made it impossible to bring the pulp wood which has been cut to market. A large part of the season's cut of the forests of Wisconsin and Michigan, upon which the middle Western States depend for pulp wood, is now lying on the bare ground and can not be moved until snow comes. Another great danger comes in the possibility of a heavy fall of snow following this long dry season. A fall of eighteen inches of snow would cover up the pulp wood already cut so that it would be next to impossible to dig it out and float it down the river to the mills.

SCARCITY OF LABOR.

"A great scarcity of labor in the pineries has also made the movement of pulp wood to the mills slow. Companies cutting pulp wood have spent thousands of dollars importing men into the pineries to cut pulp wood only to lose them when they got there. Boys of 18 and 19 are being largely employed in the work.

"Canada has been the source of supply for many of the Eastern mills, but that source of supply has been cut off as

the cutting of timber on crown lands has been prohibited and the Province of Quebec makes the importer pay \$1.90 per cord duty, which makes the material too expensive. The only solution we can see is to adopt a new fiber as a substitute for wood fiber. That is the subject of discussion. We have one in view, but I do not care to talk of that now.

LACK OF WATER.

"Another difficulty which confronts Eastern manufacturers is a lack of water upon which they depend for power. That, too, is the result of the cutting away of the forests. The mills of the middle West are not embarrassed in this respect to the same extent as the Eastern mills.

"We have not come together to form any combination or to raise prices. The demand naturally governs prices. The sole object is to avert a famine if possible, for a famine would hurt the producer as much as the consumer."

J. C. Brockelbank, Vice-President and Western Manager of the Manufacturers' Paper Company of New York, with offices in the Rookery building, confirmed the statements made by William Schaeffer concerning the trade.

CONDITION IS SERIOUS.

"If present conditions in the pineries continue, there will be a serious shortage of pulp wood in the West until next fall," he said. "It has been simply impossible to get the spruce, from which wood pulp is made, to market. It grows in the swamps of the pineries, and the winter has been so open that it has been impossible to haul it to the rivers, down which it is floated to the mills, as wagons would sink to the hubs in mud and water. Only continued cold weather can relieve the condition.

"About 60 per cent of the pulp wood of the United States comes from Canada, but we can not get that until the opening of navigation, and, if like conditions prevail there, their supply will be short also. Canada has just placed an export duty of \$1.90 per cord on pulp wood, so, if we depend on Canada for our supply, the price of paper must rise proportionately."

AS AFFECTED BY THE TARIFF LAWS.

The export of paper from this country for eleven months ending November, 1898, amounted to \$5,143,055, and an estimate founded on reliable data put the exports for 1899 at \$6,776,000. It is claimed now that the export trade has been abandoned entirely. In view of this fact the question arises as to how the price of paper might be affected by the removal of the tariff on wood pulp and paper. The present tariff is as follows:

"Mechanically ground wood pulp, one-twelfth of one cent per pound, dry weight; bleached, one-fourth of one cent per pound, dry weight: Provided, that if any country or dependency shall impose an export duty on pulp wood exported to the United States, the amount of such export duty shall be added, as an additional duty, to the duties herein imposed upon wood pulp, when imported from such country or dependency. * * *

"Printing paper, unsized, sized or glued, suitable for books and newspapers, valued at not above two cents a pound, three-tenths of one cent a pound; valued above two cents and not above two and a half cents per pound, four-tenths of one cent per pound; and not above three cents per pound, five-tenths of one cent per pound; valued above three cents and not above four cents per pound, six-tenths of one cent per pound; valued above four cents and not above five cents per pound, eight-tenths of one cent per pound; valued above five cents per pound, fifteen per centum ad valorem: Provided, that if any country or dependency shall impose an export duty upon pulp wood exported to

the United States, there shall be imposed upon printing paper when imported from such country or dependency an additional duty of one-tenth of one cent per pound for each dollar of export duty per cord so imposed, and proportionately for fractions of a dollar of such export duty.

* * *

"Surface-coated papers not specially provided for in this act, two and one-half cents per pound, and fifteen per centum ad valorem; if printed, or wholly or partly covered with metal or its solutions or with gelatin or flock, three cents per pound and ten per centum ad valorem. * * *

"Paper envelopes, plain, twenty per centum ad valorem; if bordered, embossed, printed, tinted, or decorated, thirty-five per centum ad valorem.

FREE LIST.

"Paper stock, crude, of every description, including all grasses, fibers, rags (other than wool), waste, including jute

difficulty—through the discovery or utilizing of some other cheap fiber than that of wood. It certainly does not seem that, for the cheaper grades of paper at least, much relief would come through the removal of the existing tariff unless Canada could also be induced to remove the export duty on pulp wood.

OTHER COMBINES AND HOW FORMED.

The following, from the circular of a firm of brokers, offering for sale \$8,600,000 first mortgage five per cent sinking fund gold bonds of the American Writing Paper Company, shows something as to how some of these companies or trusts are manipulated, and the reasons given for their formation:

The American Writing Paper Company will own absolutely the following properties:

Beebe & Holbrook Paper Co., Chester Paper Co., Massa-

Four Conspicuous Memphis Buildings.

1—Equitable.

2—Odd Fellows.

3—Lyceum Theater.

4—Peabody Hotel.

waste, shavings, clippings, old paper, rope ends, waste rope and waste bagging, including old gunny cloth and old gunny bags, fit only to be converted into paper."

Some of the manufacturers claim that if present conditions continue, the only possible relief must come—as was suggested to the Kansas editors as one way out of the

soit Paper Co., Esleeck Paper Co., Hurlbut Paper Manufacturing Co., Hurlbut Stationery Co., Crocker Manufacturing Co., Oakland Paper Co., Springdale Paper Co., Parsons Paper Co. (except its Ledger Mill No. 2), Norman Paper Co., Platner & Porter Paper Manufacturing Co., Windsor Paper Co., Linden Paper Co., Nonotuck Paper Co., Harding

Paper Co., Holyoke Paper Co., Dickinson Paper Co., Riverside Paper Co., Shattuck & Babcock Co., Albion Paper Co., Syms & Dudley Paper Co., Geo. C. Gill Paper Co., Connecticut River Paper Co., Agawam Paper Co., Eaton, May & Robbins Paper Co., Geo. K. Baird Paper Co.

The returns show that for the year 1898 the above mills produced eighty-four per cent of the fine writing paper output of New England (the chief seat of the industry) and over seventy-six per cent of the entire output of the United States.

The new company will begin business with a cash capital of \$2,500,000, besides a full stock of merchandise, raw, wrought, and in process.

Most of these properties have been in operation for many years, and their trademarks and goodwill are established and very valuable.

The books of the companies have been examined for us by Messrs. Barrow, Wade, Guthrie & Co., chartered accountants, who report to us that the average net earnings, for the past ten years (which it must be remembered, include the hard years 1893, '94, '95 and '96), after charging all expenses, wear and tear of plants, and bad debts, and making a proper allowance for executive salaries, have been \$1,250,620.38, and that the aggregate earnings for the first half of the current year are at least equal to this average. The combination of these companies will naturally result in extensive advantages, improvements and economies, and our best advices from most competent men indicate that the net earnings of the new company will not be less than \$2,200,000 (and this without increased outputs), which is equivalent to interest and sinking-fund of the bonds, seven per cent dividend on the preferred, and three to four per cent on the common stock. These advices and the auditors' report may be seen at our offices.

The following quotation from a letter, recently received from one of the best known paper manufacturers in the Connecticut Valley, states more particularly the advantages of this combination.

"The fine writing paper business is peculiarly one which has suffered in the past, and is now suffering from extreme competition, and it is one wherein the benefits and advantages resulting from a business-like combination are apparent and certain.

"Each fine writing paper mill to-day must be fully equipped to supply the trade with a large variety of papers, thus requiring different processes, machines, and treatment. The equipment, arrangement, and operation of each mill is, therefore, very expensive and wasteful, both of money and of labor.

"Under separate managements each concern must have a complete corporate organization, and although it may, by reason of natural advantage, position, or otherwise, be peculiarly adapted to the manufacture of certain grades, it must, in order to run successfully on an independent basis, adapt its machinery and equipment to manufacture all the other grades.

"By a combination of any considerable number of the largest and best companies these evils will be overcome and great advantages ensue.

"The manufacture can be at once systematized; each mill can be run constantly on the product for which it is best adapted and equipped; orders can be distributed and placed so that each mill can work to the best advantage; all unnecessary duplication of machines can be avoided; equipment can be kept at a high degree of efficiency, and the demand for paper supplied on a sound business basis.

"The advantages and economies of single management substituted for twenty-seven different managements, of

course, are clear, and you doubtless appreciate this one great advantage that the present large fine writing paper mills already occupy the most valuable locations in the Connecticut Valley, where the peculiar soft water required for working rags can best be obtained."

The authorized capital and bonded debt of the American Writing Paper Co. is \$12,500,000 seven per cent cumulative preferred stock, having preference both as to assets and dividends; \$12,500,000 common stock, of which \$3,000,000 will remain in the treasury of the company; \$17,000,000 first mortgage five per cent sinking fund gold bonds, due 1919, interest payable January 1 and July 1.

Of the \$17,000,000 bonds, \$8,400,000 have been taken by the manufacturers and private investors. The remaining \$8,600,000 are now offered for subscription at par and interest. All the stocks issued not used to cover the expenses and commissions of promotion have been taken by the manufacturers and private investors.

Application to list these bonds will be made to the New York and Boston Stock Exchanges.

Subscription books will be opened on Monday, July 17th, at 10 o'clock a. m., and will be closed on or before Tuesday, July 18th, at 3 p. m.

The right is reserved to reject or reduce the amount of any subscriptions.

Along the same line, the scheme for the formation of the Flat Paper Trust will tell its own story and furnish food for thought until this subject can be resumed in the March issue.

The general idea under which it is proposed to organize the flat paper mills into one central concern or trust is about as follows:

All mills shall be appraised on the same valuation basis, which in the final organization would place them all on a parity, so far as value to the central organization is concerned. The basis of valuation is about as follows:

A Board of Appraisers would first pass on what it would cost to install a plant like the one under consideration; after this had been determined, it would refer to the books of the company, and if the plant showed an earning power of four per cent on its appraised valuation, that valuation would stand; should the books not show that they had been able to earn four per cent, the appraised valuation would be scaled accordingly. On the other hand, should the books show that they had earned more than four per cent, the value of the plant would be increased in a certain ratio, this increase to cover the value of the good-will as proven by the book-showing for earnings, etc.

Just exactly what basis of per cent, outside of the four per cent basis for determining the first cost, is used, we are not advised, but it would undoubtedly be on about a six or seven per cent ratio, for the plant which was particularly called to our attention was one that would cost to build about \$150,000, which showed an earning power of twelve per cent, and the valuation or appraisement put upon it by the promoters was \$250,000, \$100,000 consequently representing the bonus or good-will feature. It is barely possible that in this case some prejudice against the property existed by reason of the fact that they are compelled to pay six per cent on \$1,000.00. The general scheme is as outlined above.

There are forty-four leading paper mills, not including those of unusual and well-known reputation, like Brown's, Weston's, Crane's, etc. These forty-four different mills, it is estimated, would cost to acquire from \$30,000,000 to \$40,000,000, everything connected with them to be bought and owned in fee simple by the new organization; after acquiring the various properties, their general modus oper-

andi would be to simply confine each particular mill upon the class of product that it is best calculated to turn out. As many of the plants are already quite heavily bonded, it would, of course, be necessary that the new organization carry a bonded debt, and, as I understand it, it expects so to do.

(To be continued.)

THE MAINE PRESS ASSOCIATION.

The editors of Maine held their thirty-seventh annual convention in the beautiful City of Bangor, where they were most cordially welcomed by the press and the people. In the thirty-seven years of its existence this Association has numbered among its members many men of national as well as of State reputation, among whom may be named Hon. James G. Blaine, Nelson Dingley, Hiram K. Morrell, and Alden Sprague. The object of the Association is succinctly stated in the preamble of its Constitution, as follows:

"Whereas, The press is an important element in the forces now educating the people and shaping the destinies of the world: We, its representatives in the State of Maine,

Waterworks and Dam, Bangor.

Famous salmon pool in foreground.

with a view of the responsibility devolved and for the purposes of self-protection, mutual improvement, and the elevation of the press to a plane of higher morality and usefulness, agree to form ourselves into a union, to be governed by the following Constitution."

The Bangor Daily Commercial, in its well-worded editorial welcome to the editors, said of its accomplishments:

"From a business point of view the union of the newspaper publishers and job printers of the State has been of large benefit in the control of prices on job work as well as on rates of advertising and on position based on circulation. Generally the rates have been adhered to, and the advantages of the Association shared by all its members.

"In the matter of literary effort and the pleasures of intellectual enjoyment the Association has taken good rank with the other educational and literary organizations of the State."

The President, John M. S. Hunter, in his annual address spoke of the causes found for thankfulness, and paid a worthy tribute to the heroic, noble and unselfish efforts of Chester W. Robbins, through whose "bravery and good judgment the lives of many were spared to their families. He was ready to take his life in his hands in order to save the lives of his friends. What greater or more noble act than this can be mentioned?"

President Hunter recommended the appointment of a committee to secure and present to Mr. Robbins a fitting

testimonial of the Association's appreciation of his successful efforts in saving lives.

He spoke of the advances and improvements that have been made during the century. The hand-press, with its

Theological Seminary, Bangor.

two hundred and fifty impressions per hour, has given place to the perfected press with about fifty thousand impressions in the same time. The time-honored compositor steps aside and in his stead is the type-setting machine, which handles as much copy in one hour as the most rapid compositor handled in ten hours. The passing of the compositor we note with regret. Shall we in the coming years witness the passing of the editorial department and the brains of the sanctum?

LOOKING BACKWARD.

Looking backward over the century now closing, mark the wonderful change for the better in the social and business standing of our mothers, wives and sweethearts. Imagine, if you can, their status when the courts restricted the thickness of the stick with which the husband whipped his wife to the size of his thumb. If a married woman worked for wages, only her husband could legally collect them—she could not. In 1803 a man sold his wife the same as he now sells a cow or a horse. One sale is reported in the Suffolk (England) market, and the price paid was one guinea. In 1808, in Knaresborough, England, a man sold

City Building and Tower, Bangor.

Corner of Hammond and Main Streets.

his wife for a sixpence and a quid of tobacco. In 1811 women were frequently dipped in a river as punishment for scolding. In 1817 it was lawful for a husband to will

his children to some other guardian besides his wife. Until 1822, in cultured Boston, girls were allowed to attend the public schools only during the summer months, when there were not boys enough to fill them; and in 1826, when a high school for girls was started in that city, a storm of opposition was aroused which continued two years, or until the school was abolished. Mark well the present status of the once-termed "weaker sex." She is competing for supremacy in the various trades and professions, and in many instances is a winner.

"What would you suggest to advance the interests of this department?" was a heading recently noticed in a Topeka (Kan.) newspaper. Can we not get points from this to ask each other, "Can you not do something to better the Maine Press Association?" Chances for improvement are certainly plenty in the methods of business of our members, are they not?

It is useless for us to expatiate upon the great variety of improvements which have appeared in the nineteenth century. They are known to all men. As we stand upon the threshold of a new century we can only ask, "What is in store for us? What new thing is it possible for the scientist to introduce into the fields of industry, art, etc.?" Let us enter the new year and the new century with a determination to "act well our part" in the great drama of life; and let us strive to do all which lies in our power to build up on a firmer and most steadfast foundation the association which ought to unite us as brothers.

"The moving finger writes, and having writ,
Moves on; nor all our pity nor wit
Shall lure it back to cancel half a line;
Nor all our tears wash out a word of it."

President Hunter's recommendation as to Mr. Robbins was unanimously adopted. The following officers were elected: President, Chester W. Robbins, Old Town; First Vice-President, Charles A. Pillsbury, Belfast; Second Vice-President, J. H. Ogier, Camden; Third Vice-President, L. P. Evans, Dover; Secretary, J. P. Wood, Portland; Treasurer, P. O. Vickery, Augusta; Corresponding Secretary, S. L. Boardman, Bangor.

As delegates to National Editorial Association in New Orleans, General J. P. Cilley of Rockland, C. W. Robbins of Old Town, and Howard Owen of Augusta, were chosen to represent the organization, together with a fourth to be selected by John M. S. Hunter of Farmington, the Maine Executive Committeeman.

A question-box, short discussions, brief talks on live topics, reports of committees, adoption of resolutions and of a handsome testimonial to Brother Robbins for saving the lives of members at the Chester Ferry accident, and the listening to an excellent essay and a poem of high merit, served to fill in the sessions of a most delightful and profitable convention. President Hunter was thanked in a handsome manner for the able manner in which he had presided over and conducted the affairs of the convention. Receptions were attended, the beauties of the "Queen City" of Maine were viewed and the State University was visited. The social features enjoyed added much to the occasion.

USE THE BLUE PENCIL FREELY.

More than 947 exchanges had news articles last week starting off with that old, weather-beaten, sing-song, stereotyped, antiquated, tiresome phrase "Election passed off quietly." For heaven's sake, publishers, why don't you blue-pencil it? It has done service for nigh onto a thousand years and deserves a rest. As a matter of fact aren't 499 elections out of 500 "quiet" in the sense of being orderly?—Franklinville (N. Y.) Journal.

THE CITY DESK.

By WILL OWEN JONES, Lincoln, Neb.

Questions, criticisms, and experiences are solicited for this department.

It may not be advisable to be over-much concerned about the exact meaning of words in these days of freedom in the use of English, but to one who remembers its derivation it is just a little distressing to see "audience" employed in connection with an assembly of people who may not be using their ears at all. The New York Tribune says that, "The football game drew an audience of 6,000 persons." Some time ago the New York Sun spoke of an "audience" at a ball game. Now, you go to these contests to see and not to hear. In fact, they are often enjoyed by deaf mutes. The Century dictionary defines audience as "an assembly of hearers." Webster gives the same definition. It is time for some of us to mend our ways, or for the dictionary-makers to add something to the definition of "audience."

* *

Here is a recent experience that carries its own moral: A clergyman telephoned in the facts about a funeral, and in order to amplify the account the reporter volunteered the information that "The floral offerings were beautiful." The clergyman dropped in on the following day and said: "The funeral notice was satisfactory, but I think you ought to know that there was not a flower in the house. I have officiated at funerals for twenty years in all kinds of places, from palaces to hovels, and this was the first time in my experience that no flowers were to be seen."

It is remarkable that this should be true of the very funeral that the reporter went out of his way to embellish with floral offerings, but such is the way of the local room. When a reporter assumes that the usual thing has taken place, that is just the time for fate to will a change in the program.

* *

"What is the pay of a reporter on a city daily?"

Reporters are poorly paid in every part of the United States. The hardest work is done on the small dailies in cities with from ten to twenty thousand people. Here one or two men must do all of the local work, and it is a good reporter who receives more than ten or twelve dollars a week. On the prosperous papers in cities of more than thirty thousand and less than one hundred thousand people, there are many fairly comfortable places where good reporters earn from fifteen to twenty-five dollars a week. In the large cities the "stars" earn from twenty-five to seventy-five dollars a week; but these men are few in number when compared with all of the reporters employed. Of late years it has become the custom to employ beginners at barely enough money to pay for board and lodging. This class of novitiates is large, and it requires considerable ability to graduate into the higher positions. Trained reporters who go to the cities to "make a mark in journalism" often return to their home towns and their old places on little papers. They prefer a regular place at a very few dollars a week to the hardship and struggle connected with existence on a metropolitan daily.

A young man who has fully made up his mind to seek employment as a reporter on the daily press is earnestly warned against going to the very large cities. In a small

city he can make himself known, may become a part of the life of the community, and may aspire to ownership in the paper. He must work hard at small pay, but there are compensations that cannot be found in a "larger field."

* *

"Do you recommend the use of comment in local items?"

Not unless the owner of the paper believes that the news should be written in that way. The best practice requires the complete separation of editorial matter from the news and miscellany. But note this: The salaried reporter who succeeds is the one who finds what is wanted by his paper and follows that style loyally. This does not mean that

of Philadelphia, the leading paper of the Protestant Episcopal Church in America:

In narrative, the article ought always to precede the word "Reverend," even in the abbreviated form "Rev." "The Rev. Dr. Smith spoke."

It is quite legitimate to say "the Rev. Mr." The Christian name is used, of course, when it is necessary to distinguish persons of the same surname. It is perhaps proper, even on other occasions, to use the Christian name once; afterwards "Mr." Just as in conversing with a person of title you would say "My Lord" or "Your Grace" just once, if it were only to show that you knew how to address him;

Interior of a Cotton Shed, Memphis.

he must abandon his principles or desert his ideals. The average editor wants the best possible work done, and will rejoice in the possession of an assistant with the disposition and the ability to be clean and scientific. If by any chance he wants sloppy or yellow local writing, it is his privilege to order, and it is the duty of the reporter, to follow instructions or resign. Belief in the inferior wisdom of the "old man" has brought almost as many promising reporters to grief as bad habits and bribes.

* *

Every editor and reporter who wishes to do accurate work will be especially particular in the use of titles. A request for information under this head brings the following from Dr. John Fulton, editor of the Church Standard,

but after that you would drop it. Only a footman would keep on repeating it in every sentence.

In lists of names, if very formal, you say, "the Rev." Otherwise "Rev." is sufficient.

"Rev. Jones," or even "the Rev. Jones" is a pretty bad vulgarism, and ought to be found nowhere outside of a yellow—a very yellow—newspaper.

THE PRINCIPLE OF ADVERTISING.

Advertising is the presentation of anything by any medium of connection. It travels by paper and press, by word of mouth, by paint and brush, by wire, and by everything that will hold or transmit words, sound, or characters.—Fowler's Publicity.

THE CHICAGO PRESS CLUB—SOMETHING ABOUT REPORTING.

The following are the new officers of the Chicago Press Club:

President—John E. Wright.

First Vice-President—A. B. Yount.

Second Vice-President—I. J. Bryan.

Third Vice-President—J. R. Yount.

Financial Secretary—J. B. Waldo.

Treasurer—E. J. Baker.

Recording Secretary—Elton Lower.

Librarian—John T. Bramhall.

Directors—George S. Wood, Paul D. Howse, George Horton, George F. Butler, E. R. Kimball.

President Wright said the club was in a prosperous condition.

The installation was held on January 14, when a number of new members were admitted. The new President declared it to be his hope to make the organization more than ever social and to add many active newspaper workers.

Why not also make it more educational through a discussion of methods of newspaper reporting, writing and editing?

This could be also accomplished through papers, addresses and lectures by those eminent in the calling. The broad fields covered by reporters and newspaper writers suggest the consideration of social and political questions as well as newspaper obligations and ethics. A reporter never can know too much. While copy passed in by reporters is always subject to the blue pencil, it does not follow that there is nothing to be learned or that it is not necessary to be just as well informed as possible on all subjects, touching all matters to be treated of or reported in newspapers. The law of libel as related to newspapers is something that every reporter should understand. We are of those who believe that reporting is to-day the most important department of a paper, requiring all possible knowledge.

The age of Bohemianism has passed, as has the tramp printer. Newspaper men to be truly successful must be up in all practical affairs, and in touch with all social, financial and industrial institutions, questions and conditions. There is a constant complaint that reports are inaccurate and often amount to almost a burlesque of the subjects treated. A short time since a gentleman connected with a governmental experiment station related to us some of the blunders coming under his notice, in connection with a report of a convention of sugar planters and manufacturers. He stated, at the same time, that the only way to get a report that at all covered the discussions at many similar meetings was to write out the report himself—do the work for which the reporter is employed, and let the reporter act as a mere messenger boy, to carry the copy to the paper. This may be an exaggeration and we know that men in all kinds of public meetings are often under many obligations to reporters for overlooking or correcting blunders that they have themselves made, through haste and careless statement, or even through blundering ignorance. Yet this only proves the necessity of reporters being well informed on all manners of subjects.

The best way to acquire knowledge is through comparing of notes, mutual criticisms, putting knowledge and theories to the test. There could be a great deal of pleasure as well as knowledge obtained in the ways indicated.

The reading and comparing reports of leading events in the best papers and following with a free expression of opinion with regard to the same, could be made instructive

and entertaining. There is a right and a wrong way of telling a news story, and sometimes a hint given or received would correct a fault that had grown or might grow into a bad habit in writing. Ben Franklin was a jolly clubman and a model newspaper man. No one of that age knew, and a very few since have known, how to tell a news story better than he, using as he did the clearest and best English, captivating the attention and holding it to the end. His clubs always had the objects of improvement and public good in view. Songs were sung and stories told, but the affairs of the calling, the mutual improvement of the members, the advancement of science, literature and the arts, of good government, city improvements, and general intelligence, were ever placed first in the aims of the Junto, Leather Apron Club and all other social, literary and scientific organizations with which he was connected. Modern reporters and newspaper men can well learn from their great prototype.

The library is one of the most successful and commendable features of the Chicago Press Club under the management of the present successful Librarian.

In his last annual report Mr. Bramhall announced among the recent acquisitions the gift of a library of standard works from Colonel J. H. Kellogg, numbering some 350 volumes. Other contributors to the library were H. O. Shepard, R. H. Donnelley, Rand, McNally & Co., Charles H. Sergel, Charles Scribner's Sons, Belford, Middlebrook & Co., Fleming H. Revel Company, Allen R. Foote and Hon. Theodore Roosevelt. Senators Cullom and Mason and Representative Lorimer have sent valuable public documents on the Spanish war, Alaska, etc. Silver plates bearing the names of prominent donors to the library have been placed on the shelves.

*CASH IN ADVANCE.

By A. J. LANGER, publisher West Point (Neb.) Republican.

A newspaper is purely a business institution, but what shrewd business man, in another line, would put out all of his commodity, deal out his merchandise to every one who called, whether or not he lived in the same town, county or State, and trust to the honesty of his patrons for his remuneration? I dare say, few merchants would be long engaged in business were they to pursue such a liberal policy of credit as is extended by the average newspaper publisher. Then, if the extension of unlimited credit be not wise nor business-like, why is it that the rule remains? The conclusion to be drawn is, that the average publisher, ordinarily shrewd and intelligent, is a poor business man.

The publication of the paper is the most expensive element of a country newspaper business, and, as a rule, is the least remunerative. The cause for this is the unlimited credit extended on subscriptions. The credit plan is neither wise nor just, because it makes the subscribers who are prompt in payment make up for the loss sustained through those who never pay. The losses on the pay-as-you-please plan vary from fifteen to forty per cent, according to the watchfulness of the publisher, and this loss, to a \$1-paper, the price of most of the Nebraska journals, is truly enormous. The writer contends that herein is a leakage of much larger proportions than is generally believed to exist by the average publisher, because few keep accurate track of the profits and losses in the various departments. It is the main reason why so many country publishers are not more successful.

As to the adoption of the "Cash in Advance" plan, I wish to state that no paper is too old to take up this

*Read before the Nebraska Press Association, January 23, 1900.

modern method. The idea prevails that the paper, long run on the pay-as-you-please plan, has so habituated its readers to pay their subscriptions at their own pleasure that the plan of "no pay, no paper" would be, virtually, suicidal. This is a mistaken notion, and here the experience of the writer upon this point may prove interesting.

The West Point Republican was started in 1870, and for over twenty-five years was conducted on the pay-as-you-please plan. Over four years ago, which period was one of great financial stringency, the writer, in analyzing his publishing business, made the startling discovery that less than sixty per cent of his subscribers were paying their dues. This proportion was but a trifle better in each of the two previous years. Realizing that good business policy dictated that it would be inexpedient to continue this method longer, the plan of "no pay, no paper" was decided upon, but not without some misgivings. The matter was discussed with some of our best local business men, as well as with a few of our leading Nebraska newspaper men, all of whom pronounced such policy suicidal, particularly in face of the fact that three other papers were published in West Point at that time, and seven others in Cuming County, and all of those on the old-time plan. Despite the discouragements of the ablest business men and brethren of the craft, I determined to undertake the new plan, even though I would have to run with a handful of subscribers. I immediately added a new Cranston cylinder press, a new dress for the paper, enlarged from a five to a six-column quarto, added an extra hand, and started to print the best paper in our section. It was boldly announced during the four issues of December, 1896, that, commencing January 1, 1897, the subscription price of the paper would be cut down from \$1.50 per year to \$1, absolutely cash in advance, and that no subscriber need expect to be continued unless arrearages were paid up and one year paid in advance. The notice was placed conspicuously and worded in such manner as to carry conviction that we meant business. I will confess that December, 1896, contained days of much anxiety to me, but the die was cast and there was no receding. There was ever present a strong determination to make the new plan a success, and, being fortified to run the paper, at a loss, for at least two years, instilled an element of confidence which was somewhat consoling under the circumstances. The eventful day—January 1, 1897—arrived, and the foreman was instructed to take off the mailer every subscriber who had not paid in advance, and to "hew to the line, and let the chips fall where they may." The paid-in-advance subscribers were counted, and there were just 300 left on the list. This was just thrice the number we had figured on, and we instantly saw the plan was going to be a great success. At least 150 old subscribers returned during January, and a few new ones were added. About this time the publisher had more money than he ever had before in his life. About \$1,200 in old subscription accounts had been collected and over 400 subscribers had paid one year in advance. This condition imparted a degree of enthusiasm which found expression in the improved condition of the paper. From that day to this the plan of "no pay, no paper," has been rigidly adhered to, and be he banker, farmer or laborer, his name is promptly taken off the subscription list when the time paid for has expired. The success of the plan is demonstrated by the fact that no other paper in our county has one-half the number of subscribers contained in our list.

About three weeks before the expiration of subscriptions the man in charge sends the subscriber a circular, calling his attention to the approaching expiration of his subscription. At the expiration of that time a final notice

is sent him, calling attention to the invariable rule of cash-in-advance, thinking that through oversight he neglected to renew.

We never wait for reply to the last notice, but take off his name exactly when the time has expired. The last notice, however, leaves a pleasant impression. Both circulars are couched in a pleasing, but business-like vein. Thus every effort is made to keep subscribers on the list.

The advance plan has done as much to popularize the Republican as its newsmanship. The idea that, unless all of the other local papers join in adopting the advance subscription plan, it can not be made to succeed, is a mistaken one.

Myrtle.

"What is the little one thinking about?
Very wonderful things, no doubt."

In fact the reverse has been true in the case of the Republican, as by its distinction, in this respect, it has gained in popularity, respect, and much advertising. The deadheads are all left to our contemporaries, who run on the pay-as-you-please plan, and the more they have of that element the worse off they are; while, on the other hand, the cash-in-advance paper has absolutely no loss, and has the use of the entire subscription receipts for one whole year "before the goods are delivered." It has been figured out by some of the ablest members of the National Editorial Association that a country paper can not be successfully published for \$1 per year on the pay-as-you-please plan, unless the circulation exceeds the 1,500 mark, particularly with prevailing prices on print paper, and the truth of this statement cannot be successfully questioned.

The advance plan stimulates a wholesome respect for the publication not instilled by the credit system. The

bad impression left upon an old subscriber, who has just paid five years of back subscription, is done away with. The numerous inconveniences of not possessing the subscription money, which is scattered to the four points of the compass, should alone be sufficient inducement to the country publisher to adopt the only sensible and business-like advance plan. What deters many of our leading publishers from adopting this plan is the fear of the result of depleting their list. They should take a little nerve tonic. Most every publisher would be better off were his list weeded out, and the advance plan does it to a nicety. It compels the publisher to print a newsy paper, and then, instead of an occasional subscriber calling to pay several years of back subscription, and grumbling at the amount, there would be a procession of gratified patrons pouring in to pay their small dues. The improved paper always brings in additional subscribers.

The writer contends that the advance plan tends to elevate the profession. Fears for the success of the plan are more fancied than real. The writer knows by his own experience that one's constituency soon becomes educated up to the idea of paying in advance for the subscriptions. Why is it that when a patron of a bank, desiring to make a loan, expects to pay his interest in advance? It is because he has been educated up to that rule. Likewise, a man does not expect to do business with a bank after 4 o'clock. It is all a matter of education. The readers of the paper of which the writer is publisher have been educated to this advance plan, and, the paper being exceedingly newsy, they want it, and it is as natural for them to call when their subscription has expired as it is for them to call at a bank before 4 o'clock, if they expect to do business there.

To make the plan a success the publisher must be endowed with perseverance, and, first of all, must publish an exceedingly newsy paper, so that people will feel that they can not be without it. In commending the plan the writer speaks from over four years' experience. It has been a marked success in his case, where strong opposition on the credit plan exists. The Republican is forced to be a better paper than any of its contemporaries and is published at a lower price than it possibly could be on the credit plan.

Our price is \$1 per year, and on the credit plan such a paper as the Republican would be printed at a slight loss. The Republican is probably the only country paper in Nebraska that adheres rigidly to the absolute cash-in-advance plan. What the writer has done can be repeated by any publisher present. Some of the obstacles in existence at the time of the adoption of the plan, such as scarcity of money during the panic, etc., etc., do not now exist, and despite strong old-plan rivals in the community the plan can be made to succeed.

Our experience with the "cash-in-advance" plan, strictly adhered to and enforced to the letter, can be briefly summed up as follows, viz:

We increased the size of the paper, doubled the mechanical equipment of the office, added to the news and other features of the paper and to the office force, cut down the subscription price to \$1 per year, and the result has been that since 1896 we have almost trebled our list of actual paying subscribers.

A DELIGHTFUL STORY BOOK.

"Scraps" is a neat little booklet by Judge Lewis B. Francis, of Denver, Colo. It is made up of a number of delightful and restful storyettes. We acknowledge the receipt of a signed copy, which is highly prized.

GOODSON TYPE CASTING AND SETTING MACHINE.

[CONTRIBUTED.]

We are sure that the trade will be interested to learn of the rapid progress which is being made in the work of manufacturing of the Goodson Type Casting and Setting Machine. We learn that the working model to which the machines for the market are now being built has proved under test a most eminent success. With this machine, although the original model exhibited in the New York office seemed to be about as simple as could be, we understand that the conveniences and simplifications of the mechanism for changing of body size of type, length of line, face, etc., have been simplified and materially lessened in the number of its parts.

In addition to these simplifications we learn that some very material improvements have been made in the machine, making its application to the general field of printing even more perfect.

Two of these improvements seem to be of such great value and so entirely original with this machine that they are well worthy of individual mention. The first is a means by which any line or portion of a line of composition at the key-board machine may be cancelled at will by the operator, thus allowing him where an error is made at the key-board to re-write the line or lines containing the error without breaking or destroying his tape or typewritten copy. The other which will appeal very strongly to certain classes of the trade, especially those doing tabular and

KEY-BOARD MACHINE.

general catalogue work, is a means by which any number of justifications may be made within a given measure, avoiding the great expense of setting tabular matter in single columns on galley and then making up by hand, which involves both skillful and careful work and even more careful and accurate proofreading to see that the names, sentences or figures are on the proper lines with each other. You have simply to write your matter in columns on the typewriter as you desire it to appear, always touching the justification key indicated at the end of each line, in each column, and the result from the casting and setting machine will be like that shown on your typewritten sheet,

requiring only that the brass rules be dropped in their place and avoiding the possibility of any of the lines being improperly placed opposite to each other and also the great expense of makeup.

For the benefit of those who are not familiar with this machine we will give here a brief description which will

CASTING AND SETTING MACHINE.

serve to convey a general idea of its mechanical construction and method of composition.

It is composed of two parts: First, the Key-board Machine, and second, the Type Casting and Setting Machine.

The Key-board machine is about the size of a small single desk and contains an ordinary standard typewriter, a Perforator and a Justification Indicator. The typewriter is operated as in ordinary commercial use and requires no greater skill or knowledge.

Each key as depressed forms an electrical connection with the Perforator, which perforates, in a narrow strip of paper, combinations of holes in such variety that when this perforated ribbon is put in place in the Casting Machine, where it is automatically fed under a series of electric contact points, electric connection is formed through the perforations, causing to be cast and assembled in justified lines, in the order as indicated at the Key-board, the particular characters as were indicated upon the typewriter in making the perforations.

The Justification Indicator, which operates entirely automatically and simultaneously with the perforator by means of a similar electric connection, shows the operator just where his composition stands in the line and indicates at the end of each line or justification the key upon the typewriter which will properly justify the line. No mental operation or figuring is required of the operator, the Justification Indicator showing but the one figure indicating the key upon the typewriter which will cause the proper justification to be made.

By the use of a standard typewriter for the key-board it will readily be seen the enormous advantage which is given to the operator in that he can at will refer to his work in course of composition, thereby avoiding many errors and the great amount of time ordinarily consumed in finding his place. In addition to this, the typewritten sheet may be used as the first proof and afterwards stored with

the perforated ribbon for reprint work; in which case with the reprint not only is the work of the key-board saved, but the work of the proofreader in reading the first proof.

The work at the key-board having no reference whatever to the face of type or size, a ribbon once perforated may be used for any size or face of type and as often as desired, an ordinary ribbon being capable of certainly not less than from 50 to 100 reproductions in the form of justified lines of type on galley.

The Casting and Setting Machine, which is but little larger than a sewing machine, is wonderfully simple in its mechanical operation and construction, it having a great many less parts and simpler mechanisms than any other type-casting or composing machine yet introduced to the trade. The accompanying illustration, which is an actual reproduction from a photograph taken looking down upon the machine, shows practically all of the working parts connected with the machine. The ingenious use which has been made of electricity for the starting and limiting of its mechanical operation has made this great reduction in parts possible and has at the same time greatly simplified its operation and lengthened its wearing qualities.

Probably the most convincing thing which can be said for the simplicity of the machine is the fact that the present operator in charge of the exhibit machine, Mr. Lee Conwell, formerly of Washington, who had no mechanical knowledge or experience other than that picked up through his work in the printing trade, after being with the company for less than three weeks, was put in charge of the exhibit machine; the behavior of which need hardly be explained as being of vital importance to the company.

The change from one face of type to another is made by the mere substitution of a different "Font Matrix," which is in the form of a small frame about two and a quarter inches square and is readily replaced by the simple depression of a spring latch.

The change of body size is affected by the change of the plunger, which could not possibly take more than a min-

VIEW LOOKING DOWN WITH MATRIX CARRIAGE THROWN BACK.

ute; and the length of line is controlled at the key-board and consists simply of the setting of a hand upon the indicator, as simple as the setting of a clock.

The product of the machine is in the form of individual type, the face of which is fully equal in all respects to the ordinary foundry type. These individual characters are mechanically assembled and pushed forward in justified lines upon a galley similar to the ordinary double-column galley; from which the operator can readily slide the matter on to his galley.

The justification we may say is ideal, in that it is accomplished with ordinary foundry spaces, being only six in number. This permits of the distributing and resetting

by hand with equal facility to foundry type. In this fact one other great advantage is offered with this machine, that of being able at all times to carry sufficient type on hand to take care of the extra rush of work which usually comes to all printers for a short period in every year, but which does not justify, under ordinary conditions, his carrying sufficient number of machines or type to handle the same. By simply melting work which has been used on long runs and distributing that coming from short runs an unlimited amount of type may be kept on hand without any cost of casting.

NATIONAL EDITORIAL ASSOCIATION.

Editorial in New Orleans Times-Democrat, January 28, 1900.

The National Editorial Association will hold its fifteenth anniversary meeting at New Orleans, the place of its birth, next month. The Association was organized in this city in 1885, during the Cotton Centennial. There were press and editorial associations in most of the States at the time, but no interstate one, covering all the points of the Union, until the National Editorial Association sprang into life in 1885.

The organization thus founded in 1885 has grown steadily in size and influence until it now covers the whole country and includes editors from every State in the Union. Perhaps the most interesting feature of the Association is its annual conferences, which have been held in nearly every important city in America. These conventions have not only strengthened the Association, but they have broadened the minds of the editors, eradicating all provincialism and sectionalism and making them better acquainted with the country as a whole.

At Boston, at St. Paul, San Francisco, and wherever the Association has met, it has been welcomed and most hospitably entertained, and its members have been given a chance to see the resources and possibilities of the section they visited. Two years ago New Orleans was a candidate for the next place of meeting of the Association, but the honor went to Portland, Ore., where in spite of the fact that it was on the other side of the continent and many thousands of miles away from where a great majority of the editors lived, there was a splendid attendance and one of the most successful meetings ever held. The Oregon people are not yet done talking of the success of that gathering, which did the Pacific coast so much good; and they show they appreciate it, for the Oregon Press Association has decided to send a large delegation to the New Orleans meeting, to still farther advertise the merits and advantages of the Pacific coast. And the Colorado Editorial Association has also announced its purpose of attending in a body, to bring up before the Association the question of the increased price of paper and see if some relief can not be secured through it.

The Association opens in New Orleans March 1, two days after Mardi Gras; but as the editors are desirous of seeing our carnival, which most of them have never seen, they will reach here February 26, and devote three or four days to seeing the sights and attractions of New Orleans before getting down to business. The members of the Association will assemble in St. Louis a day or so beforehand, hold a preliminary session there, and come down in a body on a special train to New Orleans. They will be welcomed and entertained at Jackson and Vicksburg, Miss., where most interesting programmes have been arranged for their benefit.

The entertainment of the visitors in New Orleans will not begin until after the carnival, because of the great rush

and excitement incident to our holiday. It is desired to make the entertainment such that the editors will appreciate the hospitalities of New Orleans, see the beauties and attractions of the city, and lay them before their readers.

As we have said, these visits to the several cities where the Editorial Association has held its sessions have not only been beneficial to the editors themselves, by letting them see all parts of the country, but to the cities visited as well. Portland was more than delighted by the session held there last year, and claims that it and Oregon were benefited thousands of dollars. No city can hope for more beneficial results than New Orleans. We have suffered for some years past from slander and abuse, and if we can through the press of the country correct the unfavorable impressions that have been created in regard to New Orleans by showing how greatly the city has improved of late, and how much it has done in the way of paving, draining and other public improvements to make it one of the healthiest and most comfortable cities in the world, it will mean millions to New Orleans. There will be no better opportunity ever offered us to do it than the present, for we will not have here so many editors, and will not be able—for many years at least to come—to speak to so many people on this subject.

The visiting editors have been received in the most hospitable manner in all the other cities they have visited. They must be given a similar reception here. This will include a trip on the Mississippi, so that they can see the river front; trolley rides up and down town, a reception and other entertainments. A committee consisting of members of the various commercial exchanges and other bodies, and of which Mr. George H. Smith of the New Orleans and Northeastern Railroad is chairman, has been engaged for some time past arranging for the reception and entertainment of the visiting editors and collecting the necessary funds. The Times-Democrat gladly contributes \$100 to this cause, convinced that it will prove of great benefit to this city, and it hopes that the fund collected will be sufficient to give the visitors the same warm and pleasant reception that they have received in other cities where they have held their sessions.

Invitations have been extended to the visitors by a number of towns in Mississippi—Jackson, Vicksburg and Hattiesburg, for instance—and from New Orleans as their headquarters they will probably make excursions into the surrounding country, but it is to New Orleans that they are coming from all portions of the country to see the city, the metropolis of the South; and we want to put it before them in the most favorable light possible.

(From Proceedings of Board of Mayor and Aldermen, Vicksburg Post, January 9, 1900.)

A communication signed by Messrs. C. E. Wright, E. C. Carroll, J. I. Lengsfeld and J. G. Cashman, editors and managers of the local newspapers, was presented to the board by Alderman Kelly. The communication is printed in full in another column.

Alderman Kelly moved that a committee of three, the Mayor to be included, be appointed. Messrs. Kelly, Caughlin and Mayor Trowbridge compose the committee, which is a guarantee that the newspaper men and their wives will be nicely entertained while in our city.

(From the Vicksburg Evening Dispatch, January 5, 1900.)

B. B. Herbert, editor of the National Printer-Journalist and father of the National Editorial Association, is in the city to write us up in advance of the visit of the Association to this city, February 25, en route to New Orleans

THE NEBRASKA EDITORS.

The Nebraska Association held its twenty-eighth annual convention in Lincoln, and for the ability displayed and the broad and practical grasp of subjects considered, it must, admittedly, be placed first among the splendid meetings held by this model organization. The officers elected for the ensuing year were:

President—D. H. Cronin, of the O'Neill Frontier.

First District Vice-President—W. M. Hassler, of the Pawnee Press.

Second District—D. C. VanDusen, of the Blair Courier.

Third District—J. B. Donovan, Madison Star.

Fourth District—Lew Frazier, Fairmont.

Fifth District—Judge Abbott, of the Hayes Center Republican.

Sixth District—F. P. Morgan, of the Chappell Register.

Secretary-Treasurer—F. N. Merwin, of the Nebraska Editor.

Corresponding Secretary—U. E. Foster, of the Plainview News.

The delegates from the State to the National Editorial Association are given elsewhere in this issue.

The spirit that prevailed throughout all the sessions is well typified by the splendid resolution adopted, as follows, at the afternoon session of the second day of the convention:

"Resolved, That it should be the aspiration and duty of every newspaper publisher, editor and newspaper worker in this association to pursue his calling with the dominating idea and inspiration of establishing the fraternity on that plane where it may justly and without question be accorded and maintain an honored place in the ranks of the professions—so that it may become, in fact as well as by courtesy, 'the fourth estate;' that it should be the pleasant duty of the newspaper man to show at all times the spirit of professional courtesy and concord one toward another, and to maintain for himself such an attitude of professional dignity toward the entire public that his professional position will be questioned by no person, and that the association of the newspaper man with his apprentice, his employe, or his reportorial or editorial subordinate, should be precept and practice until this idea, to the end that the aspirations that the fraternity holds in the present may be fully realized in the profession of the future."

This resolution was offered by Mr. M. A. Brewer, of the Kearney Hub, and, in speaking in favor of its adoption, Mr. Edgar Howard, of the Committee on Resolutions, said that "the business end of a newspaper had better suffer than that all sentiment should be crowded out of the profession by commercialism."

There will be no danger of business suffering or failure when editors and publishers come up to the standard set in the resolution. It is greed, commercialism, unreliability, ignorance, slothfulness, quackery and shystering that bring failure to and disgrace upon physicians, lawyers, editors and ministers. Zeal in and jealousy for the reputation of a calling, with a full appreciation of and a loyalty to its opportunities and obligations bring success. We always had a deep sympathy with the feelings of a successful jurist who, after listening to a slovenly, drawling effort of a young minister, declared that if he had a law student who did not show more preparation and earnestness in conducting some little suit in a justice peace court, he would kick him out of his office. It stirs one's soul with solid pleasure to see editors arise to the grandeur of their opportunities.

President W. H. Huse presented an able annual address. Among other good things, he said:

"It is a matter of congratulation that the newspaper is rapidly taking its rightful place among the strictly legitimate business enterprises of the community in which it is published. During these later days, owing largely to the practical teachings of this association, the publisher has come to look upon his advertising columns as his stock in trade—that which he has to sell and from which he makes his living. No longer does he bite at every glittering bait thrown out to secure the use of \$10-worth of advertising for a dollar magazine or a pair of tickets to a ten-cent social. We put our wares on the market upon a strictly business basis, to be sold at a fixed price, and pay our own way as we go. This brings to the newspaper man more independence than he could possibly have under the ancient method of trading his paper and advertising for any old thing that might be offered, and gives him the proud feeling that he is as much a business man of his town as the banker, the dry goods man or the grocer."

"The pet hobby of the past president of this association is that at the end of each year every man who owes the printer shall be asked in to pay, while the editor should in turn liquidate in cash all his outstanding indebtedness. I fully agree with Editor Howard in this so far as it goes, but I would go farther. Instead of making the day of settlement once a year, I would make it at the end of every month, when it should be understood among our customers that if they owe us they are expected to pay, and that if we owe them they will receive what is due in cash. This puts our transactions practically upon a cash basis, which is the consummation of business desires."

"In at least one publishing house in the State the rule has been in effect for years that the books for the month shall not be closed until every bill outstanding against the office has been paid. This system, in connection with daily balances of cash and earnings, makes it possible for the publisher to know at any moment whether his plant is working at a profit or loss, and how much. My idea of 'Carrying a Message to Garcia' in the publication of a newspaper is to apply the most rigid business principles to the business department. There is great satisfaction in keeping the affairs of one's office always up to date—besides, it pays."

WORK OF COMMITTEES.

"It cannot be said that the association has revolutionized the work of newspaper making during the past year, but it has accomplished considerable that will prove of practical value to the fraternity. A great deal of work has been done by the legislative committee in the interest of the publisher, and the association is to be congratulated upon the fact that it has had at the head of that committee so capable a man, D. M. Butler, whose opinions upon questions of moment to the newspaper man are being recognized far outside the confines of the State."

* * * * *

THE EDITOR'S CREED.

"These words of Dana—the prophet of the press—shall these not inspire us? 'Above all, know and believe that the great world is advancing; that there is progress in human life and human affairs; and that as sure as God lives the future will be greater and better than the past.' Incited by such a belief, fighting that which is evil, contending earnestly for that which is good, 'with malice toward none and charity for all, doing the right as God gives us to see the right,' what may we not accomplish for our generation and the twenty generations which are said to be under the direct influence of each individual now living? However much we may differ in our opinions regarding present dayisms, let us unitedly agree that we are fighting a winning battle just so far as we are allied with the truth."

"Fling pessimism to the winds! It is out of place in such an era as we are living for anyone—most of all in a newspaper office. The doors of opportunity swing open wide. In hamlet and in city, in Nebraska and the nation, the freedom of the press is untrammelled—its power unquestioned. There are foes that menace the public good—we should be warriors to strike them down. There are forces that promote the public welfare—we should be friends to welcome and sustain them. Through the most searching discussions of public men and public measures, through smoke of battle elsewhere and peace and plenty at home, humanity struggles always upward and onward, and upholding its cause should ever be found the public press."

One number on the program read, "An Unknown Subject by a Prominent Nebraskan." The President, in announcing this, said the prominent Nebraskan was none other than J. R. Buchanan, general passenger agent of the Fremont, Elkhorn & Missouri Valley Railroad. Mr. Buchanan was introduced, and he said:

"Now, my editorial friends, every one of you, I am sure, will bear me out in saying that, for reading matter, that which bears on personal history or biographical sketch is most carefully read; and so it seems clearer to me that each editor should study the farming interests in his community, and determine that, hereafter, he will in each issue of his paper publish the statistical result, with a personal sketch of at least one farmer's efforts; who he was; where from; when he came to the State; his worldly belongings when he came to Nebraska; where he located; cost of land and improvements; how he farmed, or bred stock; how he progressed and succeeded and how he stands financially to-day; with such personal mention as to characteristics as the subject is willing should be made."

"I know some may object at first to give this informa-

tion, under the impression the valuation may affect their taxation; but there is really no cause for such apprehension. Nevertheless, to assure such objector you can withhold his name in the account, simply citing the case in all its relations, but omitting to identify in publication.

"My prediction is that before the year expires these persons, having seen results with others and neighbors, will be glad to have the identification in the roll of honor—which it really is.

"In every community there are some persons who will send papers to a former home in a foreign state. There are over 600 newspapers in the State; at least 500 weekly country newspapers in the ninety odd counties in this State, and so if the above suggestion is followed it means that at least 500 (and probably five times that number) papers will each week go out of the State and be scattered abroad over the country. This, repeated each week, will tell of at least 25,000 thrifty farmers in the various counties in Nebraska in one year and their personal history. These papers will come to my office, or to some other general passenger agent. We will collate and combine these instances and publish them in our statistical folders—5,000 or 10,000 or 20,000 per month—and will distribute them through our agencies all over the country, and it is clear that in this persistent way 'Nebraska' will get into the very air all over the Western States, and the tide of immigration will turn to us.

"Five hundred editors, with a few general passenger agents of railroads, working in a single purpose to a central aim, with their hearts, brains and hands in the effort, will undoubtedly bring results. Five hundred papers will in fifty-two weeks have given news of an army of good men who plowed and sowed to some purpose, and it is quite safe to say that the experiences of this army of say 25,000 men will reach and be read by at least 100,000 other men who will be interested in just this information.

"I trust we may all meet one year from now, and, by comparing our then information of results, be ready to resolve to continue the same methods for another year of fifty-two weeks."

On motion of A. J. Langer the association agreed to accept the plans offered by Mr. Buchanan and to publish as often as possible the statistical matter suggested in the paper.

F. H. Young, of the Genoa Leader, presented a paper on the question, "Does a Partisan Paper Pay?" He said the successful business man does not mix politics with his business, and argued that, if he did, his business would suffer therefrom. The same, he thought, was true of the newspapers. The partisan publisher drives from his paper much business by an unwise course. He thought it was not necessary, because one ran a partisan paper, to offend people of other political beliefs. He said:

"How many of you have not published columns of what they knew to be political rot? How many have not supported men whom they knew to be unworthy of the support of any honest man, incompetent and unfit to fill any office? How many have not helped, for the party's sake, to whitewash a public official who had betrayed every principle his party had ever advocated? We have all done this to a greater or less extent, and must continue to do so as long as we publish a partisan paper. The party bosses demand it, while our readers imagine that we receive yearly a wad of boodle several feet in diameter. Such are the political inconsistencies of the ordinary, otherwise broad-minded editors of Nebraska that we believe we are safe in saying 75 per cent of the voters really believe we receive large pay for the vast amount of political rot we publish and our influence with the masses is lessened by just the extent this belief prevails.

"And, now, my friends, to moralize a little: When the country press of Nebraska ceases to bow the knee to party bosses, when the editors cease to fill their columns with what they know to be political rot, when they cease to support unfit and dishonest men for the party's sake, when they cease to whitewash unfaithful office-holders, then will thieving officials and the betrayal of public trusts of all kinds cease to exist throughout this broad domain of ours. He will cease to exist for two reasons: first, it will be hard for him to receive a nomination and still harder for him to secure an election. And secondly, when you take from him the knowledge that his acts must be rank indeed when he will not receive the defense of his party press, and give to him the full knowledge by a united, independent press, he will tremble to depart from the straight and narrow way; and the blighting influence of pernicious legislation, accom-

plished or attempted, will be removed and our fair State will blossom like the rose, politically as well as agriculturally."

L. A. Williams, of the Blair Pilot, spoke on "Newspaper Controversies, Wise and Otherwise." He did not approve of personal attacks on anyone through a newspaper, but he admitted that such attacks might sometimes be justified, yet he said he had never known of an instance where silence would not have been better. He thought editors should refuse to be drawn into profitless controversies, and that it should be the aim of all to treat all subjects fairly and honestly.

THE PROOF-READING CONTEST.

Last month we referred to that novelty of a proof-reading contest. The program of the meeting was printed with a number of errors in it, and a prize offered to the one finding the greatest number of errors. The secretary said there were 109 actual errors in the program. One sheet had been turned in with 304 errors marked. The smallest number of errors marked was forty. The prize of \$10 was awarded to S. J. Potter of the Great Western Type Foundry, Omaha. Mr. Potter had marked 130 errors, and these had been cut down to 100. The second prize of \$5 was awarded to Clyde King of O'Neill. He had marked 189, and these had been cut down to 89.

COLORADO EDITORS MEET AT DENVER.

Officers and Delegates Chosen—Newspaper Interests Discussed and the Paper Trust "Cussed."

The editors of Colorado had a decidedly successful convention at Denver on January 23d.

The following officers and delegates were elected:

President—Howard Russell, Fort Collins.

First Vice-President—I. N. Bunting, Grand Junction.

Second Vice-President—Frank N. Briggs, Victor.

Secretary—Halsey M. Rhoads, Denver.

Treasurer—H. J. Holmes, Glenwood Springs.

Executive Committee—K. G. Cooper and J. S. Temple, Denver; Lewis Gaylord, Colorado Springs.

Delegates to the National Convention—Wolfe Londoner, Frank J. Arkins, Lewis Gaylord, T. M. Patterson, W. C. Calhoun; alternates, Lute Wilcox, J. S. Temple, Howard Russell, Halsey M. Rhoads.

"Freight Rates," an important question to all the people of Colorado, and "The Paper Trust," just now of overtopping importance to printers and newspaper publishers, were the principal questions under consideration.

After a lively debate, the following resolutions and the last-named subject were passed with enthusiasm, there being only two negative votes:

THE PAPER TRUST TO BE FOUGHT.

"Discarding all controversy over the mooted questions of tariff and free trade, we nevertheless unite in denouncing every form of combination that has for its object an increase in the cost of necessities through the curtailment of production and the destruction of competition.

"The newspaper has become a prime necessity of modern life. The best results in all efforts to improve government, advance civilization and secure faithful public officials, will be obtained through the newspapers of the country produced as cheaply as possible consistent with fair wages and reasonable hours of labor.

"In the paper trust, but lately formed, we, the Colorado State Editorial Association, recognize only an enemy to the newspaper publishers and readers, and, therefore, to society and good government. By combining to destroy competition in the manufacture of paper, and thereby unduly raise its price to the publishers, it has forfeited all claim to the consideration and bounty of the government, and it is the plain duty of Congress to repeal all laws that tend to enable the trust to carry out its nefarious scheme of plunder.

"To the end that the newspaper publishers of the United States may free themselves, in part at least, from the exactions of the paper trust, we demand that the Congress of the United States shall immediately repeal all tariff duties upon paper, upon wood pulp for the manufacture of paper, and upon every other article that enters materially into the manufacture of paper, and we will consider as our enemies every senator and congressman who shall fail to do his utmost to repeal such laws at the present session of Congress.

"Resolved, That we will oppose the re-election of every

senator and member of Congress who does not actively aid in the immediate repeal of all such tariff duties."

The resolution was introduced by K. G. Cooper, Business Manager of The Denver Daily Republican, and was voted for by editors of all parties, though in the discussion the charge was made that it had a partisan intent. The Rocky Mountain News gives the following brief outline of the debate had preceding the almost unanimous vote for adoption:

Mr. Newton thought the resolutions were too sweeping. He wasn't ready to bind himself to oppose every man who didn't think as he did. He believed in protection of American industries.

"Well, isn't the newspaper an American industry as well as the paper mills?" said Mr. Bunting.

"But we don't know the cause of the rise in the price of paper," said Newton.

"Never mind the cause; think of the effect," said Rawalt.

"Then you don't believe in the law of supply and demand," said somebody.

James Calbreath, of Denver, who signs himself "Industrial Reporter," said that the rise in the price of paper was due to the demand in England owing to the Boer war. The resolution was an attempt to tie the association to the tail of the Democratic kite.

There were cries of contempt at this.

Frank N. Briggs said he was publishing a Republican paper as near as he dared in Victor. But this was a proposition that affected his pocket, and he was here to protest. A year ago he paid the Denver mills \$2.25. He was now paying \$3.75. If this was not a sign of a trust, there had been more advance in the newspaper business than he knew anything about up his way. He was in favor of the resolution if the clause about opposing congressmen who did not support the bills was stricken out. He moved to strike out that clause. His motion was lost.

Lewis Gaylord, of the Evening Telegraph, Colorado Springs, said there was hardly a more rigid Republican paper than the Colorado Springs Gazette. The editor of that paper stood with him on the proposition that they would support no man for Congress who opposed bills to remedy this matter. The resolution then passed as offered, only two dissenting votes being heard.

Mr. Rawalt, on behalf of Frank Arkins, moved the appointment of a committee of three to frame an address to issue to the publishers of the United States, asking them to send delegates to the national convention at New Orleans, to consider the matter of the paper trust. Arrangements had been made by Mr. Arkins, Mr. Patterson and Mr. Cooper to send out this address free by the Associated Press that night. On motion, the three gentlemen named were appointed a committee to issue such an address to the publishers and editors of the United States.

FREIGHT RATES.

Mr. Bunting moved the appointment of a committee of three to secure the classification of rates on print paper from third to fourth-class in this State. Mr. Gaylord, of Colorado Springs, wanted to include that the roads from the East be seen, as well as the Colorado roads. The rates were raised two years ago without a protest from any publisher in the State.

W. J. Jackson, of Pueblo, said some had to buy in the East. He tried to buy from the Denver paper mills the other day and was told that they were full for six months ahead, and he got out the Star every day. Another said he used four car-loads of book paper a year, and there was none of that manufactured in the State.

"There's no reason in the world why printers' paper should be classified any higher than wrapping paper—none in the world!" said an irate member, and the whole meeting gave a groan of assent. The motion was carried, and the chair appointed I. N. Bunting, Lewis Gaylord and T. M. Patterson.

LEGISLATION.

Colorado seems to have suffered in its effort to receive proper newspaper legislation from the same causes that have existed in other States, apathy on the part of publishers and the lack of any provision of funds necessary to pay the actual expenses of committees in preparing and looking after the passage of needed enactments. The following outline of the discussion appearing in the Daily News will be found valuable in suggestions:

"The question of legislation brought up that picturesque member of the lower body of the last general assembly,

C. F. Rawalt, who took the floor. He said the three bills introduced by the Association met with no opposition in either house. No member cared to antagonize those bills. But while the house disposed of every bill that came before it by a vote, the three bills, with many others, were continuously put at the bottom of the calendar and never came to a vote.

"H. J. Holmes made an earnest speech, in which he urged that the organization do something for itself in legislation, or disband.

"By just so much as you do good legislative work to benefit the country printer, this Association is active. When you do not, you are dormant, and might as well disband. I helped your committee last winter. I particularly helped them with Senator Taylor of our county, a man obnoxious in every way to a printer. I made him lay down and quit his opposition to those bills. But your committee didn't push those bills in the Senate. They trusted to the promise of Senator Gaymon, and there was no one to push them through."

The chair said that the committee put in its time at its own expense, and they ought not to be criticised.

P. A. Leonard moved that an assessment of \$1 a head be laid to help defray expenses of the committee. Mr. Rawalt said there was no difficulty in securing the passage

The Colorado Editors.

Sketched by the Rocky Mountain News.

of legislation. It was the everlasting slowness of the Association that killed its bills. The most important bill at the last assembly was numbered 519. It should have been numbered 1, and introduced the first hour. Hundreds of bills, more important to individual senators, were killed before 519 was ever reached. He moved the appointment of a committee of Denver publishers, one of whom should be a lawyer competent to draw a bill able to stand the test of the Supreme Court, to draw the bills and see them through. Several members opposed the idea, saying that the Denver papers opposed the bills desired by the country press. Mr. Rawalt said there were plenty of weekly editors in Denver.

The following Legislative Committee was appointed, the Association insisting on the chairman being a member: K. G. Cooper, Denver Republican; Howard Russell, Fort Collins Express; F. N. Briggs, Victor Record; J. T. Lawless, Lamar Sparks; J. S. Temple, Western Newspaper Union.

By a unanimous, twice repeated vote, Hon. Wolfe Londoner was requested to publish at his own expense a paper in the interest of the Colorado State Press Association and the calling in general, devoted to questions pertaining to the business, interspersed with wit and humor. The name of the paper is to be "Wolfe Londoner's Cyclone Cellar." The name, while not having particularly a professional smack,

still smacks of something particularly pleasing to the editors of the Centennial State from long association, and that will be fully understood by the delegates to the 1898 convention of the National Editorial Association.

THE BANQUET.

A banquet was tendered to the members of the convention,—the twenty-first in its history,—in the hall of the St. James Hotel.

J. L. Temple of the Western Newspaper Union, on behalf of the local committee, introduced Wolfe Londoner as toastmaster.

Mr. Londoner said:

"I am glad to see that the newspaper men of Colorado are getting together and looking out for their own interests. If they don't, nobody will. Up in New England the boys get together once in a while when there is anything for a rake-off. The first subject is 'the weekly press.' The weekly paper man sobs with his friends, saws wood with his neighbors, and holds the babies. He has to do it. He is the most popular man in the community. He has to be to hold his subscribers. There is a gentleman here tonight who represents the wind-power of the weekly—C. T. Rawalt of the Gunnison Champion."

"Without doubt Mr. L. Vincent, who was to have responded to the toast," said Mr. Rawalt, "could have have done it better than I. We all seek the great daily newspaper, but the fact remains that in the outlying precincts the paper most closely read and religiously trusted is the weekly press. It may contain the writing of a man of mediocre ability, but if he has so lived at home as to win confidence his advice will be taken in the degree of confidence he has inspired. The editor of a great daily cannot be confident of the reliability of his large staff, while the work of the weekly is, as a rule, done by one man, upon whose integrity the people must depend."

GOLD BELT FANCIES.

Mr. F. N. Briggs, of the Victor Record, was called upon to respond to the toast, "The Cripple Creek Mining District."

"There is not much to say that is not known," he said. "To-day we have upon the former barren hills some of the finest buildings in the State. We have a city of which we and the whole State may well be proud."

"The Western Slope" was responded to by I. N. Bunting of the Grand Junction Sentinel.

Howard Russell of the Fort Collins Express responded to "Pioneer Journalism of the Western Slope." "Fifteen years ago I established the first paper on the western slope, at Glenwood. We did not think at that time a railroad would ever reach the place. To-day there are two newspaper offices in the State, the natural growth of journalism from the time I worked that old hand press that fell down every morning. I bought that press twenty years ago, on trust. Talk about trust, we had trust in those days that worked quite differently. The freight bill was \$98. I walked fourteen miles to borrow money to pay the freight. It took nerve in those days to run a paper on the western slope. I remember the time when a fellow was compelled to climb a telegraph pole—or pay a bill. I had a nice time looking for printers. Found fourteen printers with union cards, and not one of them knew a thing about a press. It seems strange to me that after such experiences I find myself at the head of this organization. I know of nothing more to the credit of a man who came to the State under such adverse circumstances than the honor you have conferred upon me."

TALK ON TRUSTS.

"The Tariff and the Trusts" was responded to by Thomas M. Patterson. He thanked the organization for his election as a delegate to the national convention.

"At 14 years of age I went into a printing office and for three years worked in a country town in Indiana, until I could set 8,000 ems of long primer in a day. From that I became a local editor. When I entered law I found that my early education in the printing office had been of great value to me. My election as a delegate recalls those early days, and I thank you for the honor. I sometimes wonder why it is that it is almost impossible to separate from the newspaper a man who has ever been identified with one. I think it is simply fascination of power. Who, if he feels that he can control, advocate measures and elect officials for the good of the community, would not cling to the newspaper that gives him that power?"

"The newspaper of before the war was to that of to-day as a grain of sand to Pike's peak. The newspaper is the weightiest power that exists in the country. The country press is really the great power. It is almost impossible to grasp the number of the weekly papers, or to estimate their enormous circulation, which exceeds that of the great dailies, while the papers themselves wield more power in consequence. When we comprehend the power of the press, it has seemed to me that the trust might have kept its hands off the papers. The subject of tariff I will not discuss, for I recognize the fact that in that I would be upon debatable ground. But, however we may regard the tariff, there is one thing upon which we all agree—that the modern trust is a monster, which should be throttled. All parties will declare that the trusts are an evil, and the only thing that can be said by one of the other is that one may not be as earnest as the other—but all are on equal ground. A few weeks ago President Hadley declared that ostracism of trust magnates and their families would be justified by conditions. In the meeting to-day there was some doubt as to the propriety of attacking senators and congressmen, to compel them to remedy the evil as to white paper. If Hadley can recommend ostracism, we can certainly afford to ostracize the people who refuse to release their grip on the white paper industry."

"The origin of the trust is in placing property of several concerns in the hands of a trustee for the distribution of profits in proportion to the agreed value of each piece of property. The strongest argument used by agitators of trusts is that dispensing with all but the central force of directors, managers and superintendents will reduce the cost of production. The purpose of the trust is to combine capital, raise prices and control the labor market. You show me the corporation which controls everything in its particular line and I'll show you the greatest tyrant on earth. Do they control prices? Take ten steel mills combined under one head. The central board regulates all of those enterprises and having this power regulates production. If the market is overstocked mills are closed by this same power. Men are out of work. The surplus steel is used and prices then go up. Let any young man or any individual attempt to start a new enterprise and see the trust underbid for the purpose of driving the newcomer out of business. We have felt the crushing power of the trust in Denver, that knows no law but its own advantage. Impoverished families, starving and half-clothed women and children are as nothing to them. No matter how peculiarly fitted for a calling, how ambitious and how industrious, a young man is crushed under the power of the trust. 'Undersell this young man who has the temerity to come among us,' comes the order from the central office. The trust means the destruction of opportunities. It means that vast wealth alone has the opportunity to develop further wealth. All of the white paper mills of this country have been gathered together in a trust. Until a few months ago there were some independent mills, but when the last mill went into the trust competition ceased. The result was that the price of white paper was doubled."

"Some explanation made is that our paper is needed in Norway, reducing the supply at home, but that does not explain more, at the outside, than 10 per cent of the increase. What are you going to do? If you start your own mill, your paper at 5 cents per pound will be delivered in Denver by the trust at 1½ cents, and you will laugh while the fight is going on, but pretty soon your \$250,000 or \$300,000 will be gone, and you will be asking for employment and a place on the pay rolls in the trust mills. There is no absolute remedy yet discovered. We realize the necessity of newspapers, and therefore we have a right to say that we will demand of our representatives in Congress immediate and complete relief from the wrecking grasp of the paper trust. We want them to repeal tariff duties on all materials that enter into the manufacture of white paper—a tariff that feeds the trust by keeping out materials from other countries. The trust is the product in reality of the last few years, but now that that situation is fully known and appreciated we can demand and force the repeal of all trust protecting laws, however innocently passed in the first place. This being a government of the people and for the people, when this question is brought to the attention of Congress by the whole people, the evil will be remedied and the government will be more surely their own, and they will experience more liberty and freedom than ever before."

When Mr. Patterson had finished the company adjourned in the best of spirits.

THE CHICAGO TYPOTHETÆ.

Thirteen did not prove an unlucky number with the Chicago Typothetæ. The thirteenth Franklin banquet of the society, held at the rooms of the Athletic Club, proved the most successful in its history. It is not necessary to refer to the menu, for the reputation of dinners served at the Chicago Athletic Club is already national. They are always the best, and printers on Franklin's birthday, at least, manifest the tastes of epicures and always take measures to have their appetites fully satisfied, in remembrance of the fact that their patron during more than half of the years that he was a printer dined with a wooden spoon out of a wooden bowl and thought his wife extravagant when she bought one of bright pewter. There were about a hundred of the members of leading printing firms and members of related trades present at the feast. The Chicago Typothetæ is blessed with an excellent and popular Secretary, W. F. Hall, who worked most enthusiastically and successfully to carry out the wishes of President Thomas Knapp to make this one of the red letter occasions in the history of the society. He succeeded, as he does in business and everything else that he undertakes.

The feast disposed of, the President offered a few appropriate congratulatory remarks and introduced Mr. Geo. E. Cole as toastmaster. Mr. Cole, in a happily worded talk, brief and of a humorous turn, gave the cue to the speakers of the evening. It was to be a season of enjoyment. He referred to Franklin and said that he had thought to tell of Franklin's love for bread and how he drank water when he was poor and wine when he was rich, and thereby showed himself to be a true philosopher. How he found political positions for his relatives and thereby proved himself a genuine politician. He, on second thought, had concluded to let others do the talking. Among those present were the following:

Alexander Belford,
W. B. Conkey,
A. R. Barnes,
J. H. Ruston
Thomas E. Donnelly,
A. M. Barnhart,
W. H. French,
Franklin Hudson,
W. P. Dunn,
W. B. Leffingwell,
Sam Ohnstein,
C. M. Staiger,
Forest Hopkins,
A. H. Dwight,
Charles E. Temple,
Clarence C. Warder,
C. F. Whitmarsh,
M. A. Fountain,
A. W. McLaughlin,
Joseph N. Wilson,
Frank P. Wright,
Charles W. Rankin,
C. L. Regan,

Charles F. Blakely,
A. J. Brock,
Isaac Colburn,
T. B. Cole,
Charles A. Dexter,
Daniel Boyle,
O. B. Marsh,
W. A. Grant,
George W. Gould,
J. M. Abell,
W. S. Burnham,
George H. Barnard,
George W. Peck,
W. F. Hall,
Jarvis Blume,
L. J. Corbitt,
George H. Benedict,
William T. Hodge,
James T. Mix,
C. O. Wright,
J. S. Zeigler,
A. T. Hodge.

Ex-Governor Peck of Wisconsin, who, besides being the father of "Peck's Bad Boy" and ex-Governor, is also a printer and an editor, for once a printer always a printer, was the piece de resistance in the post-prandial feast. He spoke to the toast, "The Tramp Printer." He said:

"I presume I am as great an admirer of Franklin as there is in the world, but I don't think of him all the time as the statesman and the diplomat, but as the boy, the 'bad boy,' who wouldn't let any man run him 'for nothing a week and find himself.' He was the first tramp printer of history. Many of our brave fellows have followed in his footsteps more or less successfully. I've been something of a 'masher' myself in my time, but I've got admiration for the man who could go up the street with a dirty towel under his arm, as Franklin did, and 'mash' the prettiest girl in Philadelphia.

"Franklin was the first 'masher,' too.

"He never was so proud as a diplomat as he was when he was working on an old hand press. There is something in working an old hand press that you rich devils don't know anything about. There is nothing that gives an old printer more pleasure. I never was so happy, even when I was Governor and heard thousands of people around me swearing that I was 'the whole thing,' as when I owned my first printing office.

"I took occasion to follow in Franklin's footsteps early," ex-Governor Peck continued. "He said all boys should go

into business. I told my father there wasn't any use going to school and I wanted to go into business. My father said, 'All right, here's 30 cents,' and I went into business."

The speaker told how he and a boy friend had made their first money by selling cider made out of dried apples to a circus day crowd.

"I was one of the original tramp printers after Franklin," he continued. "I don't suppose there is a town in Wisconsin that I haven't gone into 'broke' and come away with a towel or something that I had borrowed. I wasn't one of the tramp printers that fall down-stairs drunk just about the time when you are going to press. No, I was one of those angels of light that drop in when you have a column of stuff to set and nobody to set it, and who are then asked home to dine with the editor's family."

Rev. J. H. Remston spoke of "Proofs" and found Franklin one of the "proofs" that needed little revising by the Author. This would not have been considered orthodox at one time, but the orthodoxy has broadened and Franklin was a broad man who looked upon worthy services to humanity and love and worship of God as the cardinal principles in religion, while creed often proved a fetter to useful living.

Judge Orrin N. Carter, who has concluded that his friends want to make him the Governor of a free people, though while running for judge he made the mistake of having it proclaimed that he would have no printing for his party done by an office that did not wear the badge of slavery in the shape of "Union Label," spoke of Franklin as born with the newspaper instinct and said:

"He was the most popular newspaper writer of his time. He did not think it the business of the newspaper to make trouble or to attack the reputation of public men without cause. He was perhaps the most illustrious printer the world ever has produced. Like Lincoln, he was true to his country, regardless of all consequences to himself. In simplicity and in all-round development he stands foremost of Americans for all time. We have had men great in their chosen lines, but only one Franklin, who was great in all."

We doubt whether any newspaper man of the present day, worthy of the name, "think it the business of the newspaper to make trouble or to attack the reputation of public men without cause," however it may be with judges. We are glad that Franklin was like his successors in this. The only trouble is that there is generally, at least too frequently, a cause, and narrow-mindedness, conceit and prejudice are among the best causes when a man holding a judicial office is concerned.

Charles Eugene Banks recited a poem entitled "There Is Good in Everything." He was poetically right, though it is hard to realize the good there is in a mosquito when suffering from its bite, or in malaria when burning with fever. It takes both a poet and philosopher to discern.

Then William Lightfoot Vischer told stories for the amusement of the boys. He used to be an editor and President of the Washington State Press Association, and has written some good poetry as well.

Printer Franklin Hudson, of Kansas City, and President of the United Typothetæ of America, graced the occasion with his presence as an honored, invited guest. He spoke a few words expressive of his pleasure at being present with his Chicago brothers in the calling, and of his desire to promote the best interests of the calling and of the United Typothetæ of America, of which he was proud, through the kindness of its members, to be for the time being the executive.

"A Lawyer's Views of the Printing Industry" was a theme ably handled by Hon. C. P. Johnson.

Similar celebrations were held by the members of the organization in nearly all the large cities, but the accounts of the four, New York, Chicago, Cincinnati, Connecticut, are sufficient to satisfy our readers that the name of Franklin is well remembered and wisely revered throughout the nation.

NEW YORK TYPOTHETÆ.

The New York Typothetæ honored Benjamin Franklin in the usual festive manner by a banquet at the Hotel Savoy on the night of January 7, beginning at seven o'clock. One hundred and forty guests were present. The menu was of the best and richest. The after-dinner speeches were eloquent and entertaining as well as instructive.

Mr. J. H. Canfield spoke to the toast, "Franklin as a Typical American." He placed the American citizen on a lofty pinnacle of worth, broadness of character, and enterprise, and spoke of Franklin as the true American type. He had the independence of thought, the aggressiveness and

the activity that enter into the character of the American citizen; with indomitable industry, perseverance and calm self-reliance that win highest, truest and most enduring success. His patriotism knew no swerving, his faith in his country's destiny never faltered.

Rev. D. Parker Morgan talked of the relation of "The Pulpit and Press," opening with a humorous story about the protection given to the printer's devil by the poets when fought by the clergy. He pronounced a eulogy on the newspaper press as the aider to the pulpit in spreading broadcast all that was of highest inspiration and worth in the sermons of ministers who really had a message of truth, instruction, spiritual and moral uplifting to deliver.

Col. William D. Brown, in speaking "A Few Things About Franklin," rapidly sketched the noble deeds and achievements and the career of Franklin the printer in an entertaining, eloquent, pleasing and instructive manner.

Dr. J. H. Finley's toast was not previously announced. He gave "Cadmus" as his theme when he rose to speak, saying that he had determined to have a subject concerning which his hearers were as ignorant as himself—a theme that would be original in itself at least. He could find but six lines in the encyclopedia relating to Cadmus, so he had delegated Paul N. Ford to find out. Cadmus was an old-time printer and had been honored with having a style of letter named after him. Although the Cadmean series was three thousand three hundred and forty-four years older than the DeVinne and originated 1450 B. C., it was yet used in our best universities and is affectionately called "the Old Greek." This, too, though there are only sixteen different characters. He was a wise man of the East who went West in search of his Europa and founded a city. He was a bold man and slew a dragon, whose teeth he sowed and raised a crop of fierce armed men, who formed a union. Becoming troublesome he slew all but five by throwing the imposing stone upon them. He became a man of blood and had to do penance for eight years. He died, as did his lovely wife, and snakes guarded their graves while their spirits departed for Elysium. He was not the last printer to have snakes attend him to his grave, nor, it is to be hoped, the last of the craft whose spirit has departed for the sweet Elysium fields of the blest. This was not Mr. Finley's speech, but, all the same, the speaker developed much sport in his talk about this old-time printer.

J. Hopkinson Smith responded to the toast, "The Artist as Related to the Printer." He showed the spirit of the enthusiastic artist and said that the art and beauty of printing would live forever. He may have been slightly ironical in the statement that it was sufficient glory and compensation for a printer to know that the work was good if he never got a cent ahead, or it might have been simply the outpouring of the genuine artistic spirit.

Mr. J. Stearns Cushing of Boston, Secretary of the United Typothetae of America, was the last speaker. He responded to "Our Sister Organizations." He evidently was not in love with the naughty and unreasonable methods and prevailing spirit of one of these sisters, the Typographical Union. He showed the wickedness in spirit and practice of this modern daughter of selfishness, jealousy, hate and anarchy, and exhorted all worthy master printers to get closer together in order to be able to resist the outrages perpetrated by the union, in the abused name of labor, for the destruction of personal liberty and of the right of every man to conduct his own business, or to seek employment and make an honest living without molestation, prejudice, intimidation or danger of bodily harm.

President Joseph J. Little presided. The other officers of the New York Typothetae are Theodore L. Devinne and John C. Rankin, Jr., Vice-Presidents; E. Parke Coby, Secretary; Charles H. Cochrane, Recording Secretary; and Horace G. Polhemus, Treasurer.

CINCINNATI TYPOTHETÆ.

February 3, 1900.

The National Printer-Journalist.

Gentlemen: The Franklin banquet was a success and enjoyed very much by those who were there. Among the guests were Geo. H. Hoadley, Jr., who read an unpublished letter from Benjamin Franklin which was very humorous, and something entirely new to the guests. Dr. Chas. E. Walton, who was another guest, had a pleasantly written paper on the printer who could eat his lunch as he walked along the street.

President William A. Webb presided, and with his customary grace and dignity made everybody feel that they

were there to enjoy themselves, and his jokes and remarks helped digestion.

During the evening one or two of the members entertained the crowd with songs that called for more to come next year, and before they adjourned all joined in singing The Star Spangled Banner.

Mr. Pugh, Mr. Carpenter and Mr. Hill entertained the guests with short speeches that were to the point. Among those present were Wm. A. Webb, W. B. Carpenter, A. H. Pugh, Alexander Hill, A. McDonald, S. Rosenthal, H. S. Rosenthal, E. F. Evans, L. Evans, J. E. Richardson, H. J. Anderson, John Sullivan, Michael Sullivan, Andrew Van Bibber, Rob't Allison, C. J. Krehbiel, Harry Woods, Geo. Blum, Allen Collier.

At the next meeting of the Typothetae the officers for this year will be elected.

Yours truly,

GEO. C. JAMES, Secretary.

KANSAS STATE PRESS CONVENTION.

(Reported by J. W. Morphy, Secretary.)

The Kansas Editorial Association met in annual session at Fort Scott, January 22. The sessions began with an evening meeting which was in the nature of an informal reception. The address of welcome was delivered by Gen. J. H. Rice, a veteran in newspaper work in Kansas and Missouri. The response was by President George W. Martin of the Association. This was followed by an entertaining programme arranged by the people of Fort Scott. At the morning session the regular programme was taken up.

A decidedly interesting feature was an address by Col. R. J. Hinton, one of the newspaper correspondents who represented Eastern anti-slavery papers in the Border Ruffian and Civil War period. He spoke at some length of the journalists, who were his associates. The question-box, by Editor B. B. Herbert, of the National Printer-Journalist, was a valued feature which elicited considerable interest. In his paper on the "Protection of the Material Interests of Kansas," Col. D. R. Anthony took a vigorous position in opposition to the paper trust, and called on the newspapers of Kansas to take up the fight. His remarks were received in a spirit which tended to indicate that the members were with him.

The question of establishing a Kansas magazine was introduced in an able paper by President-elect L. F. Randolph, Nortonville News. The matter was referred to a committee after extended discussion. "A Few Requisites to Success in a Country Newspaper" was the subject of a paper by Gomer T. Davies, Concordia Kansan. John W. Conway, Norton Champion, read a paper entitled, "We, the Editors," which was decidedly unique and original.

The Association committees were as follows: Auditing—Gomer T. Davies, Concordia Kansan; John Q. Royce, Phillipsburg Dispatch; John F. Roe, Chanute Blade. Resolutions—W. Y. Morgan, Hutchinson News; Charles F. Scott, Iola Register; W. H. Nelson, Smith Center Pioneer; John W. Conway, Norton Champion; D. R. Anthony, Leavenworth Times.

The following officers were elected: President—L. F. Randolph, Nortonville News; Secretary—Gomer T. Davies, Concordia Kansan; Treasurer—F. C. Raney, Fort Scott Lantern; Vice-Presidents—D. R. Anthony, Jr., Leavenworth Times; C. C. Thomas, Moran Herald; John F. Roe, Chanute Blade; J. M. Mickey, Osage City Free Press; D. A. Valentine, Clay Center Times; W. H. Hill, Hill City Republican; J. W. A. Cooke, Ellenwood Leader.

Delegates to the National Editorial Association—Ewing Herbert, Hiawatha World; F. W. Elliott, Troy Times; Charles Sprague, Olathe Mirror; W. T. McElroy, Humboldt Union; Belle L. Harbaugh, Erie Republican-Record; Harry H. Lusk, Parsons Sun; W. F. Hill, Westmoreland Recorder; D. A. Valentine, Clay Center Times; H. A. Perkins, Manhattan Nationalist; Edith Meredith, Hutchinson Herald; E. J. Westgate, Garden City Sentinel; Arthur Capper, Topeka Mail and Breeze. There are some vacancies yet to fill, the matter being left to Executive Committeeman W. H. Neison.

After the work of the meeting was over, a reception, prepared by the people of Fort Scott, was enjoyed. On the following morning a large party started on the excursion to Galena, Kansas, where the immense zinc and lead mines were examined and the hospitality of the people of

that busy city accepted. The entire day was so spent, after which a smoker at the opera house was given. A particularly happy occasion it was. The impressions made by this visit were very pleasant. The information gained relative to one of the greatest wealth-producing sections of the United States was of great practical value. A trip was made by about forty of the party to Joplin, Mo., on the 25th, and more pleasure was enjoyed and additional valued information acquired. It is questionable whether the Association ever enjoyed a more interesting or instructive meeting and excursion, and it is quite certain that no cities ever made a more energetic effort to treat the boys well.

PRESIDENT OF THE CONNECTICUT PRESS ASSOCIATION.

C. H. Scholey, Jr., was born in the city of Meriden, Conn., Sept. 6, 1860. Early in life he possessed a consuming ambition for the printing business, which, later, he had an opportunity of learning in the job offices of his native town, later conducting a small job business of his own.

In the fall of 1889 he went to New York City and was manager of a store at 703 Broadway for The Kelsey Press Co., of Meriden, Conn. This lasting but a few months, found him, like Micawber, "waiting for something to turn up." He landed at Guilford, Conn., with his wife and child, on New Year's night, 1890, with very limited capital. Guilford being without a printing office, he thought it afforded an opportunity for at least a scant living. He opened a small print shop with an eighth medium Gordon press with leg-power attachment. Here it was a game of guess and wait until the fall of 1895, when E. G. Allis, the proprietor of The Shore Line Times, by reason of ill health, was compelled to seek a purchaser for his plant, then located in Fair Haven. Mr. Scholey, having been a correspondent for

C. H. Scholey, Jr.,
Proprietor of the
Shore Line Times,
Guilford, Conn.

that sheet from Guilford, the proprietor suggested a sale to him, and received the reply, "If newspaper plants were selling for a dollar each I couldn't buy a shooting stick."

Mr. Allis, however, made the terms easy and with good friends about him Mr. Scholey secured the plant in less than five hours.

The new proprietor took possession on November 18, 1895, and moved the plant to Guilford, 17 miles east and right in the center of the paper's circulation district. By hard work Mr. Scholey came out on top and to-day is the owner of one of the best equipped country offices in the State, issuing a paper second to none of its class, with a circulation nearly double the credit given it by the gentleman in New York, and with a job department doing a snug business. The paper was established by H. W. Vaile in 1877.

NEW ASSOCIATION IN SOUTH DAKOTA.

The Republican editors of South Dakota met at Sioux Falls, January 18, and formed a Republican Press Association with the following officers: President, J. F. Halladay; Secretary, J. Tomlinson, Jr.; Executive Committee, the two above named and L. C. Taylor, J. E. Patten and John Longstaff.

PROSPERITY ON THE PACIFIC COAST.

Two Great Coming Booms Foretold.

Editor Printer-Journalist:

Two great mining booms are coming on the Pacific coast this year. One will center at Cape Nome, Alaska, and the other at Sumpter, thirty-two miles from Baker City, Ore. It is estimated that 30,000 people will rush to the wonderful beach diggings and frozen creek-beds on Bering Sea, and from present indications fully as many will pour into the new Webfoot Eldorado.

The much-used phrase, "Klondikes at Home," first appeared as the title of a chapter in a little book issued by the Oregon Railroad and Navigation Company, in 1897; and it has already become a splendid reality in the Eastern Oregon mining districts. Over 5,000 mining locations have been made; scores of paying mines and hundreds of promising ones have been opened up, and many handsome fortunes have been taken out. Stamp mills and mining machinery are going in by train-loads, and the whole vast mineral-bearing region of 14,000 square miles is being dotted with new and flourishing mining camps—of which the most notable is Sumpter, in Baker county.

It is a young wonder. Two years ago it was unheard-of, except as the camping place of a small detachment of United States troops the day Fort Sumter was fired upon. A year ago it was a cross-roads village with perhaps 150 inhabitants, and in May, 1899, it had about 250. In January, 1900—less than eight months later—it is a rushing, bustling little city of nearly 3,000 population, with over 100 business houses, including stores, banks, hotels, restaurants, saloons, theaters, breweries, real estate and assay offices, and all the other boom mining-camp establishments. It has churches, good schools, live newspapers, telegraph and telephone, a \$75,000 waterworks plant, a stalwart fire department, and is lighted by electricity. With four hotels, six restaurants and ten lodging houses, a contract has just been closed for a \$100,000-hotel. Eight brick blocks and nearly 100 less pretentious business houses are now going up. In mid-winter snow and cold, carpenters and bricklayers are working at big wages, every hour of daylight; and yet people are pouring in faster than roofs can be reared to shelter them. Many are living in tents and shacks.

Real estate is kiting skyward. A lot that a Portland drummer named Collett had to take, two years ago, for a debt of \$100, has just been sold for \$2,250; and one for which Ed. Geiser paid \$200 in November, 1897, brought \$7,000 in November, 1899. Last November Mr. Mayer leased a business room for a year at \$50 a month, and in December he re-let it for the remaining eleven months of his lease at \$100 a month. For the week ending December 18, 1899, the real-estate business, including town lots, mining claims, bonds, mortgages and releases, amounted to \$136,604—more in that line than was done during the same time in St. Paul, with 175,000 population. The town handles, by rail and stage, over 3,000,000 pounds of freight a month, and has risen, in little over six months, from nothing almost to the size of Deadwood in the palmiest days of the Black Hills.

The Sumpter boom is the biggest and liveliest thing of its age on the Pacific Slope to-day, and it has seemingly come to stay. The town is literally built on golden rock. It is walled in by mountains of gold-seamed quartz, and all its streams roll over golden sands. It is the center and supply and distribution point of hundreds, if not thousands, of square miles of gold-bearing territory, whose riches pass all ordinary computation.

In the very borders of the town, in the shadows of its churches and schools, banks and hotels, a lot of Chinamen are washing out gold enough on the Ellis placers to pay \$320 a week in royalties, and the Downey placers, about a mile south of the railroad depot, are paying handsomely. Every river, creek and rivulet for fifty miles around carries golden dust and nuggets in its sands.

Six miles north of the town is the famous Cracker Creek district, where the Eureka and Excelsior mine has produced \$250,000 a year; The North Pole, located and abandoned as worthless a dozen times, which is now yielding over \$100,000 a year; the Golconda, which yields \$150,000 a year, and in which ore was recently struck that runs from \$100 to \$10,000 to the ton, some of it going \$10 to the pound; the Columbia, which could have been bought not long ago for \$1,000, and is now producing over \$100,000 a year; the Ibex, which was sold last February for \$65,000, and resold in December for \$300,000, and whose product for this year

is estimated at the full amount of its purchase price; and a hundred other productive or prospective bonanzas.

Eleven miles northwest of Sumpter lies the Cable Cove district, abounding in rich mines and prospects; and fourteen miles northwest is Granite, the center of a score of mines that would be wonders anywhere but here. Four years ago the owners of the Red Boy were too poor to pay freight charges on a small shipment of material. They managed by hard hustling to borrow the necessary money, and the mine is now turning out \$27,000 a month, or over \$300,000 a year, in gold bricks—and negotiations are pending for its sale to a London syndicate at \$3,000,000. The Cougar, Montana, Bellevue, Magnolia, May Queen, Little Giant and scores of others are among the sure bonanzas of the camp.

Sixteen miles west of Sumpter, on the same vast north-east and southwest mineral dike, on which are all these mines, is the Bonanza, whose history dwarfs all the romances of the Orient. A half-interest in it could not be sold, a few years ago, for \$250. A young boy, driving an express wagon in Baker City, took hold of it; and, with the aid of his mother and sisters, developed it till he was able to sell the control of it for \$750,000. Now, with a forty-stamp mill, it is paying \$40,000 a month, and is said by experts to have from \$5,000,000 to \$8,000,000 of ore in sight. In the same neighborhood are the Don Juan, Imperial, Pyx, Phoenix, Banzette, Snarr, Intrinsic, Van Anda and scores of other great dividend-payers in the present or near future, including the Diadem, which has just been capitalized at \$1,000,000.

About twenty miles west of the Bonanza, and thirty-six miles from Sumpter, is the Susanville district, whose placers are panning out tens of thousands of dollars every year, and where the Badger, Cabell, Stockton and Skyscraper bid fair to take their places among the big producers. And at Canyon City, fifty miles southwest of Sumpter, where \$2,500,000 has been washed out of the placers, is the Great Northern mine, from whose \$200,000-to-the-ton ore Ike Guker picked a fortune with a hammer and an old pocket-knife.

All over this gold-strewn wonderland new discoveries are being daily—almost hourly—made. During the first week in December, Prospectors Culbertson and Bee located two claims five miles southeast of Sumpter, and six days afterward sold them for \$20,000. From a small piece of float rock on the just-found Concord, nearly \$200 was pounded out in a mortar. On the old Sumpter and Granite stage road, eight miles northwest of town, a ledge of ore two miles long, and running \$29 to the ton in free gold, was found December 10; and J. B. Stoddard has just discovered that his timber land adjoining Sumpter on the south yields \$1.50 a cubic yard as gold-placer, and a thousand or ten thousand similar cases might be mentioned.

All this vast and as yet almost unexplored mineral empire is tributary to Sumpter. Every ton of machinery and supplies brought in must come through Sumpter; and every ton of ore and concentrates, and every pound or ounce of bullion, dust or nuggets shipped out must go through Sumpter. It is the metropolis of what promises—with every probability of fulfilling the promise—to rival Cripple Creek, the Klondike and the Transvaal, as a Bonanzaland—a "Klondike at Home."

P. Donan.

SOUTH DAKOTA PRESS ASSOCIATION.

Another of the very successful conventions of the past month was that of the South Dakota Press Association at Sioux Falls on January 17 and 18.

"The Print Shop in Franklin's Time," by E. Stough of South Dakota Newspaper Union, proved a paper of historical interest, showing the condition of the printer's art and of newspaper making in Franklin's time, tracing briefly the improvements of later years; treating of the first newspapers, the old presses, crude inking methods, hand paper-making, the first iron and power presses, the old method of two-color printing, the introduction of stereotyping, and, finally, machine composition.

William O. Clough of the Egan Press, proved, under the topic, "The Editor a Liar,"—not in haste but most deliberately,—that the members of all callings are liars, if not in words, in acts and by repressions. Of the necessity for often repressing truth in the newspaper calling, after showing that the clergy, the physician, the lawyer and others were open to the same charge, he said:

"And in that representative capacity, where printed words

as beacon lights or breakers, the editor becomes somewhat more than the servant of his readers; somewhat more than the chronicler of events; for with his finger on the pulse of the people and his eye on the future, he shall either guide the formation of the composite opinion of his community or fail ignominiously in duty. If he succeed his success must come through avenues similar to those through which other people pursue the purposes of their lives. If he succeed he must have recourse to all the arts by which people in other vocations carve their way up to positions of distinction and of leadership; for by virtue of his position he will be a leader or a dog. If he succeed he must be the accurate judge of what is matter for the public eye to look upon, what is matter for the public mind to feed upon, and he must be the arbiter of the time and manner in which knowledge of principles and events evolved in convocations of people and movements of parties shall be given to the world.

"In his actions along this line he will do well to keep in mind that a truth prematurely told is more dangerous and perhaps more disastrous than a silent lie, or a half-truth served in faultless style for hungry, prying minds to feed upon.

"Editors are denominated liars when, speaking of the virtues of a man, they are silent about his vices. They are called liars when they publish inconsequential common-places, rather than betray confidences which have been reposed in them. They are classed as liars for advocating the predominating virtues of a principle and passing over in silence its inferior weaknesses.

"Again, they are denominated liars for deferring accusations of crime, or imputing it to other sources, that justice may not be defeated by premature disclosures of opinions and plans of action. In a general way, they are classed as liars when they go contrary to the blind prejudices of humanity, or disagree with the 'other fellow.'

"For all of these caustic characterizations which can only provoke a deep-seated smile on the face of the tactful, long-range, far-seeing editor, there is the comforting promise which shall justify his well-meaning digressions from truth of the 'Yea, yea and nay, nay' sort, that society and the world may be benefited by his act, and though living sometimes under the shadow of a lie he shall find his final justification in the uplifting of mankind and in the progress of the race.

"ARE WE LIARS?"

"Are we liars? Yes, because there are vices which must be covered in order to be smothered, and we are to help cover them with the cloak of silence.

"Liars? As truly as that the 'right hand must not know what the left hand doeth.' And we shall continue to be liars as long as prejudice lives in the heart of man to inspire attack on that which it does not comprehend—as long as ignorance lives to combat intelligence—as long as selfishness lures man away from his 'pathway to the stars.'

"When the world becomes one in thought, purpose and desire, and these three reach upward as with a single hand to grasp the ultimate truths of the ages, for truth's sake—then the editor need no longer parade half-truths in fantastic garb to catch an eager eye or to satisfy the cravings of morbid mind; but until that happy day arrives he will do well to remember that while the truth is all right in its place he must be careful how he uses it, and in those pivotal points in his career where printed words mark the crises of his life he shall in the last resort have one unfailing choice—"Tell the truth or trump."

Editor Levi D. Wait gave practical views on the theme, "The Country Editor—Should He Be a Political Philanthropist or a Business Man?"

He said in part:

"With industry and economy I entertain strong confidences that a man engaged in the vocation of a country publisher can succeed; but indolence and inattention to business will be sure to result in ruin and disgrace. The man who is industrious is the man who invariably meets his obligations promptly and earns his money before he spends it.

"A man in this age and year cannot practice running into debt unless he is positive of seeing a way in which to get out again. Neither can he put off until to-morrow that which can be done to-day. Money costs too much if not honestly acquired. Merchants do not appreciate the necessity of being obliged to carry an ad in the columns of a newspaper or of placing job work with a defunct institution in order to clear up some old score. It is better to deal

with patrons as one business man deals with another—not in begging our way through, but in giving to the world a little compensation for a right to a place within its boundary."

N. C. Nash of the Sioux Valley News, in speaking to the question, "Does It Pay to Be an Independent Editor?" thought the aim should always be high and the motives pure, and then when we shuffle off this mortal coil, if it can be truly said that our independence has helped lift the community in which we have labored to a higher plane; if we have promoted thinking in the minds of the people; if we have destroyed the sting of the party lash; if we have succeeded in teaching the bosses that only clean men must be nominated; if we have demonstrated that political honesty is just as essential as business integrity; if we have convinced ourselves that others may hold opinions different from or opposed to ours, and yet be as honest in their views as we are; if we have contributed as best we could to the increase of that broad "charity which covereth a multitude of sins," by our independence, we have established the proposition and our lives will answer in the affirmative the question:

"Does it pay to be an independent editor?"

There were discussions on sundry subjects under the caption: "An Hour in the Hell Box."

This was followed by an informal address by J. Tomlinson, Jr., of the Argus-Leader, on "The Building of a Daily Paper."

"The Hand that Holds the Pencil" was the theme of a poetical paper by South Dakota's famed poet, M. C. Brown of the White Lake Wave.

We present the following two stanzas:

We read of mighty powers
That are felt for right or wrong;
We have had them kept before our minds
In poem, prose and song.
There's the "hand that rocks the cradle,"
And the "hand that writes the dun;"
There's the "man before the public,"
And the "man behind the gun;"
There's the "boy that minds his mother,"
And the "Jack that takes the pot;"
While the "hand that wields the slipper"
Seldom fails to touch the spot.
Strong and potent are the forces
That against our lives are hurled;
But the hand that holds the pencil
Is the hand that prods the world.

Pencil pushers of the nation,
In whose hands the weapon lies;
Ponder well the aim and object,
Ere the pointed arrow flies;
Dealing gently with the erring—
Still, denouncing all the wrong;
Ever just in condemnation,
And in virtue ever strong.
Let your shafts be keen, yet kindly,
Never venom-tipped nor vile;
Seeking where a teardrop trembles,
To replace it with a smile.
And while o'er our smiling planet
Heaven's azure is unfurled,
Let the hand that holds the pencil,
Be the hand that helps the world.

J. N. Patton, of the Salem Special, read a five-minute paper on "Labor-Saving Machinery."

C. F. Allen, of the Brookings Press, brought out the fact that he had just closed the twenty-first volume of his publication, and he found upon looking over his files that he had gained four weeks. He wanted to know how this could be avoided.

E. S. Danforth, of the Vermillion Republican, had for his subject "The Case, the Press, Rollers and Type."

Ora Williams, of the Press, spoke on "The Make-Up of a Paper for Reader and Advertiser."

J. F. Halliday, of the Iroquois Chief, had for his topic, "Breaking the Devil."

L. C. Taylor, of the Alexandria Herald, had a talk on "What Price Should Be Charged for Patent Medicine Advertisements?"

Clate R. Tinan, of the Kimball Index, read a paper on "Mutual Insurance for the Country Newspaper."

Joseph Freudenfeld, of the Equitable Insurance Com-

pany, was present, and in response to an invitation made a few remarks on mutual insurance.

Clate Tinan, the representative of the state association on the national committee, made some remarks regarding the sending of delegates to the national meeting and the expense which would be incurred thereby. He thought the state association should pay the dues of the delegates.

After electing the following delegates to the National Editorial Association, the convention adjourned sine die:

N. C. Nash, of Canton; C. F. Allen, of Brookings; Harry Wenzie, of Pukwana; T. B. Roberts, of Armour; C. C. Fletcher, of Aberdeen; C. E. Nevin, formerly of Plankinton, and L. C. Taylor, of Alexandria.

The attendance and the interest shown was greater than at any previous meeting. The local entertainments, including a musicale and smoker, were greatly enjoyed.

ADDITIONAL CONVENTION NOTES.

MEMPHIS.

One of the days of the editorial trip to New Orleans will be taken up with a visit to the Southern city of Memphis, Tenn. The cuts of Memphis scenes appearing in this issue were furnished through the courtesy of the gentlemanly publisher of the Evening Scimitar. The first page of the Art Supplement to the Greater Memphis Edition of that paper presented in this issue will also attract interested attention. This "Art Supplement" contained eighty pages, printed on book paper, five columns to the page, splendidly illustrated with halftones and replete in facts and statistics as to the commercial, cotton, educational, railroad, manufacturing and other interests of Memphis. In portraits of bright men of business and in all lines of effort, and in the tasteful houses presented, as well as in the showing of the great cotton and manufacturing interests, we have seen no publication that could be considered superior. No one can

J. J. Williams, Mayor of Memphis.

glance over its artistically printed pages without having a very high opinion of the city which it so grandly represents.

On January 9 the Commercial-Appeal of Memphis printed what its publishers termed the "Choctaw Edition," in honor of the opening up of the Choctaw, Oklahoma & Gulf Railroad, that told a story of commercial enterprise and development unsurpassed by any city approaching the size of Memphis. From this issue of the Memphis Commercial-Appeal we present the following enumeration of advantages, or bird's eye view in word picture, that can but be of interest to every American editor, showing as it does the commanding commercial position of Memphis, which has:

The largest hardwood lumber market in the world; the largest inland cotton market in the world; the largest producing center of cottonseed oil in the world; the largest producing center of cottonseed cake and meal in the world; the largest snuff market in the world; the largest coffin manufacturing center in the South; the largest plant given over exclusively to furniture manufactures in the South; the second largest furniture and fixture manufacturing center in the South; the largest boot and shoe manufacturers and jobbers in the South; the largest wholesale dry goods house in the South; the largest wholesale drug house in the South; the only wholesale rubber house in the South; the second largest lumber market in the world; the seventh boot and shoe market in the United States; the ninth wholesale grocery market in the United States; the twenty-seventh city in the United States in volume of business; the twenty-ninth city in the United States in population; the second largest wholesale grocery market in the South; six commercial banks with a capital of \$3,500,000; seven savings banks with a capital of \$300,000; six fire insurance companies with a capital of \$800,000; nine cotton compresses; nine cottonseed oil mills; eleven trunk lines of railroads; twenty-two local river packets; the head of all-the-year-round navigation on the Mississippi; a bridge across the Mississippi River that cost \$3,500,000; six business exchanges; two gas companies; one electric light and power company; two telephone companies; two telegraph companies; five express companies; two mercantile agencies; one hundred and twenty miles of sewers; one hundred miles of electric street railroad; fifty-five miles of paved streets; two hundred and ten miles of county turnpikes; artesian water of very best quality and an unlimited quantity; most healthy climate and a death rate of only 12.62 per thousand of resident population; stands sixth in health list of the census of 1890; four hundred and fifty manufacturing enterprises; volume of business in 1899 (estimated) \$250,000,000.

VICKSBURG.

A sufficient hint of what Vicksburg has to present is given in quotations from the local papers of that city appearing in the composite article in this issue, entitled "Echoes From the Southland."

The following letter will show what the people of that historic city propose to do for the editors:

Vicksburg, Miss., January 31, 1900.

B. B. Herbert, Esq.,

President National Printer-Journalist Co.

Dear Sir: I have delayed answering your letter of the 18th until the committee formed for your entertainment here could arrive at some definite conclusions. The committee had a meeting yesterday, and agreed to tender you a special train on which to visit the National Cemetery; also to give your party a trolley-ride around the city, or as many of them as could be accommodated conveniently. The committee also suggests that you name some hour, say about 12:30 noon, at the hotels where the citizens generally could call upon the visitors and pay their respects to them. Of course the hours for the several excursions in contemplation can only be fixed when it is ascertained just what time you propose to arrive and depart, and the committee will try and conform their arrangements to the convenience of the visitors. When plans are complete we shall be glad to hear from you respecting your trip to Vicksburg. Hoping then to renew our acquaintance, I remain,

Yours respectfully,

E. C. CARROLL,
Business Manager.

After our January number was in print, letters from President R. H. Henry reached this office adding to the program as printed a supper and reception at Baton Rouge, the interesting capital of the State of Louisiana.

The local Bachelors Club, of Jackson, have also taken under their direction the presidential reception.

Secretary J. M. Page has also notified the National Printer-Journalist that General Passenger Agent McCormick, of the Southern Pacific, has tendered to the editors an excursion to Southern California and return. The arrangements for this delightful trip will be completed at New Orleans. Any member of the National Editorial Association who, by any chance, has failed to receive a copy of the January issue of this paper containing the program of and arrangements for the convention in detail will be furnished with an extra copy on application by

letter or postal card to this office. These matters are so fully given in the extracts from papers of Louisiana and Mississippi, printed in this number, that it was not thought necessary to reprint here, as had been at first intended, the program.

I. H. Levy, of Eutwa (Alabama) Mirror, suggests that it would be a very pleasant arrangement for the delegates from each association to the New Orleans convention to supply themselves with a sufficient number of ribbon badges to exchange with delegates from other States. There will be between three hundred and four hundred delegates, so that if each delegate procures a full set that many badges would be required by each.

NEW JERSEY DELEGATES.

H. C. Page, Executive Committee Member, Herald, Bay-ome; H. E. Pearsoll, Standard, Westfield.

PENNSYLVANIA DELEGATES.

R. T. Wiley, Herald, Elizabeth; H. P. Snyder, Courier, Connellsville; James M. Laird, Argus, Greensburg; S. B. Cochrane, Tribune, Kittanning; R. B. McKee, Journal, Freeport; C. A. Stephenson, Star, Reynoldsville; J. H. Sheibley, Advocate and Press, New Bloomfield; A. Niven Pomeroy, Repository, Chambersburg; W. C. Kreps, Echo-Pilot, Greencastle; A. B. Burk, Ledger, Philadelphia; J. W. Maloy, Record, Lansdale; Deitrick Lamade, Grit, Williamsport; Mrs. J. W. Stofer, Chronicle, Elizabethtown; Hiram Young, Gazette, York; J. W. C. Austin, Time Table Record, York; Harry W. Brown, Splinters, St. Clair; Wm. Rodearmel, Correspondent, Harrisburg; J. Barton Cheyney, Ladies' Home Journal, Philadelphia.

MINNESOTA EDITORS' AND PUBLISHERS' ASSOCIATION.

B. B. Herbert, Esq.

Dear Sir: The following are delegates to the convention; H. G. Hays, Dispatch, Sleepy Eye; Irving Todd, Gazette, Hastings; Hon. H. I. Peterson, Independent, Litchfield; L. P. Hunt, Free Press, Mankato; S. Tiebby, Democrat, Little Falls; Chas. J. Berryhill, Review, St. Paul.

Yours truly,
F. C. LISTOE,
National Executive Committee.

OHIO EDITORIAL ASSOCIATION.

Coshocton, O., Jan. 15, 1900.

Mr. B. B. Herbert, Editor National Printer-Journalist.

Dear Sir: I have your favor of the 27th ult., and in reply would say that the officers of the Ohio Editorial Association are: R. B. Brown, President, Zanesville; John M. Amos, Vice-President, Cambridge; C. B. McCoy, Secretary, Coshocton; E. R. Alderman, Treasurer, Marietta.

Delegates to New Orleans Meeting of N. E. A.—J. F. Lanning, Ohio Legal News, Norwalk; E. L. McMillen, Chronicle, St. Clairsville; C. C. Fowler, Dispatch, Canfield; B. J. McKinney, Times, Marietta; J. P. Mahaffey, Herald, Cambridge; W. C. McClintock, Star, Lebanon; J. L. McIlvaine, Advocate, New Philadelphia; A. S. Hoffman, Buckeye, Troy; H. E. Alexander, Signal, Zanesville; C. U. Shryock, Post, Zanesville.

Alternates—J. H. Williams, Chronicle, Norwalk; A. R. Eversole, Republican, Lancaster; F. M. McKay, Journal-Gazette, Logan; W. J. McMurray, Republican, Wapakoneta; J. O. Amos, Democrat, Sidney; Edward Wetzler, Eagle, Lancaster; W. C. O'Kane, Buckeye, Troy; Frank A. Helley, Tribune, New Lexington; D. D. Taylor, Times, Cambridge; J. S. Harris, Leader, Caldwell.

Very truly yours, C. B. McCoy.

DELEGATES FROM IOWA STATE PRESS.

A. W. Lee, Ottumwa Courier; C. D. Hellen, Fremau-Tribune, Webster City; Ira Nichols, Sentinel, Iowa Falls; Paul Maclean, Gazette, Creston; F. T. Piper, Mail, Sheldon; Ralph Robinson, Journal, Newton.

Yours very truly,

C. M. JUNKIN.

TENNESSEE.

Columbia, Tenn., January 15, 1900.

Following is the list of delegates and alternates to the National Editorial Association Convention at New Orleans:

Delegates—J. W. N. Burkett, Dispatch, Jackson; W. H. Griffin, Democrat, Union City; E. E. Adams, President, Democrat, Lebanon; A. B. Pickett, Scimitar, Memphis; H. A. Hasslock, Secretary, Nashville; W. J. Ewing, American, Nashville. Alternates—R. J. G. Miller, Banner, Nash-

ville; Thos. Boyers, Examiner, Gallatin; W. B. Romine, Citizen, Pulaski; Cy Lyle, Comet, Johnson City; Walter Holmes, Commercial-Appeal, Memphis; W. D. Fox, Free Press, Murfreesboro.

Yours truly,
LYNCH PERRY.

ALABAMA.

Bessemer, Ala., January 16, 1900.
Mr. B. B. Herbert, Publisher Printer-Journalist, Chicago, Ill.
My Dear Sir: Have just got a list of officers of the Alabama State Association from the Secretary. They are as follows:

President, R. N. Rhodes, Birmingham; First Vice-President, W. E. W. Yerby, Greensboro; Second Vice-President, Tom Garner, Tuscaloosa; Secretary, J. A. Rountree, Birmingham; Treasurer, W. M. Bunting, Florence.

Very truly,
WM. H. H. JUDSON.
OREGON.

B. F. Alley, Evening Republican, Baker City, National Executive Committee; B. F. Irvine, Times, Corvallis; D. I. Asbury, Reporter, McMinnville; Carl O. Roe, Chieftain, Enterprise; Miss Rose D. Michell, Daily Chronicle, The Dalles; Miss Laura E. Jones, Watchman, Drain; A. W. Cheney, Courier-Herald, Oregon City; Charles Nickell, Times, Jacksonville; Albert Meyer, Welcome, Portland; Isaac Stern, Hebrew News, Portland; Ira L. Campbell, Daily Guard, Eugene; A. Noltner, Dispatch, Portland; Max M. Shillock, Evening Telegram, Portland; J. H. Zane, Reporter, Portland; Geo. Peaselee, Drug Review, Portland; Mrs. Elizabeth Roudebush, Forest Home Companion, Portland; Albert Tozier, Secretary State Association; James S. Stewart, President State Association; B. F. Alley, National Executive Committeeman.

CALIFORNIA.

F. B. Mackinder, Star, St. Helena; Paul H. Moore, Facts, Redlands; G. A. Oakes, Journal, Hawgards; F. W. Richardson, Times-Index, San Bernardino; D. W. Ravenscroft, Courier, Petaluma.

J. E. Barnes, Valley Echo, Ione; D. McPherson, Sentinel, Santa Cruz; W. C. Brown, Cypress, Monterey; C. H. Smith, Home Gazette, Los Angeles; Mrs. S. A. Horton, Home Alliance, Woodland; W. D. Ponnycook, Secretary State Association; J. F. Thompson, President State Association; Raleigh Barcar, National Executive Committeeman.

I enclose copy of list as I have forwarded it to J. W. Page.

Yours,
RALEIGH BARCAR,
Nat. Com.

I will attend probably.

SOUTH DAKOTA.

Kimball, January 22, 1900.
National Printer-Journalist, Chicago, Ill.:

Gentlemen—The following delegates to the National Association Convention at New Orleans next month were elected at the winter meeting of the South Dakota Press Association, held at Sioux Falls, January 18 and 19: C. C. Fletcher, Democrat, Aberdeen; C. F. Allen, Press, Brookings; Harry Wentzy, Press, Pukwana; C. E. Nevin, Standard, Plankinton; N. C. Nash, News, Canton; T. B. Roberts, Chronicle, Armour; J. F. Halladay, Chief, Iroquois; L. C. Taylor, Herald, Alexandria.

Very truly yours,
C. R. TINAN.

RHODE ISLAND PRESS CLUB.

Arctic, R. I., Jan. 19, 1900.
B. B. Herbert, Esq., Chicago, Ill.
Dear Sir: Following is the list of delegates from the Rhode Island Press Club to the New Orleans Convention: Frank H. Campbell, Daily Times, Arctic; Richard W. Jennings, Daily News, Providence; Walter B. Frost, The Manufacturing Jeweler, Providence; William H. Farrally, Phenix, Bristol.

Very truly yours, Frank H. Campbell.

NORTH CAROLINA.

Lexington, N. C., January 19, 1900.
Hon. B. B. Herbert, Chicago, Ill.:
My Dear Brother—The following is a complete list of the delegates from the North Carolina Press Association who will attend the National Editorial Association in New

Orleans, La., February 28, 1900; H. A. London and wife, Record, Pittsboro; H. T. King and sister, Weekly, Greenville; J. B. Sherrill, wife and sister, Times, Concord; Jas. L. Boylin and wife, Messenger, Wadesboro; J. B. Whitker and son, Sentinel, Winston-Salem; A. D. Watts and two sisters, Mascott, Statesville; Rev. T. N. Ivy and wife, Advocate, Raleigh; H. B. Varner and sister, Dispatch, Lexington; W. C. Dowd, News, Charlotte.

Yours fraternally,
H. B. VARNER,
Ex. Com. Nat. Ed. Asso.

PENINSULA PRESS.

Chestertown, Md., Jan. 16, 1900.

Dear Mr. Herbert:

The delegates named to the National Editorial Association Convention from the Peninsula Press are as follows: Dr. C. A. Grise, Peninsula Methodist, Wilmington, Del.; Wilson M. Tyler, Gazette, Easton, Md.; C. J. Freeman, New Era, Middletown, Del.; Howard Melvin, Journal, Denton, Md.; C. W. Kenney, Laurel, Del.

Yours truly, Fred. G. Usilton.

IOWA—UPPER DES MOINES.

Editor National Printer-Journalist, Chicago, Ill.:

Dear Sir—The following is a roster of the delegates from the Upper Des Moines Editorial Association of Iowa to the New Orleans meeting of the National Editorial Association, 1900: Harvey Ingham, Upper Des Moines, Algona; W. I. Branagan, Democrat, Emmetsburg; Geo. A. Nichols, Republican, Estherville; J. E. Randall, Champion, Whittemore; Paul E. Stillman, Bee, Jefferson; S. C. Platt, Sentinel, Iowa Falls; A. H. Barnes, Eagle, Eagle Grove; C. A. Roberts, Messenger, Fort Dodge.

Yours truly,
A. M. ADAMS,
Ex. Com. and Sec. U. D. M. E. A.

Humboldt, Iowa.

BUSINESS NOTES.

For the illustrations of Mississippi scenes, "In the Cotton Field" and "At the City Cotton Sheds Market Away Down in the Land of Cotton," appearing in "Echoes From the Southland" this month, we are under obligations to the "New York Life Insurance Co." They were sent to this office on the request of President R. H. Henry.

"The Law of Newspaper Libel" is done up in neat pamphlet form by D. M. Butler, of Lincoln, Neb. The readers of the National Printer-Journalist have had the pleasure of reading from time to time able articles on this subject from the pen of Mr. Butler. His knowledge is practical and he speaks from careful study of the law and of recent trials in courts and decisions of able jurists in many States.

The Chicago office of the Unitype Company has been removed to a splendid suite of rooms in the new Williams Building at 200 Monroe street. The Unitype, as indicated by the facts shown by the splendid advertising pages shown in this magazine for this month, is making rapid progress. The Western manager, Mr. Robert W. Leigh, is a thorough newspaper man, well and favorably known throughout the West and South and thoroughly informed as to the wants of newspaper offices.

The Chandler & Price Company of Cleveland, Ohio, present a very attractive page this month in which facts important to the users of printing presses are succinctly stated. The features of strength and durability in their platen presses, as well as in their cutting machines, cannot be too highly commended. The two are co-ordinate. Strength is an essential to good work and strength in material and construction insures durability. Good work and durability are essentials to the securing of net profits. A

press must be equal to any strain that may be necessarily put upon it and still bring even and perfect results. A machine that is constantly breaking down, getting out of order or that wears out in a few years rapidly dissipates all profits that are realized on work. There is, as a general rule, not sufficient thought given to this matter of wear and breaking down in the press room. The result is that apparently prosperous printers, busy all the time; overworked to keep up with the growth of their business and to buy new presses, find at the end of a half a dozen or more years that they only have a lot of worn and worthless machinery. The profits have dropped into a bottomless well because they tried to economize by buying cheap machinery.

It should always be remembered that to strength, weight properly distributed is just as essential as is proper mechanical construction in any other particular. The Chandler & Price Press has both weight and proper mechanical construction.

The old and well-known A. D. Farmer & Son Type Founding Company has gotten out many pretty and useful faces lately, among them Engravers Title, Abbey Text Italic and Bradford Old Style. The latter series has been received with great favor by the craft, being especially suitable for all kinds of newspaper advertising and job work. A lot of new borders are also among the late specimens.

Charles Austin Bates has purchased a \$60,000 building lot at 206 and 208 West Forty-third street (corner Broadway), Long Acre Square, New York, and will erect a sixteen-story, steel-construction, fireproof building. The building is to be ready for occupancy on or before October 1, 1900. The top six floors will be used for Mr. Bates' own business.

The engraving and electrotyping departments will be on the top floor; art and literary departments on the floor below; business offices, magazine and newspaper departments on the fourteenth; and printing, binding, addressing, shipping and storage on the eleventh, twelfth and thirteenth.

The ten lower floors will be let, preferably to publishers or those in kindred businesses, and will be divided to suit their convenience.

The building will have its own electrical plant for lighting, and for the large electric signs overlooking Long Acre Square.

Long Acre Square is formed by the intersection of Broadway and Seventh avenue and runs from Forty-third to Forty-seventh street. It is directly in the hotel and theater district.

WEALTH IN NORTHERN ARKANSAS

Is the title of an illustrated pamphlet giving detailed information relative to the mining region of Northern Arkansas, conceded by experts to be the richest zinc and lead mining district in the world. This district, practically undeveloped, offers investors the opportunity of a lifetime. The pamphlet will be mailed free. Address J. E. Lockwood, Kansas City, Mo.

SELLING PUBLISHING BUSINESSES.

Two years ago I opened offices in New York to handle Publishing Property—to sell a paper to the best advantage by bringing it to the knowledge of the right party in the right way, and at the same time help the buyer get what he can do best with.

It works well. My services are highly valued by both sellers and buyers. Have sold papers from Maine to California for from \$1,100 well up into six figures, and I think every one who has bought or sold through me is well enough satisfied to come to me again for similar service.

My knowledge of publishing values and principles gained from successful experience as founder of a prominent general newspaper and such trade papers as "Power" and "The Street Railway Journal," enable me to grasp the strong points of a proposition, getting the owner's point of view without the disadvantages under which the owner labors in trying to sell his own publication. Am in touch with many interesting buyers, deserve their frankness and know what they want and can pay for.

Correspondence is sought with such owners desiring to sell, and with such responsible buyers as will give me their confidence and deserve mine. References besides mercantile agencies upon application. Emerson P. Harris, 150 Nassau St., New York.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 25th of the month preceding date of publication. Cash must accompany order.

WANTED—A young man with a small amount of money to invest wants a position as manager or editor, or both, of a weekly or small daily paper in a town of not less than 5,000 population, in the South or West. Is a college graduate and has worked at the business from pressroom to editorial chair for twelve years. Address "R," care the National Printer-Journalist.

THE VAN BIBBER ROLLER CO., Sixth and Vine Streets, Cincinnati, will give you the best rollers that can be made for any season or press. Our facilities are the best, and we use the latest compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

CHARLES AUSTIN BATES,

Vanderbilt Building, New York.

"Mr. Bates' masterpiece. It is interestingly and readably written—more readable than one would believe possible on so hackneyed a subject as advertising—and it is illustrated by pictures intended to lend a humorous turn to many of the sentences in the text. For those who want a general idea of advertising principles, the book will be found valuable, and even the readers to whom its subject is more than familiar will find it an interesting companion for a leisure hour. It is full of apothegms, every one of which rings with a true note."—Geo. P. Rowell.

EXPERT OPINIONS.

The December, January, and February numbers of the National Printer-Journalist are to hand. I have had some opportunity to learn the merits of various similar publications, and I have no hesitancy in expressing the opinion that yours is the best of any of which I know. It thoroughly covers the field and meets the wants of publishers. It acts as a constant and strong stimulus to greater and more successful endeavor.—R. L. HAMMOND, Fremont, Neb., Feb. 14, 1899.

I wish to express my appreciation of the National Printer-Journalist by inclosing payment for one year's subscription. I have been a reader of the Journalist for the past seven or eight years. I now consider it as important in the success of my business as any part of the office. I assure you that with it I have the advantage of my competitors. The National Printer-Journalist has improved from year to year, and I wish it success in the future.—W. G. YATES, Pierre, S. D., March 2, 1899.

“No More Cheap News Ink for Me.”

THE newspapers of this country for the past two years have been solicited, drummed, and almost persecuted by Printing Ink manufacturers who, having no reputation and no sales for Fine Grades of Inks, have been forced by their necessities to obtain a market for that grade of Ink which is easiest made and turned out in largest quantities. The result has been that so-called “News” Inks have been offered at a price so close to the cost that the manufacturer has been unable to turn out a properly made article, and in consequence there has arisen the greatest dissatisfaction among newspaper publishers at the muddy appearance of their papers and the filling up of their fine type. We have determined to give newspapers an absolutely first-class, dense black News Ink, and charge a fair price for it. The quotation at the top of this page is taken from many letters we have received from newspaper publishers who have written us asking for a News Ink that “will work free and clean, and print black.” One of the best printed newspapers in this country—the New York Commercial Advertiser—is printed with Ink of our manufacture. Any newspaper publisher who thinks this paper looks better than his own, we will be very glad to furnish with quotations for the same grade. Publishers who are satisfied to use an Ink solely because it is “cheap” we think will find from experience that there is no real economy in using anything but the best that can be made. Why spoil good paper—the item of cost of which is very large—with poor Ink, when the difference in cost between a good and poor Ink is so trifling?

Fred'k H. Levey, Pres't.
Chas. E. Newton, Vice-Pres't.
Wm. S. Bate, Sec'y.

PRINTING PRESSES

FOR ALL CLASSES OF LETTERPRESS WORK.

The Miehle

HIGH-SPEED, FOUR-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in eleven sizes, from 26 x 36 to 48 x 65. This press is built to do the finest class of printing, and is specially adapted for halftone work both in black and in colors. It is the standard Flat-Bed Press of the world today, as the producer of a greater quantity and finer class of work than any other press on the market.

The Miehle

HIGH-SPEED, TWO-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in six sizes, from 30 x 42 to 45 x 62. This press is designed for a little cheaper class of book and job work than our Four-Roller, differing only in the number of form rollers, having two instead of four; otherwise it is similar in all its other features, and is faster.

The Miehle

HIGH-SPEED, TWO-ROLLER, REAR DELIVERY, "RACK AND PINION" DISTRIBUTION JOB AND NEWS PRESS. Made in five sizes, from 30 x 42 to 43 x 56. Its method of distribution is "rack and pinion cylindrical" instead of "table." The class of work to which it is more specially adapted is newspaper and poster work. Felt packing used. It is very fast.

The Miehle

HIGH-SPEED PONY PRESS, TWO-ROLLER, REAR OR FRONT DELIVERY, "RACK AND PINION" OR "TABLE" DISTRIBUTION. Made in two sizes, 25 x 30 and 26 x 34. This press has a well-earned reputation for remarkable speed and the superior quality of work it does.

OUR NEW SHEET DELIVERY

Which delivers the sheet PRINTED SIDE UP OR DOWN, as may be desired, we put on all our presses with the exception of the "Job and News" and the smaller sized "Pony." This adds but little to the cost of the press to the purchaser and is a great convenience.

Bookbinders' Supplies

WE desire to call the attention of Bookbinders to the superior line of our manufactures, and we can assure our customers that the same careful selection of materials and the same excellent workmanship enter into all our manufactures in this line which characterize our general line of Modern Printing Office Furniture, now well-known and in use in all first-class printing establishments.

Joint Rods for Bookbinders....

No. 1—Quarto, 18 $\frac{1}{4}$ in. No. 5—S. Royal 24 $\frac{1}{4}$ in. No. 10—Small Quarto, 18 in.
 No. 2—Cap, 18 $\frac{1}{4}$ in. No. 6—Cap, 18 $\frac{1}{4}$ in. No. 11—Medium, 18 $\frac{1}{4}$ in.
 No. 3—Demy, 20 $\frac{1}{4}$ in. No. 7—Demy, 20 $\frac{1}{4}$ in. No. 12—S. Royal and Medium, 22 $\frac{1}{4}$ in.
 No. 4—Medium, 22 $\frac{1}{4}$ in. No. 8—Medium and Royal, 22 $\frac{1}{4}$ in. No. 9—Imperial, 24 $\frac{1}{4}$ in. No. 13—Imperial, 24 $\frac{1}{4}$ in.

THESE Joint Rods are made of hardwood and they are true and accurate. Unless otherwise ordered they are cut in lengths as given above, which allows about $\frac{1}{4}$ inch for overlapping ends of book. Order by number.

PRICE, 75 cents per dozen, any size.

Brass-bound Press Boards

OUR Brass-bound Press Boards are made of thoroughly seasoned, kiln-dried cherry, bound with extra-heavy hard brass, with folded corners and rounded edges. The brass binding strips are fastened with brass screws placed closely together. We guarantee them to be fully equal if not superior to any board ever placed on the market. All boards can be returned if not just as represented. We give price here of but one size, the standard size, 16 x 24. We can furnish, however, any size desired at proportionate price, and will quote on application.

PRICE (subject to usual discount):

16 x 24 inches, each,	\$2.75
Case to hold 18 boards,	5.00

Special quotations furnished on large orders.

Eighteen Brass Bound Press Boards in Case.

Bookbinders' Cabinet

MADE of best seasoned cherry, with bronzed pulls on each case, and highly finished. The cases are made in exactly the same style as printers' cases, and they are the same size and proportioned like one-half of the regular printers' cap case. These cabinets occupy a space of 20 x 20 inches, and may be put on or under a bench. "A place for everything and everything in its place" is a rule bookbinders should live up to, and these cabinets will enable them to do so.

Cabinet with 6 cases, weight 75 lbs.	\$ 8.00
" " 10 " " 110 "	12.00
" " 15 " " 150 "	16.50

(Subject to usual discounts.)

THE TWENTIETH CENTURY SUPERIOR ELECTRIC WELDED CHASE.

WHAT USERS SAY OF IT:

"Electric welded chases are the best we have ever used. They are everything that you claim for them."—THE AMERICAN PUB. COMPANY, Owosso, Mich.

"GENTLEMEN: Some time ago we bought from you several pairs of your electric welded chases, and would like to express our satisfaction with them. We find them very true, firm, and perfectly welded, and by far the best chase we have ever used, and we have given them a severe test. We certainly would recommend them to any one wishing to purchase a first-class chase."—REPUBLICAN Ptg. COMPANY, Iowa City, Iowa.

"GENTLEMEN: When on receipt of a new dress of type from you for the Banner I received the electric welded chases, I was at once satisfied that they will prove a success. Since then I am bound to say I have found them fully up to my expectations in every respect—in fact, I regard them as the best chase I have ever seen in the many years I have had anything to do with the printing business."—H. MAHRAUN, Iowa Banner, Iowa City, Iowa.

"GENTLEMEN: Am using four of your electric welded chases and find them better than anything I have ever handled. The four when placed one on top of the other lined up so perfectly that it demonstrates the absolute accuracy of the manufacture. In your 'Points of Superiority' you say nothing about the economy of these chases. They will certainly outlast a half dozen of the old style."—C. E. STEWART, Editor Williamsville Times, Williamsville, Ill.

Strength

IS AN ESSENTIAL OF A
PERFECT PLATEN PRESS.
IT IS ONE OF THE LEAD-
ING CHARACTERISTICS OF
===== THE =====

CHANDLER & PRICE..... **JOBBER**

ONE  REASON

Thickest at point of greatest strain.

IS FOUND in the construction of the platen. It has more metal than the platen of any other make of Gordon presses. The construction is convex, heavily ribbed, and thickest in the center at the point of greatest strain—as shown in the illustration. The tympan rests on a perfect surface and the gripper bars and platen ears are of malleable iron, a metal much tougher and more expensive than cast iron. The construction secures firmness, rigidity, perfect impression—making possible perfect register and perfect work in every way besides insuring

“CUTS”

The term “Cut” is used by the public to designate any kind of a printing plate, as, a halftone cut, a zinc cut, wood cut, etc. A cut may be bad or good in more ways than we can discuss here. Before everything else, it should have one quality, that of printing well: lacking that, it fails of its purpose utterly. We make every cut we turn out a practical printing plate, no more than every engraver ought to do. We are practical advertising and catalogue men, that was our business before engraving. For commercial purposes, catalogues, etc., we make cuts that sell goods, group articles attractively, economize valuable space, show an object, a piece of machinery, a device, or an article of apparel, to the best advantage, bringing out the detail or the artistic effect or both. We have a great organization here at your disposal. Write us about your business. Perhaps we can make your engraving pay better.

THE PRINTER.

NO. 3

The Needs of the Hour.

“freedom to Stand Alone.
Sanity to See a Brother's Needs and Worth.
fraternism to Lift Him Up.”

BY WALTER WILLIAMS, COLUMBIA, MO.

THIS is the best day in the world's history. Never before did Light shine so largely and Love shower so lavishly upon the dark and desolate places. The golden age is in the future, not the past and we tread upon its very threshold. With some, God's providences are like an arched sky. Away back yonder they touch the earth at the earth's dawn and away off yonder they are expected to bend down to earth in benediction at the earth's evening time but to-day, in this broad noon hour, the stars are further removed than at the horizon of either twilight. Not so. God's providences are over His children at this hour as always and the man who stands erect to-day is as close to the benison of His bending sky as he who was in Eden's garden fair or will be in the far millennium.

To realize the beauties, benefits and opportunities of life there must be Freedom. Slavery shackles brain and heart as well as limbs. The hour needs Freedom first of all.

Prejudice governs. The claims of party and of sect keep back from noble action. Tradition dogs our steps. We walk in devious paths because our fathers did. We think in grooves which ancient philosophers set. The streets of Boston were staked out by cows running wild upon the commons and through the thickets. Our creeds of church and State oftentimes were made in early wanderings on barren wastes and down valleys where the sun of truth shone not. Because of slavery which we call by high sounding names like loyalty and orthodoxy and patriotism we cling to creed of church and constitution of State. No one

would care to discard what's true because 'tis old. Nor should one hold to the false because his fathers did.

Freedom is the noblest heritage of man. To think the truth, to teach the truth, to act the truth, is the highest

Walter Williams.

mission. Freedom means independence. It means individuality. It means control by conscience not by crowds. Sheep may follow blindly their leader over mountain and through mire. Is not man better than a sheep? Leadership is

necessary for the advancement of every army for humanity's upliftment. But leadership does not necessitate slavery or submission. The final arbiter of each man's creed and conduct must be, under God, himself. In matters of thought and duty the individual soul is its own supreme court.

Religious freedom came glimpsing its way when Luther lived. Political freedom was measurably won by Washington. We struggle now for industrial freedom and personal independence. Clear the dead branches which lie across the path to-day. Humanity's hope is in the aftermath.

But Freedom must not mean license. When the halter of slavery is severed the bridle of self-control should take its place. If Freedom be the first need of cowardly man to-day Sanity is the second.

No brain, neurologists tell us, is balanced with exactly even hand. Exaggeration enters into every mind. There is abnormal development or depression in some part. Hence vision is distorted, misunderstanding caused, misconception given birth. The sense of proportion is in many atrophied.

Sanity places all things in right relation. It does not exalt one commandment at the expense of another. It metes out justice with unbiased scepter. It is not led astray by sensuality within or popular clamor without. It will not look at things equally deserving through different ends of the telescope. Sanity observes accurately, thinks clearly, acts judiciously. The Digger Indians flatten their heads and the Chinese bind their feet. Too many Americans apply similar methods to their brains and hearts.

Insanity is narrowness. Insanity is cloudiness of mind. Sanity means broadness, clearness, open-mindedness. Sanity unlocks the doors to every new and noble thought. It keeps open house for truth. It does not lose its head nor topple over when the unexpected comes. Sanity is a foe to dwarfing specialism. "He was born a man but died a grocer," is the epitaph on a French tombstone. He was born a man and died a lawyer, preacher, farmer, partisan, might truthfully be said of scores in this republic. Sanity keeps man man.

Freedom discovers the individual. Sanity causes him to weigh aright his neighbor's worth. Fraternism puts discovery and insight into action. The third need of the hour is this.

The world tried Ecclesiasticism. Spain totters to its fall because of Ecclesiasticism. The world tried Imperialism. Napoleon dying on a lonely ocean isle shows its failure. There are some who would substitute Socialism as a panacea universal and some Anarchism. The one means too large government and the other too little. The one magnifies the State and the other magnifies the mob. Commercialism stalks the world to-day. It is the golden calf and many fall worshiping at its feet. It, too, will be found wanting. Only Fraternism will cure. Only the spirit of brotherhood will bring peace from conflict, joy from gloom, prosperity from poverty alway.

The hour needs this spirit shed abroad. It needs less talk of war and wreckage, of ten per cent and trusts, and more of brotherhood. Then will the clock strike and the golden age have dawned.

Three-fold are the world's needs to-day for individual and society at large. Freedom to stand alone. Sanity to see a brother's needs and worth. Fraternism to lift him up.

But if Freedom and Sanity and Fraternism are the world's needs they are in special sense the needs of every

editor. Rightly understood the editor is the world's prophet, priest and guide. He governs by headlines and molds by news note and paragraph. His is a high estate. When he abdicates his independence he falls impotent and cowering.

Above all else the editor, dwelling in city or in country town, must be free. The newspaper, particularly the country newspaper, is simply the lengthened shadow of one man. The effect of its influence depends not upon circulation, on size of page or of town, on cleanliness of typography and beauty of press work, but on the brains and conscience of one free man. Those other things help but brains and conscience plus freedom make the influence felt. Eternal vigilance is the price of a good newspaper. Independence of thought and action is the basis of an influential one. Given a clear head, a sound heart and independence and an editor's words will count for something. And the greatest of these three is independence. To be useful in the largest sense the dollar idea must not control the editorial page. The court house domination must lose its power and the knotted cords of party whip be ever impotent to make an editorial slave. The editor must never be part of a machine. He must be all the machine. The ideal editor would be swayed by naught save unselfishness. "'Tis excellent to have a giant's strength but 'tis tyrannous to use it like a giant"—or a slave. With the growth of great corporations and the dwindling of great editors comes more and more the need of Freedom in the country press. There if anywhere opinions must be unbiased and unbought.

But the editorial need includes Sanity as well as Freedom. He must be fair as well as free. The newspaper profession draws cranks as sugar fascinates flies. The man with a hobby would make the local editor a hobby-horse. The man with a grievance would unload it across every page. For every scheme of cracked brain the newspaper is sought as vehicle or packmule. It requires clear-sightedness to detect the good and practical and to leave the concealed bad or openly visionary alone. No profession unless it be the art of healing draws so largely upon the lunatics for its followers as does that we hold our own. I have never seen an editor unwillingly in a penitentiary. I have seen a dozen in insane asylums and there are more to follow and should be. Sanity is common sense at work. It is horse sense pulling a load. Sanity is the saving grace in every sanctum. Without it Failure is written at the top of column in special position every day.

Newspapers occasionally die from too much enterprise. They are always ahead of the town in which they live but they sometimes get too far ahead. It is all right to hitch the editorial wagon to a star but be sure the trace-chains do not break. The editorial lance should be always laid in rest for any righteous, hard beset endeavor. But remember Don Quixote and the windmills about which Cervantes wrote. The best equipped editor has something of the poet and much of the knight in his composition. He has a modicum of humor in his make-up which keeps him from becoming unduly wise. But underneath learning and literature, knightliness and wit there is a substratum of practical common-sense which keeps him sane. The country editor is both business man and preacher. It requires the highest order of practicability to bridge the gulf which often exists between the two. Impracticable schemes solicit him on every side. Fads are apt to claim him. His newspaper becomes lopsided. His thoughts and editorials run in grooves. He needs a dose of Sanity, clarity of mind. He needs a wider, larger outlook upon the world. It is always a good idea to calculate results in any under-

taking. No one, not even an editor, can reform the universe in a single day. I would not lower the standard of editorial courage. I would simply urge the battle in quarters where help is most largely needed and success most probable. Do not attempt a bayonet charge across the trenches where the sappers and miners can capture the redoubt as well.

The editor must be free and fair. But if he is only free and fair he misses the very core of his true character. Freedom and Sanity alone breed stiff and coldly intellectual selfishness. Hence the need for the spirit of Fraternism. Brotherhood is the basis of happy life. It makes men of savages and gentlemen of editors. It extends charity to opponents and stoops to those who need a helping hand. Fraternism regards plutocrat and pauper with the same pity and treats them on the same plane. It will not permit the editor to be the special pleader for any class or set of men. He holds a brief for humanity and must not argue in the court of public opinion for any faction or for any fad. Fraternism makes the community the client of the editor. It brings to his desk the woes and triumphs, the hopes and fears of all. It lifts the editor from mere demagogue and chattering gossip to be a power for others and himself. The editor must solve in his columns all pending problems. There is no solvent like fraternism. In it mobs melt away and oligarchies dissolve. It reconciles capital and labor, twin-agents in the promotion of prosperity and peace, sometimes made hostile by greed or grasping demagogue. Editorial Fraternism will keep both from personal abuse and bickering. It will put the right above the individual and humanity above any human. Editorial ethics are bound up in the word. It enwraps courtesy and kindness, tactfulness and truth. In fullest measure it is the Golden Rule in action, the Sermon on the Mount incarnate. The Bible in its news and editorial opinions in style and makeup is the best of reading. The supreme mission of the editor is to inculcate Fraternism. Discuss as we will the material equipment of the newspaper, its type and presses, its white paper and black ink, the sources of revenue which make its existence possible, there is something more than these. So long as the body is more than meat and the soul than raiment, so long as man is man and not brute, so long as he lifts his heart to Heaven and his spirit goes on beyond the stars, the newspaper is more than any, more than all of these. Type and paper make the messenger, but the message is more than the messenger. Material resource and equipment are the means, but the end is above the means. The brain and the heart have need of the hands and the feet but who shall say the hands and feet compare with the heart and the brain? In this commercial age there is the constant temptation to substitute finance for Fraternism. To do this in journalism, the imperial profession, to make it merely a device for filling one's stomach or one's pocket, is to degrade it to the rank of the fakir or the companionship of the shameless creature of the streets. That many do this is no excuse. The many do not always or often stand for right. That each of us is tempted all the time by the bread and butter problem to turn aside from duty after fleshpots is no defense. This is but the weakness of human nature, the flaw in the marble, of which we all, in our loftier moments, are ashamed. The editor must plead for this Fraternism and practice it. Without it his readers go with him along the valley path with its briars and noxious weeds; with it toward civilization's mountain top where the sun gives back to earth its good-night kiss and all the air is pure. He is a blind leader of the blind, or, with face set steadfast toward the east, he is a prophet of the coming morning.

The hour needs written across every newspaper page, inscribed on every editorial heart, this trinity of Freedom, Sanity and Fraternism—Independence high and noble, the large, enwrapping view which Sanity alone may bring, the Fraternism which means Brotherhood in every written, spoken, acted word.

Mr. Williams delivered the foregoing address before the Illinois Press Association, February 8, 1900.—Ed.

TRI-WEEKLIES.

*By De Witt C. Owen, Dixon, Ill.

VERY few tri-weeklies are in existence, the total number in the United States being less than seventy. The reason therefor may perhaps be found in the fact that many publishers of weeklies who consider a change to a more frequent issue scarcely think of a tri-weekly, and go at once to a daily if the city seems to be large enough to warrant a change. Some try the semi-weekly and are often disappointed to find that their subscribers do not appreciate the change. The advertisers will not pay them much if any more money, and the expense and time occupied in newsgathering is much increased.

Most successful publishers of weekly papers in small cities harbor a desire to start a daily, and more of them make the change too soon rather than otherwise. I confess there are allurements in the daily field, but there is lots of hard work and nearly always without satisfactory returns for the first few years.

Many publishers have never been in a field with a tri-weekly or had a chance to observe the workings of one, but I feel sure that if the advantages of the tri-weekly were better understood there would be more of them in existence to-day.

It would seem that the tri-weekly is the true half-way step from a weekly to a daily, because the semi does not take better than the weekly, and the price cannot be raised, while the price on a tri-weekly can be raised without difficulty.

The best feature of the tri-weekly is the chance to combine city and country circulation in a single edition instead of the difficulties to be met with by a daily in the city and a weekly in the country, and the weekly constantly losing advertising to the daily, and the neglect which a weekly nearly always suffers in a daily office.

The opportunity to systematize work is nearly as good as on a daily. One man should act as editor, devoting all his time on the local news and exchange work and doing his own proof reading, one man as ad setter and makeup, four or five compositors, one subscription solicitor, one man on advertising and perhaps collecting as part of his duties. The job department can thus be kept entirely separate, as it should be. The proprietor will have enough to do in the management, and should avoid undertaking much routine work.

It is better than a daily for the farmers, as they could not utilize a daily to good advantage and they find the price prohibitive, while the tri-weekly is only the price of many weeklies. It comes too often for some of the farmers, but as they get used to it there is a desire created to go to town oftener, as they can always get a paper where they go, and they take more pains to have their neighbors get their mail when they can not go themselves.

The market reports make a great feature, as the markets by telegraph can be obtained up to the latest hour, and the home markets can be attended to more judiciously

*Read before Illinois Press Association.

than on a weekly, where most publishers forget them, perhaps two-thirds of the time. The telegraph news page for daily papers brings the news of the world up to three o'clock of press morning; we go to press before noon, and the afternoon dailies come out later in the day with the same report.

You will see that there are many very superior talking qualities for a solicitor in the field.

While running for thirteen years a country paper in a village of 800 people I had the opportunity to observe the successful workings of a tri-weekly in a city of about 15,000. Two young fellows took hold of the paper in about '84 or '85, and began pushing advertising and circulation. They made rapid changes from a weekly of four eight-column pages to nine and ten columns, then to a six-column quarto semi-weekly, later adding a four-page issue, making a tri-weekly, and finally making all three issues eight pages, changing at will from five to six and seven columns each issue. All this time their subscription price remained the same, \$2.00 per year or \$1.50 if paid in advance. They kept hammering away at the subscription list, working it up from 2,000 to 2,500, then three and four thousand, finally reaching 7,000, which is perhaps their limit. The press of advertising was the cause of their successive enlargements, but when their list increased so rapidly they raised their price on space and kept the advertising within satisfactory limits, but in spite of this they have during some busy seasons been obliged to issue extras or double numbers.

My observation of this extremely successful tri-weekly created in me a desire to run a tri-weekly newspaper if the proper opening ever came. I did not go to Dixon with the intention of starting a tri-weekly, but circumstances rather forced me into it. The situation was as follows: There were two dailies with weeklies attached, and my paper was a weekly with patent insides. It was eight years old, and had been a daily, a semi-weekly, a daily and a weekly under as many different managements, and had lost money for everybody who had invested in it except the one who established it. My circulation in the county was as large as the other weekly editions, but was scarcely paying with only eight or ten columns of advertising at very moderate prices. After spending six months working up my job department to a satisfactory point I set about to work up the paper. I found a good solicitor who pushed up the advertising to about twenty-seven columns, making it necessary to enlarge to twelve pages, eight home print. We then considered a more frequent issue. We passed over the semi-weekly because we felt we could not raise the price, and I would not undertake a semi-weekly at \$1.00 per year. With a tri-weekly we could get \$1.50 or \$2.00 if not paid in advance, and could also work up a good circulation in the city, which neither a weekly nor semi could hope to do. As proof of this the tri-weekly I mentioned had succeeded in working up a circulation in their city larger by 300 than the combined lists of their three daily competitors. This they attained only after several years of hard work, but they hold it to this day, and write it in their contracts.

We started Nov. 1, 1898, at first printing only four pages at home for each issue, using two-page supplements twice a week and four-page supplement on Saturdays. Sometimes press of advertising required us to print six or eight pages, and at the end of four months, by March last, we discarded ready-prints entirely and have printed at home ever since—three eight-page six-column papers each week, with from fifteen to twenty columns of eight-point leaded matter each issue.

In the beginning we divided the advertising between the three issues, giving the advertiser his choice of issues, at

the same price as he had paid in the weekly. We gradually got them to take either two or three issues a week at a higher price, until in six months we had only a few home advertisers who used but one issue per week, and our price for three was quite satisfactory.

But as circulation is the proper foundation for advertising I hastened to give attention to this department. While one man was working on the advertising to get it shaped around for the tri-weekly and secure new contracts, another was arranging carrier routes and working up circulation in the city. On Jan. 16, 1899, the ad man went on country circulation and began a canvass the like of which I had never before heard. Some of you newspaper men may know of better records, but such results were wholly unknown to me. My solicitor had promised big results, but I was not sanguine enough to anticipate the full measure of success which was attained. After a few days' work he settled down to a steady pace, and in the first calendar month turned in 305 new names, and in two days less than twelve weeks reached the 700 mark, making an average of ten a day for seventy days. His place was taken by another man who is still with me, and who secured 330 the first calendar month, while the first man went back to the advertising. The solicitor has kept up an average of 55 to 60 new names per week, ever since, and the actual net average gain has been 43 per week for the year from Jan. 16, 1899, to Jan. 15, 1900, the actual gain being something over 2,200, and the list now reaching nearly 3,100 subscribers.

I attribute this remarkable record to several causes.

First—Three papers a week for \$1.50, the price of many weeklies, and containing the Chicago and local markets, always up to date. Second—The country field had perhaps never been thoroughly worked by solicitors for a county seat paper, and was therefore ripe for the harvest. Third—I put on a good solicitor and gave him good support.

I use no schemes and no premiums. A good solicitor does the work, and he finds talking points enough in the paper itself to secure subscribers wherever he can find people who do not take it.

I believe in letting the solicitor carry out his own plans of work in most particulars. I pay a salary and a liberal one, and pay all expenses. He keeps in touch with the people and can often bring in suggestions to the office which prove valuable, and can secure new correspondents when necessary.

I always see that the territory is sampled ahead for two or three issues.

My solicitor at first interviewed the farmers as they came to the city, and secured 300 names before going elsewhere, then he went to the neighboring towns where farmers were likely to be found in some numbers, and picked up ten or twelve every day, taking other towns as soon as new material became scarce, or the number who were not subscribers became too few to secure a good list each day. By working in this way it was four or five months before it was necessary to do any driving, and he could make most of the villages by train so as to be at home nights.

For over four months we aided the solicitor and likewise did a little advertising for ourselves by publishing the list of names as secured by the solicitor from week to week. Every Saturday we run a list of from 50 to 79 names, giving the township they resided in but not the postoffice. This spurred the solicitor to keep up a good average; it interested the subscribers as much as any feature of the paper, and it convinced our advertisers as well as all others that we were increasing our list.

I have kept up the feature of country news letters, hav-

ing six paid correspondents at present, and about thirty-five active correspondents writing from one to three times a week. I pay out from nine to twelve dollars per month for this purpose, and run from five to six columns each issue, or fifteen to eighteen columns in a week.

In regard to advertising, much of our success was due to good soliciting, but we have done considerable self advertising in the way of circulation statements, published in detail in the paper from time to time. Although I have never boasted that our paper was the best, I have repeatedly come out with the statement that its circulation was the largest in the county, and have made affidavit and published a detailed list several times, showing the exact number in each postoffice. I have found this necessary on account of the intense conservatism of some of the older business men, who find it difficult to believe that any paper could go ahead of their old stand-by, the oldest and leading daily. Backed up with sworn statement and with circulation books open to the public there are now not many left who doubt the facts. We sometimes hear remarks that our list is composed of nearly all trial subscribers, and that after a while it won't be so large. It has grown larger from month to month, and there is still more territory to work. Trial subscribers become permanent ones, and so long as we keep within our legitimate territory we retain nearly all of the subscribers which the solicitor secures.

Perhaps the question will be asked if I would not have succeeded just as well by putting forth the same efforts on a semi-weekly as I have on my tri-weekly, under the circumstances as they existed in my field. I do not think so. A semi-weekly would not have made headway in the city, and at a dollar a year would have been hard to get a profit out of. We get prices for advertising as high and higher than the daily papers, the merchants making comparison with the daily papers with regard to price, while a semi-weekly will always be compared with a weekly.

To be classed as a daily is certainly a distinct advantage over a weekly or semi-weekly, or even a daily itself, as the cost of running is much less, and the opportunity much better for a large circulation. Had I attempted to start a third daily, many business men would have refused support on the ground that the city was not large enough to properly support three dailies, and that was the truth. Even the second daily has found it hard to overcome the competition of its older rival. By making the Star a tri-weekly we seized the outside field and, while we have not added very much to the severity of the competition for our daily competitors, we have been able to secure a larger number of advertisers and at better prices than either of the dailies. We practically have a monopoly of the advertising intended to reach the farming community. Our competitors made no move to meet the competition until our list had reached about 2,700, when they changed their weeklies to semi-weeklies, with the price at \$1.00 a year. One of them put out a solicitor, and, although we hear of his doing some work, we see almost no effect on the results of our own canvass.

I have been interested in watching the results of some other tri-weekly ventures, two of which I shall mention. L. E. Davis, of the Berlin, Wis., Courant, started a tri-weekly last year in February, and as I favored him with advice before he took the step, I wrote and asked him for his experience, which he has kindly consented to give and a portion of which I shall repeat to you.

He gives as his motive for starting the fact that there was need of more room for advertising than his weekly could accommodate without running a blanket sheet, and a daily in his city made a more frequent issue desirable.

He started with a six-column folio and raised his price to \$1.50 per year. While he made some gains in the city and country he lost some subscribers on account of dissatisfaction with the size, so he decided to enlarge to a seven-column folio and reduce his price back to \$1.00. This satisfied the farmers, and he made steady gains in the country without the use of a solicitor, and by good canvassing he has succeeded in almost reaching the list of his daily competitor in the city. His price in the city is five cents per week, the same as mine. He has made great gains in advertising and uses the flat rate, getting eight cents an inch, and making a discount of 25 per cent where plates are used. I think he made a mistake in giving up the \$1.50 price. I should have tried the enlarged size at \$1.50 for awhile, and I think he would have made it win.

One peculiar idea he has put into effect is that he retains the serial number of his old weekly for the Thursday issue, and calls the Tuesday and Saturday issues a semi-weekly. His object is to run a weekly paper so that he can publish the State laws, which brings \$100, and which the law provides for being published in a weekly paper. It makes no difference to the subscriber, as he gets all three papers for the one price. Mr. Davis concludes by saying that at first the farmers did not like it, but now they are highly pleased. On the whole he seems satisfied with his venture.

The publisher of the Atlantic (Iowa) Messenger has started a tri-weekly, under peculiar circumstances. The city is about 5,500, and contained besides the weekly Messenger a small daily with a weekly edition. Both were on a good footing. The competitors of the Messenger announced a semi-weekly to take the place of their weekly, and the Messenger at once came out with a tri-weekly, and they are going to fight it out on that line. It will certainly be an interesting contest to watch, and if the competitors are equally matched in ability and financial strength my opinion is that the tri-weekly will win out in the race. Should it do so it would give additional proof that the tri-weekly is the proper half-way step to the daily.

I believe in printing the best paper possible at all times. I set a high standard, and work up to it zealously. The wants of my particular patrons are considered, and if I fail to satisfy them it is the fault of judgment rather than a lack of interest in their needs. It is unnecessary for me to outline my idea of a model paper, as that is done time and again at every meeting and has been done here during this session, but I simply wish to impress it on all that I am not losing sight of the importance of getting out a good paper when I am spending so much time talking about methods of working up business.

I see no reason why my experience in working up a tri-weekly may not be duplicated in very many places. It has been hard work, but no success is ever attained without hard work, and he who falters with that fear deserves little at the hands of the goddess of fortune.

ADVERTISING AN IMPORTANT FEATURE.

Advertising has become so firmly established as a regular and important feature of the home newspaper that the domestic economy of the household would be sadly disarranged if the usual interesting and needed business announcement should cease to be published. The advertisements save time and worry. They supply information of the sort which leads to purchases, and which consequently makes advertising pay. The liveliest, most up-to-date merchants, and those from whom the buyer can get the most of his money, are the ones whose advertisements may be found in the columns of the daily papers.—Newspaper Maker.

GETTING A STORY UNDER DIFFICULTIES.

REPORTERS do not always find clear sailing. Even with people who possess facts which they are willing to impart, it is difficult often to get a straight story, so differently does the same event appear to different eyes. There must be a pretty good knowledge of human nature and quickness to grasp the real and natural sequence of things even then, but when the knowledge, facts or information, must be coaxed or dragged from unwilling lips then are the finesse, the resources, the ready wit of the newsgatherer put to the severest test. There is no frowning judge clothed with the power of fine or imprisonment back of the newspaper reporter, to compel answers from an unwilling witness, yet he often succeeds where courts and lawyers, police and expert detectives fail. But this is somewhat aside from our story, which is related by a writer in the *Express* of Portland, Me., who says:

Several years ago I was sent to interview the captain of one of the Boston boats. A man had jumped overboard on the trip down the night before and drowned himself. That was all we knew. The public would look to our paper that evening to give full information about the matter.

I have always claimed that a thorough gentleman will be civil no matter what the conditions are; that is, as long as you are a gentleman toward him. If, in spite of your politeness, he "sassess" you, then, why he is—several things. I boarded the boat and found the captain in the pilot house. He had possibly been up all night, so allowances can be made for his mood.

"Good morning, captain."

"Ugh."

"Will you be kind enough to tell me the particulars of that man jumping overboard last night?"

"What man?"

"Why, wasn't there a man drowned?"

"There might have been."

"Don't you know that there was?"

"None of your business."

"Thank you."

"Don't you get sassy to me."

"I have no intention of it, sir. I was sent down here to find out the particulars and I thought the best way, the way you would prefer, would be for me to come direct to you and get it straight, not from hearsay and what I could pick up around the boat."

"Oh, you did, hay? Well, you get off this boat. You're one of those fellows that goes round sticking his nose in other people's business, are you? Well, I told you I wouldn't tell you a thing and I won't, and now you get off of this ship or I'll have you thrown off."

He reached for an electric push button and pressed it. Couldn't help thinking that the newspaper business has its drawbacks. A thought struck me.

"Captain?"

"Ugh."

"May I ask you one proper question that has nothing to do with this suicide?"

"Ugh."

"You believe in your men obeying orders do you not?"

"Well, if my men didn't I'd fire every one of them."

"Exactly. Then, will you think a moment. You are captain of this steamer. You have just pressed that button summoning a man to you. If he doesn't come you'll find out the reason. That's your business. Well, my business is that of a reporter. I am employed by the *Evening Express* and the editor—my captain—gave me orders to come to you

and ask you about this case. In fact, he ordered me to get a story, and I'm trying to carry out orders. If I go back without a story I am practically disobeying orders. You must realize that, personally. I don't care a particle about this man. I never heard of him and we never saw each other. He might have drawn and quartered himself as far as it would affect me personally, but I am only trying to do my duty as you require your men to do theirs. I don't doubt that you read several papers yourself and it wouldn't surprise me if you look in the *Portland papers* to-night for an account of this case. You expect the papers to give the news and so does the public at large. How could they do it if all men treated reporters as you have treated me?"

Just then the man whom he had called came in. He touched his cap and asked what the captain's wishes were.

"Ahem," said that worthy, "I never thought of it just that way before. Well, well, perhaps I was a little crusty. It was a hard night last night. Here you, Joe, take this young man to that fellow's stateroom and tell him all you know about that suicide."

AN EDITOR'S DUTY TO A COMMUNITY.

By F. L. Pinkerton, Press, Rantoul, Ill.*

AN EDITOR'S first duty to a community is to prepare himself for the onerous responsibilities of his profession, so that he may know what constitutes a creditable journal.

To be so equipped he must study his work deeper than the surface. The motive power of every great force is an invisible energy which cannot be known through the senses. To be successful as a newspaper man, and to be of value to a people, there must be something more potent than fine presses, supercalendered paper, gold pens, scissors of keenest edge, or aromatic paste. If the editor lack cultured brains he may have all of these material things and yet have the play of Hamlet with the hero left out.

Machinery is necessary, but there are qualities of head and heart more essential. To be a force in a community the editor must exalt the profession. He must be clean in person and character.

The worth of an editor to a community is increased or lessened as he is able to personify the ideals he creates during the course of his editorial labors.

He must teach by example as well as by precept, being consistent, devoid of hypocrisy, a man of sterling parts, true to his ideals. His readers must exalt him into a quasi-public character or he cannot discharge successfully his duty. The people love a bold leader, an advanced thinker, and will do him reverence though they take his doctrines sometimes with a grain of allowance; but he must be positive in his convictions and unwavering in his position if he would hold his dignity.

While there is much of sentiment about the publication of a newspaper, it is a business proposition, and the editor who does not look well to the debits and credits of his enterprise loses influence among his people. The good Book and society exhort the editor to provide for his own household, or be subject to the indictment of being worse than an infidel. We are assured that he who has much will be given more while he who has little is liable to lose what scant possessions he may have.

Having secured the confidence and respect of the people by building a foundation on the rock of financial and moral worth, the editor need not fear that the loss of a few self-opinionated subscribers and dictatorial advertisers will

*Delivered before Illinois Press Association.

turn on him the carnivorous wolves of poverty, and therefore can pen without intimidation the uplifting currents that flow through his inner consciousness. Editorials on local and National questions can be written without consulting the judgment of the counting room.

Not only in the discussion of live municipal questions should the newspaper have perfect freedom, but it should be fearless, yet charitable, in its publication of police records. By a course as impartial as the sun, it becomes preventive of crime, for the criminal class fear this instrument of chastisement—publicity—worse than they do the sentences of the court. After a thorough test citizens of high and low degree respect such an editor because they know they cannot use him to their baser ends. His columns become a true index of current local events entitled to publication, though they may at times seem devoid of mercy in their exposition of criminality.

The demands upon a newspaper are greater than when country folks were content to travel in ox carts, and could hear from the centers of population and legislation only by stage coach. A more intense period is upon us and the newspaper must grow with the development of other legitimate industries. This is a rapid age and the survival of the fittest is working phenomenal changes. We must demonstrate our necessity in the economy of a progressive community. We are no longer a luxury, but the need of an enlightened people; not only the art preservative of other arts, but the art promotive of other arts. This is an age of rapid communication, and the newspaper has no competition in its facilities for carrying information accurately and speedily to the people. The public schools have prepared the people to receive us into their homes, and it lies with us to occupy the canaan to which we are entitled. To some editors this exalted stand will always remain a promised land or a myth, never a reality. They are not up-to-date, the procession of events having outmarched them.

No longer can our editorial columns echo the conclusions of metropolitan journals without inviting censure. Even local matters must be reviewed in an economical and sociological manner, the community appealing to its leading paper for assistance—by furnishing statistics and logical deductions—in forming their opinions on public questions. In time they naturally conclude this is the function of a newspaper and have no delicacy in permitting the editor to do a great part of their thinking, believing he has more leisure and more opportunity to arrive at correct conclusions. Such an editor should be pardoned if he takes a pride in this prerogative, given him by force of his good judgment and personality.

He should be guarded, however, that passion, pride or avarice do not influence his columns. The people will not be fooled often, and once confidence is lost the precious reserve fund of his credit is gone, and gone forever.

Moral heroes are in demand. Panoplied with the armor of truth the hosts of the infernal regions cannot prevail against the courageous and progressive wielder of the instrument mightier than the sword. An editor should not permit himself to become a profitless martyr by insisting upon a righteousness that belongs to future centuries. Keep close to the people and lead them heavenward by slow marches. The evolutions of the eons should teach us the plan of the Master. To make haste is dangerous. Every coupling pin in a train would break if the engine were started at full head of steam. The editor is at the throttle, and he should know what character of power he is trying to manage. Let us grow by evolution instead of revolution.

The yellow journal is a diabolism to a community. It is a loathsome disease and every editor should avoid it as he would a pestilence. Its diet is sensationalism; without such sustenance it dies. The exposure of family skeletons, real and imaginary, and social sores and distorted exceptions are the meat upon which it feeds. It creates an abnormal public appetite for the most unholy doings of a community and does not respect the rights of persons or things, and this begets discords and a long train of other evils.

A NEWSPAPER PLATFORM.

THE Peoria (Ill.) Journal has passed under new management and the following declarations with regard to its future policy might enter into the platform of any well-conducted modern newspaper of either party, and with this in view the name of the party mentioned in the Journal is left blank, to be filled in according to the politics of any publisher or editor who may choose to adopt this newspaper platform, in whole or in part:

Politically, the paper will be ———, first, last and all the time.

The Journal will support the candidates of the ——— party, believing that, other things being equal, it is better for the city, the county, the State or the Nation, that ———s should control the destinies of each. A tree is judged by its fruits, and the ripened fruit of the tree of experience demonstrates that that community or State is most prosperous and best governed where the proportion of ———s is greatest.

The Journal believes that while all ———s are good, some are better than others. Holding this belief, it will exercise its best judgment in urging upon the ———s the policy of putting none but its best men in nomination. This right, sacred with the individual member of the party, becomes a high and important duty with a newspaper.

To those who are seeking to advance their own interests at the expense of the party, The Journal has this to say—that under no circumstances will it permit itself to be used as the organ of any particular individual or any particular clique. There has been too much of this kind of business in the past, and the scars of the party because of it are plainly visible. The ——— party to-day has more to fear from the efforts of ambitious and unscrupulous men within its own ranks than it has from any assault that may be made on it by its hereditary enemy.

Believing that the ——— party is right on the questions now before the people, it will be the high aim of The Journal to so labor in the eyes of God and man as to secure success for that party—not for individuals, cliques or factions.

Naturally and under ordinary circumstances, it might have been the best plan to first tell what The Journal proposes to do in the way of the publication of a newspaper, but the politics of the paper was mentioned first for the reason that it was believed that it would be of the most interest to the readers of the paper and the members of the party whose principles it proposes to advance, and for the further reason that no one who has been a reader of the paper would have any other idea than that the high standard of the paper in respect of news would be maintained. It will be the aim of the new management to materially improve The Journal in this respect. No pains will be spared to secure the best reportorial talent that can be secured; the paper has the exclusive use in the evening field of the Associated Press reports, than which there is nothing better, and no money will be spared to obtain the

best special reports that can be got where matters of importance are concerned. The motto of The Journal in the past has been to print all the news that was fit to print. That cannot be improved on by the new management.

Generally The Journal will be the advocate of all measures that will add to the prosperity of Central Illinois and the Illinois Valley. But it will aim to specially devote itself to the best interests of the city in which it is printed. It hopes to be a powerful aid in that direction. It is aware that it is being published in the best city of the best State in the Union, but it believes that there can be great improvements made, and it will take both pride and pleasure in advocating all measures tending to that betterment.

In the hurried work of getting out a daily paper mistakes are unavoidable, and it sometimes happens that incidents of daily happenings are so manipulated that injustice is done to individuals. The greatest care possible will be taken to prevent anything of this kind, but The Journal lays no claim to infallibility. Where such cases occur it is not necessary to run off to some other paper to get "justice." Lay your grievance before The Journal, and if you are in the right and the Journal in the wrong, the rectification of the error will be as broad and ample as any one can desire.

In a general way above is outlined the policy of The Journal. It proposes to publish a clean newspaper in a clean town. None but clean men will be advocated for position at the hands of the people. The policy will be to get along with our local contemporaries in the most agreeable way. If this intent is thwarted, The Journal, however unwillingly, will use the best means at its command to perform an unpleasant duty.

Support of ——— principles and support of ——— candidates does not mean that ———s will be abused. The Journal loves ———s, but detests their principles. It recognizes that it may take years to convert them all, but it starts out with high hopes and unselfish aims. The ———, the ———, the ———, will meet with nothing but fair treatment in these columns.

THE SUFFOLK COUNTY ASSOCIATION.

JOB PRINTING, LEGAL ADVERTISING, CHURCH AND SOCIETY NOTICES.

VERY successful, useful meeting of a County Association of editors is proof to a demonstration that such organizations can be made valuable. Demonstration is worth a world of theory. The meeting of The Suffolk, N. Y., Association was held at Huntington, N. Y. Committees on job printing and legal advertising reported as to prices to be charged:

The Committee on Legal and Local Advertising advised, subject to agreement of all members of the association, that hereafter the full legal rate be charged for all legal advertising. Where a special rate is asked for and the case requires it, the same to be fixed by a committee of three members.

The committee recommended that a committee of two be appointed to draft and secure the introduction of a bill in the Legislature providing that citations, referees' sales, foreclosure sales and all legal notices, be required to be published in one or more of the newspapers in which the law directs, in the town in which the property or estate is located. In case there is no paper in the town, then in the nearest paper or papers in adjoining towns.

The committee also recommended a list of charges for special legal notices as follows: Two dollars for resolutions

of respect or condolence; fifty cents for cards of thanks; five cents a line for all church, fair, sociable, society or other notices of a money making character, unless the job printing for the same is done at the office and is of such an amount as to warrant free notices.

The committee recommended that another bill applying to townships, villages and cities not exceeding 40,000 population only, be drafted and presented to the Legislature, providing that all tax collectors' notices, rules and regulations of boards of health and of town auditors and the annual reports of the supervisors in their respective towns, be required to be published in all town papers, and that town auditors be required to publish, semi-annually, a list.

Resolutions were adopted on matters of general local interest to the county, and looking to the retaining and protecting the water supply of the county.

Mr. Henry Guimond, an honorary member of the association, read an interesting paper on "The Advertising Department of the Country Paper." Mr. Guimond gave what he termed "a review of personally conducted and personally tested methods." It was a man to man talk with men who were greatly interested in the subject, and was received with pleasure and profit.

He referred to the good old days when people willingly paid \$2.00 and \$2.50 for their weekly paper, and compared them with the hustling times of to-day, when the publisher has to compete with the semi and thrice weekly issues of the big city papers. In those times not so much attention was paid to the advertising columns. To-day the financial return from the subscription list is an insignificant affair in the matter of dividends; that profits must come through the advertising columns. A paper to command its share of the going business must be up-to-date, newsy, neat in makeup. Such qualities will bring advertising offers "to burn." Mr. Guimond advised a perfect rate card to contain all the information an agent or advertiser requires. He then gave a description of a model card. He advised the refusal of business from unknown or doubtful firms. The local field should be well cultivated, advised the speaker. Let no legitimate business enterprise escape. He gave a plan for soliciting such advertising.

Mr. Guimond likened the advertising agent to the character in Shakespeare, and declared that he demanded the pound of flesh that the newspaper man had promised him. Don't be afraid to ask for payment in advance for advertising. Be persistent in cultivating the local field. The speaker advised every printer to clip from their exchanges all well set advertisements and preserve them for future guidance. Beware of running unseasonable advertisements, such as holiday goods in June and grass seed in December. Have fixed rules to govern your advertising department and have a rate card that every agent can understand. Don't advertise foolish schemes.

Mr. H. B. Fullerton followed Mr. Guimond with interesting talks on good roads. He brought out the fact that the United States was ahead of the world in education and railroads and everything else, but behind in the matter of good roads—even China was more advanced in this respect than we. He said that people had moved to Long Island and after settling here they had gone to New Jersey principally on account of our poor roads; that New Jersey was not as attractive as Long Island, but she had grasped the idea of good roads, thereby excelling us. If Long Island, especially Suffolk County, expected to make the advancement that she should, she must do it by her people awakening to the good roads idea. Mr. Fullerton said that if a person wished to cross the island it would be preferable to drive west and then take the turnpikes that are in good condition, instead of going directly over. He advocated the

building of good gravel roads—one on the north and one on the south side of the island, and then connecting these with roads across the island. He believed there was sufficient native gravel in the county to build such roads at a cost of approximately \$2,500 a mile. He called upon the Suffolk County editors to urge upon their representatives in the Legislature to make the Higbie-Armstrong Bill operative. The Long Island Railroad Company was doing all in their power to improve the service, and the best time made on the road was fifty-five miles an hour, and said that Mr. W. H. Baldwin, Jr., the President, was an enthusiastic good roads man, as well as a good railroad man. With both these achieved Long Island would be a most charming resort. Now that the automobile is coming much into use, the necessity for good roadbeds was more than ever apparent. Mr. Fullerton is of the opinion that the automobile will be a most important factor in road improvement.

Officers were chosen for the ensuing year as follows:

President, L. B. Green of the Patchogue Argus; Vice-Presidents, Joseph N. Hallock of the Southold Traveler, Henry Livingston of the Babylon Signal, John H. Hunt of the Sag Harbor Express, A. Jay Tefft of the Port Jefferson Echo, Hiram A. Baylis of the Huntington Long Islander; Secretary and Treasurer, Irvin J. Long of the Bay Shore Journal. This Executive Committee was named: H. H. Williamson of the Riverhead News; E. S. Boughton of the Easthampton Star; Joseph N. Hallock of the Southold Traveler; F. A. Burling of the Bridgehampton News; C. P. Rogers of the Huntington Bulletin.

Mr. H. B. Fullerton was elected an honorary member of the association.

Editor Charles A. Jaggard of the Southampton Times extended the association an invitation to hold their next meeting at Southampton.

On motion the meeting was adjourned to meet at Southampton on Monday, May 7th, at which time the wives of the editors are invited to meet with them.

The newspaper men of Huntington highly entertained the members of the association, and their courtesy was appreciated to the fullest extent.

ONLY A PRINTER.

"He is only a printer." Such was the sneering remark of a leader in a circle of aristocracy—the codfish quality. Who was the Earl of Stanhope? He was only a printer. What was Prince Edward William and Prince Napoleon? Proud to call themselves printers. The present Czar of Russia and the Duke of Battenburg are printers, and the Emperor of China worked in a private printing office almost every day.

William Caxton, the father of English literature, was a practical printer. What were G. P. Morris, N. P. Willis, James Gale, James Parker, Horace Greeley, Charles Dickens, James Buchanan, Simon Cameron and Schuyler Colfax? Printers, all, and practical ones. Also Bayard Taylor, the poet.

Mark Twain, Amos Cummings, Bret Harte, Opie Reid are plain printers, as were Artemus Ward, Petroleum V. Nasby and Sut Lovingwood. Senator Plumb was a printer, and so is James S. Hogg of Texas, and the leader of science and philosophy, Benjamin Franklin, in his days made it his boast that he was a printer.

In fact, thousands of the most brilliant minds in the country are to be found toiling in the publishing houses of large cities and towns. It is not everyone that can be a printer—brains are absolutely necessary.—Our Companion.

THE MISSOURI CONVENTION

The More a Calling is Studied, More there is Yet to be Known.

N TWO conventions each year the editors of Missouri confer with regard to the calling. It is a university of newspaper making with two sessions annually, and every branch of knowledge is made to pay tribute. The meeting at Kansas City last August was replete with sound thoughts, able papers and instructive discussions, but there was no less to be considered at the meeting in St. Louis the 8th and 9th ultimo. Knowledge is cumulative. The more a calling is studied, the more there appears yet to be known. Men of more than a quarter of a century's experience in newspaper making frequently declare that they know much less about the calling than they did or thought they did at the beginning of their newspaper careers. It is not to be wondered that Newton felt like a boy gathering a few pebbles on the seashore

W. R. Painter,

President Missouri Press Association.

while all the vast ocean of knowledge lay unexplored before him, so greatly does the unbounded extent of knowledge increase with the larger view.

For seven years now the Missouri Press Association has had a winter meeting, as well as the regular annual summer meeting, yet the last was the largest in attendance and the most successful every way in its history.

The meeting was called to order by the President, W. R. Painter, of Carrollton, and the opening invocation was pronounced by the Reverend J. C. Armstrong of Central Baptist Church. Mayor Zeigenheim made a speech welcoming them, all and singly, to the city and assuring them that while in St. Louis they were among friends. He added a few strong words in behalf of the Louisiana Purchase Fair, urging

the editors to use their efforts to make the undertaking a splendid success.

President Painter in his response complimented the open-hearted hospitality of the city, and promised that the association would unitedly support the World's Fair movement.

After the roll call, the President appointed the following committees:

Auditing Committee—James Todd, Maryville; R. G. Weisel, Neosho; J. C. Patterson, Marshall.

Resolutions—Walter Williams, Columbia; B. F. Blanton, Paris; Philip Gansz, Macon; W. F. Jenkins, Platte City.

Membership—W. L. Thomas, St. Louis; R. M. White, Mexico; C. D. Morris, Trenton.

Special Committee—H. E. Robinson, Maryville; E. W. Stephens, Columbia; Omar D. Gray, Sturgeon.

The morning session then adjourned. During the noon recess the various committees met and began the work assigned them.

At the opening of the afternoon session the editors were treated to an address on the proposed celebration of the "Centennial of the Louisiana Purchase," by Mr. Fred W. Lehmann.

He explained that the people of the entire Mississippi Valley are interested in the success of the Fair financially, besides the pride that they naturally should feel in the proper display of the progress they have made in the century just closing. Continuing, he said in part:

The great fact in modern history is the wonderful growth of the English-speaking population of the world. Four hundred years ago barely 5,000,000 persons spoke English, while 8,000,000 spoke French and 12,000,000 spoke Spanish. Now French and Spanish are spoken by about 50,000,000 each, while English is the language of at least 150,000,000 people. This has been accomplished by the extension of the territory owned and controlled by the English race, and the placing of savage or half-civilized peoples under the laws, institutions and traditions of the English speaking people.

To-day one-half of the entire number of people speaking the English language are living in the United States, and, more than any other one thing, the purchase of the Louisiana Territory brought this about. That purchase meant not only the acquirement of Louisiana, but of the vast area to the West, including Texas. And the possession of these wonderfully fertile regions, safe from any possible invasion from a foreign foe and devoted to the peaceful arts of commerce, has furnished to the free institutions of a free people an opportunity for development that they could never have had but for the action of President Jefferson and his advisers.

The purchase was also of the greatest importance to the whole world, for in the vast territory thus opened up for civilization men from all parts of the world have found a refuge from oppression and a place where they could build up their fortunes in peace and security. Suppose the people who lived here were of a different race from ours, with a different language and different traditions. The Mississippi River would be lined with forts and the country would be in the state of armed neutrality which makes life in Europe a burden.

This plan to celebrate the centennial of so great an event with a World's Fair is most fit. We paid \$15,000,000 for the Louisiana Territory, and we propose to celebrate it with an undertaking on which we figure the initial expense at exactly the same amount. One-third of the sum is to be contributed by the citizens of St. Louis; one-third to be supplied by the city through the issuing of bonds; and we

are asking the United States Government to give the rest as being rightly our due. Other expenses we expect to be able to meet by the anticipation of the gate receipts. All we ask the State of Missouri to give to the enterprise is to appropriate \$1,000,000 for an adequate State exhibit. It should be borne in mind that the greater part of the expenses of such an enterprise are met by the exhibitors themselves, and it is practically certain that by the time the gates are open the investment will represent not less than \$50,000,000.

The ten years that have elapsed since the fair at Chicago has made it possible to surpass that wonderful exposition in many respects. Invention has been most busy during those years as has been shown in the smaller expositions held since then. Among the things which we will be able to show which are entirely new will be, not only manufactured products, but the entire process by which each of them is brought to the finished state from the raw material. The commercial spirit in its true sense, which is the spirit of industry and thrift, and infinitely better than either the military or the aesthetic idea, will hold full sway, and will show to the world what wonders can be accomplished under such conditions as only our country affords. The growth and present importance of the country demand some such recognition as this exposition proposes to obtain. We ask the support of the editors of Missouri, and shall continue to ask it until the Louisiana Purchase Fair is an accomplished fact.

WORLD'S FAIR INDORSED.

Mr. Lehmann's address was liberally applauded, and at its close E. W. Stephens offered a resolution which was at once adopted by unanimous vote, as follows:

"Be it resolved, That this association cordially indorses the movement to celebrate the centennial of the Louisiana Purchase by an International Exposition at St. Louis in 1903, and that we will use our best efforts to make the same the greatest world's fair ever held."

THE UNPRECEDENTED RISE IN PAPER

Received much attention throughout the convention. The discussion, as reported in the St. Louis Republic, was begun with the reading of a paper by E. W. Stephens, devoted chiefly to the price of white paper. He stated that the present tariff on paper and paper pulp is responsible for the formation of the paper trust, and that the tariff and the inflated values given to the trust stock are jointly responsible for the great increase in prices. He asserted that the tariff on paper is a tax on intelligence, wholly unjust, and will result in small publishers being forced out of business. He suggested that the publishers co-operate to the extent of buying their paper only from some mill known to be outside of the trust. He did not think it feasible for the association to try to operate a mill of its own, but was certain that the plan of patronizing other concerns than the trust would have a tendency to bring the trust people to terms.

DISCUSSING THE PAPER TRUST.

W. D. Thomas of the Fulton Sun then took up the discussion. He had made careful and exhaustive inquiries into the formation of the International Paper Company, with its capital of \$55,000,000, and the claim of the promoters that the present high price of paper is due to the scarcity of wood pulp and water. He said that the entire property owned by the trust is probably worth \$15,000,000, and the rest is simply added value on which to pay dividends. He cited several instances in which mills had been sold to the trust at three, four or five times the cash value,

the owner accepting the stock of the trust in payment. He asserted that the dividends are equal to about 25 per cent of the actual value of the trust's property. He quoted from a number of letters to show that the same paper which now costs \$3 to \$4 per hundred pounds in this country is sold in Canada for \$2 to \$2.25, delivered. His idea was that the whole trouble could be remedied by the abolishment of the tariff on paper and wood pulp.

A number of the editors took part in the discussion which followed, among them former Governor Norman J. Colman of the Rural World, Howard Ellis of the New Florence Leader and W. D. Rogers of the Trenton Tribune. Mr. Ellis offered a resolution demanding that Congress remove the duty from paper, and E. W. Stephens offered a substitute including wood pulp and asking that a committee be formed to find, if possible, the cause of trusts, if it is anything else than tariff. There was some objection to the passage of either resolution until both had been submitted to a committee, and the discussion became quite lively. President Painter urged that too much haste should not be used in taking such important action, but both Mr. Ellis and Mr. Stephens insisted. Just then Editor H. F. Childers came to the rescue with a point of order, holding that all resolutions must go to the committee unless the rules were suspended. Mr. Ellis then withdrew his resolution and moved that a special committee be appointed to draw up resolutions setting forth the views of the association regarding the paper trust and the proper action to be taken.

After some discussion, this motion was carried, and the president appointed on the committee Howard Ellis, E. W. Stephens and Philip Gansz. There was no difference of opinion as to the belief that the trust should be abolished. The only question was as to the best method of expressing the ideas of the association.

A paper by S. A. Pierce of Kansas City relating to the increase in the prices on printing materials other than paper closed the set program of the first day's session.

SEE "SPORTING LIFE."—VISIT A NEWSPAPER.

In the evening, most of the editors viewed "Sporting Life" as presented at the Century Theater. Later they visited the office of the Globe-Democrat, and were shown all over the newspaper establishment, beginning at the composing room on the eighth floor and ending among the presses in the basement. Afterwards they went to the office of The Republic, and saw the very latest things that go to make a perfect working place for newspaper men. The visitors were unlike the ordinary sightseers at the newspaper offices, for they understood the practical workings of such an establishment, and the questions they asked were always to the point. They expressed themselves as delighted with their midnight call.

THE ASSISTANT EDITOR AND THE HOME NEWS-PAPER.

At the morning session of the second day Miss L. M. Sargent, assistant editor of the Bolivar Herald, read a bright paper on the "Duties, Pleasures and Troubles of the Assistant Editor."

Mr. Joseph A. Graham, managing editor of The Republic, delivered an address. As a preface he denied the intimation of the lady editors that there was a disposition to be sensational on the part of the city newspaper. He then took up his subject, "The Home Newspaper." He held that the day of reading books had passed, and that America was reduced to two institutions for its education, the common school and the newspaper. For this reason he argued for the best ideals in the making of a newspaper. The best news-

paper, whether it be in a great city or a small country town, he thought, was the newspaper that most accurately represents the activities and desires and happenings of the town or city in which it is published. "The Home Paper" is the ideal newspaper, and the most influential. The city paper, which circulated in the homes of its people, and the country paper, which fulfilled a similar service in its territory, were, together with the common schools, the educators of the day.

In a paper on "Foreign Advertisements; Cause and Decrease," H. E. Robinson of the Maryville Republican blamed

C. D. Morris,

Secretary Missouri Press Association.

the false statements of circulation published in the newspaper directories. J. N. Holmes of the Piedmont Banner presented a paper on "The Country Editor." He paid a deserved tribute to the influence and standing of the men who publish newspapers in small towns.

TARIFF TO BE TAKEN OFF PAPER.

The Committee on the subject of the tariff on paper and wood pulp submitted the following report:

Whereas, It is alleged that the heavy advance in price of print paper is the work of the International Paper Co., and that the tariff of \$6 per ton upon white paper and \$1.67 per ton on wood pulp is to the advantage of said trust in fixing higher prices on paper; therefore be it

Resolved, That the President and Secretaries of this association be and are hereby instructed to prepare a memorial asking Congress to provide legislation placing white paper and the material from which it is made upon the free list, and such other legislation as will prohibit combinations and trusts of like nature; that we cordially indorse the action of Hon. Champ Clark and Hon. Dorsey W. Shackelford in introducing bills into Congress removing this tariff from white paper, as well as other Congressmen who are aiding such legislation, and we hereby earnestly petition our

Senators and Representatives to heartily support this and all similar measures.

Resolved, That the paper read by W. D. Thomas before this convention, giving information on this subject be appended to said memorial.

HOWARD ELLIS,
PHIL GANSZ,
E. W. STEPHENS.

The report was adopted, though two members of the association voted in the negative. They did not believe the tariff had anything to do with the advance in the price of paper, as paper reached its lowest price years after the tariff went into effect. One member of the committee, who voted for the resolution, explained that while he did not believe the existence of the tariff had anything to do in causing the rise in the price of paper, he thought this action might result in good. He evidently considers those who continue to practice extortion no longer deserve the protection or the fostering care of the Government.

President Jesse of the State University made a short talk, announcing that there were 1,000 students enrolled in the university and appealing for the support of the association for the institution.

At the afternoon session the Committee on Resolutions made a report, offering the hearty thanks of the association to the various business firms in the city and to the Globe-Democrat and The Republic for courtesies extended; sympathy for D. M. Houser of the Globe-Democrat and his family in the bereavement they have suffered in the recent death of two sons; and saying, further: "That we extend our thanks to Mr. Fred W. Lehmann of St. Louis for his eloquent and timely address on the Louisiana Purchase Exposition, and that, as editors, we pledge our hearty support of the project and will use our every energy in furthering it until its ultimate consummation—the grandest of the great expositions of the age."

WHAT THEY ARE THANKFUL FOR.

Considerable merriment was created by the reading of a "minority report" of the Committee on Resolutions, which was referred to the Committee on Accounts as being of "no account." The report was in the form of a set of resolutions, as follows:

Resolved, That we are individually and collectively glad that we are still alive.

That we have cause to rejoice that the Paper Trust has not eliminated us entirely.

That we congratulate ourselves that we are neither in the Transvaal, Kansas, Kentucky or other places subject to high and rapid changes of temperature.

That we have heard that Walter Williams of the association delivered on yesterday a lengthy and diversified address to the Illinois Press Association. That we condole with our Illinois brethren on what has been and felicitate ourselves upon a lucky escape on what might have been, for all of which we are duly thankful.

That Governor Norman J. Colman is still an active motor of the sprightly present; that the voice of the Hon. William F. Switzer still resounds with phonetic celerity and his nimble footsteps yet make their imprints upon the sacred soil of Missouri; that the old white hat of J. West Goodwin moves along in its majestic serenity, a guide for the past and, as it were, a landmark for the younger members of the association and an indication that "there were giants in those days" and for the present that "all is well."

For all of these may we ever be duly thankful; and furthermore your deponents say not.

OTHER TOPICS TREATED.

J. C. Patterson of the Marshall Democrat-News read a paper on the best arrangement of a weekly newspaper office, describing his own, which is conceded to be a model. He said that the day of dirty and disorderly printing establishments is forever past, and that now the successful enterprise is the one which pays quite as much attention to appearances and conveniences as any manufacturing concern of equal producing capacity.

G. S. Jones of the Post-Dispatch presented a paper which he had expected to read Thursday, on "Journalism as a Profession; Its Obligations and Missions." He said that while money is essential to the success of a newspaper, the real foundation of such an enterprise is in the news. He said that, while it is the purpose of the publisher always to sell the news, yet it is possible in the handling of it to be of great benefit to mankind. Modern journalism is the result of better facilities for collecting and distributing the news.

Mr. Johns showed how modern papers have improved upon the manner of presenting the news to their readers by the use of headlines, proper types and illustrations. All these things, he said, are civilizing factors, for civilization rests upon the ability of men to perceive relations, to understand that, after all, all men are brothers, and this is only possible where men are informed about the affairs of the world. For this reason, he considered the newspaper the most potent factor in the work of civilizing the world.

DEFINITION OF NEWS.

In a discussion of what constitutes news, Mr. Johns said that practically all men will agree upon the main features. Scandal, crime and vice, when used in the columns of a paper for base and unworthy purposes, do not properly make news. But when told about for information, that the public may know what is going on in the social body, he considered them entirely legitimate subjects for newspaper accounts, and took the stand that it was the duty of the press to not suppress anything of the sort. Opinions of good men may be good enough, but one single plain statement of facts is more potent as a power for good than ten thousand opinions.

Mr. Johns criticised severely the plan of a Kansas minister to publish a newspaper "as Jesus would," and asserted that the undertaking was unworthy of a truly pious and sensible man. He said that the same problems confront the country editor as the editor of a metropolitan daily, and must be met in the same way, with an unfaltering regard for the truth and a hatred for every form of evil. In the close of his paper, Mr. Johns touched upon the growing tendency toward censorship, which he characterized as a step towards the worst form of tyranny.

Hugh Stephens entertained the editors with a talk about "Job Work." He exhibited samples of work from the offices of the Jefferson City Tribune and the Columbia Herald.

A paper prepared by Mr. W. L. Chappell of the St. Louis Paper Company was read by one of his associates, William Holz. Its purpose was to show why publishers need not expect any decrease in paper prices for a year at least.

THE EDITOR AND THE FARMER.

An address on the "Relation of Country Editor to Farmer," by Levi Chubbock of the Rural World, came next on the programme. The speaker said that the country papers of the State reach at least 1,000,000 readers, who live on farms. Many of the best weekly papers in the State have from 50 to 90 per cent of their subscribers

among the farming class. For this reason the importance of the editor's mission could not be overestimated. He made a number of suggestions as to the manner in which the communications of country correspondents should be treated, and especially urged that closer personal relations be established and maintained between the editors and farmers. He suggested that the farmers should be taught to know the value of advertising their products when they wished to sell.

"The Question Box," an informal discussion of various topics of interest to the country publishers, was conducted by W. O. L. Jewett of the *Shelbina Democrat*. What to do when a subscriber gets mad and wants to stop the paper; how to deal with delinquents; postage exemptions; rate cutting, and correspondents were all discussed.

Charles W. Crutsinger answered a number of questions about the mechanical work of a printing office, and the President announced that the association would visit Mr. Crutsinger's establishment immediately after adjournment.

When all the business had been disposed of the association stood, while Walter Williams of the *Columbia Herald* offered a prayer, and the winter session of the Missouri Press Association was ended.

SUCKER STATE EDITORS.

Instructive Discussions—The Trading Stamp—Newspaper Improvement—Rural Free Mail Delivery—Machine Composition—Practical Questions.

THE meeting of the Illinois editors at the Lexington Hotel on February 7, 8 and 9, added another to the wonderfully successful conventions of the present year. There is certainly a waking up among the members of this calling at the beginning of A. D. 1900 that bodes good for the coming century.

The first session of the Illinois convention was opened at 11 A. M., on the 7th, with prayer by Rev. Myers of Immanuel Baptist Church, Chicago. The regular committee were then announced by the President, when the Association went into executive session for the consideration of matters especially touching legislation and the business side of the calling. The subjects considered were handled in a practical manner, and as a whole the session proved one of the most profitable of the convention. Mr. A. C. Bentley of the *Times*, Pittsfield, presented a very convenient card of reference for publishers giving, briefly, the requirements of the statutes as to publication of notices, etc., and citing the pages of "Hurd's Revised Statutes of Illinois, 1899," on which the acts relating to newspaper publications, etc., are to be found. Mr. F. H. Hall, of the *Joliet News*, spoke briefly of the fraudulent stamp system of advertising, and presented the following law enacted and held constitutional in the State of Vermont:

THE TRADING STAMP.

An act to prevent the use of trading stamps, coupons or other devices on the sale or exchange of property.

It is hereby enacted by the general assembly of the State of Vermont:

Section 1. No person or company shall in the sale, exchange or disposition of any property, give or deliver in connection therewith or in consideration of said sale, exchange or disposition, any stamp, coupon or other device, which entitles the purchaser or receiver of said property or any other person to demand or receive from any person

or company, other than the person making said sale, exchange or disposition, any other property than that sold or exchanged, and no person or company other than the person so selling or disposing of property shall deliver any

J. W. Walsh,

President Illinois Press Association.

goods, wares or merchandise upon the presentation of such stamp, coupon or other device.

Sec. 2. Any person or company who violates any provision of the foregoing section shall for each offense be punished by fine of not less than twenty nor more than five hundred dollars.

Approved November 26, 1898.

PRESIDENT WALSH'S MESSAGE.

In the afternoon President J. W. Walsh presented his annual message containing important recommendations that were afterwards concurred in by affirmative action. The following outline of the President's address, as given by the *Chicago Evening Post*, will be found of interest, in the way of suggestion and instruction among members of other associations:

At the present time, of the 1,800 papers published in the State, but 300 are represented in the State association. President Walsh said this should not be the case and recommended the organization of the State by congressional and senatorial districts. He believes that in this way a closer union of the editors and publishers in a small territory can be brought about. His plan is to make these smaller associations subordinate to the State association.

Another feature of the address of President Walsh was the recommendation that two meetings of the association be held each year—one during the summer, to be devoted

to pleasure, and another to be the regular business meeting. This scheme is to make the summer meeting take the place of the long jaunts by the national association, which last several weeks and take a man from his business.

In his address President Walsh reviewed the history of the Illinois Editorial Association from the time of its organization at Peoria in 1866 to the present, referring to the many changes that have taken place, especially in the personnel of the association. Among the old-time members still on the rolls are J. W. Baily of the Princeton Republican, John W. Clinton of the Ogle County Press, and J. M. Lusk of the Pittsfield Democrat.

IMPROVEMENTS BROUGHT ABOUT.

During the early meetings of the association the principal object seemed to be to bring the members together for the purpose of having a good time. It was in the '70s, the

press greatly improved so far as the methods of news gathering are concerned, but the tenor also has been elevated so that now editors are more courteous and cordial with each other and give each other much better treatment with a few exceptions. This is due to the work of this and kindred associations. There was one thing that was deplored in the address, and that was the fact that of 1,800 papers in the State not to exceed one-sixth held membership in the association. He referred to the work of the association from the non-partisan standpoint in the legislature. Several amendments to the constitution were recommended. It was urged that the ban be raised so that the association could re-elect a treasurer more than two years in succession. He said the question of membership was the one important matter puzzling the members. What was needed, he said, was a system devised in such a way that it will reach the country editor. He advised the elec-

Second Vice-President.

A. W. Glessner,
Third Vice-President.

Officers of the Illinois Press Association.

President said, that the true conception of this was realized. Honest pride in the profession and in self has tended to elevate the press until at the present time the newspaper men of Illinois are the peers of any equal number in other walks of life. The improvement, Mr. Walsh thought, was brought about largely by the work of the association. He noted the great changes that had taken place in the newspaper world. He contrasted the newspaper of to-day with that of the '50s. In the early days the tendency of the newspaper was to be the organ, while to-day the publication is a newspaper in the strictest sense of the word. He mentioned the story told of James Gordon Bennett of the New York Herald. In talking to one of his men he had occasion to reprove him. He said: "You think the Herald is being published to 'interest and educate,' but that is not true; it is issued 'to amaze and amuse.'"

Mr. Walsh said a publication of that day would scarcely be considered a newspaper in this age. He referred to the statement made by a member of the staff of one of the great dailies in 1853 that that enterprising newspaper paid out as much as \$7 a week for dispatches. The amount expended in a single day by the American press is estimated at \$25,000, while for the year the amount reaches up in the millions.

The President said that not only is the quality of the

tion of one member of the executive committee annually instead of the present system.

John M. Rapp of the Fairfield Record followed with a paper on "How to Secure New Subscriptions and Collect Old Ones." A paper prepared by Frank W. Havill of the Mount Carmel Register was read in his absence. His theme was "Reciprocal Duties of Editors and Officials." The last paper of the afternoon was by DeWitt C. Owen of the Dixon Star. Mr. Owen had as his subject, "Tri-Weeklies." The substance of these papers, with others, appear under appropriate headings elsewhere in this issue.

EDUCATION AS TO GIFT AND STAMP ADVERTISING SCHEMES.

Following the papers, a short time was devoted to the subject of stamp or gift advertising. The report from members was that wherever tried, it had proved unsatisfactory and a loss to merchants as well as to newspapers from which money that would have been devoted to legitimate advertising had been diverted. The editor of this paper thought that a little education through the newspapers to put the merchants on their guard against imposition would be but performing a duty toward patrons while protecting the best interests of the papers; that even an enactment such as the Vermont law, would, at least, act

as a schoolmaster to teach the careless, ignorant and unwary the folly of gift schemes in advertising. A few coincided with this view, while others thought the stamp advertising scheme had to have its run, like the measles, and it was better not to interfere. There seemed to be a little feeling manifested by some who deemed experience the better school than the newspaper and did not want to go up against the perversity of human nature in resenting well meant and well intended good counsel as selfish intermeddling or attempted dictation.

GO TO THE THEATER AND GET A GAVEL.

In the evening a theater party was given to the editors and their ladies at the Columbia, to hear "Erminie." The party was arranged by the following firms of Chicago: American Type Founders Company, Barnhart Bros. & Spindler, Samuel Bingham's Sons Mfg. Company, Bradner Smith & Co., J. W. Butler Paper Company, Chicago Paper Company, Crescent Type Company, W. D. Messinger & Co., Moser-Burgess Paper Company.

One of the pleasant incidents of the occasion was the presentation on the part of the above named firms and companies of an elegant ivory gavel with ebony handle. It was developed at the meeting last year that the old gavel, on which had been engraved the name of each succeeding President and had been in use thirty-three years, had no room left for names of other presidents, besides being the worse for wear. A committee was appointed to procure a new gavel. A suggestion to Chicago friends of the need was all that was necessary to secure the purchase of an elegant one, presented at the Columbia.

SECOND DAY.

The second day's session was made conspicuous through the annual address on "The Needs of the Hour," by Walter Williams of Columbia, Mo., a Past President of the National Editorial Association, who is loved as well as esteemed by the best newspaper publishers everywhere for his manliness, high ideals, undisputed ability and his noble principles and character, as an editor, a citizen and a Christian gentleman. The address is given in full in these pages as a worthy and needed contribution to a professional literature that is helping to place journalism in the worthy position demanded by its obligations, opportunities and its possible power or influence.

RURAL FREE MAIL DELIVERY.

"Rural Free Mail Delivery," by H. A. David, of Carlinsville, proved a most interesting topic that elicited questions and discussions as to the effects of the system on weekly papers and on local merchants. Some thought that the plan would lead to a demand for daily papers, but where such routes had been established it was the unanimous testimony that such increased demand for dailies did not in the least injure the local weekly papers but lead to an increased circulation and was in every way an advance, a means of education and of social and material improvement.

MACHINE COMPOSITION.

Typesetting and linotype machines received a thorough consideration by F. B. Mills of Lincoln, Frank T. Moran of Belvidere, Past President Charles Boeschstein of Edwardsville, and Hon. Owen Scott, Leader, Bloomington, Ill. The verdict of each and all was favorable to their use. The machines used and recommended were the Simplex Typesetting Machine and Mergenthaler Linotype. The number of thousand ems obtained per day on the Simplex, with two operators, was put at 55,000. Mr. Mills said that

he used the new aluminum type with the Simplex and experienced very little loss from breakage. Mr. Boeschstein had recently installed a Linotype and found it entirely satisfactory. He thought that any one with intelligence enough to set type and run a printing press could without trouble, manipulate a Linotype machine.

GOVERNMENTAL COMPETITION.

In the afternoon Hon. E. A. Snively of Springfield offered a preamble and resolution directing the delegates from Illinois to the National Editorial Association to take

J. M. Page,

Secretary Illinois Press Association.

steps in that body for securing the passage of laws by Congress to restrict the government from competing with job printers and newspaper publishers by selling printed stamped envelopes.

The resolution also contained a protest against the decision of the internal revenue department demanding a license fee from traveling physicians who advertise in country papers.

Mr. Snively said: "The practice of the government in selling stamped envelopes to the business public operates to the detriment of job printers all over the country. The government buys its supplies in the largest possible quantities and is able to sell its product much cheaper than any job printer. We do not think the government should compete with us in printing envelopes. Its present policy in this matter deprives job printers of millions of dollars' worth of work each year.

PRACTICAL QUESTIONS.

Practical questions connected with the management of newspapers were then taken up.

Miss Lottie E. Jones read a paper on "Fads in the Schoolroom." A paper by Thomas Rees of Springfield, on "Invoicing and the Insurance of Newspaper Property," was read by E. A. Snively. Terry Simmonds of Marseilles dis-

cussed, under the subject of "Turned Loose," county associations, historical files and the value of prize essays. The subject of "Foreign Advertising" was treated in a paper read by J. J. Baker of Mount Vernon.

BETTER RATES FOR FOREIGN ADVERTISING.

This subject led to a spirited discussion pretty generally participated in, during which it was made apparent by the statement of prices obtained by different members that after a quarter of a century of discussion of this question in editorial associations and in papers devoted to the calling there is still a great variance in the prices obtained by publishers for this kind of advertising. However, the discussion also showed an improvement among those who really take business seriously, read the *National Printer-Journalist*, attend to and remember what is brought out in papers and discussions at meetings of editorial associations.

Several years ago a representative of a foreign advertiser stated that articles in the *National Printer-Journalist* had cost his firm over fifty-five thousand dollars in one year. This amount had all gone into the pockets of newspaper publishers wise enough to read what is published about the calling founded on long experience and sound reasoning and then put into actual practice all that has been learned.

EVENING SESSION.

In the evening, the resolutions offered by Hon. E. A. Snively, at the opening of the morning session, were taken up, and after the elimination therefrom by Mr. Snively of everything referring to the revenue laws and a brief discussion, were passed in substance as given above in this article. Mr. B. B. Herberhart, as committee on a new gavel, reported that the same had been obtained merely on suggestion to Mr. Johnson of the Butler Paper Co., who conferred with other Chicago friends of the Association and ordered the committee to go ahead and have such an one made as would be worthy the Association and the occasion. This duty was performed and the largest gavel that could be manufactured from one piece of ivory had, as all knew, been presented and was ready for the use and names of succeeding Presidents. He moved that the old gavel be now presented to the State Horticultural Society at Springfield, together with a card bearing the picture of the gavel and the names of the twenty-six past Presidents who had wielded the same during the thirty-four years of the Association's existence. The motion was adopted by unanimous vote.

Mr. George W. Harper of the *Argus*, Robinson, had a paper full of valuable suggestions on the subject "Keeping Everlastingly At It." There are, as shown by the paper, very many things to be kept "everlastingly at" in carrying on a newspaper, but this constant, untiring attention to all these, every hour, every day and every week, brings success.

R. T. Spencer of the "State Center," Illiopolis, made "Job Printing" humorous and entertaining as well as instructive. He told of a custom with a printer, now gone to his reward, who used to print "sale notices" at a dollar and a half for a hundred on card-board, line notice in paper, five hundred small cards for distribution and throw in a tin cup. Mr. Spencer had sent out blank slips containing a list of twenty or thirty kinds of printing, such as statements, bill heads, letter heads, cards, etc., etc., asking the quotation of prices. The variety of prices given were something wonderful, and a Chicago office beat all the rest in getting down for completed work below the prices usually paid for paper.

Mr. E. E. Pinkerton of the *Press*, Rantoul, discussed "The Duties of An Editor." He thought his duties were of

leadership, and the higher ideals should direct and inspire him in his work.

Mr. Charles Bradshaw of the *Carlton Patriot*, spoke on the theme of "Educating Advertisers and Subscribers." He thought the process a difficult one and came himself as an inquirer. It had been suggested that this education might be accomplished through sending papers to advertisers that were devoted to this subject, but this had objections.

Mr. H. M. Wheeler spoke briefly in a practical strain.

President Walsh, whose approaching marriage had been the occasion of many pleasant remarks during the days of the convention, took his departure during the evening session for Oregon, where he was to be married on the fourteenth of February. Before leaving the room in which the

Charles B. Mead,

Treasurer Illinois Press Association.

members were assembled, he was given a hearty handshake by every editor and editor's wife present, accompanied with many good wishes. Previous to this he had received a very complimentary vote of thanks for the able manner in which he had presided over the convention and cared for the interests of the Association. The resolution was adopted by a unanimous rising vote. When Mr. and Mrs. Walsh return to their home, in Harvard, he and his bride will be made aware of the fact that the members of the Association had also arranged quietly a substantial remembrance, that will through coming years be a witness of the high esteem in which Mr. Walsh is held by his brother editors and members of the Illinois Press Association.

On Friday morning the election of officers, reports of committees, passing of resolutions and other routine business took up the time.

The following were elected to watch over the affairs and interests of the Association for the year 1900-1901:

President—A. C. Bentley of the *Pittsfield Times*.

First Vice-President—Smith D. Atkins of the *Freeport Journal*.

Second Vice-President—C. W. Bliss of the *Hillsboro News*.

Third Vice-President—John Marshall of the *Yorkville Record*.

Secretary—J. M. Page of the *Jerseyville Democrat*.

Treasurer—H. A. David of the *Carlinville Democrat*.

Executive Committee—A. W. Glessner of the *Galena Gazette*, S. K. Strother of the *Taylorville Courier*, and W. W. Lewis of the *Greenville Advocate*.

Twenty delegates were chosen to represent the organization at the annual meeting of the National Editorial Association in New Orleans March 1.

Half a Century's Advance in Illustrations. A STORY OF TYPE AND PICTURES.

PART THIRD.

Article and illustrations contributed by the BINNER ENGRAVING COMPANY, Plymouth Court, Chicago.

THE modern half-tone engraving or plate is an evolution having as its basis the crude stock wood cut such as appeared in the first part of this article, showing in the most convincing way the advance in the art of illustrating in the last half century. Those who are in touch with the art and have seen it grow to its present wonderful perfection, and whose experience in the business of producing cuts extends back to the time when wood engravings were the only cuts available, know how eagerly the public demanded and appreciated the first efforts toward the perfection of the engravers and illustrators' art, for every advance made the illustrator more noticeable in the pictorial efforts of the printing press. Take as a beginning for the marked change the period of the Civil War; turn to the pages of Harper's Weekly during the years of '61 and '64, and one sees for the first time the evidence of the special artist on the spot, who has since become a most familiar, and, at times, a most fictitious character. Those large wood cuts often extended across two pages; they were, in themselves a wonderful advance since the days of the crude stock cut, and they, in turn, were again overshadowed by the perfection of wood engraving that appeared in the '80s and early '90s in the magazines. Wood engraving, as an art, seems to have reached its zenith of glory at that time, and left us the names of Cole, Kingsley, Johnson and others to cherish as masters of the engravers' art. The wood engravers' ruling machine, which came into general use about 1865, created a vast improvement in the appearance of the purely commercial engravings, and made it possible to produce cuts of machines, etc., in a cheaper and far more satisfactory way; nor has this machine even at the present day been displaced by a better method.

Wood engravings of objects of intricate detail are still in demand, and there are those who say that the present popular half-tone will never quite equal the wood engravings in this special field. The advent of the ruling machine, created a demand for more engravings, as will always be the case whenever the supplying capacity leaps ahead (for a period) of the demands for the same. Any process that cheapens and at the same time betters the product will soon find the demand existing in previously undreamed of quantities. This is more than proven by the great popularity of the present process engraving, whether it be zinc or half-tone. One doubts whether those early experimenters and pioneers of the present processes ever, in their wildest dreams, saw or thought of the volumes of illustrated books, both commercial and artistic, which the present processes have made possible, and surely no one ever laid stress enough on the value of the half-tone plate, that has done so much toward enlightening us all through pictures, on the manners, customs, art, architecture, scenery

and happenings of our own and other lands; nor can any one rightly estimate the practical value that a correctly and at the same time pleasingly illustrated catalogue is towards the sale of the goods illustrated, be they machines, jewelry, clothes, houses, horses, furniture, etc. If, as it is said, the advent of steam power, electricity, and the telegraph made the world smaller, in a sense of drawing us

"Where there is one pound of Butter that any Christian Man ought to eat there is a Ton that ought to be thrown overboard into perdition. Bad Butter clogs the liver and destroys the Purity of the Blood."

Henry Ward Beecher.

A Convincing Union of Type and Illustration.

all closer together, then of the modern illustrating processes one can almost claim they made the world larger, in the sense of making it possible to represent salable articles to the people one could not have reached in any other way. In support of this one has only to read the illustrated advertisements and catalogues; those convincing unions of illustrations and type setting and run over in one's mind the score of names of prominent mail order houses. In

Architecture of Other Lands.

A Soft, Pleasing Picture — Entire Absence of Stiff Mechanical Lines.

nine cases out of ten, the buying public knows nothing of the house they are dealing with, nor the object they are buying. They rely entirely on the illustrations and the text of the advertisement, and in most of these sales one can feel that the first notice the public gave the article was occasioned by the illustration or the picture part of the advertisement. Pictures! That's what they are; modern half-tones, duplicating to a degree unknown before any drawing, painting, photograph, anything that the eye can see, and doing it in such a soft, pleasing way that the pub-

ods that have gone before, wood engraving, steel engraving, copper etching, lithographing, photogravure, and many other processes, the modern half-tone has eclipsed them all in the point of adaptability to all possible uses for commer-

A Mechanical Wood Cut — Showing Lines Ruled on the Wood Engravers' Ruling Machine.

cial and artistic purposes; where, in former years, an engraving was a matter of weeks and months, now it is a matter of hours only. Formerly the cost was almost prohibitive, now it is so reasonable that it has created a demand for itself, where formerly no one ever conceived one might exist. Such is the record of success of the half-tone plates.

Now, if the evolution of the plate itself from its crude wood cut forerunner has been so remarkable, it might be of interest to notice the effect this improvement has had upon the shop itself, that produces it. Shop! That was the name commonly attached to the small concerns of those earlier days, when half to a dozen men were considered a large force; when one or two attic rooms with good north light were all the location necessary. That the producers who kept advancing at the rate the product advanced, can be easily proven by merely glancing at the names of the establishments (not shops any more) that are scattered all over the land; where the latest improved machinery, electric light, special trained men in the different departments, well appointed offices and, in some few cases, a capable staff of trained artists and designers really exist. This latter is a want at times painfully evident by its absence, in the production of otherwise well appointed establishments.

The very accuracy with which the half tone process reproduces the copy, makes it necessary to have in all first class establishments artists that can change or brighten defective copy, in such a way that it will not be apparent in the finished plate. The awakening of the artistic taste in the American people, especially since the World's Fair at Chicago, calls for designers of more than the usual ability, to design the numerous booklets, magazines and newspaper ads., posters, catalogue illuminations, letter-heads, envelopes and all the cleverly thought of aids that the American business man calls for in his campaign for the almighty dollar.

A Retouched Photo — The Work of Specially Trained Artists.

lie feels an entire absence of any stiff, mechanical process, reproducing the copy faithfully. Pictures, the striving after which we can trace way back through all the ages and nations to the time of the pyramid builders, and which still asserts itself in the crude decorative efforts of the savage tribes. Pictures, the craving for which is a part of human nature. This, then, is the want that the latter half of the century has reserved to itself to fill. After the many meth-

THE BADGER EDITORS.

FFICERS were elected at the meeting of the Wisconsin Press Association in Green Bay February 9th: President, M. P. Rindlaub, Platteville; Secretary, O. F. Roessler, Jefferson; Treasurer, Mrs. Flora B. Ginty, Chippewa Falls. The session was opened on the morning of February 8, with an address by President M. P. Rindlaub. He referred to attendance on a meeting of the Association in

Martin P. Rindlaub,

President Wisconsin Press Association.

Green Bay thirty years ago, speaking in a feeling manner of many then present who have since passed from earthly scenes. He plead for a larger membership in the Association, which, though comparatively large, embraces less than one-half of the newspapers of the State. He thought a thorough advertising of the Association, its benefits, and results, the practical education obtained and pleasures enjoyed might help to this end. He advocated combining on advertising rates, spoke for a better understanding between advertisers and publishers. He said: "A good rule is to establish a rate for your home advertisers and then not allow outside firms to occupy your columns for a less amount than your home advertisers pay."

Type setting machines in country offices were discussed by C. G. Starks of The Berlin Journal and C. W. Bowron of The Oshkosh Northwestern. "The New Richmond Cyclone" was reviewed by E. J. Scott of The New Richmond Republican-Voice. Miss Hattie B. Moberg of the Amherst Advocate read a paper on "Some of the Things a Woman Can Do in a Country Office," and George Crawford of The Mineral Point Democrat spoke on "Some Phases of Newspaper Work." The evening's program was commenced with prayer by Rev. J. M. A. Spence; musical selections

were rendered by Mrs. S. W. Harteau, and a poem was read by Gustav Kustermann.

Mr. Andrew Bruce, Madison, spoke on the "Gospel of the Press." He criticised sharply some of the methods of the metropolitan press, taking the Chicago papers as a basis for his remarks. He urged the paying of more attention to the conventionality of the people and less to monetary interests.

Governor Hoard made a strong appeal for a higher ideal for newspaper men, and particularly lauded the country press as being the conscience of the people. The country editors were in touch with nature and were nature's noblemen. They should think for themselves and express their own opinions. Politics and money, he said, were among the strongest agencies leading to the corruption of mankind.

The Association held its business meetings Thursday and Friday forenoons. The evenings were given up to music, speechmaking and social functions given by the citizens. During the afternoons the party of editors was escorted by city officers and business men to the various places of interest, particularly manufactories about the city. Among these institutions visited was the new Grand Opera House, now nearly completed, the Murphy saw mill, where a mill pond is kept thawed by means of steam pipes; the DePere paper mill, claimed to be the largest in the world, where the finest linen and print papers are made from rags; to the State Reformatory and other points of interest, gathering a vast amount of practical information that will enable them to give good, live facts to their readers regarding the institutions and interests of Green Bay. Herein, such newspaper assemblages are of value to citizens as well as to the editors themselves.

Before the meetings of the Association closed, an invitation was extended by the Wisconsin River Valley Advancement Association for an outing for the editors along the valley during the coming summer, with the promise to show the editors the banks where the wild pine grows, to tent them on new tentage grounds, surrounded by the prettiest lakes and the grandest of summer resortage pleasures, in sight of the tepees and wigwams of our red brothers—there are a few of them left; to show Hiawatha up-to-date, and where nature's canopy furnishes protection from storms; to quench their thirst from nature's crystal fountains and feed them game meats and feast them on birds and fresh fish from the forests and streams.

We were once elected an honorary member of the Wisconsin Press Association and wish to be counted in at their summer meeting.

INTERESTED IN CIRCULATION MATTERS.

Office of The Chicago Tribune,
Chicago, Ill., Feb. 14th, 1900.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—Enclosed find check for (\$2.00) two dollars, in payment for one year's subscription to the National Printer-Journalist, to commence with issue of February.

I see you have opened a department to cover the circulation field, which, I think, is a step in the right direction, as most papers devoted to newspaper making and advertising do not give any space whatever to this important department of newspaper work. I am interested in circulation matters, and wish all the numbers since the department commenced, which, I believe, is with this month's (February) issue. Send papers to my home address,—3252 Rhodes avenue.

Wishing you every success in your new departure,

Yours truly,
A. J. CHARLES,
Sup't Country Circulation Chicago Tribune.

Entered at the Chicago Postoffice as Second-class Matter.

Advertising Rates Promptly Furnished on Application.

CHICAGO, - - - - - MARCH, 1900.

Last month, in this department, a number of questions, propounded at the meeting of the Kansas Press Association, were answered with a promise to resume in this issue.

Question 23.—Is it a good plan to have excursions in connection with the meetings of the State Association?

Answer.—The most successful Associations of the United States have two sessions a year. The summer meeting generally includes a short excursion, while the winter meeting is given up entirely to business. Knowledge of one's own State and one's own country is of great value to every live editor or publisher. An editor should be thoroughly informed as to the institutions of his own State, and by visiting different cities, valuable facts are obtained that make the very best, most valuable, interesting and instructive matter for home readers. With the purpose of obtaining information of the best educational and industrial methods, advantages and improvements to be found or afforded by the State or the different cities thereof, excursions are of immense value. People like to read travel, and the editor whose horizon is bounded by the sky seen from his own office door is not fitted to give even home news interestingly, much less to instruct as to, or to speak intelligently of, the advantages or institutions of his own city, or of the possibilities for advancement. During properly conducted excursions, many practical facts are gained bearing directly on the calling. Besides travel affords needed recreation, and social enjoyment, and tends to awaken and brighten the faculties. Yes, with these considerations and objects in view, it is a good plan to have excursions

with the meetings of State Associations or else meet in different cities from year to year and devote a day or two to the viewing and becoming familiar with the beauties and advantages of each city, especially visiting State institutions, schools and factories. The visit of the Minnesota Association to the State Agricultural College, described in the account of the proceedings in this issue is a good illustration and just to the point.

Questions 24 and 25.—Would it be profitable for our Association to maintain its own ready-print and plate service? What is our remedy when the ready-print trust underbids and drives all competition out of business, and then names its own prices on prints and plates?

Answer.—To the 24th question, the experience of most associations that have tried the experiment gives a negative answer. The rule, too, is that every individual or organization makes the most by sticking closely to the business undertaken without trying to branch out into other lines. Still, there are exceptions to all rules. The Minnesota Editorial Association, as will be seen by the report of the Committee on Law Supplements, printed under the caption "Successful Co-operation" elsewhere in this issue, has saved thousands of dollars by a little co-operation in printing. Not only was money saved to its own members, but to every publisher in the State, by bringing down the price to all, hundreds of whom pocket the gains but show no disposition to help sustain the organization through which great, direct money benefit has come to them, on this and other occasions. Aside from business reasons, the selfishness, short-sightedness and improvidence of those to be benefited, have generally stood in the way of success. Human nature must be changed before the continued co-operation preached by Bellamy will ever be adopted. To get immediate advantage and to secure something for nothing appear to be the ruling passions with a great many who will go into a co-operative scheme and desert at the first temptation. Besides, it takes capital and experience to conduct even a ready-print or plate business. As to Question 25, which is so closely allied to 24, that we have connected the two, the answer is, encourage others to enter the business in order to make new competition or else imitate the example of the Minnesota Editorial Association, appoint a reliable committee of one, two or three members, and let that committee arrange with some printer outside of the combination to furnish ready-prints or plates at stipulated rates. Then share the cost of the same and the expenses of the committee pro rata among those receiving these ready-prints or plates. Another way is, as far as possible, to make the paper all home print, control your own advertising, make better papers, get better prices from advertisers and subscribers, and get rich. In this day of machine composition, buy a machine, or if no one office has sufficient composition to make this plan pay, then let the publishers of such city unite in the purchase of a machine, or stipulate to give a certain amount of their composition to one of their number who will make the purchase. No monopoly can exist in a free country, among a free, independent and resourceful people without it exists through the consent, slothfulness or indifference of the people. However, a first consideration should be whether the prices paid are too high. The wise man of business or manufacturer always strives to keep prices down to the lowest possible figure in order to retain, and make permanent, his business, and to prevent competition, or any temptation thereto by making the same impossible or unprofitable.

Question 26.—Is there a growing demand for a more frequent issue of country papers? In other words, is there any general demand for twice a week instead of weekly issues, regardless of loss or profit to the publishers?

Answer.—This question is very ably answered, in part, by the paper published in this issue of the National Printer-Journalist on "Tri-Weeklies." The writer of the article speaks from experience and covers the subject so thoroughly that very little need be said here in answer to the question. A daily "Rural Free Mail Delivery" will doubtless lead to the increasing a demand for and rendering profitable, in densely settled districts of the country at least, a more frequent issue of papers. This subject of Rural Free Mail Delivery, is also thoroughly and exhaustively treated in two articles in this issue. The facts stated therein are of great importance in the answering of this question, and, to newspaper publishers, in many other ways. The articles should be carefully studied and publishers should act in harmony with the desirable results shown to have been reached. The profit of the publisher must always be taken into account, and certainly to him there can be no demand "general" or otherwise, regardless of profit. It is with the publisher only a question as to whether greater profit can be made and greater satisfaction be given by publishing two or three times a week instead of once a week. Where a grocer's or butcher's delivery wagon can only profitably reach customers once a week, the customers will be satisfied with weekly service for their groceries and their meats, but it is presumed that, if, where such service has been weekly, some one would start in and deliver just the goods wanted twice or three times a week, he would be likely, in a short time, to get the bulk of the business. People like both their news and their meats fresh.

Question 27.—Would the removal of the tariff on wood pulp and paper, in your opinion, cheapen the market price of paper?

Answer.—The removal of the United States tariff on dry wood pulp, which as shown by a copy of the revenue law printed last month, is only 1-12 of a cent a pound on unbleached, and 1-4 of a cent on bleached, could have but very little effect on the price of paper. If the paper output is controlled as to price by a combination that can not be broken and that exists merely to hold up the price regardless of a proper profit on actual cost of production, then the so-called trust could quietly pocket this 1-12 or 1-4 cent as an additional profit. This paper question which was commenced in our February issue and was to be considered further this month, is omitted, to await the discussions and action of the National Editorial Association now in annual convention in New Orleans.

Question 28.—What makes it possible for the United States Government to furnish business houses with printed envelopes at a material reduction in price just at a time the envelope trust advances the price to printers about 40 per cent?

Answer.—The Government had a contract, secured by proper bonds for carrying out its conditions, with a Connecticut contractor, who, in turn, had a contract with two large paper and envelope manufacturing establishments. Until that contract expires, the Government gets envelopes at the old agreed price. It is the provision of the law that the United States should make no profit on the business, and as the contract was let under competitive bids, the figures obtained, on account of the large quantities purchased,

were correspondingly low. As the printing on envelopes ordered by bankers and other business men in from five hundred (never less than five hundred) to fifty thousand lots, is done on the sheets, before the envelopes are made, the cost of printing is almost nothing. The contractors can afford to do the printing without charge, or, at most, with only a nominal charge, for the purpose of increasing the output. Two years ago the printed envelopes sold through the Government amounted to over \$7,000,000. This answer is based on information obtained at about that time. It is probable that the new contract for envelopes was made shortly before the rise in paper. Printers, or, at least, some of them, are foolish enough to think that the United States ought not to continue in the business of selling envelopes to private individuals, directly competing with job printers. These are probably wrong, as editors and printers have a good deal to do with making Senators, Congressmen and other officials, and it is to be presumed that this competition is kept up through the influence and votes of these holders of public office, through gratitude and in order to relieve printers of the superabundance of work that is crowded upon them and in that way decrease their cares. It saves money to bankers, insurance companies and large, well-known corporations whose correspondence runs into tens of thousands and hundreds of thousands of letters, annually. If the interests of these are subserved, what right have the printers or the publishers of papers in the smaller and the medium sized cities, part of whose income is derived from the job offices, to complain?

WOMAN'S PART IN JOURNALISM.

THE history of the progress of journalism through its various stages of development is the keynote to the mental growth and enlightenment of the people, It is the pulse through which is calculated the mercantile, the religious, the scientific and the social status of the universe; and through its medium is determined not only the moral and spiritual growth of the people, but their artistic and literary attainments as well, and their development and progress is noted on all lines through the avenue of the press.

Our profession is perhaps one of the most important of modern civilized life.

Journalism as we understand it, or more properly newspaperdom, is a comparatively modern institution, and up to a hundred years ago was decidedly provincial and meager in its efforts, accomplishing little toward the education of the masses.

The advent of woman into journalism came first through her idealistic and poetic nature, lending a charm and a refining influence by its sweet sentiment to the prosy and dreary character of the earlier press.

Early American women journalists were given to thoughtful meditation instead of scientific researches and their advent into the field brought a refining influence which was strengthening in its appeal to the soul.

To Mrs. Frances Osgood, Hannah Gould and others of their time is given the credit of possessing the qualities of higher literary attainments which has shown itself more plainly in others with the later opportunities and advantages offered the sex.

Woman's first work in journalism was distinctly feminine and appealed entirely to the domestic and feminine side of her nature, subjects dear to the heart of woman were treated at length and, until the arrival of Sara Willis Eldridge, "Fanny Fern" and Miriam Berry in the Widow Bedott letters, which were signals for a broadening of

ideas among women writers, woman's work was decidedly limited.

Woman is accused of being devoid of the sense of humor, but among the cleverest satirists are found women writers, and the pungent humor of Maria Holly, "Josiah Allen's Wife," Phoebe Cary and later Lillian Bell and "Bab," and many others is fully appreciated.

Literary and magazine work, fiction and poetry, have been fields into which woman has entered eagerly and worked diligently with credit to herself and equal to the

women would scarcely be believed, so naturally and easily has woman assumed its responsibilities, and, so far as distinguishing between the sexes, such a thing is quite impossible, woman's part is co-equal with man's and corresponds one with the other. Woman has come to be a power in all lines, including politics, which she must necessarily view from afar off. What greater influence has been exercised upon politics and religion than through the pens of Harriet Beecher Stowe and Mrs. Humphrey Warde?

One of the most successful war correspondents in South

CARTOONIST'S IMPRESSIONS OF BOB WHITE OF THE MEXICO LEDGER.

J. N. HOLMES,
Piedmont Banner.

There are some people who are anatomically out of focus. Mr. Bob White of Mexico carries that sort of optical illusion about with him. His feet are located in one of his hands. Let him lounge into his characteristic pose, as indicated in the above caricature, and this is the impression you get. Now, really, his feet are of ordinary, intellectual size, but they get out of focus every once in a while, and look like the result of an experiment in amateur photography before the operator and his machine get on familiar terms with each other.

sterner sex for many years. Within the past ten years since the approach of woman into every avenue of work for which she shows ability, her efforts in the field of actual newspaper work have shown themselves to a marked degree. Woman is no longer swayed to such an extent by her emotions, she has learned to think deeply and in a practical manner; she takes kindly to a profession which offers a diversity of work such as we find in the newspaper field, and has fitted into its requirements to such an extent that she has already attained a large entrance to its portals. The large numbers of actual newspaper workers among

Africa at the present time is Lady Sarah Wilson and the experiences of Catherine Wescott Romney in publishing a newspaper on the frontier, rival the pages of a dime novel, but she was eminently successful.

Woman has run the gamut with her brother in all lines of the work, and has proven herself capable of filling its requirements.

The equal rights of woman has no better argument to offer for herself than the record she has made in journalism.

Woman's interests are the same, her strife is the same,

and her victories or failures must be meted out in the same degree as man's. The immortal Kate Field is a shining example of the modern newspaper woman, as was also Ruth Ashmore, women who struggled through all trials, entering every field of labor, and, with their glowing pens, brightening and enlarging the lives of others, and widening their powers for good.

Woman's part in our profession is not distinct from man's; she is a co-laborer, and works to the same end and with the same object in view; her efforts, perhaps, are not as far reaching as man's, yet to woman in journalism must be given the credit of having been largely responsible for some good having been accomplished along the line of temperance, and in battling with many of the wretched social evils existing around us constantly.

Woman is by nature given to piety; she leads her readers into a religious train of thought. She has a keen sense of the beautiful and encourages the arts, and a love for nature; her ideas on the social conditions of the people are clear and sound; her judgment is found to be fair and impartial.

We see in her work a gain to the profession, which has called to the service of man the faculties of a sex that can

THE NORTH STAR EDITORS.

NE hundred and eighty-six paying members, actual editors and publishers of papers, present and taking part in the proceedings, was the splendid record at the meeting of Minnesota Editors' and Publishers' Association in Minneapolis, February 15 and 16, this year. It was the largest actual attendance at any session in the history of the association. The interest manifested and the high qualities of the papers presented were in harmony with the large attendance. Nothing could possibly be more gratifying to the editor of this paper than to witness this advance in the association over which for three years, now fifteen years in the past, he had the pleasure of presiding. It speaks of an advance in newspaper making in Minnesota that should be a subject for pride and congratulation to every editor and publisher of the North Star State.

The editors, very sensibly, passed the first day in an inspection of the State Agricultural School, Farm and Experiment Station—an institution in which every newspaper reader, every citizen of Minnesota, ought to take a deep

Minnesota Editors Visiting the State University.

penetrate at a glance the mysteries which men have puzzled over for years, utilizing the results of her efforts for the mutual benefit of all.

Woman's part in journalism is to labor long and unceasingly beside her fraternal brother, with ever that thought of a higher reward in the help of her fellow creatures to inspire her.

MARILLA LEE,

Before the Minnesota Editors' and Publishers' Association.

EDITORS OF AGRICULTURAL PAPERS MEET.

The National Agricultural Press League held a special meeting February 12, in Chicago, with President George B. Briggs in the chair. Resolutions were adopted urging the National Congress to remove the duty on all print paper, pulp and other materials which enter into its manufacture. The plan of the 50 papers represented in the league, uniting to purchase all paper used from one mill, was favorably discussed. A committee was appointed to make arrangements for an excursion in August to Colorado and the Yellowstone Park. It was decided to hold the next annual meeting in Milwaukee upon a date coincident with the convention of the National Association of Agricultural Implement and Vehicle Manufacturers. A number of new members were elected and much interest was manifested.

interest and to have in its splendid success and increasing usefulness a genuine pride.

The pencil-wielders were first greeted by the Minneapolis Press Club, and then by the Mayor of the city, who is himself an editor.

President Huntington briefly responded, when the members, who must ever be seekers after knowledge to impart to their readers, made ready to depart for Minnesota's fountain of practical knowledge and instruction. Just at this time the artist of the Minneapolis Times caught members of the party at the West Hotel with his camera. Through his courtesy and that of his splendid paper we are able to present these gophers on their way to dig for an understanding of the methods by which the youth of the State are lead into all the wonders of plant and animal life and growth, agricultural chemistry, anatomy, physiology, hygiene and all the other branches of science necessary to modern farming. The editors were clad as befits a day with the mercury at eighteen degrees below zero. "All aboard for the Agricultural College," was the cry heard when the press people found themselves lined up along six big cars of the Twin City Transit Line. It was a jolly train load. Sociality and songs, supplemented by cakewalks up and down the aisles by some of the members who have

attended the conventions of the Association for nearly four decades, and have grown younger and jollier every year, filled in the time of the joyous ride in Minnesota's bracing atmosphere until roomy busses on runners for the ladies took the place of the cars, while the men footed it over the crisp snow.

The farm buildings reached, a cordial greeting awaited them, extended with glad hand by Colonel W. M. Liggett, dean of the School of Agriculture. All were ushered into the great assembly room, where the dean introduced J. A. Vye, manager of the school paper, who described to the editors the manner in which he printed 2,000 copies a month.

Professor Snyder told of the education in chemistry which the prospective farmers were given at the college.

After a talk by Principal Brewster, President Huntington complimented the school and its work, and urged the editors to tell the public about it.

Mayor Gray, being called on again, gave the editors his theory as to the manner in which a city should be managed. His plan was to first find out just what the papers want, and then have a council do it.

SOME BRIGHT SPEECHES.

H. P. Hall, "who had regretted all his life that he had not remained a farmer," delivered a serio-comic ten-minute address which was replete with good things. Professor Hayes, Mrs. Meredith and Professor Lugger each entertained the molders of thought with five-minute talks, preceding President Cyrus Northrop's address.

When the worthy President arose he was greeted with applause and was frequently interrupted during the course of his twenty-minute address by manifestations of the audience's appreciation. It was the clearest exposition of the agricultural school and of the university as a whole that has ever been given anywhere or at any time. He was given the closest attention.

Following President Northrop (we quote from the Minneapolis Times) came Conde Hamlin, of the St. Paul Pioneer Press, who spoke from the newspaper man's standpoint, showing a just pride in his profession and comparing it with several others to their disadvantage.

Dinner was announced at the close of his talk and in a few minutes the assembly hall was emptied and the audience was on its way to the dining hall. Here a substantial dinner was spread, and inasmuch as each table was presided over by some one connected with the college, it need not be supposed that any guest was allowed to go away hungry.

The time between the dessert and the hour of departure was utilized by the guests in visits to the several departments of the college, where the students were found engaged in their studies. Considerable interest was manifested in the work being accomplished in the horticultural department, and the visitors spent some very profitable minutes in the new building and its outlying conservatories.

At 4:30 the return trip began from Dooley avenue, and half an hour later the party alighted at the West Hotel.

The editors and their wives made up two theater parties at the Metropolitan and Bijou Opera Houses that night. At the Metropolitan some witnessed the performance of the Corinne opera company, and others saw "Through the Breakers" at the Bijou.

After the performance the editors—it being a stag party—gathered in the main dining room of the West Hotel, where they whiled away the hours until well into the morning with a social session, in which song and story were very pleasantly intermingled. Colonel A. X. Schall, President

of the Press Club, was master of ceremonies, and he made the fun fast and furious.

The chief funmakers were W. I. Nolan, H. P. Hall, of St. Paul, who never missed but one annual editorial meeting, and Eddie Collins in characteristic songs and monologues. Mr. Hall harped on the old theme of twin city rivalry until he was drowned out in the rousing chorus of "That's a Chestnut, That's a Chestnut," to the air of "Clementina, Clementine." There were other incidents of a nature calculated to embarrass Mr. Hall while he trod the boards, but he held to his course unabashed and became so decidedly funny in his own inimitable way that when he finally gracefully descended from the platform he was almost forced to respond to an encore.

W. H. Eustis proposed a toast to "The Country Press," and in so doing paid the "free, untrammelled, uncensured molders of public opinion" a most eloquent tribute.

About that time Charles S. Mitchell, of the Alexander Post-News was asked to lead off in the fearful and wonderful yell manufactured by the editors on their annual junket to the canyon of the Colorado last fall. The editors joined their voices with him with great gusto and fairly raised the roof with their united vocal endeavor.

Mr. Graham, of the Corinne company, gave the audience a bit from "Julius Caesar," which he recited with such truly dramatic fervor as to call forth the vociferous applause of his auditors. He responded with a selection from Edgar Allan Poe, which was as well received.

The Keystone quartette, also of the Corinne opera company, made a tremendous hit with their magnificently blended voices in the songs, "Kentucky Babe," "Because I Love You," and encores which suited the popular fancy to a capital T.

Mr. De Lange, another member of the company, heightened the effect greatly with his comic songs.

Robert Fitch, of Minneapolis, contributed a coster song—after Chevalier—and was a close second to his professional associates on the programme.

And there were others.

This is the way they have among the editors of the State of the North Star. The editor of this paper arrived in time to enjoy the two sessions of the second day and to listen to the able papers, the substance of which are printed elsewhere in this issue.

At the morning session the following papers were read:

"Where Every Editor May Stand," A. W. Blakeley, Rochester Post-Record.

"The Editor as a Business Man," J. A. Wharton, Willmar News.

"Woman's Part in Journalism," Mrs. Franklyn W. Lee, Rush City Post.

"Make-up and Type Display," John E. King, Adrian Democrat.

"The Extended Influence of the Press if Rural Mail Delivery were General Through Minnesota," Secretary C. P. Stine, St. Paul.

The last paper met with marked approval and lead to a brief discussion and the relation of experience, all favorable to "Rural Free Mail Delivery," and showing that only good had resulted to both local weeklies and to dailies, as well as to local merchants and to the agricultural communities.

Previous to the reading of the papers an attempt was made to foist a local quarrel with regard to public printing in Brown County on the Association under a charge against a member of conduct unbecoming an editor. Although the boys who failed, as they claimed, to get their share of the pudding in the county printing, managed to

air their grievances, the resolution for a committee to investigate the charges was laid on the table by almost a unanimous vote, and the accused, to that extent, was vindicated without the hearing of his side, which he asked the privilege to state. During the preliminary discussion before the motion to lay on the table was made Mr. Charles

Of the other business transacted the Minneapolis Times gave the following account:

The election over, certain members of the Association set about to repeal a constitutional provision allowing each publication but one vote. C. W. Stanton moved that the section be amended so as to read that every person holding

Six Prominent Members of the Minnesota Editorial Association that Visited the State Experimental Farm.

Photographed in the dining-room by the Minneapolis Times' staff photographer.

They are, commencing on the right, David Ramaley of St. Paul, W. B. Mitchell of St. Cloud, John C. Wise of Mankato, H. P. Hall of St. Paul, President Cyrus Northrop of the State University, and Granville S. Pease of Anoka.

S. Mitchell, of the Post-News, Alexandria, who was afterwards elected President, got in some telling hits against the squabbles over legal printing and the running after the loaves and fishes in politics. His words would prove wholesome and profitable reading for editors all over the United States. He said in part:

"I wish to the Lord there was no such thing as county printing. And I wish to the Lord every editor in the State could make a good, honest living without having to bother his head about official patronage, and I wish none of us had a thing to do with politics."

The following officers were elected at the afternoon session:

President—C. S. Mitchell, Alexandria.
 First Vice-President—W. R. Edwards, Tracy.
 Second Vice-President—A. B. Allen, Battle Lake.
 Third Vice-President—H. C. Miller, St. Peter.
 Secretary—Charles P. Stine, St. Paul.
 Treasurer—David Ramaley, St. Paul.
 Executive Committee—Frank Meyst, C. C. Whitney and H. P. Hall.

a membership ticket in the Association shall be entitled to a vote.

Editor Pease, of Anoka, opposed the amendment, as unjust to those newspapers that have only one representative in the Association. Editor Johnson, in a rattling speech, heartily indorsed the amendment which, when put to a vote, received forty-eight out of the sixty-seven votes, and therefore prevailed under the two-thirds rule.

The matter of the paper trust and the consequent high price of paper now prevailing then received attention. George N. Lamphere offered a resolution that "in view of the extortion of the paper trust, this Association respectfully and urgently request the United States Senators and Representatives from this State to support a measure removing the duty on wood pulp imported into this country."

Treasurer Ramaley thought it would be a mistake to adopt such a resolution, as in his opinion the paper trust had nothing to do with the rise in the price of paper.

In response to a request, B. B. Herbert, of the National Printer-Journalist of Chicago, who has given the subject much attention, expressed his views. Mr. Herbert said that

if the entire tariff on wood pulp were removed it would not decrease the price of paper more than a quarter of a cent a pound. Mr. Herbert admitted that the paper trust was hurtful, but he advised the Association to appoint a committee to investigate the matter and ascertain the facts before taking action.

H. P. Hall favored the resolution, which was finally adopted by a big majority.

NAME IS CHANGED.

Captain C. C. Whitney offered a resolution providing that the name of the Association be changed from the Minnesota Editors' and Publishers' Association to the Minnesota Editorial Association, in order to simplify the work and because the latter name would be more in keeping with

SUCCESSFUL CO-OPERATION.

The following from the report of the committee on law supplements of the Minnesota Editorial Association show how publishers and printers may successfully co-operate:

The committee was able to secure the orders of two hundred and ninety-one (291) newspaper publishers for law supplements, the aggregate of their orders amounting to 204,667 copies. There was received from the State \$73 for each paper, amounting to \$21,243, to which was added \$12.88 for 1,000 supplements sold to the Winona Independent, which paper was not entitled on account of being under age (not having been published for a year), to participate, making the total amount received \$21,255.88. This amount was divided between the papers from which orders were received, according to an impartial system, arrived at on

GOMER T. DAVIES, Secretary.

L. F. RANDOLPH, President.

Officers of the Kansas Editorial Association.

the objects of the Association. The resolution was adopted.

Then followed the adoption of the resolution authorizing the appointment of the special committee to draft a bill amending and codifying the State laws regulating the award of contracts for county printing.

Resolutions were adopted thanking the Minneapolis Press Club for the many courtesies extended to the Association, and likewise the West Hotel management, the street railway company, the railroads, President Cyrus Northrop and the faculty of the State Agricultural College.

The Association then adjourned for one year.

an equitable basis, less the expense of printing supplements and incidental expenses. The amount actually divided was \$18,258.66, and the amount of expense was \$2,997.22. This expense is itemized as follows:

St. Paul Dispatch, printing supplements, etc.....	\$2,505.61
Printing and mailing circulars, postage and revenue stamps, and expenses of committee.....	491.61
	\$2,997.22

The cost to publishers of supplements was slightly less than 50 per cent of the cost to them two years previous.

The only members of the committee who incurred or charged any expense were the chairman and the secretary,

Mr. Hoard. Both performed a large amount of work, as all can readily appreciate by the results accomplished. Neither the chairman nor the secretary made any money out of the job, and was barely reimbursed his expenses.

The committee was given every facility and was materially aided in its work by the St. Paul Dispatch, that paper under the direction of A. M. Knox, business manager, performing a large amount of work for which no charge was made. As all of you can easily imagine, many obstacles were placed in the path of the committee, and without the valuable aid of the Dispatch, it would have been impossible at that time to overcome them.

The committee succeeded in its undertaking to a degree which was encouraging, but its success would have been much greater if all the publishers of legal newspapers in the State had co-operated with it. Whether they can be

PRESIDENT RANDOLPH AND HIS PRINTING OFFICE.

LACING Mr. Leslie Fitz Randolph, Nortonville News, at the head of the Kansas Press Association gives the opportunity to introduce our readers to one of the neatest editorial sanctums in this county. He was born near Meadville, Pa., March 12, 1851. The family moved to Atchison county, Kansas, in 1863, where Leslie worked on a farm and attended public schools. At twenty years of age he began teaching school. For several years following he was a student of a normal school at Edinboro, Pa., and of a university at Alfred, New York.

In 1874 he began the study of law at Meadville with Hon. H. L. Richmond, afterward a member of Congress

Home Library of L. F. Randolph, Nortonville, Kan.

induced to do so when the time comes to again take action in this matter may be doubtful, but we trust that the confidence of a larger number has been won by what was accomplished by the committee last year. Respectfully submitted,

GEORGE N. LAMPHERE,

Chairman Committee on Law Supplements.

FRUITS OF FOREIGN CIRCULATION.

St. Louis, February 15, 1900.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—We beg to advise you that fruits of your foreign circulation has come to hand from the Star, at Hawera, New Zealand, W. A. Parkinson, proprietor. Very respectfully,

HOKE ENGRAVING PLATE CO.

from Pennsylvania. His law studies were completed several years later at Topeka, Kansas, with his brother, former attorney general of the State. Then followed his admission to practice in the district court and afterward in the supreme court. He is now an active member of the State Bar association.

Mr. Randolph served as a member of the Kansas legislature from Atchison county two sessions, and was for two years Mayor of Nortonville, one year of which a majority of the city council were women. From 1883 to 1897 he was associated with the reporter of the Kansas supreme court in editing the reports of that court. In politics Mr. Randolph is a Republican. He is a member of the State Central Committee of that party, in which capacity he has served several years. Though at different times urged to be a can-

didate for high political office he emphatically declines, preferring to give his attention to private affairs and incidentally to be helpful to his friends.

Mr. Randolph gives but little attention to the practice of law, most of his time being taken by other interests. He is a member of the board of directors of the Bank of Nortonville, the largest bank in the county. But newspaper work suits him best. Besides close attention to the details of the business he also writes an occasional magazine article.

The Nortonville News, of which Mr. Randolph has been the editor and proprietor for the past ten years, is recog-

Office of Nortonville News.

nized as one of the leading weekly papers of the State. He has been an active member of the Kansas Editorial Association from its organization, and has been a delegate to the conventions of the National Editorial Association held at Chicago, St. Augustine, Denver, Portland and New Orleans.

In 1883 Mr. Randolph was married to Miss Addie R. Wheeler. They have one child, Olive, who though only

"Out There in Kansas."

fifteen years of age assists in the proof-reading on her father's paper. The family has one of the beautiful homes of Nortonville. One of the illustrations herewith represents

the home library—the editor's den. His library is among the largest and choicest private miscellaneous collections in the State and is one of the treasured possessions of the editor.

THE INDIANA REPUBLICAN EDITORIAL ASSOCIATION.

SOME partisan editorial associations seem to consider that they can best prepare themselves to serve their parties by talking politics at them; others deem that the desired end will be best accomplished by improving themselves in their calling. The Indiana Republican Association appears to belong to the latter class, as will be perceived by the following brief account of its recent meeting, given in the Review of Greensburg:

The twenty-third annual meeting of the Indiana Republican Editorial Association was held in Denison. Several important papers were read, all being on subjects of special interest to publishers of newspapers. "Rural Mail Delivery; Its Effect on the Local Paper," by N. S. Cragun, of the Lebanon Patriot brought out the point that the speaker considered rural mail delivery of particular advantage to the small daily in giving a broader field for its county circulation.

"Foreign Advertising" was treated by Fred A. Miller, of the South Bend Tribune, who said that while he could not approve of the acceptance of foreign advertising at cut rates, he did feel that foreign advertisers were entitled to the same treatment that was accorded to home advertisers.

"The Dignity of the Profession," by A. M. Willoughby, brought out the thought that the newspaper business was a profession from which should be eliminated all grossness, hackneyed humor and tendency to fill up with trash to suit a fancied, popular taste.

Marshall Hacker of the Columbus Republican spoke on "The Editorial," saying that the writer should abstain from making his pen the instrument for satisfying any personal spite and that in party politics a Republican editor should know no factions, but should work for the success of the entire party at all times.

Talks on circulation were made by H. M. Smith, of the Greencastle Banner; W. W. Lockwood of the Peru Republican; J. A. Kautz of the Kokomo Tribune, and A. W. Tracy, of the Hartford City Times.

The following named officers and delegates were chosen:

President—Wallace B. Campbell, of Anderson.

Secretary—M. W. Pershing, of Tipton.

First Vice-President—M. C. Garber, of Madison.

Second Vice-President—E. J. Marsh, of Portland.

Executive Committee—W. B. Campbell, of Anderson; M. W. Pershing, of Tipton; F. T. Singleton, of Martinsville; J. D. Hogate, of Danville; H. J. Martin, of Franklin.

District Committee—First district, John Chewing, of Rockport; second, W. B. Maddock, of Bloomfield; third, J. A. Kemp, of Salem; fourth, A. M. Willoughby, of Greensburg; fifth, F. T. Singleton, of Martinsville; sixth, W. S. Montgomery, of Greenfield; seventh, H. S. New, of Indianapolis; eighth, D. H. Swaim, of Bluffton; ninth, M. W. Pershing, of Tipton; tenth, H. A. Strohm, of Kentland; eleventh, W. W. Lockwood, of Peru; twelfth, F. M. Mills, of Waterloo; thirteenth, F. A. Miller, of South Bend.

Delegates to the National Convention at New Orleans—W. E. Beeson, of Winchester; E. O. Rose, of Angola; J. A. Kautz, of Kokomo; W. H. Craig, of Noblesville; M. C. Garber, of Madison.

THE JOB PRINTER.

By Charles H. Cochrane, New York.

PAMPHERD menial of color who condescends to act as my factotum in the sky-scraper where I do my literary work handed me, the other day, upon the silver salver on which those who write for the press are invariably served, two letters.

"I specs dis yere ain't no good, suh," he took upon himself to remark concerning the letter that lay uppermost.

"Why not, Rastus?" said I.

I call the boy Rastus because I do not fancy his real name, and I talk to him, and allow him to talk to me, in a sort of familiar way—of which, nevertheless, he knows the limits—because I hold that even a colored boy may have some ideas and opinions that are worth hearing, and some powers of observation that occasionally prove interesting. Rastus has handled my mail quite a while, and I have often observed him reading with interest the printing journals and typographic specimens that lie scattered about. So, as I say, I asked him his reason for forming the opinion he expressed.

"Why, suh," said he, with a kind of Sherlock Holmes sparkle in his expressive eye, "jes look at dis envelop—such poor stuff it hab got tore in the mail. And see the printing in the corner—must hab bin set up in the country, shuah. But the other consahn's all right, boss."

As a matter of fact, the two envelopes (and their contents, as later appeared) were first-rate exemplars of two entirely opposite types of reasoning and effort. Both chanced to be answers to letters of mine to concerns with which it was possible I might do business. The one that had attracted the unfavorable comment of Rastus was from a man in Harrisburgh, Penn., doing, as I have been informed, a large business. But his envelope stock was of poor quality, and the label was set in a most slouchy manner, and then indifferently printed. His letter-head was even worse. Lack of taste and judgment was stamped on it in 20-line pica Gothic. Added to this, the subject matter of the letter was written on a typewriter that had a muddy ribbon, and you have the tout ensemble.

The other letter was from a smallish place in Connecticut—Ansonia. The envelope stock was good, and the label well set. Inside, the letter-head was set in different sizes of a medium heavy Gothic series, and the presswork left nothing to be desired. The typewriting was clear, and the communication short and to the point. Both firms writing to me were in the same line of business, and both wanted the order I controlled.

It is scarcely necessary to tell the discriminating reader which concern received the order.

There are those who will argue that from an economic standpoint I should have looked deeper into the matter than this, and not acted merely on impulse or on a first impression in giving an order possibly of importance. But I answer that this is a workaday age, in which few things are more important than time, and that I, as every other business man, am largely guided in my business judgments by just such impressions as this. If a man's esthetic side has been cultivated to the extent that he will pay more money to have a first-class job of printing done when the form and character of it stands as an advertisement to the world of himself, I argue that that person as a man is evidently more developed, his judgment is better, his in-

sight is keener, and, doubtless, the product of his factory will be better. Thus I argue, consciously or unconsciously, in forming my conclusions; so does every good business man.

This tendency (to do good work for its own sake) is recognized in the recent attempts of the New York Board of Education to develop the artistic side of the pupil instead of, exclusively, the literary side. You might think, if you walked into one of the lower grades of the New York public schools to-day, that you had accidentally stepped into an institute of technology. I am as sure as one can be of anything in this world that this is the system that will give us better job-printers in the next generation—yes, even in the next decade. For if job-printing is not an artistic occupation, then I know of no so-called trade that can be justly so called. You may truly say that every job given to a compositor is a picture in embryo. What it will look like depends to a great extent upon the man who sets it up. Of course there are limitations of type, and space, and time, and a dozen other things that affect, perhaps unfavorably, the finished product; but this does not invalidate the truth of the principle stated. A man of artistic taste will make a neat and attractive circular from even mediocre materials; a man without taste will be given exactly the same choice of material and turn you out a handbill.

"Yes, yes," you say, "I know that. But where am I going to get these artistic job-printers? I would rather have them than the poor kind I have got. But the best men are all in the large cities, getting high wages. I can set a pretty fair job myself, but I have no time to spend that way. I want my men to do the work."

You are perfectly right; no employing printer, unless it be in a man-and-a-boy office, can afford to set up his own jobs. If he would keep out of the sheriff's hands, his time is worth much more outside of the office than in. But the good job-printers must be secured or the work will go elsewhere? Then educate your printers. You don't know just how? Well, it is true that a river cannot rise above its source, and that, ordinarily, a pupil will not rank far above his teacher. If the employer does not know a good job when he sees it, or, being dissatisfied, cannot tell what ought to be done to it to improve it, he really should not have stocked an office with type and gone into the business. However, this is not an ideal world, and we must face conditions rather than theories. You are in business, and must make the best of it. You need a little educating yourself. Write to the leading trade journals, and ask them either for samples of tasteful work, or for the address of parties who have sent or do send in tasteful specimens. Get samples from these people and study them. Paste them up on the walls and make your men study them. My word for it, they are usually as anxious to improve as you can be to have them do so. Why, when I was a boy in a country office, without many opportunities of seeing really good work, I actually paid an older printer who chanced along to give me some points on setting difficult and "fancy" work. He was fortunately a man of good sense, and I have never had occasion to regret the five hard-earned dollars I gave him. He understood the principles of typography, even if he had not sufficient control over his appetite for drink to become the man he ought to have been. I remember now some of the fundamental truths he told me that are as true to-day as ever they were, and on which, even with my years of experience since then, I can scarcely improve.

"Remember, my boy," said this graybeard, "never to overdo a job. Study simplicity always and the particular nature of the piece of work before you. An invitation to a

ball, and a circular calling attention to the excellence of a new line of chilled steel plows, strike you as being very different affairs, don't they? Certainly. They suggest different ideas, and must be treated differently. Common sense will tell you that. Both should be simple; but if there is any chance for ornateness, give it to the ball invitation. Two colors, perhaps—a carmine figure or initial, or border, and plain light type for the black. The iron man's circular all in one style, the line as to plows standing out in relief, the rest subdued, but strictly in keeping. No light flourishes, nothing fancy. In short, always use common sense."

This is the substance of what the old man said to me years ago. And he was just right. A man must have a settled principle in his mind in order to be a good job-printer. That principle is, in one word, just discrimination and common sense. Study the character of the job given you. Consider the goods, the class of people it will be sent to, the effect the advertiser is probably trying to produce. Then sketch the picture in your mind. Sometimes one might to advantage even draw it roughly on paper—the point or points of display, and the general effect you intend to produce. You then have your central idea and can adjust the details.

This is the only way to do good work—make a plan, and follow it out. In a short time, with practice, your ideas as to what is fit and what is unfit for your purpose will come to you with great rapidity. By practice you can tell at a glance what effect you ought to produce, and can produce, in any given case. You may, sometimes, indeed often, find it necessary to change the wording of your copy in order to get a good effect. This should be done with caution, and a proof always shown, with a note to the customer explaining the reason of the deviation. Almost invariably the man will be grateful to you, appreciate what you have done, and remember your house the next time he has anything in your line. There will be found exceptions, of course; but they merely prove the rule.

Remember, that in studying good taste you study the customer's interest; and the customer's interest is yours, be you employer or employed.

KEEPING EVERLASTINGLY AT IT.

By Geo. W. Harper, The Argus, Robinson.*

NOTHING succeeds like success" is an old aphorism. "He who would have his shop keep him must keep his shop" was a proverb of that printer whose excellence and virtues we have heard extolled from our childhood, the great patriot and statesman, Benjamin Franklin. "There is no excellence without great labor" is another trite but true saying, and one which all who attain any success in life learn, not by precept and example, but by practice.

When Mr. Paige wrote me that I had been placed on the program for a paper he said I was to choose my subject. I wrote him that I was very busy and did not have time to prepare a paper; that it was doubtful if I could attend the Association meeting this year; that the success of my business required me to keep "everlastingly at it." He wrote me again: "Prepare a paper on 'Keeping Everlastingly at It,' and if you are unable to attend send the paper in to be read."

"He who by the plow would thrive
Must either hold the plow or drive"

is another maxim that will hold good in any business undertaking as well as on the farm, but in none so well as

in the print shop. The man who owns a ten, twenty or forty acre farm in order to thrive would not be expected only to drive, but he must hold the plow also; while he that has his broad acres running way up in the hundreds has no time himself to hold the plow, and his driving must be in a manner commensurate with the amount of plowing to be done. So in the printery. He who has a small shop at a little crossroads town cannot successfully carry on the business by hiring some one to "hold the plow" while he does the driving. He must both hold and drive, and "keep everlastingly at it."

"Whatever you do, do well," is another good motto, and one when well learned and acted upon brings its sure reward. Doing anything well will always find its appreciation. Glean your field for business for your printery, and, especially, a country editor should glean his field well for all the news it is possible to get. If you haven't got a "nose for news" proceed to grow one at once, and never let what at first mention of it you may deem an unimportant item slip by you without your gaining all the particulars. When you have gained these the item may be found of more importance than at first presumed. Don't let a little hurry about other matters delay you until to-morrow in getting the particulars of an item. Do it at once. "Keep everlastingly at it."

It was impressed on me when I first learned the type boxes at the case not to hurry but learn to do what I did well. It is better to have full particulars of a few items than a bare mention of a hundred. This is a point I always endeavor to impress on my local correspondents, but that they must at the same time strictly avoid "padding" and the use of superfluous words.

"Time is an essence of the contract" is a legal axiom, and it is one that has a very strong significance in the printery, whether it be the completion of a job of work by the time promised, or in getting the paper out not only on the day of publication, but at a regular time on that day. If a customer wants a job of printing within a time about which you have doubts as to getting it done, don't make promises according to his desires. Give yourself plenty of time to get the work done in good style, and if he leaves it with you make great endeavors to get it done at the time he wanted it, then deliver it, and your efforts to please will have the more appreciation, and you will have cemented his custom to your shop. With your paper, have an hour in which to go to press, and let it be some most extraordinary circumstance or occurrence that delays the issue beyond that hour. In accepting a man's money on subscription you have virtually signed a contract to give him your paper on time, and to give him all the local news possible to obtain, and as full particulars. Be conscientious about the observance of this contract, and "keep everlastingly at it."

The subscription part of the country paper is one that is both badly and sadly neglected. I do not mean the effort to get new subscribers, or to hold subscribers after you do get them. The former can be done in a great measure by the observance of what has already been said in this paper, and as to holding them "there is no other way on earth or given among men" by which this can be done than making a paper for which the wife will scold unless she can get it, that the children will cry for it, and that the husband himself cannot afford to do without it. But the great point in taking care of a subscription list is to watch it closely and to collect up promptly. I would not recommend a strict cash in advance system, because it is not feasible with a country paper. But do not let a subscriber run three, four or six years without paying up. He may sometimes pay, but you cannot ask him for the

*Read at meeting of Illinois Editorial Association.

interest on your money which he has had the use of for so long a time, and four times out of six you will lose the amount, and this more than takes all the profit off the two who do pay. I have not been taking my own medicine strictly, doctors seldom do, and I know to my sorrow whereof I speak when I say that a man must watch closely the collection of subscriptions and "keep everlastingly at it." I have learned this lesson in the business thoroughly and practically by the loss in not acting upon it promptly in the years gone by of over five thousand dollars in subscriptions to *The Argus*, the price of a good farm, or a first-class country printing plant and good will of the paper. This is a big sum in the aggregate to lose, and it is with a feeling of horror I contemplate it. I presume there are publishers here whose losses will average over \$150 per year on a circulation of 1,000 or 1,200, and hence my loss during the thirty-six years I have published *The Argus* is not more than the average. Yet it is too much.

I have been in printing shops where two or three hands were at work, and a business of \$3,000 or \$4,000 per year was being done, or should be done, and the only system of bookkeeping was with a set of books consisting of an ordinary cheap day-book, without an alphabetical or other index to guide the finding of such accounts as the book contained. Some time after the paper was printed, if the proprietor had plenty of time on his hands, he took a copy of the paper and went through it to see what new advertisements were to be charged up, and this was done in a hasty and careless manner. Saturday evening or Sunday morning, if he did not forget to do so, such job printing as could be called to memory was charged up. How any one with such a system of doing business, with settlements running from one to five years, can keep his outfit from going into the hands of the sheriff causes a skeptic to strengthen his belief in a world of chance. Have a system about everything, "keep everlastingly at it," and if you have anything like a field for business you cannot fail.

ASSOCIATED OHIO DAILIES.

NUMBER fifteen of the annual convention of this very useful and practical organization was held at Columbus and proved as successful and interesting as its predecessors. The most important business was the presentation of the report of the Committee on Legislation, by R. B. Brown, business manager of the *Zanesville Courier*. The report recommended that the Clark bill, introduced in the last legislature and defeated, be reintroduced, and that no other libel legislation be projected until after action is taken upon this measure.

The discussion of legal advertising was very animated and exhaustive and consumed nearly all of one session. An address was delivered by a leading advertiser. He said among other things: The most striking characteristic of the age is the diffusion of information by the press. A free press has emancipated the people, it has enlightened and nourished an independent, healthful and progressive population. And this is the reason that Ohio, so prolific in great industries and greater men, stands in the front rank of the States of the Union.

The press of Ohio is second to none. Each one present can readily call to mind papers, whose collection of news foreign and domestic, or whose editorials, criticisms, or management of advertising space are unsurpassed.

The most marked matter of this progress of the modern press, is the marvelous development of the advertisement column.

The industrial individual, when free from legislative

restraint and fears of confiscation, seeks gain. The producer who can produce the most, the best or the cheapest wins a standing in the market.

It may be asked, What are the requisites to obtain a standing in the market? The goods must be effective for the purpose proposed, easily obtained, cheaper and better than other agencies, and the public must be so persuaded.

This persuading the people that goods are "efficient" is both difficult and expensive. To reach the intellects of the people and multiply on every mind impressions favorable to products, calls for an annual expenditure, the amount of which, if known, would amaze one not familiar with the subject.

The advertisers have always recognized the power of the press of Ohio and other States. They have seen it, beginning under the shackles of poverty and in the shadow of obscurity, win its way to wealth and power. They, better than any other men of business, know the true power of the press. They know the reverence which the plain people have for it, that it is the great educator, more than universities, schools or books; that it multiplies the influence of man on man; that it brings human activities into intercourse. That each month, week and day it carries to the consciousness of every person in the land, the recital of the entire story of man. They know its power to reach, arrest and educate the popular mind, and they avail themselves of that knowledge by appropriating the columns of the press to persuade the people as to the value of their goods, and thus gain a "standing in the market."

A number of practical papers were read. Officers for the ensuing year were elected as follows: President, J. T. Mack, Sandusky; Secretary, L. H. Brush, Salem; Treasurer, J. P. Chew, Xenia. Executive Committee—H. R. Snyder, Urbana; J. R. Alexander, Zanesville; B. F. Taylor, Warren.

New York already has a Pan-American Press Association with headquarters at Buffalo, of which A. O. Bunnell of Dansville is President and R. C. Hill of the *Pan-American Magazine* is Secretary.

Michigan editors met at Grand Rapids February 16 and discussed the following among other practical questions: "The Practicability of Running Illustrations of Local Subjects in Country Newspapers," "How Can Weekly Newspapers Be Published at \$1 per Year at the Increased Cost of Production?" "The Best Methods of Collecting Delinquent Subscriptions," "The Employment of Subscription Solicitors for Weekly Newspapers," press excursions, home-print and co-operative sheets.

ADVERTISEMENTS MUST BE TRUTHFUL.

It has been said that an advertisement to pay must be a truthful advertisement. That depends. Fake advertising pays so well that it seems there are many people who really like to be swindled. But the ad of a legitimate business will not pay unless it is backed by truth. If it is not truthful the public naturally places the advertiser in the catalogue of fakirs.—The Ad-Writer.

GET YOUR MONEY'S WORTH.

Fairport, N. Y., February 16, 1900.
National Printer-Journalist, Chicago, Ill.

Gentlemen:—Find enclosed \$2 cash, for which please jog our date ahead a year. We get more than our money's worth in the reports of the National Association trips.

With kindest greetings, we are respectfully yours,
WILL O. GREENE.

NEWSPAPER

COMPARISON and CRITICISM

By O. G. WOOD, Chicago.

Publishers who wish criticism on their newspapers are respectfully requested to direct the same to this department.

LAST month the attention of the Brothers Woosley & Woosley was called to the poor presswork of the Mulhall (Okla.) Enterprise. Another copy of the paper arrived at this office without any appreciable improvement in the presswork. The liberal amount of advertising which the paper enjoys, and the otherwise "get-there" appearance of the Enterprise would seem to warrant an improvement in the presswork and in the composing room. The running head is left off the third page of the issue dated Friday, January 26, 1900; the head is found on the second and fourth pages, but not on the third. There seems to be no reason why this should be done.

* * * *

Several papers now set the editorials wide measure. Those in the Clarksburg (W. Va.) News are set 20 ems; the other part of the paper being the regular 13-em measure.

* * * *

There is a certain dignity and commendable appearance to the pages of the Garland (Tex.) News, which arrived at this department for criticism, along with the following letter:

Garland, Texas, February 3, 1900.

Mr. O. G. Wood, Chicago.

Dear Sir:—I have been reading with interest your "Criticism Department" of the National Printer-Journalist, and have concluded to submit two copies of my paper for your inspection. I am in a town of 900 population, which was visited by a fire November 30 last, that destroyed thirty business houses, including my office and entire plant. Only eight business houses were left. Yours truly,

JOHN H. CULLOM.

As soon as your contract will admit of it move the editorial head up to the top of the column, now occupied by the Spillers & Beaver ad, and keep it there. You could put the ad in the next two columns if they insist on being at the top of the page. The type looks new and clean; try to keep it clean; a few minutes time spent in cleaning type often saves lots of time on the press, when there is always the biggest rush. Use great care when folding the paper; it isn't nice to have a fold come through the first column of reading matter—I mean lengthwise, with the margins all out of kilter. The interest taken in this department by Mr. Cullom is appreciated, and a copy of the News will be welcome at any time. This is a good opportunity to state that when a paper has once been noticed in these columns it means that more copies should be sent for comparison, and not discontinue sending papers because once criticised. In Mr. Cullom's letter he speaks of the entire plant being destroyed by fire. This fact reminds me of the important question as to whether the owner of a printing office is responsible for the cuts and other material in his possession belonging to his customers at the time of destruction by fire. A printer in New York recently made good from the insurance money he received the loss his customers sustained in a fire at his office. It often happens that large printing offices carry thousands of dollars worth of cuts and other material belonging to the custom-

ers, and it is a serious question, and has two sides to it, as to whether he is responsible for the safe-keeping of this material or not. It would be of interest if Mr. Cullom would send his experience on this matter for publication, or any other reader who may possess knowledge on this particular subject.

* * * *

A particularly clean and well-printed weekly is the News-Herald, of Hillsboro, Ohio. It was established in 1837. The first page is well made up and devoted entirely to news matter. The surrounding neighborhood is gleaned for local news, and the News-Herald has the appearance of being very much alive. The only suggestion for improvement which might be offered is that of making the top line of each head on the first page full 13-em measure; it looks a kind of queer to have the heading read on from the first line with a dash between.

* * * *

When printing half-tones in a newspaper where the illustrations appear, say, all on the first page, this form should be run last if it is possible; providing, of course, that the whole paper is not run in one form. If the half-tones are run first, when "backed up" the impression often spoils a good half-tone. This is called to my attention from a copy of the Delawarean, of Dover, Del., which has several half-tones in it. The Sun, Wilmington, Del., is not as well printed or as carefully folded as it deserves to be. A copy dated February 15 is about six picas out of register, and badly folded. This can easily be avoided.

* * * *

The Sussex Republican, Georgetown, Del., proposes to collect from subscribers in arrears by the aid of the law, as the following taken from the editorial column testifies:

NOTICE.—In accordance with previous notice, the accounts of our subscribers who are in arrears three years and over, have been placed in the hands of W. H. Wilson, Constable, for collection.

It would have been better to have sent this notice by printed circular to each delinquent. Never collect through the columns of your paper. It is not news for your readers and reflects unfavorably upon your own business and on your paying subscribers.

* * * *

A dignified and manly stand is taken by the management of the Hoquiam (Wash.) Washingtonian in an editorial announcing an opposition paper in the field. Here it is:

Some of the enemies of the Washingtonian are wondering what we are going to do, now that a new paper is established. For their benefit we will say that we shall continue to publish just as good a paper as our support will justify, do job printing as cheaply as it can be done with fair profit, and work in the future as we have in the past for the up-building of Hoquiam. We have no fight to make on another paper unless forced upon us. We hope the continued growth of our city will support two papers, so both may be a credit to it and their publishers.

* * * *

W. R. Estes has made an improvement by changing the head of the Madelia (Minn.) Messenger, and he has also

found time to start a new paper called the Truman Tribune in Martin County, with A. E. Browe as managing editor. It is a six-column folio, and appears to be well patronized by local merchants.

* * * *

A small four-column weekly comes from Childress, Tex., called the Budget. Miss Loutie E. Harrison is editor, publisher and manager. I don't know who the proofreader is, but here are some of the division of words: Congratulations, hors-es, dai-ly. The proofreading is very much below grade, and the paper is not well printed.

* * * *

Without much fuss the Evening Standard, New Bedford, Mass., celebrated its golden anniversary on February 15. The historical section of the paper consisted of an eight-page supplement of the regular size, with half-tone portraits and exterior and interior views of the office. An additional supplement consisted of an exact fac-simile of the first issue of the Evening Standard, dated Friday evening, February 15, 1850. From this the following is cut:

When we hear a man—a man! say he cannot afford to take a paper, we are inclined to tell him that he can't afford to do without it. A man who is really too poor to take a paper, is like a person so emaciated by famine as to be too weak to eat bread.—Gospel Banner.

The whole paper is well printed and has the appearance of being a solid and sound institution.

* * * *

Several papers will have to go over for a month owing to the lack of space and time necessary to give them proper attention, as the National Printer-Journalist is going to be printed at an earlier date than it has been heretofore.

A SUGGESTION TO ENGRAVERS.

Much of the difficulty which printers experience in working halftones is due to the fact that they are often required to deal in one large form with illustrations of 100 up to 300 lines to the inch. All halftone engravers should issue specimens in their price lists showing results by the different screens they use, and work for one particular publication should all be turned out from the same screen.—Practical Photographer.

MAKE-UP AND TYPE DISPLAY.

By John E. King, Adrian, Minn.

MAKING up a country newspaper is an art—in some offices a "lost art." Either there are too many newspaper men ignorant of the rudiments of make-up or fail to devote attention to this important factor in the construction of handsome, readable papers. Good make-up is so much of a necessity that the lack of it is well-nigh indefensible, since the value of advertising is impaired, important news is made insignificant, and even the editor's leader on "Expansion" or the Boer war fails to produce the effect intended if slouchiness in make-up is tolerated.

Many technical points regarding good make-up offer a field for diversity of opinion, but some of the essentials are so universally recognized that there is neither excuse nor pardon for deviation from the established rules.

One of these iron-clad regulations, irrevocable as the law of the Medes and Persians, is that the fourth page (I am now speaking of the quarto) is the editorial page. People expect to find the editorial matter here, and the publisher has no license to compel "Constant Reader" or "Old Subscriber" to chase down cellar or up to the garret to find out whether his editor is a goldbug, a silverbug or a paperbug.

As to how the matter should be arranged on this page is largely a matter of taste. Some prefer the headed articles first, followed by the paragraphs, while others reverse the order. I do not think there is a choice in this respect.

The short local, or as much of it as possible, should be placed on the fifth page—universally considered the local page. The arrangement of the other pages is not subject to established rules, except that the first page should always be made up of headed articles, with at least two-story heads on the more prominent articles. Correspondence may be placed almost anywhere. But when there are several columns it is well to devote an entire inside page to that purpose. If patents are used, the last page is an appropriate place.

One of the requisites of good make-up is a systematic scheme of heads. For the average country paper one kind of type is sufficient for this purpose, except for "scare" heads, of which I will speak later. For two-story heads a cap top line, with a two-line second head of caps and lower case, is most convenient. Editorial heads should always be in caps, while in ordinary single heads for local and general matter, the cap and lower case plan is recommended. The head letter should be on the same body as the reading matter type, if convenient and a minimum of labor is sought for. Head letters should be as plain as possible. To my mind even Jenson and DeVinne are too fancy. A boldface, Aldine or medium Gothic are appropriate. Cushing Title and several of the new plain faces answer the purpose very satisfactorily.

"Scare" heads are all right in their place, but in the country it is not advisable to use them too freely. A murder, disastrous fire or other dire calamity, or an extraordinary announcement affecting the community as a whole, demand a "scare" head, but it is better to be overly modest than too free in the use of this much-abused privilege. As you value your reputation as a printer, don't allow the use of exclamation points in headings. This mark has its proper uses, but it signifies nothing when following a head. A head is simply a concise statement of the contents of the article following, and is not meant to be used as a war whoop or a hurrah. A head is not an exclamation. Save the mark! If there is occasion to exclaim do so in the reading matter. Don't abuse the head by topping it off with a point that does not mean what it says.

There is much that might be said on this subject, but your patience and my inability to offer a treatise forbid. A good way to secure helpful hints is to subscribe for some good journal of printing, and to carefully note the systems adopted by your successful and well-printed exchanges.

* * * *

The matter of type display is too comprehensive to be treated fully in a paper of this nature, but a few salient points may help us in getting out better newspapers.

A mistake is made by many publishers in imagining it necessary to have a hundred or more faces of type in the office. Three or four series of serviceable faces like Elzevir, DeVinne, Jenson, Era, Bradley, Doric and others in the same category, with double fonts of 12, 18, 24 and 36-point, are ample, and better results can be obtained than from a hundred fonts selected hap-hazzard. I know of several papers using but one series, and there are no neater papers. It is seldom that type larger than 36-point can be used except in a very large advertisement. It is a common failing to use too much large type and to allow insufficient white space. Borders and ornaments should be used sparingly, and the freak who bends brass rule ought not be tolerated. He wastes time, and in the country newspaper

office time is money—even though some of us would welcome the opportunity of "cashing in."

More intelligent direction in the way of make-up and type display is needed in the country office. A really good paper, locally and editorially, often presents a poor appearance on this account. A study of approved methods would result in a general improvement, I am satisfied. Minnesota is already well in advance of other States, but there is still much that may be accomplished. Let us not weary of well-doing.

THE PROGRESS OF INKLESS PRINTING.

The following résumé of the progress made during the year in printing by electricity is supplied by the company handling the process:

Since electrical inkless printing came to the front immense progress has undoubtedly been made in bringing it within the methods and requirements of the modern printer. Photographic methods being soon proved to be commercially unsatisfactory in their results, on account of the time-wasting subsequent treatment required to render them visible and permanent, the attention of the inventors was next directed to purely letterpress methods, and it was soon recognized that to be successful in this direction there must be as little disturbance as possible of the machinery and methods already in use. This consideration has been kept constantly in view, and the electrical inkless process now demonstrates the fact that what was unsuccessfully sought for in the photographic field has been found in that of typographic printing, and in a combination of chemically prepared dry paper and electricity with the ordinary types and blocks and on the ordinary printing machines now in use.

Up to eight months or so ago the certainty of being able to print on dry paper was not absolutely assured. It was found in every experiment tried up to that time that, to secure the desired results, a certain amount of moisture could not be dispensed with in the paper. At the same time it was recognized that the printer had practically abandoned the damping of paper previously to printing, and also that to so treat most modern printing papers would be to ruin them. Consequently, investigations and experiments were commenced in another direction, with the purpose (1) of incorporating the chemicals into the pulp in the process of making the paper, so that (2) damping would be avoided, and (3) the paper could be used dry. It was recognized that the whole thing turned on the discovery of a new combination of sensitising chemicals, and it was only after eight months of the most disappointing effort that, just after the first public demonstration in July last, this desideratum was finally achieved.

Singularly enough, though it has often previously been found to be the case, the chemical forming the basis of the new sensitising combination (patents for which have been applied for in all countries) is practically a waste material, and is so plentiful that it will not in any way add to the cost of paper, whilst at the same time it is not only more easily managed in its incorporation with the pulp in the manufacture of the paper than any chemical combination previously used, but has also developed many unexpected qualities which materially tend to the improvement of the printing process.

Now that printing on dry paper is assured, the Electric Inkless Printing Syndicate are actively engaged in making preparations for the introduction of the process to the trade, and as a necessary preliminary they are leasing large paper mills near London, to supply printers direct, and also preparing engineering works for the manufacture of dynamos

and the other electrical apparatus required to fit up ordinary printing machines for the electric process, of all of which particulars will be forthcoming in due course.—British Printer.

NEWSPAPER NOTES.

Beriah Brown, probably the oldest newspaper man in the west, died in Anaconda, Montana, February 8th, at the advanced age of 86 years. Death was due to old age, superinduced by an attack of la grippe. Mr. Brown was born in New York State in 1814. He was an intimate friend of Horace Greeley. For half a century he has been engaged in newspaper work on the Pacific coast. He was the founder of the Democratic Press of San Francisco, which afterward became the Examiner.

After the war he went to Mexico, where he was a foremost figure in the organization of the colonization scheme, the district to be settled by people of the confederate states. The plan was nullified by the death of Maximilian. He afterward engaged in newspaper work on the Pacific coast again. He started the first daily newspaper in the state of Washington, the Puget Sound Dispatch, at Seattle, and conducted the Democratic Herald at Portland. He was mayor of Seattle in 1879 and 1880. He leaves four sons, one of whom is a city official of Seattle, another news editor of the Post Intelligencer at Seattle, a third city editor of the Spokesman-Review at Spokane, and the fourth city editor of the Anaconda Standard.

The Clinton, Ill., Evening Journal has just put in a complete Mergenthaler linotype machine, which does away with hand composition. This is the first and only Mergenthaler or typesetting machine in Clinton county. The Clinton Journal has also installed a whole lot of new machines of various kinds, and the paper under the new management seems to be coming in on the road to prosperity at a 2:10 clip. We hesitate to suggest that about all that is needed now in the Clinton Journal office is a pressman.—Fulton, Ill., Journal.

A good deal has been said about Rev. Sheldon's effort to conduct a newspaper in "His Steps" at Topeka, Kansas, but little of Editor Howe's attempt to run a church on principles of newspaper sense. Editor Howe is reported as having declared that "if there is not a sufficient amount of religion injected into the columns of the newspapers, neither is there enough common sense or ability in the average sermon. If we fail to make out as much of a case against the preachers as Rev. Sheldon makes out against the newspapers, we will buy a Bible and join the church." Howe has had experience on the lecture platform and his ability as a writer is well known.

The prosecution of the editor of the Inter-Ocean ended in his acquittal, and yet the prosecuting witness, Mr. H. H. Kohlsaat, was proven innocent of the charges made against him in the Inter-Ocean on which the prosecution was founded. The acquittal was all on the principle that the Inter Ocean and its friends were acting on the defensive in the publication and had a right to use any weapons of vituperation at hand, though the one reviled was entirely innocent. It was mud-throwing to meet hot attacks, though the mud did not stick. Both sides can now claim a vindication. The man is lucky who can use a whip on skunks and yet escape without the scent of the dirty beasts' only weapons of defense on his garments. But really, ought newspaper publishers to resort to suits of libel? Is it not setting a bad example to the laity? No one would believe anything that was said against a good editor with an established character like that of Mr. Kohlsaat in a rival paper anyhow.

CIRCULATION Department

OBTAINING CIRCULATION AND COLLECTING SUBSCRIPTIONS.

By John M. Rapp, Record, Fairfield.*

NO MORE important question connected with the newspaper business exists than that of "How to secure new subscribers?" An editor with a flexible conscience may boast of the rapidly-growing subscription list, or may claim the largest circulation of any paper in his end of the State, and he may do this when he is not adding on an average one new subscriber a week, and when his circulation is too small to be of any advantage to advertisers. This may be done, and sometimes a lie well-told and stuck to, will pass for the truth, but the wide-awake business man will sooner or later learn the real facts, and up-to-date business men prefer up-to-date newspapers that sell not only space but circulation. So I insist, and I think we will all agree, that the question of new subscribers becomes one of paramount importance. I do not claim to have originated anything new in this line. Like everything else, circulation is maintained and increased only by "keeping everlastingly at it." This is true, I mean, of us ordinary country editors—the plodders of the fraternity. I long ago learned that it was not worth while to insert in one's paper requests for your friends to come in and subscribe, for the fellow that sees that item is already a subscriber. Being new in the business and having everything to learn, I found out by accident, several years ago, what, possibly, most of you already know, viz., that, to add names to the subscription list, the prospective subscribers must be made acquainted with the merits of the paper, and that the best way to do that was to let them read it regularly for a few weeks. Several years ago, a friend of mine, a candidate for office, conceived that a good way to stir up party enthusiasm at a June election and cause his friends to take an interest in him, would be to have many people read the Record during the campaign, who were not regular subscribers. This friend and his two colleagues on the ticket contracted for five hundred copies of the Record to be sent to names furnished by them. Of course the price was nominal, but I soon began to see that it was having good effects for the editor as well as the candidates. The result in new subscribers was very gratifying, and during each campaign for several years I selected names myself and sent out sample copies for several weeks, with the result each time of securing numbers of new names, and keeping up an interest in the growth of the paper. In these efforts there was a lack of system and thoroughness. Many times the parties receiving the paper would conceive the idea that it was being forced upon them, and that they would be called on to pay for it, and the list of names gotten haphazard from poll-books and other sources would not be the best or most accurate as to addresses.

To secure the list of desirable names, I wrote a circular letter and enclosed with it an addressed postal-card, ruled on the back for six names, postoffice address and politics,

with a line for name of sender. Two hundred of these letters were sent to parties whom I had reason to think were my friends. In the letter I spoke of the growth of the Record's subscription list, its usefulness to the party, gratitude of the editor to his friends, etc., then expressed a desire that this paper might reach many who were not subscribers, and asked that they write the names on enclosed postal card, of such of their neighbors as they felt might become subscribers. I told them that it was my intention to send a copy of the Record to the names furnished for six weeks free, and that during that time a kind word from them would be appreciated. Half, possibly more, of these cards were returned, with from one to half a dozen names, so that I had about four hundred twenty-five names to send papers to. When this list was made up with the first paper I sent to each address a circular letter, as follows:

Office of Wayne County Record, Fairfield, Illinois.

Dear Sir:—At the request of a friend I have this week sent you a copy of the WAYNE COUNTY RECORD.

I am anxious that you should become familiar with the RECORD as it is now edited and managed, and to this end I have placed your name on the list, and will send you a copy of the paper each week for six weeks. I do this, of course, in the hope that you will be pleased with the paper, and become a permanent subscriber.

For these six copies which I send you there will be no charge made, and you will be under no obligations to continue taking the paper unless you so desire. At the expiration of the six weeks the paper will be stopped, unless you order it continued.

The RECORD, as you are aware, is Democratic in politics, and is a staunch advocate of the free and unlimited coinage of silver and gold.

While the RECORD is partisan in politics, it endeavors to give all the news of the County, State, and Nation, and especially to give all the news from the various parts of the County. The copies you will receive will give you a chance to judge of the merits of the paper.

Should you have any item of news at any time, I would consider it a favor if you would bring or send it in, and you are cordially invited to visit the RECORD office at any time you are in the city.

Very Truly Yours, JOHN M. RAPP.

Naturally, during these six weeks, the quality of the Record was not allowed to deteriorate any, and during the time I started a very interesting continued story. At the end of the six weeks I sent out the following letter:

Office of Wayne County Record, Fairfield, Ill., Dec. 4, 1899.

Dear Sir:—For six weeks I have been sending you a copy of the WAYNE COUNTY RECORD. I hope you have received it, and have enjoyed it. It has cost you nothing, and unless I receive word from you to continue sending, it will be discontinued after next week—December 14th.

If, however, you are pleased with the paper, and want it continued to your address, I shall be glad to enroll your name permanently on the RECORD'S subscription list.

During the past few weeks, while advertising has been heavy, I have found it necessary to print ten pages each week, in order to have room for all the news. After the first of the year, when advertising is not so good, for a while the RECORD will contain only eight pages, the same as all the other county papers, but I will at all times endeavor to give all the news of the City, County, State, and Nation.

The price of the RECORD is \$1.00 per year, in advance, but if the price is paid any time before the year is up I will make you the cash rate.

If you want the RECORD to continue coming to your address, sign and return the enclosed postal card, and whenever you are in this city and can spare the dollar you can come in and pay it. I want

*Read before Illinois Press Association.

you also to feel that you will always be a welcome guest at the RECORD office, and any item of news that you may have will always be received with thanks.

Hoping to receive your postal card, signed, by an early mail, I am,
Very Truly Yours, JOHN M. RAPP.

The effect on the subscription list was apparent from the first issue. Parties whom I knew would meet me and say, "Just let that paper keep coming"—the name would be added, subscription commencing at the end of the six weeks. After the first cards were sent out they began to return, signed—two, three and half a dozen with every mail for about ten days, then they came slower, but the effect on the list was felt for weeks. Men will meet you and say, "I forgot that card or lost it, but send the paper." With my first effort, signed cards were received six months after they were sent out.

As close as I can estimate I received about one hundred fifty new names from my last effort in this line. The result might have been a little better if I had had an agent in each community looking especially after the matter. In three or four instances I had this done the first time I tried the scheme, and the proportion of cards received, to the number of samples sent out, was greater at that time.

The matter of collecting from delinquent subscribers will, of course, be of no interest to the more fortunate brethren who are able to adopt the cash-in-advance rule, but with most of us in the Southern district the rule is to send until forbidden, and trust to luck for collections, and to this class of editors I know any scheme that will make a delinquent pay up without making a mortal enemy of him will be gratefully received. I will be brief with this matter, for I have been o'er long already. In the first place, it does not do any good to dun a subscriber unless he has the money, and so, for this part of the business, one must be careful to select the season when one's patrons are most apt to be "flush." I have found the best season for this to be from October 1st to December 15th. The time being settled, how can you go about it without offence? A little history in this line might be both interesting and amusing: I first bought a half interest with a veteran editor of ten years' standing. He had paid little attention to collections, and his efforts had usually been of the sledge-hammer variety, and to pay-up notices in the columns of the paper. Soon after buying an interest we thought it advisable to do some vigorous dunning. After consulting about the matter we decided to use the back of a postal card, and the wording was about as follows, so far as I can recollect: "Dear Sir: You are indebted to this office for subscription in the sum of \$..... We are placing our accounts for collection, and a prompt remittance from you will save costs. Yours truly."

You may imagine the result—it brought money, but made mortal enemies. After I bought the other interest in the paper I laid it all on to the partner, and got most of the subscribers back, but I think there are some who never fully recovered.

Ever since that time I have used a sealed envelope and very cautious language. Down in Egypt it is sometimes the way to have two prices for the paper—one price paid in advance, another when not. My subscribers all get the cash rate when they come in and pay up arrearages and a year in advance, but I try to keep them from knowing that this is the rule, and this fall I sent out the following very diplomatic letter, or, rather, letters, for I had three kinds. One where the party was less than a year in advance, the other two for those owing more:

Office of Wayne County Record, Fairfield, Illinois.

Dear Sir:—As you can see from the date on your paper, you are now owing for the RECORD since

I have tried not to worry you with repeated duns, but when these accounts run on, and similar amounts are coming from many others, the sum runs up. To dun delinquents is never a pleasant task for me, but the time comes when I must have money to keep the paper going and support my family. That time has come, and as there have been liberal crops this year, I hope you can manage to meet the amount due from you.

As an inducement to have you pay this sum promptly, I am going to make you what I know you will concede is a very liberal proposition. Until May, 1898, the price of the RECORD was \$1.25, cash in advance, and \$1.50 on credit. Since that time it has been \$1.00 cash, and \$1.25 on time. At the credit rate your paper to the present time would amount to \$..... Now, I propose that if you will pay up for the full time, and a year in advance, by December 15, 1899, I will give you the benefit of the cash rate for the whole time. At the cash rate for a year in advance, the amount would be \$.....

I hope that you can find it convenient to meet this amount by that time, and I can assure you that the RECORD will continue to grow better as it grows older.

Very Truly Yours, JOHN M. RAPP.

N. B.—The above amount is too large to be allowed to run longer, and unless some effort is made to meet it I shall have to place the account in other hands for collection.

I sent out about seven hundred of these, and the results were very gratifying. In some instances dead beats were developed, and, of course, dropped. Many of the "old stagers" came in with sums ranging up as high as \$15.00. One day's collection was fifty dollars, and the amount came from less than ten subscribers. It was an exception, but several passed the \$25.00 mark, and, strange to say, not a single person appeared offended—well, just one who was intoxicated when he received his notice and misread the part about repeated duns. The greater part seemed to think they were being greatly favored and I always agreed with them.

RURAL FREE MAIL DELIVERY.

By H. A. David, Democrat, Carlinville, Ill.*

A RURAL free mail route established in Macoupin County, Ill., with Carlinville as its head, has been in operation long enough to demonstrate thoroughly its many advantages. The route leads out west from the city, is twenty-five miles in length and serves ninety families. It was started October 16, 1899. The carrier receives \$400 yearly from the government, and can increase this amount fully \$200 more by carrying small parcels for the patrons along the route from the stores in Carlinville. The number of pieces of mail delivered and collected by the carrier for the latter half of October was 1,012; for November he handled 2,298 pieces. In December it had increased to 2,670 pieces, and during the past month, January, he handled 2,911 pieces. The total number of pieces handled in the three and a half months it has been in operation being 8,891, and the total cost to the government being \$116.67, or an average cost of not quite one and three-eighths cents for every piece of mail handled.

The establishment of this route has been so beneficial to the farmers that it has aroused the interests of others, and an application is now on file in the Postal Department at Washington asking that another route be established from Carlinville, leading in the opposite direction, which will be twenty-five miles in length and will serve one hundred and twenty-five patrons.

The question naturally arises, what benefit or injury results to the postoffice at Carlinville from this route now established and the one that will soon be put in operation. So far, the present route has made a decrease in the revenues of the office in box rent amounting to about \$7 per month, or \$84 per year. This results from the fact that nearly all who now receive the rural delivery were

*Read before Illinois Press Association.

patrons of the office before it was established. However, nearly one-half of this decrease in box rent receipts has been made up by the increased sale of stamps and postal cards. The route passes within a few miles of two other towns in the county where there are fourth-class post-offices, and one reports a slight decrease of his revenues, while the other says it has not effected his receipts in any way. Now the other route soon to be established will be a benefit to the office at Carlinville, as those who will be served by the carrier are now patrons of two other fourth-class offices. Consequently the postmasters at these places will feel the loss in the sale of stamps and postal cards. The loss in box rent not being large enough to count much figure, for, as a rule, the outfit of a fourth-class postoffice does not consist of many boxes.

A very important feature in establishing a route is in the territory to be covered. Great deliberation should be exercised that the most people in the least amount of territory be reached. It is highly essential that the route cover a territory where there is at least one farm house to every 160 acres of land.

The advantages of rural mail delivery are many and far reaching. They commence in the large distributing offices, continue to the mail clerk, then to the local postmaster, and end only when the mail is delivered to the owner. The work of sorting and making up the mails is consolidated in one central station at the head of the route, with a consequent saving of labor and expense. In a thickly populated county it would do away with several small postoffices. It facilitates the postmaster in sending out the mail every day, and thus it is not permitted to accumulate and become an encumbrance to the office. Mail that formerly would lay in the postoffice two or three days is now sent out every day.

The people who produce the food and fiber that feed and clothe the world must not be overlooked in their just demands. They bear a large part of the burden of taxation, and are justly entitled to some of the privileges accorded to others. The farmer sees in rural free delivery his first recognition by the government. He realized previously that he was of some utility, but felt that he was of little consequence. He was a splendid subject for taxation for the benefit of others, and it was all right for him to grow wheat, and corn, and cattle, and horses, and hogs, and sell them for what he could get, but beyond that he was only a clodhopper, and no one cared particularly for him. But the time has arrived when the American farmer has begun to think, act and benefit himself. He will no longer be a nonentity. He knows he possesses rights and dare maintain them. Thus the farmer has demanded free delivery of mail and lifted up his voice in its behalf. His brother man in the city has but a short distance to go to the post-office, and there are paved streets and rapid transit lines over which he can go; yet his mail is delivered at his door. Why should not the farmer be accorded the same privilege? The distance he travels for his mail is much greater, the roads often muddy, and often he is sore pressed for the time required. In the former case it is a luxury provided by the government, and if the city brother is to enjoy the luxuries, why should not the farmer receive the necessities, which in equity he ought to have.

Rural free delivery diffuses intelligence, makes rural life more pleasant, improves roads, enhances the value of land, increases the volume of mail, promotes sociability, and tends to more exalted ideas of government.

Every community served by rural delivery is advanced a long distance forward in the scale of civilization, and brought into closer touch with the life and progress of the

world. The constant craving for more knowledge, created by reading accounts of happenings in the world at large, furnish the motive for new ambitions and higher ideals.

The farmers being the producers of food supplies need the daily market reports in order that they may know when to sell to the best advantage. The more money the farmer receives for his products the more he spends with the merchant and the more the merchant sells the more he expends for advertising. Thus the publisher reaps a benefit from the daily delivery of the newspaper containing the market report to the enterprising farmer.

The very fact that newspapers, magazines and letters are delivered at the very door of the home will, in my opinion, solve the question that all present, no doubt, have commented on in their publications, namely, "How to keep the boys on the farm." The mail supplied daily assists materially in making farm life more comfortable. Great numbers of young people whose enterprising spirit, if properly employed, would lead to the rapid development of the agricultural interests of the State, annually flock to the cities in search of more congenial environment. Insufficiently prepared, as they are in most cases, for the struggles arising from sharp competition, it is not surprising that scores of them succumb to the evils surrounding them. They are engulfed in the maelstrom of the city, their enthusiasm disappears, their fine energies are dissipated, and they are borne hither and thither like derelicts on the sea of metropolitan life, a burden to themselves and to society. The rural free delivery service has a tendency to prevent such disasters. It provides a regular and rapid means of communication between the farming districts and the cities; renders news from the outside world easily obtainable; enables the sons of farmers to gratify their desire for knowledge of matters beyond the narrow confines of their everyday life, and helps to prevent their becoming dissatisfied with the pursuit of agriculture.

It is an unquestionable fact that it increases letter correspondence, the number of letters collected on the route at Carlinville having increased every month, starting in with 150 collected in October, while in January it had increased to 480 letters.

It is a direct financial benefit to the agricultural interest of the community, as it not only permits the farmer to sell his produce when the prices are high, but it saves the money he would spend by partaking of several social glasses with his friends in the saloons were he to come to town for his mail. While the amount thus spent might be small, yet in a year it amounts to a considerable sum, and that same money if spent for the price of a subscription to a daily or weekly paper would bring forth a hundred fold.

It enhances the value of the farmer's land from \$3 to \$5 per acre, a prospective buyer being willing to pay that much additional in order that he may have the advantage of being in touch with the outside world, and the fact that the roads along a rural free delivery are kept in better condition.

The question of good roads will be taken up by the farmers along the route, and each one will use his best efforts to make the road one that will enable the carrier to travel over it rapidly, and when the people at large notice the difference they will take steps to put their roads in the same condition, even though they have no mail delivery.

The solution of the very serious sociological and economic problem presented by the tendency of young men and women, to say nothing of the older men and women, residing in farming districts to gravitate toward the cities, is found in the fact that the greatest educator of the day, the

modern newspaper, will be at their door every morning. The safety of the republic is in the enlightenment of its citizens. The youth of to-day are the forefathers of the generation yet to come, and the bulwark of the nation. The young man or woman reared in the pure atmosphere of the country, free from dissipations and the evils of the city, are the men and women who, in later years, will control the affairs of the nation.

Each new route established by the government will tend to give great impetus to agricultural pursuits, and as the farmer prospers so prospers the newspaper publisher. The field open to the publisher is a large one and every rural mail delivery route is a benefit to him, even though he should fail to increase his circulation.

As an association, interested in the advancement of the newspaper's field for usefulness and profit, we should urge Congress to take some action that would prevent certain persons from deluging our mails with thousands of tons of trashy stuff, destructive rather than constructive in its influence, thus costing the government millions of dollars to handle. These publications are not sent in good faith to bona fide subscribers, but to many unwilling subscribers, whose names are fraudulently obtained. It would be far better if the amount thus expended, and, by the way, it is the handling of such matter that causes the deficit in the Postal Department, were devoted to free rural mail delivery routes. The result would be that the farmers would take daily papers, and tens of thousands of our home daily and weekly newspapers, with all their elevating, refining, and educating influence, would find their way into rural homes. Of all men the farmer needs the daily paper. His highest success, socially, financially and intellectually, depends upon the greatest educational force in the world—the clean, moral newspaper, and every one present represents such a paper.

NEWSPAPER CIRCULATION.

CIRCULATION is the largest, most significant word in the vocabulary of the newspaper. At least on the business side. No other word evokes quite so much artful dodging and juggling. Nothing is so agonizingly coveted as large circulation. Not for the direct profit accruing from paper sales, for that is frequently done at a loss; but because thereupon rests advertising patronage, even as a house upon its foundations. Hence, in times past the publisher commonly claimed largest circulation, with the same careless boast that he claimed to have the best paper and equally resented the proposition to test either claim, as impertinent meddling. The equity of the present day, however, has decreed the right of the buyer to proof of the measure delivered in circulation, as it is accorded in all other merchandise.

So the career of the common circulation liar is rapidly closing. But the covert liar is still abroad, only he is more ornate—does it with a finer stroke of genius. He says: "Ah! if definite figures is what you want, you shall have them," and he proceeds to cover the country with expert solicitors, sleek men and fair women, plying the people with trashy overpriced books, garish portraits and other showy premiums, as baits for "trial" subscriptions, knowing that his victims will probably go on reading their accustomed paper, if any, and drop away with the close of the premium period, enabling the publisher of easy conscience, however, to swear to so much paid (sic) circulation. The deceit is not concealed. Only the small head of the circulation ostrich is in the sand.

But the sagacious advertiser is keeping pace. He asks

some embarrassing questions, when abnormal figures are quoted. By what method secured? Whether by gifts which shift the true consideration over to the gift that goes with the paper? The real test of advertising value is whether the subscription represents the voluntary choice of a given newspaper, as evidence that it is relied upon for the daily reading of the family. Only thus have advertisements a fair chance to be seen. Otherwise the transaction contains fraud. To meet the new condition of faking circulation, grown so common, the honest circulation statement, of the future, must contain an additional guaranty—that the average paid circulation quoted has been secured without other inducement than the merit of the paper itself. The Indianapolis Press subscribes to this guaranty in its statement at the head of this column.—The Indianapolis Daily Press.

THE EXTENDED INFLUENCE OF THE PRESS IF RURAL MAIL DELIVERY WERE GENERAL THROUGH MINNESOTA.

By C. P. Stine, St. Paul, Minn.

NOTHING in the history of the postal service of the United States has been so remarkable as the growth of the rural free delivery system. Within the past two years, through the aid of the people themselves, it has implanted itself so firmly upon the postal administration that it can no longer be considered in the light of an experiment, but must be dealt with as an established agency to be developed

Minnesota Editors at West Hotel, Minneapolis.

Preparing to take cars for Agricultural College.

as the action of Congress determines. Wherever the system has been established with the sincere idea of making it a success it has been followed by the following results:

(1) Increased postal receipts, more letters are written and received, more newspapers and magazines subscribed for. So marked is the advancement that a number of rural routes already pay for themselves.

(2) Increased values of farm lands reached by rural free delivery. This increase of value has been estimated at as high as \$5 per acre in some States.

(3) A general improvement of the condition of the roads used by this system.

(4) Better prices obtained for farm products, the produce being brought into daily touch with the state of the

markets, and thus being entitled to take advantage of information not before attainable.

(5) To these may be added the advantages of better educational benefits conferred by releasing the monotony of farm life through ready access to wholesome literature and the keeping of all rural residents, the young people as well as the elders, fully informed as to the stirring events of the day.

To determine how the influence of the press can be extended by the establishment of general rural mail deliveries through the State, it will be of value at this time to detail to some extent the origin and growth of the system.

In 1896 Congress made available \$40,000 and forty-four widely divergent routes selected for experiment were located in twenty-nine States, including one at Farmington, Minn.

All the details in regard to the establishment of the service were placed in the hands of officers of the division of postoffice inspection. Success followed, and in 1897 Congress again apportioned \$50,000 to the cause. At the next session of Congress petitions from every section of the country where the service had been given a fair trial began pouring in upon the department. Special agents were appointed to lay out services wherever conditions seemed favorable. Again such good results were obtained that Congress responded to the demand of the people by appropriating \$150,000 for rural free delivery for 1898 and gave \$300,000 for the same purpose for the current fiscal year.

The requests for the service multiplied like an endless chain, every new rural free delivery established bringing in several applications from adjacent towns for like privileges.

With the increase of applications for the establishment or extension of the system it has become necessary to fix rules which imply that all service must be originated upon petitions presented by the people desiring it through Representatives in Congress or Senators.

The petitions must be accompanied with a map of the country to be traversed, together with a statement as to the number and avocations of the people to be served. When good roads prevail, no route can be less than twenty-five miles in length, and there should be not less than one hundred families within easy access to each route.

The carriers are under the control of the postmasters in whose territory the routes are located, and receive \$400 from the Government, which includes horse hire, but no actual tolls or ferriages.

Mail is delivered to any family free of all cost, provided only that a suitable box to receive the mail is put directly in a place than can be conveniently reached by the carrier without alighting from his carriage. A red cloth is required to be tacked on the inside of each mail box, and when there is any mail for the carrier to collect the red cloth is pulled out of the box so that it can be seen by the carrier. The mail is placed in the inside of the box.

We are fortunate in having a special agent of ability and one who on account of his interest in the work has established in Minnesota four routes at Cottage Grove, two at Red Wing, one at Lynd, Lyon County, one at Rochester, one at Waseca and one at Austin and rearranged four routes at Farmington for the purpose of accommodating a much larger number of persons without interfering with those receiving the benefits of the service.

I allude to Agent Thomas Howard, whose jurisdiction extends through the States of Minnesota, Washington, Nebraska, Colorado and Wyoming.

It can be readily appreciated that this system of rural

free mail delivery will further the cause of education through the medium of quick service in the country in the delivery of both the weekly and daily press, thus extending the influence of the press in each State, and in such parts of the States not accessible but only through this system. I am informed that proprietors of a certain class of general merchandise stores are opposed to the routes by reason of the removal of the necessity of frequent trips on the part of the people residing in districts to the town postoffice. These merchants can be educated by the editor and proprietors of the country paper, who if they themselves understand the situation can convince the merchants that in place of a detriment it is a benefit. It discourages the growth of the liquor traffic and gives no incentive to the establishment of more saloons. It gives the country customers an opportunity to read the newspaper advertisements and other notices concerning the business of the country merchants, learn daily of bargain sales and other inducements to trade, and are able to place orders by mail. The beneficial result is that the merchants find a new avenue of trade and profit open to them. They then increase their advertising patronage, both as to space and location, and look to the paper as a medium to increase the volume of their trade.

The free delivery system is a benefit to the agricultural districts also. In Southern Minnesota, where the farmer devotes considerable time to the development of the dairy industry as well as stock raising, he finds the service extra valuable. Newspapers, letters, circulars, cards, etc., arrive regularly every day, enabling him to keep himself well informed in regard to the varying market prices.

The operation of the system has another advantage for the extended influence of the press, and that is manifested by the founding of new schools in the very districts where they are most needed. The constant demand for more knowledge created by reading accounts of happenings of the world through the papers furnishes the motive for the location of schools in country districts. Through the influence of the press this system of rapid free delivery of the educational resources to the farmer can and should be extended through the whole of one State.

As previously stated, there are only fourteen routes at the present time. This should be increased during the next six months to at least fifty more. If each editor in the State would give this subject personal attention and prompt action he would find that his sphere of extended influence through the medium of his paper would avail ten fold.

ADVERTISING REQUIRES CAREFUL ATTENTION.

You wouldn't expect to plant a seed, never go near it again and expect it to bear fruit. Yet that's the way a great many people do advertising—simply put in the first copy that comes to them, run it week after week without change, and expect it to accomplish more than all their salesmen. Advertising properly done will work wonders in a business-bringing way, but, like a growing plant, it requires careful attention.—The Wheel.

THE BEST PAPER FOR PRINTERS.

Mount Sterling, Ill., February 17, 1900.
The National Printer-Journalist Company, Chicago, Ill.

Gentlemen:—Enclosed find money order for \$2, as per statement. I am very well pleased with the Journalist. It is by far the best paper for a printer that I have ever read. Very respectfully,

DAVIS & DAVIS,

Per W. B. Davis.

By WILL OWEN JONES, Lincoln, Neb.

Questions, criticisms, and experiences are solicited for this department.

THE WINDSOR HOTEL FIRE.

IN THE May number of the Printer-Journalist appeared a discussion of the disastrous Windsor hotel fire, with an analysis of the correct method of reporting such a catastrophe for a daily newspaper. It now seems desirable to turn back to that event to emphasize some remarks heretofore made as to the essential difference between a story written to meet the needs of journalism and one written for "literature."

Fortunately we find in the December number of McClure's Magazine a piece of work founded upon the same occurrence. It is called "The Adventure of Tillerman McDermott, by Ray Stannard Baker, A True Story of the Firemen." Through the courtesy of S. S. McClure it is possible to reprint this story entire, and it is done in order that readers who are interested may make a still closer study of the problems that a reporter must solve before he can reach a high place in his trade or profession.

The Associated Press account of the fire was snappy and direct, like all of the reports mentioned in the May number. The introduction was as follows, the list of the dead and the injured coming immediately after the second paragraph:

New York, March 17.—Flames which originated from the igniting of a lace curtain, burst forth from the second floor of the Windsor hotel at Forty-seventh street and Fifth avenue shortly after 3 o'clock this afternoon, just as the St. Patrick's day parade was passing the building, and in a few moments they had leaped up to the roof and enveloped the entire Fifth avenue and Forty-seventh street fronts of the hotel. Ten minutes later the flames were roaring through the interior of the hotel and all escape by means of stairways and elevators was cut off.

There was the wildest scene of excitement within and without the building. Probably from ten to fifteen lives were lost within a half hour, and thirty to forty persons were injured in jumping from windows and in rushing through the roaring flames in the corridors and on the stairways. It may be twenty-four hours or more before the entire list of fatalities becomes known, and it will be longer before it can be ascertained definitely how many charred bodies are in the mass of fallen masonry that marks the spot where the hotel stood.

Mr. Baker's story, as it appeared in McClure's Magazine, is as follows:

When the truck of 21 came out of her house, McDermott sat with his legs braced, and turned the iron tiller. What with her ten ladders—one an eighty-five-footer—her two line-guns, and her hand extinguisher, to say nothing of axes, ropes, lanterns, door-jimmies, smoke-hoods, jumping-nets, and all the other various armament of the fire-fighter, Truck 21 weighed something more than five and a half tons; but McDermott brought her around the sharp corners, among the frogs of the car crossings, as if she were a buckboard.

McDermott is an Irishman, built as square and solid as a post; not tall, but heavy; short of legs, long of arms, and thick through the chest, where a man's strength lies. You would know him for a fireman from the puckered red scars on his face where he has been cut with falling glass. He is one of the twelve men chosen from more than 2,000 as members of the Exhibition Class, for ladder work, for net-jumping, and for other feats of muscle and daring.

It was shortly after noon on St. Patrick's Day when

Truck 21 stopped in Forty-sixth street near Fifth avenue. There had been a 3-3 alarm, and Martin had driven the big blacks a mile through crowded streets in a few seconds more than four minutes. Above the hotel the smoke was already rising in huge, slow-moving clouds. It was even creeping from the tops of the upper windows, with here and there red streakings of fire. In the streets the police were pressing back the broken St. Patrick's parade, men were rushing in and out of the hotel entrance like bees at a hive, and over all rose the vast roar of voices.

The marks yet remain in the pavement where Truck 21 stopped with set brakes. Martin threw his seat forward and he and McGuire and the others sprang to the windlass of the extension ladder. Just then Beggin, the captain, saw a woman sitting perilously on the ledge of a sixth story window, 80 feet sheer above the stone flagging of the sidewalk. She was waving her hand and screaming, although the noises of the fire drowned out the sound of her voice. There was fire above her and smoke below, and the windows were giving out a peculiar ominous orange glow that told the grim story of the destruction within. Beggin motioned to McDermott. Without waiting to put on his scaling-belt, McDermott wrenched a scaling-ladder from the truck and ran to the building. Raising the ladder, he drove the long steel hook through the glass of the second-story window. Then he ran up like a cat, crooked one leg over the sill, braced himself, drew up the ladder hand over hand from beneath him, and plunged the hook through the third-story window; and thus, like a great measuring-worm, the man and the ladder crept up the sheer brick wall. At the fifth floor the heavy glass of the window fell in fragments in McDermott's face, cutting him deep over the eye and on the hand. He drew his sleeve across his face to wipe away the blood, and hooked the ladder over the sill of the window where the woman sat. Instantly she turned as if to come down or else to jump. "Keep quiet," shouted McDermott; "I'll take care of you."

Mounting now until he could see in at this sixth-story window, he saw the inner walls all afire and the entire interior a raging furnace. The woman on the sill was pale and scarcely conscious. She held in her lap a small, barking pet dog wrapped in a cloak. On her left wrist she carried a little leather bag of jewels, and she clutched a purse firmly in her hand. McDermott threw the dog and the cloak inside the room.

"You must do just as I tell you," he said.

The woman turned on the sill, with both feet out of the window, and leaned a little outward. The crowd below held its breath. McDermott went a few steps down the ladder, grasping the sill with his right hand; the woman slid out upon his left shoulder. She was heavy, nearly 170 pounds; the ladder, unanchored at the bottom, swayed under the weight of the two like a cotton string. For a moment McDermott paused before he let go of the sill. Then of a sudden, from within the building, there was a terrific roar of falling walls, and smoke and fire gushed outward from the windows above them. McDermott let go, and stepped down one round. His foot held a moment, and then the round gave way with a snap, broken short off. Instantly the ladder swung far out to one side, and McDermott hung there in mid-air by one hand, six stories up, with a fainting woman on his shoulder. He felt the tendons of his arm stretching, indeed snapping; but he did not lose his presence of mind. Grappling with his legs, he succeeded in getting another foot-hold. A few rounds more, and he had reached the bottom, and there he hung waiting. Beneath him he could see the dense masses of men in the street, and above him the white streams of water from the engines curving like bows and opening in spray at the end where they cut into the rolling smoke. And of all the sounds he heard, that of the fire rose in a vast volume above everything else. Blood from his cuts was trickling into his eyes again, his arms were numb, and he was choking with smoke.

In the meantime Beggin and his men had lifted the extension ladder. It now swung and swayed eighty-five feet in the air. Seen against the black walls it seemed a mere thread. And yet on the very top round, with his legs drawn up under him, sat McGuire. Gently the ladder nodded toward the building. Mc-

Guire reached out and touched McDermott. "Hold on, old man," he said.

Then, with infinite care, but swiftly, McDermott stepped from the scaling-ladder to the extension ladder. It was with difficulty that he released the clasp of his right hand, so benumbed had it grown. It was a moment of awful uncertainty. If the frail ladders, one of which was loose at the bottom and the other loose at the top, should be parted under the strain of the heavy burden, all three would drop to their death seventy feet below. They were half down when they heard a faint sound of barking above them. There in the window stood the pet dog, begging as piteously as a dog could. It was as much as a man's life was worth to venture upward again; but McGuire went. He took the little dog under his arm, and brought him down. "I couldn't see him burned," he said afterwards somewhat shamefacedly.

All this, from the moment Truck 21 stopped until McGuire reached the ground, had not taken more than ten minutes. If they had stayed one minute longer they would have been buried, truck and all, in the ruins of the hotel, for the wall fell just as they reached safety.

McDermott showed me the scars on his face and hand, and the ugly swelling on his wrist where the tendons had "drawn." He also showed me a little flat leather box containing a gold shield pendant from a gold bar. The brief account of McDermott's deed on the shield was as graphic as the Bible. I asked him if he would do the same thing again if he had the chance.

"Of course," he said; "it's business."

It would give me the greatest pleasure if all of the readers of the Printer-Journalist who are interested would write me, answering the following questions, and adding any remarks they may wish to make. The questions refer to Mr. Baker's story, and not to the Associated Press paragraphs:

1. Is this story done in "Newspaper English?" Point out examples of style and words that a reporter would not use.
2. Would it be suitable as a "lead" or introduction for a report of the fire? Why?
3. Would you use it in any part of a report? Where? Why?
4. Primarily does the story give information or emotion? To what extent may emotion be used to intensify a newspaper report?
5. If work of this kind could be done by reporters in time to print the next morning, would it be advisable to use it? Please discuss fully.

ILLINOIS PARTISAN PRESS ASSOCIATIONS.

BOTH the Republican and Democratic Editorial Associations met in Chicago February 6th, and then the members of both joined in the meeting of the non-partisan body, the Illinois Press Association, on February 7, 8 and 9, and exemplified "how blessed it is for brethren to dwell together in unity."

The Republicans met at the Grand Pacific Hotel, the Democrats at the Sherman House.

During their session the Democratic editors adopted resolutions, listened to speeches, and elected the following officers:

President—John M. Rapp of the Record, Fairfield.

First Vice-President—S. G. Thornton, Ledger, Canton.

Second Vice-President—S. K. Strother, Courier, Taylorville.

Third Vice-President—J. W. Lusk, Democrat, Monmouth.

Secretary—Edwin Beard, Times, Watseka.

Treasurer—C. J. Lumpkin, Enquirer, Carlinville.

Among the speakers were General Alfred Orendorff, Springfield; M. F. Dunlap, Jacksonville; W. H. Hinrichson, Jacksonville; Willis J. Abbot of the National Committee; Judge E. F. Dunne, J. G. Johnson, Kansas, of the National Committee, and W. L. Mounts of Carlinville.

The seventh annual meeting of the Republican editors was held during the afternoon with fifty-eight members present. Several papers were read and officers were chosen for the year. Politics was discussed only in a general way.

The officers elected were:

President—J. R. Stewart of the Champaign Gazette.

First Vice-President—W. W. Lewis, Greenville Advocate.

Second Vice-President—G. E. Sisley, Geneva Journal.

Third Vice-President—B. F. Shaw, Dixon Telegraph.

Secretary—George C. Rankin, Monmouth Republican-Atlas.

Treasurer—A. R. Van Skiver, Streator Free Press.

Executive Committee—W. G. Dustin, Dwight Star-Herald; W. F. Calhoun, Decatur Republican; W. R. Jewell, Danville News; C. E. Snively, Canton Register; Z. A. Landers, Oregon Republican.

PRESIDENT-ELECT OF ILLINOIS PRESS ASSOCIATION.

The new President of the Illinois Press Association, Mr. Arthur C. Bentley, is widely known through the prominent part he has taken in State politics and by his activity as a member of the State Press Association and as delegate

Arthur C. Bentley.

to the National Editorial Association. One of the many useful of his works for the editors, was the presentation at the recent meeting of a carefully and laboriously pre-

pared card of citations to the laws regulating the publication of legal notices. He is now thirty-nine years of age, and a bachelor, as was his immediate predecessor in this office at the time of election, now a happy benedict. There is hope for President Bentley. He is a native of Illinois, born in Griggsville, Pike County. He received a common school education and was then a school teacher for four years. He read law with Judge Jefferson Orr, of Pittsfield, and was admitted to practice in 1883, locating at Baylis, Illinois.

In partnership with D. E. Donly, now publisher of Alexis (Ill.) Visitor, he established The Baylis Guide, a local newspaper, and published it five years. In April, 1895, he formed partnership with C. W. Caughlin and bought the Pittsfield (Ill.) Banner and changed its name to Pike County Times. It is a seven-column quarto with the largest circulation of any paper in the county. He joined the Illinois Press Association at the Litchfield (Ill.) meeting and has attended every meeting since.

Mr. Bentley was appointed master in chancery of Pike County in 1894 and now holds that office. He has a good law practice, and was Secretary of the Democratic State Committee during years 1897 and 1898.

SHORT SKETCH OF THE NEW TREASURER.

Herbert A. David was born in Carlinville, Ill., February 1st, 1872. He graduated from the city High School in '88, and from Blackburn University in '95. He is also a grad-

a line of steady promotion, became secretary of the company in 1895, and joined the Illinois Press Association the same year. He is also a leading member of the Illinois Republican Editorial Association, and went as a delegate from this association to the convention of the National Editorial Association at Denver, Colo., in 1898.

Newspaper work in all its details comes natural to him. He was to the manner born, as his father, A. G. David, has successfully conducted one of the most influential Republican papers in the Sixteenth Congressional district for the past thirty years.

He is a young man of strong mental make-up, a versatile writer, and a typical newspaper man in all its details, having served from devil to assistant editor, which latter position he now fills. Any association is made better and more progressive by the membership of such splendid young men as Mr. David, and we congratulate the Illinois Press Association in securing him as its treasurer for the coming year.

EDITOR OF THE MONTGOMERY (ILL.) NEWS.

Mr. Bliss being asked for a few hints from which a brief biography might be constructed, replied in a manner characteristic of his genial humor. He wrote:

You ask for a short biography of myself. There is nothing to "biograph" about. I was born in this (Montgomery) county over forty years ago. My parents came here from Vermont, but notwithstanding that fact they always tried

Herbert A. David.

uate of the Blackburn University Literary Course, which has been of great benefit to him in his newspaper work. In 1886 Mr. David entered the employ of the Macoupin Printing Co., publishers of the Carlinville Daily and Weekly Democrat, in the mechanical department, and, following

C. W. Bliss.

to live honest, upright lives. I studied law and for several years practiced the profession in Hillsboro, but seeing the error of my ways, I concluded to reform and bought the Montgomery News, and have since walked in the straight and narrow way. I once ran for the Legislature, but re-

pented and finally succeeded in regaining my standing in society, although this unfortunate step is still thrown up to me. I am married and am glad of it. Yours truly,
C. W. BLISS.

The editor takes occasion to add that Mr. Bliss is an interesting and eloquent speaker as well as an able and successful editor, and is as popular as he is entertaining.

AN ILLINOIS EDITOR.

Terry Simmons was born in a log house, September 26, 1855, on a farm near Shabbona's Grove, DeKalb County, Illinois. At the "little red school house" he took his first steps in education; then, removing from there to Leland, was a pupil for some time of our present Assistant State School Superintendent, Joseph H. Freeman, a very able instructor. Next he moved to Marseilles, and there and at Jennings' Seminary, Aurora, continued his school work. Later he served as deputy postmaster at Marseilles for six years, acting during a portion of that time as a paid correspondent of the Chicago Daily Times. He began learning the printing trade in part under an ex-proofreader and dramatic editor of the Chicago Times when that paper was at its best. The instruction he thus gained was of great value. Mr. Simmons' corresponding experience and wide social acquaintance gained in postoffice duties completed a trio of practical advantages which he made a wise use of by beginning the publication of the Plaindealer in 1876, and still continues, as always, its sole editor and publisher, a period of now almost a quarter century. He also publishes the Seneca Record, which he bought in 1894. He joined the Illinois Press Association in 1890.

Terry Simmons.

NEWSPAPER READING AND LONGEVITY.

Providence, R. I., has a veteran retired merchant ninety-six years of age. In a recent two-column interview given a representative of the Providence Journal, he said:

"My father before me was a great newspaper reader. He took the Providence Gazette, and it was his custom to read aloud the news to us children, thus keeping us posted on what was going on in the world. During the time of Napoleon's Russian campaign my brother used to ride horseback to Providence and load his saddle bags with Gazettes and deliver the papers to subscribers along the route to Thomson, Connecticut, many of whom were tavern keepers. We lived in Gloucester at that period, about four miles from Chepachet."

It is evident that newspaper reading and keeping informed contributes to longevity and to retaining the mental faculties unimpaired to the last.

KEEPS IN THE FRONT RANK.

The National Printer-Journalist has a notable article in opening on "Half a Century's Advance in Illustrations." An exhibit is made of a number of the old cuts which were common and popular more than fifty years ago, but now are observed only as curiosities. The publication keeps in the front rank of trade papers.—The Times-Union, Albany, N. Y.

PAY FOR ITSELF EVERY DAY.—Ramaley's Price List for Printing. 80 pps. Two for One Dollar. D. Ramaley, Box B, St. Paul, Minn.

About Advertising.

By Charles Austin Bates, New York.

Communications to this Department are solicited. Questions will be answered and criticism made on advertising matters.

HAVE you a new article of merchandise? Then give it a good letter of introduction to the world. This letter is advertising. One of the best advertisements is a good salesman. A good salesman must not only understand his wares; he must also know something of human nature. He must meet all sorts of moods in all sorts of people with suavity and dignity.

If young men, young women, too, appreciated the value of a personal following while they are occupying the position of clerk, there would be fewer complaints of inattention to customers, brusqueness or slipshod manners of those behind the counter. If a clerk is popular with the customers, his employer soon finds it out. A clerk who is asked for and patiently waited for, need not dun very hard for a raise in his salary.

The good clerk knows what has been said in the advertisements. He can emphasize them simply by his manner. This makes the truth told in the advertisement doubly strong. If a truth is told in a weak way, in a way that expresses a lack of confidence, it is almost as useless as if it had not been told. The statements made by an advertiser should be wholly true. Then, the desired point cannot be made too prominent.

A good ad is suggestive. It means more than it says. When people think about ads they are on the way to become buyers.

Even a funny advertisement, if it has a "catch" to it, may be good, if people remember, not only the ad, but what it talks about. The worst thing about the funny advertisement is that too often readers look upon it merely as fun.

* * *

An advertisement that does not give information fails in its mission. If it tells only a part of the story it leaves the reader in doubt. This is particularly the case with advertisements of rooms or apartments.

Everybody knows what a wearisome thing it is to go house hunting. The actual face-to-face hunt is bad. The scanning of the newspaper columns is often exasperating. Part of the facts are mentioned, and the house, or apartment, or flat hunter "must traverse many a weary mile" to find what sort of heat, or light, is used; or how many flights up they must go; or if there's janitor service; or what the price is, and many other things.

A woman said to me the other day: "I've rented three rooms of my flat. I wish I had a dozen more suites to give to the people who came after I had secured a tenant."

"What did you say in your ad?" I asked her.

"I said: 'Three furnished rooms, bath, pantry. Blank dollars a week. One block west of L station. Fine neighborhood.' That was all, with my name, without initials, and address, of course. This ad came out in a Sunday paper. Before noon I had a fortnight's pay for my rooms, but applicants kept coming up to Wednesday noon."

There's a three-line ad that told the whole story: Number of rooms, price, the means of transit (which is

most important of all) and a hint of the surroundings. The ad is suggestive by the mention of the pantry. That means housekeeping may be indulged in or let alone.

This ad passed the crucial test. If it had not been good, it would not have been answered so soon, nor so often.

* * *

One great difficulty that confronts new advertisers, old ones, too, in a measure, is the choice of mediums.

Upon the selection often depends success. The question is, "What will reach the people to whom I wish to speak?" This cannot always be judiciously answered by taking the paper that has the largest circulation. It is the character of the readers that must also be considered.

* * *

Advertising should be free from technicalities. Each sentence should be so plain that any child that can spell it out can understand it.

Advertising is not an exact science. Neither is medicine nor housekeeping. But, we rely upon the doctor's opinion because he has given his time and all his ability to the study of medicine. We depend upon our homemakers for limitless comfort and happiness. So also the people who have made a study and a business of advertising form a class with whom it is profitable to reckon.

* * *

Failure or success in advertising is not governed by chance. There's no lottery about it.

If you have a good thing, something that many people may use, if it can be sold at a fair price, a price that the majority of people can afford, all you have to do is to advertise your merchandise.

Then, if the advertiser is new to the business of telling clearly and plainly his story to the public, let him be guided by the experience of those trained to the work. If an ad writer knows how to begin it is a great point gained. If he can start off as if he had thought the matter all over and knew his subject thoroughly it begets confidence at once.

Another very important matter is to know when to quit. Don't protest too much. Tell your story in a few strong words, and in simple sentences. Even if you mention but a half dozen of the thousand and one articles you have for sale it is better than to make a hotch-potch of your space. Your patrons will soon learn that your advertisement is a realistic serial. If they don't find what they want one day they will the next. Irish stew is a savory dish, but don't build your advertising on the same plan.

ADVERTISATORIAL.

The size of the ad should be regulated by the possibilities.—Profitable Advertising.

* * *

An advertisement may bring custom, but advertising alone will not keep it.—Printers' Ink.

* * *

Make your ad easy to read in type, language and illustration.—Rhode Island Advertiser, Providence.

* * *

Advertising may properly be considered by the merchant as an investment from which he has a right to expect quick and large returns, but in making this investment the merchant must be as prudent in placing his announcements as

is the careful investor of cash in selecting bonds or property.—Philadelphia Record.

* * *

I believe that some of us will live to see the time when there will be as careful editing of advertising as attaches to any other part of the paper.—Toledo (O.) Journal.

* * *

The first step in advertising is to get a good article to advertise, something which good business judgment dictates the public wants and will buy.—Ladies' Home Journal.

* * *

The only school for advertising is the school of human nature. All men live in it. Few men ever turn it to their advantage. No text books ever told how to win men and money.—Results.

* * *

Timeliness in advertising is an important factor. The ability to seize upon an event of current interest, and to turn it to the advantage of the advertiser is something that commands admiration wherever it is manifested.—Office.

* * *

The influence of an ad is often greater than the advertiser supposes. It is estimated that a half dozen people read each copy of a popular newspaper and readers naturally discuss the bright things they read.—Press and Printer.

* * *

Too many advertisers consider their advertising as an adjunct to their business. Here is where they make the fatal mistake; advertising is not an adjunct, but a part of the business, as much as is the buying and selling of goods.—The Advisor.

* * *

To talk effectively means that the talk shall convince the hearer. If it takes the form of an ad in a trade magazine it should be written in clear, truthful and forcible language. Nothing is more interesting than the plain facts about goods truthfully told in convincing, good English.—Mallett.

* * *

An advertisement in a newspaper finds access to the homes of the people. It is not thrown into the waste paper basket or the fire as soon as its character is known, as a majority of handbills and advertising pamphlets are. It is not ignored, or regarded with either aversion or contempt, as posters generally are. It comes to readers with the authority behind it of the journal in which it appears, and it confronts many of them when they have the leisure to consider its terms.—Rochester (N. Y.) Chronicle.

* * *

"Strange how much money is spent in a big city for useless signs," said a New Orleans sign painter. "On almost every street one finds big announcements masked by awnings, hidden under cornices, and in all sorts of queer places that the eye would never be apt to reach. I can point you out a handsome piece of black and gold lettering not a block from here that is executed on the glass of a fourth-story window. It must have cost considerable money, yet the characters are so minute that I will venture the assertion that nobody can read it without an opera glass. Another sign that I discovered quite by accident the other day is painted across the front of a building near the roof. Directly beneath is a covered gallery, and the only place from which the inscription can possibly be seen is a bit of sidewalk about a dozen feet long diagonally across the street. The chances of a passer-by looking up in just the right direction are possibly one in 10,000. The prize freak sign of the city, however, adorns a certain roof, and is visible from only the upper stories of one or two adjacent

SAFE FIGURES, by using Ramaley's Price List for Printing. 80 pps. Two for One Dollar. D. Ramaley, Box B, St. Paul, Minn.

buildings. Nearly all the useless signs in town might have been located much more advantageously if the people who ordered them had allowed the painter to use his judgment. We calculate the chances of observation down to a nicety, and know exactly how large a letter ought to be visible at a given distance. As much skill is required for that sort of thing as for the actual painting."—New Orleans (La.) Times-Democrat.

BUSINESS NOTES.

CONFIDENCE AND BACKBONE, with Ramaley's Price List for printing, Pocket size, 75 cents, or two for one Dollar. D. Ramaley, Box B, St. Paul, Minn.

The A. D. Farmer & Son Type Founding Company is send-out sample sheets of Engravers Title, showing four sizes on 6-point body and others up to as large as 30-point. It is a nice clean-cut letter and well adapted for use on business cards and fine stationery. A postal card will also obtain a specimen sheet showing Florence, Tourine, and Franklin Borders and Bands, which is worth sending to this Company for.

A PRACTICAL INVENTION.

Another simple and useful device for printing offices. It is the Challenge Book Stabber, and is shown in the illustration attached to the clamp of a paper cutter. The comb-like piece is the stripper, which is secured to the bed of the cutter, acting as a stripper and gauge for the work. The

needles may be set at any desired distance apart within a space of seven and a half inches, and will stab any thickness up to three-quarters of an inch. It is applicable to any cutter, and for binding pamphlets, check-books, receipts, order blanks, tabs, etc., its utility will be seen at a glance. The price is only \$4. Illustrated circulars can be obtained from any type founder or dealer, or from the manufacturers, The Challenge Machinery Company, Chicago.

The Dexter Folder Company have opened an office in Boston, Mass., which will be in charge of W. M. McCain (a brother of its Chicago manager, B. H. McCain). He is a thoroughly skilled mechanic and will personally look after the installation of its machinery placed throughout New

England. The Boston address is No. 12 Pearl street. Telephone 4170, Boston. The Dexter Folder Company's business for 1899 nearly doubled that of any previous year, and from present indications this year will show a still greater increase.

NOME CITY, ALASKA,

Is twenty-four hundred and fifteen miles from Seattle, via ocean, thirty-three hundred and eighteen miles overland. Is said to be the richest gold field discovered up to this time. The first steamer will leave Seattle on or about May 10, 1900. For full particulars, maps, etc., address C. N. Souther, Ticket Agent Chicago, Milwaukee & St. Paul Railway, 95 Adams street, Chicago, Ill.

The Glidden Varnish Company, of Cleveland, makers of Jap-a-lac, will place its 1900 advertising through Charles Austin Bates, of New York.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 25th of the month preceding date of publication. Cash must accompany order.

WANTED—A young man with a small amount of money to invest wants a position as manager or editor, or both, of a weekly or small daily paper in a town of not less than 5,000 population, in the South or West. Is a college graduate and has worked at the business from pressroom to editorial chair for twelve years. Address "R," care the National Printer-Journalist.

THE VAN BIBBER ROLLER CO., Sixth and Vine Streets, Cincinnati, will give you the **best rollers** that can be made for any season or press. Our facilities are the best, and we use the latest compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

YOU can sharpen or whet your paper cutter knife instantly without taking it out of the machine with **Hoerner's "Little Wonder" Sharpener**. It preserves a perfect edge always and can not injure the knife like a stone that becomes uneven and dangerous to use. Lasts a lifetime and does the work quickly and saves the time and danger of removing and resetting of the knife. A boon to every printery and bindery, large or small. Price, \$3; cash with order, only \$2.70; by mail, 30 cents extra. Descriptive circular and testimonials on application. For sale by Typefounders and Dealers, or by the inventor, **J. S. Hoerner, Highland, Ill.**

ABOUT PRICES FOR JOB PRINTING, Ramaley's New Price List. Fifth edition. Up to date. 75 cents, or two for One Dollar. D. Ramaley, Box B, St. Paul, Minn.

CHARLES AUSTIN BATES,

Vanderbilt Building,

New York.

"Mr. Bates' masterpiece. It is interestingly and readably written—more readable than one would believe possible on so hackneyed a subject as advertising—and it is illustrated by pictures intended to lend a humorous turn to many of the sentences in the text. For those who want a general idea of advertising principles, the book will be found valuable, and even the readers to whom its subject is more than familiar will find it an interesting companion for a leisure hour. It is full of apothegms, every one of which rings with a true note."—Geo. P. Rowell.

"Excellent work."—Buffalo Evening News.

"Interesting and profitable."—Baltimore Herald.

"Lively and sensible."—Philadelphia Evening Telegram.

"Handsome and clever."—New York Press.

"Should be read twice."—Cleveland World.

"Should be on the desk of every advertiser."—Cleveland Press.

"Best thing we have seen."—Buffalo Express.

"Most practical and helpful."—Minneapolis Journal.

"Every advertiser may read with profit."—St. Louis Post-Dispatch.

"Mr. Bates has rendered a service to all progressive business men."—Philadelphia Record.

"Most interesting of all instructive books."—Buffalo Times.

"Full of ideas of value."—Cleveland Leader.

"Nothing humdrum or commonplace."—Buffalo Commercial.

"Full of snappy, commonsense hints."—Boston Advertiser.

"Striking and readable."—Baltimore American.

"Can not fail to prove interesting."—Pittsburg Press.

"Should be in the hands of every business man."—Philadelphia Ledger.

Charles Austin Bates has secured the advertising of "Sedatine," a new proprietary preparation. For the present the work will be confined to Philadelphia, the home of the Sedatine Company. Half and quarter pages will be used in the dailies.

Faster than ever to California

Chicago-Union Pacific & North-Western Line

THE OVERLAND LIMITED leaves Chicago 6.30 p. m. daily, arrives San Francisco 5.15 p. m. the afternoon of third day and Los Angeles early next morning. No change of cars; all meals in Dining Cars. 1370 Great Northern Bldg.

THERE ARE STILL A FEW advertisers, advertising men, publishers, and printers who have not yet subscribed for **PROFITABLE ADVERTISING**. They are doubtless victims of procrastination. They know, of course, that it is the leader of all advertising magazines published today, and they intend to send along their dollar when they "get around to it." But in the mean time they're missing the superb numbers now appearing, which they will regret. Our readers say that each number, with its artistic cover, its wealth of illustration, and its interesting articles, is alone worth the price of a whole year's subscription. For the present, however, we shall continue sending it at the old price—one dollar a year. Why not get around to it today?

If you want a sample copy send 10 cents and mention the National Printer-Journalist.

“No More Cheap News Ink for Me.”

THE newspapers of this country for the past two years have been solicited, drummed, and almost persecuted by Printing Ink manufacturers who, having no reputation and no sales for Fine Grades of Inks, have been forced by their necessities to obtain a market for that grade of Ink which is easiest made and turned out in largest quantities. The result has been that so-called “News” Inks have been offered at a price so close to the cost that the manufacturer has been unable to turn out a properly made article, and in consequence there has arisen the greatest dissatisfaction among newspaper publishers at the muddy appearance of their papers and the filling up of their fine type. We have determined to give newspapers an absolutely first-class, dense black News Ink, and charge a fair price for it. The quotation at the top of this page is taken from many letters we have received from newspaper publishers who have written us asking for a News Ink that “will work free and clean, and print black.” One of the best printed newspapers in this country—the New York Commercial Advertiser—is printed with Ink of our manufacture. Any newspaper publisher who thinks this paper looks better than his own, we will be very glad to furnish with quotations for the same grade. Publishers who are satisfied to use an Ink solely because it is “cheap” we think will find from experience that there is no real economy in using anything but the best that can be made. Why spoil good paper—the item of cost of which is very large—with poor Ink, when the difference in cost between a good and poor Ink is so trifling?

Fred'k H. Levey, Pres't.

Chas. E. Newton, Vice-Pres't.

Wm. S. Bate, Sec'y.

PRINTING PRESSES

FOR ALL CLASSES OF LETTERPRESS WORK.

The Miehle

HIGH-SPEED, FOUR-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in eleven sizes, from 26 x 36 to 48 x 65. This press is built to do the finest class of printing, and is specially adapted for halftone work both in black and in colors. It is the standard Flat-Bed Press of the world today, as the producer of a greater quantity and finer class of work than any other press on the market.

The Miehle

HIGH-SPEED, TWO-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in six sizes, from 30 x 42 to 45 x 62. This press is designed for a little cheaper class of book and job work than our Four-Roller, differing only in the number of form rollers, having two instead of four; otherwise it is similar in all its other features, and is faster.

The Miehle

HIGH-SPEED, TWO-ROLLER, REAR DELIVERY, "RACK AND PINION" DISTRIBUTION JOB AND NEWS PRESS. Made in five sizes, from 30 x 42 to 43 x 56. Its method of distribution is "rack and pinion cylindrical" instead of "table." The class of work to which it is more specially adapted is newspaper and poster work. Felt packing used. It is very fast.

The Miehle

HIGH-SPEED PONY PRESS, TWO-ROLLER, REAR OR FRONT DELIVERY, "RACK AND PINION" OR "TABLE" DISTRIBUTION. Made in two sizes, 25 x 30 and 26 x 34. This press has a well-earned reputation for remarkable speed and the superior quality of work it does.

OUR NEW SHEET DELIVERY

Which delivers the sheet PRINTED SIDE UP OR DOWN, as may be desired, we put on all our presses with the exception of the "Job and News" and the smaller sized "Pony." This adds but little to the cost of the press to the purchaser and is a great convenience.

FACTS

THE LINOTYPE.

Over 7,000 in Daily Use.

Each machine produces all sizes of type from Ruby to 13-point bodies.

Italics, Small Caps, and a limited number of black-face can now be set from the keyboard.

30,000 ems a day bookwork can be estimated on.

6 cents per 1,000 ems will cover all the incidental expenses, including interest and depreciation.

One Linotype can be used as profitably as one cylinder press.

Change from one face to another can be accomplished in less than five minutes.

A Linotype machinist is not necessary in a small plant of machines.

If the advantages of the Linotype were not substantial, it would not be in demand.

SPEAKS FOR ITSELF

...A GOOD ILLUSTRATION will tell its own story far better than any word picture will do. The fine details of an excellent construction will be grasped at once by a practical eye, through photographs or good cuts. It is impossible to look at the illustration below without realizing at once the many advantages of this high-grade cabinet. Like the Polhemus Cabinets, the news cases are placed on the opposite side from the job cases. Those news cases on top are resting on our patented tilting brackets. These Porter Extension Front Cabinets are fitted with steel runs, which increase the case capacity 25 per cent. over wooden run cabinets. The cabinet has the extension front—the feature of the Porter Cabinets—which enables a case to be drawn from any part of the cabinet and placed at a convenient height for setting purposes. This Porter Cabinet, as illustrated, possesses valuable features covered by three distinct patents, as follows: First.—The Tilting Bracket, allowing the galley to be kept under the lower case. Second.—The “New Departure” case; this case in two years since its introduction has revolutionized case making the world over. Third.—The Porter Extension Front. The result of the combination of these three valuable patents is a cabinet unrivaled in points of excellence. Porter Cabinets have been adopted in the Government Printing Office at Washington. Send for our complete catalogues, which explain it all. Specify our goods when ordering through your dealer. Every article we make bears our stamp. *It is a Guaranty of Excellence.*

Endorsed by the Public Printer and now used in the Government Printing Office at Washington.

OFFICE OF THE PUBLIC PRINTER,
Washington, D. C., Feb. 25, 1897.

Gentlemen:—In reply to yours of the 20th instant, I am pleased to state the Patent Extension Front Cabinets have given entire satisfaction, and possess advantages over the old style cabinets. Respectfully yours,
TH. E. BENEDICT, Public Printer.

Porter Cabinets are sold as low as any other first-class cabinet. They are not high-priced in any sense.

Strength

IS AN ESSENTIAL OF A
PERFECT PLATEN PRESS.
IT IS ONE OF THE LEAD-
ING CHARACTERISTICS OF
===== THE =====

CHANDLER & PRICE..... **JOBBER**

ONE  REASON

Thickest at point of greatest strain.

IS FOUND in the construction of the platen. It has more metal than the platen of any other make of Gordon presses. The construction is convex, heavily ribbed, and thickest in the center at the point of greatest strain—as shown in the illustration. The tympan rests on a perfect surface and the gripper bars and platen ears are of malleable iron, a metal much tougher and more expensive than cast iron. The construction secures firmness, rigidity, perfect impression—making possible perfect register and perfect work in every way besides insuring

Durability

ONE OF THE CHARACTERISTIC
AND ECONOMIC FEATURES OF
THE CHANDLER & PRICE PRESS.

STRENGTH AND DURABILITY, WITH PERFECT MECHANICAL CONSTRUCTION, MAKE A PRESS ALWAYS READY AND EQUAL TO ANY DEMAND OR ANY EMERGENCY.

The Necessity of Expansion

SOME REASONS WHY WE ARE COMPELLED
TO SEEK LARGER QUARTERS. :: :: ::

INCREASING demands
from large catalogue
houses.....

Growing needs of
Advertisers of Specialties
and Magazine Agencies.

Exacting service required
by newspaper advertisers.

Wants of live business
men who circularize.

Out-of-town printers and
publishers who want their
work at once.

The exit from business of two
competitive engraving houses.

And the absorption of the
Imperial Engraving and
Photographing Company
with its complete
plant equipment.....

These are reasons for expansion
which every buyer of
Printing Plates will appreciate
and we hope remember.
We are more than ever at
your service.....

INVENTORIES AND INSURANCE.

By Thomas Rees, Illinois State Register.

IT SHOULD be understood that the business of insurance companies is collecting premiums and not the payment of losses. The payment of losses is one of the contingencies of that business. That while insurance companies are usually ready to pay for everything that is covered in the policy in their respective companies, they are not anxious to pay for those things which are not insured, and that it must be proven to their satisfaction that the articles and merchandise have been destroyed by fire before there is any claim against the insurance company. The burden of proof is on the insured. It cannot be assumed, when an establishment burns out, that the insurance company is bound to pay the face of the policy. It remains with the person who has suffered a loss to prove beyond all reasonable doubt that he has suffered by the actual destruction of articles on which he claims a premium. This being the case, the easier the facts can be arrived at and the more tangible the evidence the better chance the insured has of collecting for the loss he has sustained.

The best way to prove up a loss is to have a complete inventory of everything in the establishment, taken at a time previous to the fire, and, besides the advantage that such an inventory may be in case of fire, it is a most excellent thing to have in keeping track of the material of a printing office.

It is a most excellent thing to round up the office at least once a year. It frequently calls to mind the fact that you have loaned galleys, chases, composing sticks, or cases of type to other offices which would be entirely lost track of if it were not for the annual round up, when everything must be present or accounted for. Starting with a complete inventory, it should be kept in a safe but convenient place, and every new article purchased should be added to it at the time of purchase. If this is regularly kept up, it will surprise you to see how quickly and easily you can go through your office at the end of the year and call the roll on everything which you are supposed to have.

In making your inventory, commence with the business office. Put down your safe, counters, desks, typewriters, gas and electric fixtures, inkstands, clocks, printed matter, books, and everything to the minutest details. Move on to the editorial office the same way, including the editorial library, naming each book. Take up the press room. Enter each press or other machine separately, the number of feet of shafting, the number of feet of belting for each press, naming the width of the belting, and putting all down

minutely. In all departments include the electrical and gas fixtures, tables, etc. In the composing room enter each font of type separately, giving the number of pounds or the number of A's in the font, how many fonts there are of each kind, the price per font and the initials of the foundry where they are made. Take the chases, commencing with the largest, give the measurement in inches of each chase to the smallest. The same with the imposing stones, attaching the price of each and every article. Give the style and kind of each rack or cabinet, and so continue throughout the entire office, including galleys, composing sticks, tools, etc. In the matter of cuts, I would suggest that a good proof be made of each and every one, that they be bound in book form and a number be attached to each cut to designate it, and that they be entered in the inventory by their numbers and with the price to each.

The main difficulty in making up an inventory is to arrive at the price to attach to the various articles, but this is not so difficult if a certain rule is adopted and adhered to. I would invoice type, presses, shafting, belting and all other articles at the printed prices in which they are quoted in the various catalogues. Most of these articles can be found in the pricelists furnished by the type foundries. Use the schedule price, or gross price. Do not try to make a net price as discounts are frequently changed and a net price will never represent what the articles are worth for any great length of time. Invoice everything which has a regular schedule price at such price, and in making calculations thereafter discounts, damages, wear and tear, etc., can be taken into account when the time arrives. In the matter of shafting and belting, the Medart Pulley Company of St. Louis has a schedule which covers everything, which schedule can be obtained in most any hardware establishment. The same is true of belting, gas fixtures, tools, etc. In the matter of desks, typewriters, safes, etc., give all schedule prices. Put them down at price no matter how old or how new they are. Their condition can be taken into consideration afterwards. Counters, tables, etc., which have been made to order, can be put down at the cost price, or in the absence of the knowledge of what they cost, at what it would cost to replace the same.

In the matter of job stock or other material on hand, a separate sheet may be made of the same, entering each article or each lot or quantity at its market price.

I think this is the only way to make prices on an inventory that will be at all satisfactory. As before stated, discounts are continually changing, wear and tear and deterioration are continually taking place, and if a person

attempts to make an inventory of actual value the same will not be good for more than one day, while an inventory made of schedule prices will be good for all time to come. Another thing, it is very difficult to arrive at the actual cash value of many things, the prices of which are effected by discounts, wear and tear and the conditions existing at particular times. For instance, you may have a font of type, say five hundred pounds of brevier, the schedule price of which is 52 cents per pound—the discount on that, say 33 per cent. At the present time I believe it is about 25 per cent. Be that as it may, you consider the wear and tear has depreciated the net value of this font of type about 25 per cent, but about this time a customer comes in who wishes a book printed which he insists shall be in the best manner that printing can be done, and you are compelled to buy a new font of type just like the one which you thought was good enough. After you get the new font of type, having use for only one ordinarily, what is the first font of type worth, which a few days ago you thought was good enough? You now have another better font that entirely takes its place. You conclude that the only thing to do with it is to trade it in as old type metal, and so the value has decreased about 75 per cent on the introduction of the new font of type. But just about the time you have concluded to throw it away, somebody else comes along and wants a job printed and the old type is good enough, and by having it you secure a profitable job that you otherwise would not have secured. The price of the old font is immediately increased in your mind to pretty nearly its original cost. Such a case as this is more marked in the value of cuts. Suppose you have a halftone cut made of your best customer at an expense of \$8.00 and you are using it right along for him. There is no doubt of the value of the cut being all that it cost. Suppose that some trade journal publishes a picture of this man which suits him much better than the one you have been using. You send to them and get it at a cost perhaps of \$2.00 and the original cut is discarded and practically valueless; but in a few months the customer may become dissatisfied with the second cut and insist that thereafter the original cut must be used. This completely destroys the value of the second cut and reinstates the first engraving to its original value of \$8.00. I only cite these to show the difficulty of trying to invoice articles for future use at the particular value which they may represent at any particular time. Put them down at the schedule price and the conditions covering their value can be determined when the time arrives that it becomes necessary.

Having completed your inventory, take out your insurance policy and compare the two and see whether the articles you have invoiced are covered in the policy. In placing a policy upon your establishment, the nearer you can get to a blanket policy, that is, a policy covering everything under one head, the better it is for the insured, but insurance companies refuse to make blanket policies covering large establishments. If divisions have to be made in the policy, make as few divisions as possible, for the less divisions you have in a policy the better. In comparing the inventory with the policy take up each article covered, item by item, and see that the language of the policy covers each particular article. If it does not, then the policy should be amended. I might tell a true story here to illustrate the necessity of this. I knew a man down in Missouri who owned a lumber yard that was well insured. It was finally destroyed by fire, and the adjuster called upon him to settle the loss. The lumber merchant, being a good-natured sort of fellow and a man who believed in liberal dealings, was glad to meet in the adjuster a man who impressed him as being a gentleman with the same broad, liberal ideas. They commenced on the adjustment. Signs on which the insured only claimed \$40.00 the adjuster was willing to put in at \$50.00. Paint on which the insured claimed a loss of \$150.00 the adjuster was willing to allow a loss of 200.00. A coil of rope on which the insured only thought he would ask \$40.00 the adjuster was glad to allow \$57.75, and so it went on all through the adjustment, the only difference between them being a matter of \$300.00 on a certain pile of lumber, but as the adjuster had been so liberal all the way through the Missouri man thought he would give him the \$300.00 on the lumber pile, and after some argument allowed it. Having completed the work the adjuster took up the policy and raised the question as to what was covered in the policy, and the scales fell from the eyes of the Missouri man when he found that paint, signs,

rope and that class of goods on which the adjuster had been so liberal were not covered at all in the policy and were a complete loss without insurance, while the lumber on which the insured had allowed \$300.00 without any good cause except the liberality displayed on the other side, was the only thing covered in the policy.

This shows the necessity of finding out in advance whether your goods are covered in the policy rather than wait for the adjuster of the company to give you that information after the fire has occurred. I submit herewith the form of a policy carried on the establishment which I represent and which I think covers nearly everything in the office. Improvements may be made upon it but I think it is more comprehensive than the majority of insurance policy forms. It reads as follows:

ILLINOIS STATE REGISTER.

(Incorporated.)

\$1,000 insurance, to apply as follows:

A. \$750.00 on its printing presses, rollers and roller stocks, paper cutters, card cutters, stereotype machinery and apparatus, perforating machines, standing presses, wire and other stitchers, sewing machines, folding machines, engines, shafting, gearing, belting, pulleys, hangers, pipes, valves, radiators and apparatus and all other machinery (except Mergenthaler Linotype Machines); also on its type, rules, stands, galleys, chases, slugs, imposing stones and frames, racks, cases, cabinets, electrotypes, wood or other engravings or etchings, standing forms and labor on same, stereotype or other metal, tables, scales, cutting dies and all other appliances, implements and tools.

B. \$150.00 on its stock of paper and card board, plain, printed and in the process of printing or completion, inks, bronzes, oil, glue, binders' boards and binding and printing materials and supplies of all kinds, stationery, and all other materials and supplies pertaining to or used in its business, or for sale, whether its own or held in trust or on commission or sold but not removed.

C. \$50.00 on its office furniture and fixtures, safe, shelving, show cases, desks, type writers, stoves, partitions, enclosures and closets, in various parts of the premises; chandeliers, gas fixtures, gas pipes, speaking tubes, signs, bound and unbound files, cases and books, fire extinguishers, clocks and all other conveniences, office furniture or fixtures.

D. \$50.00 on its electric motors, dynamos, fans, and connections, including switchboards, switches, meters, starters, electric wiring, fixtures, and all other appliances or connections, but not to cover any loss or damage to dynamos, exciters, lamps, switches or motors caused by electric current, whether artificial or natural.

All contained in the two-story, metal roof brick building and additions thereto, situated on south side of Monroe Street, between Fifth and Sixth Streets, Springfield, Illinois. The ground on which said building and additions are located is owned by different parties.

Permission to light premises with gas and electricity or oil; to use gas stoves and to make ordinary repairs to buildings, machinery and fixtures without notice; also to run nights and extra hours.

Other concurrent insurance permitted, not to exceed \$30,000.

This slip being attached to Policy No. _____ of the _____ Insurance Company, of _____, issued at its Springfield, Illinois, Agency, forms part thereof.

Dated _____ 189—

_____ Agent.

IN A HURRY FOR ITS CONTENTS.

Richmond, Mo., February 9, 1900.

Hon. B. B. Herbert, Chicago, Ill.

My Dear Sir:—I am in receipt of your statement of my account to May, 1900. I herewith enclose you a draft for \$4, which pays me up to May, 1901. I look anxiously each month for the arrival of The Printer-Journalist, and don't see how I could get along without it. It hardly reaches my desk until I have hold of it and begin to tear off the wrapper and scan its columns. I don't see how any country editor can get along without it, especially after he has once become accustomed to reading its columns, for at no time does it lack in looks, make-up or contents. Wishing The Printer-Journalist and its editor continued prosperity, I am, sir, yours very truly,

GEORGE W. TRIGG.

TYPE-SETTING MACHINES.

By Frank T. Moran, Republican, Belvidere, Ill.

PUBLISHERS of country newspapers have watched with a great deal of interest the progress of the type-setting machine. A few years ago the country publisher paid little attention to this subject because he thought the type-setting machine was made solely for the use of the metropolitan newspaper and therefore concerned himself very little about it. In the past year or two, however,

of changing to machine composition should give the subject careful investigation. He should stop and figure out in black and white exactly what his type-setting is costing him per thousand and then compare the figures, with the cost of machine composition. I dare say there are comparatively few country publishers in the State whose help works by the week who can tell what their newspaper composition costs them per thousand ems. In many cases they do not stop to consider what proportion of labor is expended on job work and what part on the newspaper.

When the publisher finds out what his newspaper type-setting is costing him he can very easily tell whether anything is to be gained by the installation of a machine.

MEMBERS OF THE FIFTEENTH CONVENTION OF THE NATIONAL EDITORIAL ASSOCIATION
IN FRONT OF THE HEADQUARTERS AT ST. CHARLES HOTEL, NEW ORLEANS.

we have observed a great change and now many newspapers in the State outside the larger cities are using machines. When this subject was assigned to me I made a protest to the officers of the association but finally consented to tell what I knew about the question and perhaps may be able to give a few points of interest, but my remarks will be brief. In the first place a publisher who is thinking

No newspaper can afford to put in a machine, no matter what make, unless they are setting in excess of 100,000 ems per week at a cost of from 15 to 20 cents per thousand. I might say that a newspaper would have to set considerably more than the amount I have stated to make it economy to change composition. There may seem to be many glittering advantages in type-setting machines but

remember that the cost is great and the expense of operating and other things are items to be taken into consideration. From actual experience I cannot say much on the subject as my machine has been in operation but a short time but before I concluded to abandon the old way I canvassed the subject carefully and did not make up my mind in a moment. In fact I studied the matter for nearly a year and during that time kept the typewriter busy writing letters all over the United States to newspapers using the machines and in this way I managed to collect much valuable information. Before putting in a machine my composition on both daily and weekly was costing me about \$32 per week. We were setting about 200,000 ems, the cost per thousand being 16 cents. Very little plate matter outside of the daily news plates was used, so this item could not be taken into consideration in making an estimate for machine comparison. I decided to put in a Simplex machine for the reason that the cost of operation is not as great as the machine of another make and the chances less for delay on account of breaks. Moreover the original cost is about half. At this time I cannot state positively that my judgment was correct but from present indications we are going to increase our composition and as near as I can figure, the cost per thousand will not be over 10 cents. The machine is being run by two girls who are old employes of the office and the results thus far are quite satisfactory. With about two weeks' practice they are setting between 22,000 and 25,000 ems per day.

From the experience of publishers all over the country who were kind enough to answer my letters I learned that in most cases both the Simplex and the Linotype were doing good work wherever they were in use. In nearly every case the publisher could not praise too much the particular machine in use in his office. I candidly believe that either machine would pay for itself if there were enough work to keep it going and I further believe that there are certain offices where it would not be economy to put in the one kind while the other might be a good investment. I might go on and make comparisons and give figures on both machines but I dislike to do this, but if there are any questions I am capable of answering I will cheerfully give what information I can and will be pleased to talk at any time with prospective purchasers of machines.

FOREIGN ADVERTISING.

By J. J. Baker, News, Mt. Vernon, Ill.

HAT is a fair price to charge for foreign advertising? How many times during the course of a year do we ask ourselves this question? The publishers of this State should come to some understanding as to the charge that should be made for this class of work—not that we want to charge an exorbitant price, neither do we wish to see how cheaply we can do the work—but to determine what a fair and reasonable price would be.

It is well known to all here that this question has been discussed by Press Associations and publishers every year for the past decade, and so far as I am able to learn such discussions have been productive of very little, if any, benefit to the newspaper fraternity. And there is one reason why they have not been beneficial, and that is because there has been no united effort on the part of the publishers. After we finish discussing, we go home and probably the next time it comes to our mind is when some patent medicine man comes in the office with half a column of medicine locals to be run in pure local columns, or with a display ad. that must have position at "top of column and next to reading matter." He submits his copy for the locals, which is invariably set in nonpareil, you give him a price of say \$30.00, and he immediately drops dead, figuratively speaking, or tells you he don't want to buy the office. He revives in a few seconds and gasps: "Why, I get this run in such and such a paper for \$15.00," and drawing a contract from his pocket, proves what he said was true.

I recall an instance a few weeks since when I received a proposition for an ad. from an advertising agent offering \$54.00 gross, which would amount to \$40.50 net. I replied that I would run the ad. for \$60.00 net. Their next offer was \$60.00 gross; their next \$64.00 gross; their next \$52.00 net; their next \$58.00 net; and in just one month from the time

the first offer was made, the contract was received at my price, \$60.00 net. And still I have my doubts whether or not I am getting a fair compensation for the advertising. There is no doubt that everyone of you have had similar experiences. Our advertising columns are our stock in trade just the same as sugar, coffee and such articles are the stock in trade of the grocer, and the habit of taking advertising for less than it is worth, just because some other fellow has taken it at too low a figure, should be abolished as soon as possible.

I believe this association should adopt a scale of rates covering this class of advertising, basing the same on the circulation of the paper. Then have these rates printed on a card, and when one of these advertising agents wanted a price on a certain ad. you could mail him a card, and indicate thereon what the circulation of your paper is.

Now, in conclusion, as I believe we are all very much interested in the matter of charges for foreign advertising, I would like for the members present to let us know what they are charging for this class of work and what, in their opinion, would be a fair price for running such ads. as "Uneda Biscuits," "Lion Coffee," "Arbuckle's Coffee," or any other that may be running in their papers.

WHERE AN EDITOR MAY STAND.

By A. W. Blakely, Rochester, Minn.

ECENTLY there has passed from the scene of earthly activities one of the most famous men the latter part of the nineteenth century has produced. No name was more widely known among English-speaking people than that of Dwight L. Moody. No orator ever faced as many thousands of eager listeners, or stirred more profoundly their spiritual emotions. No organizer ever founded more far-reaching and elevating institutions and maintained them with a greater degree of success. Whatever he undertook he carried easily to the desired conclusion. If his need was for money in support of his enterprises it came to him in abundant measure. He moved the hearts of men to sympathy with his purposes, and they gave him unstintingly of their means and their influence. He stood in the first rank of the preachers of his time, with two others of American birth only—Phillips Brooks, of Boston, and Henry Ward Beecher, of Brooklyn, to be placed on a level beside him.

What was it gave this man his eminence and made him the power he became in his line of effort? It was not education. He had merely the training of the common schools in his youth. It was not elegant manners. He was brusque, abrupt, unpolished in address, at least in the early years of his career. It was not expansive intellect. He was narrow and fixed in his code of religious dogmas. It was not genius. He displayed no creative ability. It was through the plain, homely qualities which every man may develop, through energy, determination, enthusiasm. He believed in the work he undertook. He believed in the Christ he preached, and he believed in himself as one born to persuade other men to believe with him and come up out of the kingdom of the flesh into the kingdom of God.

There is a lesson for us, fellow members of the editorial fraternity, in the example I have cited. It is in the power of every man before me to take a stand in his profession, in his community, in the region bounded by his readers, that shall in proportion to its extent equal in honor and in usefulness the achievements and the distinction of Dwight L. Moody. I am not claiming too much for common human nature. Any man can make of himself what he will as a force for good. The editor has every aid and incentive in his calling. There is none more noble, more inspiring; none offering greater opportunities; none that should be more sacred and hallowing. The priest in the pulpit has a much narrower sphere. He preaches to the few, to a limited congregation, who are supposed to have already set their feet in the way he would have them traverse. The time has passed when the masses looked to the pulpit as a source of wisdom and guidance. It is the newspaper that has become their prophet and preacher. It is in the hand of every man, woman and child. It is their sermon, their hymn book, their Bible, often in too complete an entirety. In this fact alone there is an appeal for us to

do our utmost to speak to them in words of truth, and of purity and of wisdom, so far as we can gain it. We have no right to print a paper merely for the money we can get out of it. We must get money out of it for the support of ourselves and our families, or we must turn to other business; but while we work for that money we ought never to forget that we have in our hands an instrument that should be made a continual source of instruction, of entertainment, and therefore of improvement to our subscribers.

We should not be satisfied with what satisfies them. We stand at the fountain head of news and knowledge. We command the telegraph, the printed page of every kind. We have in the journals and magazines that pour in a ceaseless stream into our sanctum the best thought of the best minds of our day, upon every subject of interest to human curiosity. It is our duty to make ourselves acquainted with these products of combined intellect and learning, and enlarge and strengthen our own intelligence by so doing. There is not an editor in the remotest country district who has not the means of self-culture at his service. If he does not by their help add continuously to his stores of knowledge, to his breadth of judgment, to his faculty for reasoning, and his ability to write easily and agreeably, he is recreant to his duty as an editor. He is not treating his readers honestly. He is not making the most of his opportunities. He is not living up to his privileges. He is handing a stone to those who look to him for bread.

I repeat, we should not be satisfied with a paper that satisfies our subscribers. Our aim should be that of perpetual progress. Each sheet should be a little better than the one that preceded it. At least that should be our endeavor. There is no reason why the editorial matter in a country newspaper should be inferior to that furnished in the columns of a city journal, why it should be less spirited or spicy. There is a man behind it with average brain power. That is all that is necessary in the way of intellectual enginery. Now let him apply the stimulus of ambition; let him turn on the push, the force, the energy that impel the city editor to strenuous and successful effort, and he may produce the same commendable results.

We are content with too small attainments. We are not willing to do the work and endure the fatigue which men must who rise in any degree above mediocrity. No soul has earned a position of esteem, has gained distinction of any kind who has not toiled for it, and sacrificed, putting self out of sight in view of the goal he would reach. There are two small words, "dig" and "grit," that are the keys of all earthly achievement. These are good Saxon words. Short, strong, marrowy. They are easily held in the memory. They are good catch words to nerve one in moments of trial, perhaps defeat. It is the willingness to "dig" and the dogged "grit" that make the hero. I would rather my sons would possess these two qualities than to leave them a fortune. That might be quickly dissipated. These would insure their mastery of a happy fortune in any circumstances in which they might be placed.

I look about me, not here, fellow editors, but in my ordinary walks, and see the mass of men and women content to lead commonplace lives, content to tread on one dead level from birth to death; each like the other, no better, if no worse; with no deeper thoughts, with no higher aims, doing no superior work. It fills me with wonder and with pain, for I know each one of the vast number could be distinct from every other in some marked manner if he tried. Each could do some particular thing with such peculiar excellence as to arouse the attention and excite the pleasure of those about him. We do not benefit ourselves alone when we develop our possibilities and make the most of our special capacities. We are benefiting our fellows. We are showing them how worthy it is always to be active and inspiring. They catch some of our enthusiasm. They are infected by our atmosphere. We become a light that is set on a hill where its beams cannot be hid. That man or woman who stands separate from the bulk of mankind, who by reason of definite activities in a laudable direction has become a unit, an individual, is a benefactor indisputably.

Do we editors realize our responsibilities as benefactors in our community? To this high place our profession elevates us. We may shirk its duties, but there is no release, no pardon for us. We are to be educators, inspirers of the people, promoters of the public good, critics of public shortcomings, guardians of the public morals. Vigilant

watch dogs, we should never be off our guard, never faithless to our trust. Every time our voice vibrates through the mute type it should speak of things worth men's knowing, worth their time and their money which they spend for it.

It is a serious matter to enter a man's home and a man's heart in the guise of an instructor or a monitor. It demands earnestness, sincerity, and a high purpose. We cannot be too well equipped. We must not spare pains to say the right word and in a just and generous spirit. There must be no stint in the proffered information. We must glean all we can up and down the great world, and give it out again in clear and compact language. We must be exact in our interpretation of events, and above all we must be fair in our judgment of men. To be partisan is to be narrow. To print a word of slander is to be criminal. The pen of an editor may become a stiletto, stabbing the souls of men who cannot fight back. The reputations of our citizens lie at our mercy in our inkwell. Let us beware how we deal with these most precious of human belongings.

I have set a lofty standard in my demand of the editorial profession. It is the ideal, and the ideal is the real. It is not impossible; it is not beyond the attainment of any of us present. It should not be beyond our ambition and our effort. "They can, because they believe they can," was the powerful saying of Virgil. Let every man believe that he can, and there is no height on which he may not stand, no height to which industry, morality and usefulness cannot uplift him. "This world belongs to the energetic," said Emerson. Nothing truer was ever spoken. Pick out the men in any time or place who are conspicuous, who have mastered the situation, who have become the leaders in the world of thought or in the world of affairs, and you find men who are the embodiments of energy, who have won the vantage ground they occupy by incessant "dig," by impregnable "grit."

It is good to be an editor. It is a glorious profession to which we have dedicated our powers. So long as we appreciate the privileges it confers, the freedom of expression and expansion, the honor of the high calling, the duty it imposes, it will be well with us and with our readers. The welfare of the State may be entrusted to our keeping. It will be safe in our loyal hearts and our faithful purpose.

"TURNED LOOSE."

By Terry Simmons, Plaindealer, Marseilles, Ill.

COUNTY ASSOCIATIONS.

Y COUNTY, La Salle, ranks first in area, second in population, and, now, as most of you have read, is on the front seat in another important direction, the press having recently organized a County Editorial Association. For this result thanks are largely due to two members of our State Association, Brothers Fornof, of Streator, and Bedford, of La Salle. This could have been done years ago if a committee from the State association, created for that express purpose, had proposed, aided and pushed it to a conclusion. This is a legitimate field I believe we are not at present fully occupying, the importance of which can hardly be overrated. In fact upon it hinges matters of great importance. With every county in the State organized, if our association needs prompt and efficient co-operation it can be had, something certainly not now possible. Its helpful power, under such conditions, could hardly be limited. I would advise the appointment of a standing committee, whose express powers shall be to persist until every county in the State has its organized association. That the members thereof, not belonging to our State association already, will find it advisable to join, follows as a matter of course.

HISTORICAL FILES.

To dignify and ennoble our calling should be the set purpose of every publisher. It is our life blood, creates fruits worth the winning.

Most, if not all publishers, preserve a file of their paper. For this only the most perfect copies are selected. But why stop there? Let us follow up the wise move to

its full fruition—provide for a like preservation of our life work in our county and State libraries.

We write and publish history. Knowing to this fact, add that what we do is to permanently live after us, impress it firmly on our minds, and the inspiration to at all times be as nearly as possible at our best must improve the tone of our papers to a marked degree.

Two well bound yearly files, donated one each for a county and State library, would not be a great expense to a publisher. Even this could and would be met by the public, through the library board, if it was properly prepared for it. If room is not now provided for these files our association can soon see that the radical defect is remedied. What more greatly concerns the public, has equal value, more right to a place in public recognition, than the papers you and I are sending out?

Access, at all times, at a county seat or the State house, to all the county papers, in the first case, or State papers in the second, could not fail to become a highly prized privilege. Rich in the affairs of right now, who shall limit its grand worth of the future?

Think of all it would mean: A visit to the county or State repository, there to be handed at will, from the shelves for perusal, volume after volume of the papers from your home town, telling the every-day story of ten, twenty, thirty, aye, forty years, about your immediate friends and associates. Then going beyond the social side, estimate at its full weight, who can, their value as works of reference.

This is no fancy sketch. To-day I have nearly a quarter century of bound files of my paper. They are not for sale. No money would buy them. My business career is there in black and white. There is not a citizen in the place, able to read, who would not jump for joy at the chance to read those papers. From your own experience you know how absolutely true every word of this is.

I once obtained a file of a paper published in my town twenty years before the date of my securing it. Week by week I copied the local news taken therefrom as a special column. Nothing I have published, before or since, of equal length, has ever attracted the eager interest or unqualified praise that did those notes of "twenty years ago."

The dignity in all this, the wisdom of the course I propose, the strong incentive for us to take immediate action, is brought out vividly as we take up Newspaperdom of Jan. 11th and read that the University of Michigan is right now undertaking a collection of the newspapers of that State. Especially does it ask for those special editions whose creating is at once the bright particular gem in a publisher's crown.

PRIZE DESCRIPTIVE ARTICLES.

"John Tompkins went to Sharon Monday," from time immemorial, has been the standby of localdom. "He was called there on business" is the second stage. Sometimes a hurriedly written half-column or the rare column is given to home affairs. Practically anything out of the cut and dried order is the exception. Correct business we believe it to be. But, Brother, must we stop there? You know there are times when you feel this surface work is not your best. There is a longing to rise above it. Why not give play to the best that is in you? But occasion for this must precede. Create it! Narration of the common run of affairs may be accepted by our readers fifty-one weeks of the year, but we certainly owe them something better on the fifty-second even leaving out of the deal what we owe to ourselves. This thought was awakened by reading in the *National Printer-Journalist* that editors returned from the meeting of the National Editorial Association, at Portland, refreshed and enthused by travel and experience, largely published glowing accounts of their trip, others made it a subject of lectures and yet others issued illustrated books. Is there no suggestion in this for us?

If another outing is indulged in by this association, let each brother partaking prove his metal by writing and publishing the very best account of it in his power. Take time enough to do the subject full justice. Send copies of the printed paper or papers containing it to a proper committee to receive them. Let the members thereof judge the article in line with adopted rules of contest and according to actual merit. Have each contestant remit a reasonable sum with his application for a chance to compete. This would at least assist in providing prizes. Give to the

matter the widest possible advance and after publicity. On the decision of the committee the articles of the winner or winners should appear in our trade papers, our annual report, or both. Stronger temptation to make it the effort of efforts could hardly be named. Properly arranged it would command the attention of the press and people of the whole State if not nation.

If the editors of national repute believe such descriptions wise, and we have proof positive that they do, we cannot be unwise to follow the pace they have set.

OUR ANNUAL REPORT.

If order is Heaven's first law then there is little of Heaven in the average newspaper of Illinois. The absence of literal order, a sequence of affairs rigidly adhered to, is the rule. Every publisher is a law unto himself, a king with a throne and followers as the wisdom of his reign warrants. He is a creature of circumstances; his best laid plans oft vanish into thin air before a pressure totally unlooked for. This newness, novelty, enforcing combat perhaps with what tests his utmost ability, is the chief charm of the editorial life. Too great preparation for it is the impossible. Head erect, he scents the air, confident he is equal to any occasion; only thus is victory probable. His triumph is also his defeat, because the battle is never wholly won, a more intense struggle awaits.

As publishers we are turned loose upon a community. Our hopes, our fears, are those of our readers if we are in touch with them as we should be. To ignore this fact, forget that it is to us support, is to fail and fall. The stronger the ties between us and our readers the greater, more sure our success. To weave them well is the problem.

There are at least three factors in successful publication no editor worthy the name can wholly afford to overlook. In the order of their importance they are: County, State and National editorial associations. It is to them he must look if he prefers to stand fortified with the accumulated knowledge they place before him, or in his own measurably inexperienced strength. No other way is open to him, so readily accessible, to attain both the wisdom and inspiration he needs and must have to wield the power that is to conquer.

Once a member of an association the keen delights afforded by contact with equals or superiors are too precious to him to ever again willingly deprive himself of. Turned loose thus armed, his readers and advertisers readily respond to the improved conditions they cannot fail to note. All experience proves this. Why, then, are there not more of the publishers of the State members of the Illinois Press Association?

Our Secretary encloses a blank to each member, at least annually, and urges its use in securing new members. This serves a good purpose, but the results are not what they would be if more made use of them. The strongest, best plea for membership possible to make is to place in the hands of those out of the fold a copy of our annual report. No intelligent editor (and of course we have no other kind in this State) can fail to be benefited by a careful reading of our book and will see at once the urgent need of becoming one of us. Our association cannot afford to donate copies to all not members. Put a fair price on the book then send a circular to outsiders describing the forthcoming work in as alluring a manner as the proposed contents will admit of, and urgently solicit an advance order. It cannot fail to be labor and money wisely expended. The demand could then be intelligently met.

If a brother does not or will not join the association, the next best service he can render himself, us and the cause we hold dear, is to read and profit by our annual.

Our association cannot become too large in number of members or great in influence. None of us know it all; the wisest are they who would ever know more, add to their wisdom that of others. We are all at least humble once; some of us are yet, although our stock of pride is above par because members of an association embracing the social, moral and mental peers of the State.

Let us practice what we preach to advertisers. There is enthusiasm in large circulation; spread our annual widely in the State. Under such conditions our talks at our annual meetings will gain by brevity, substance and worth, as we rise to a more supreme need. The papers we read will improve in every essential. Measures not now probable of execution, affecting the immediate welfare of every publisher in the State, with the press a union in interest,

can be pushed by an organized power that need bend the knee to no known human conditions probable of contact. All will be lifted to a higher level, and with that rise must come, in large measure, that of every citizen of our great commonwealth.

The time is now, if never before, when whoever puts a stone in the way of the proper prosperity of any paper in Illinois is a known foe to progress the most vital. His downfall is certain. The newspaper tide never recedes. Go with it or be swept aside.

There is joy unconfined for that publisher who attains, in just measure, to the true dignity of his position. No one man in the community can exercise so great an influence over the lives of the people as does he. His the superior opportunity. He works for to-day, to-morrow, and the years to come. Even centuries after the printed page may and will have its place in public weal.

Brethren, let there be more of us. May the work of this meeting be turned loose in fields to which that of others has been strangers. Stop short, if at all, when there are no more Illinois editors to appropriate its blessings.

I am an enthusiast in the newspaper work in proportion as I realize my weakness. Out of my needs I plead for the help it is in your power to give. The outstretched hand, the welcoming smile, the social greeting, the words of cheer, the advice so precious because born of your own personal trials and successes, is to me of much value. I am but one. The same treasures of mind, heart and soul, poured out here, should be the property alike of every publisher in the State and Nation.

SOMETHING ABOUT REPORTING.

NEWSPAPER people are supposed to be pretty well informed about the ways of keeping tab on and collecting local news, yet here are several things from an article in the Portland, Maine, Express, under the caption of "The Story of a Paper's Growth," that will prove profitable as well as entertaining along the line of good newspaper reporting. The writer says:

Almost every newspaper has its own peculiar method of getting the local news. Few people realize the amount of work it requires to keep track of everything of importance that is going on in the city. One important feature of the local news department is the assignment book. This is a large ledger in which a page or two is devoted to each day in the year. Whenever a member of the reportorial staff or the city editor hears of anything that is to happen on a certain date, that event is recorded under the proper date line in the assignment book.

These dates are secured in every imaginable way. A reporter may hear a casual conversation that on February 16 some society will hold a special meeting. The next time he goes to the office he will turn to the page in the assignment book headed February 16 and write there the fact of the meeting. When that day arrives the book is an un-failing reminder that some one must look out for the special meeting.

It is the duty of the city editor to carefully read not only the other Portland daily papers but all the state papers. He might learn from the Bath Times that there was considerable enthusiasm in the Shipping city over polo and that a meeting would be held at the Preble House in Portland to see if a State league could be formed. If it stated what day and time the meeting would be held that would mean an assignment for the big book. If it did not some one must find those facts out and then enter them in the proper place.

"KEEPING TABS" ON EVENTS.

The city editor may discover in some obscure corner of a daily paper a short notice in fine type stating that the United States Lighthouse Department will hold an auction sale of old boats that have been accumulating for years. The date of this sale must be placed in the assignment book, for there may be some picturesque features about this raffle of decrepit crafts.

Assignments are suggested in all sorts of ways. In the Six Town Times a brief paragraph might state that Hiram

Hodgkins of the Fort Road had invented an ingenious motor by which he hoped to be able to propel his bicycle. The wideawake city editor or reporter who reads this paragraph might see a good story in it and, accordingly, put it down in the assignment book under head of "Special Articles." Every editor likes to have a long list of subjects for good local specials that he can assign to his men in the afternoon after the regular business of the day is over.

Under this head members of the staff are expected to write the subjects of any matter that they think can be used as a special story. For instance, the paragraph about Hiram Hodgkins' motor might "pan out" big. When the reporter to whom the assignment was given should call on Hiram he might find that the machine was really a pretty good thing and from a half hour's chat with the owner he would possibly secure a very readable article containing Mr. Hodgkins' description of how the idea occurred to him and his trials in getting the motor to work smoothly. If Hiram was good natured and did not object to a little harmless notoriety very likely he would mount his wheel and let you take a snap shot of him as he went by. When you had developed your photograph the artist would make an illustration from it and Hiram would have been brought before the public in a way in which he never dreamed of when he saw the brief paragraph about himself in the Six Town Times.

ITEMS OVERHEARD.

You may be standing in a drug store lighting your cigar and overhear one gentleman tell another that he has been looking at Mr. So-And-So's collection of coins and that it is the finest in the city. That means that Mr. So-And-So will receive a visit from you shortly and have a nice story written up describing his collection and how he came into possession of it.

Of course the editor-in-chief will have many ideas of his own which mean assignments for the members of his staff. He may wish to have expressions of opinion from prominent business or professional men upon subjects which the people are talking about, or he may have heard of half a dozen things that need to be followed up.

In giving out assignments the city editor tries as far as possible to set each man after the work which he is best adapted to. There are always "star" men on all big newspapers who can be depended upon in any emergency or big happening to get everything in the shape of news that there is to get and to put it together in just the style his paper requires. These "star" men must, of course, have been in the business long enough to understand it thoroughly. A new reporter does not always realize the value of a story. Where he would see nothing more than would warrant a few lines, giving barest facts, the trained newspaper man would see picturesque incidents that could be turned into half a column of bright lively dialogue that everybody would read and laugh at. These traits can only be developed by practical experience.

CONTENTS ABSORBED WITH INTEREST.

Lyon Co. Reporter,
Marshall, Minnesota, March 12, 1900.
National Printer-Journalist, Chicago.

Gentlemen:—We received a sample copy of the Journalist. The contents were absorbed with interest, and we fully believe that we have already received the value of one year's subscription in the single number. We want the paper for a year and inclose bill.

Respectfully,
C. F. Case & Son.
F. W. C.

PRESENTS ARTISTIC RESULTS.

From The Times-Union, Albany, N. Y.:

The March number of the National Printer-Journalist is an excellent exponent of the manner of printing and electrotyping in America, presenting as it does such artistic results with the types, paper and pictorially, while its reading matter is abreast of the spirit of progress. There are some pertinent topics discussed, such as "Tri-weeklies," "A Paper's Platform," and "The Features of Advertising." The trading-stamp comes up for treatment and what was done at conventions is described.

By WILL OWEN JONES, Lincoln, Neb.

Questions, criticisms, and experiences are solicited for this department.

IN THE issue of this magazine for March appeared an extract from the Associated Press report of the Windsor hotel fire, in New York, and a complete story based upon the same incident from a recent issue of McClure's Magazine, together with a few questions which readers were asked to answer and comment upon.

Eighteen replies have been received up to the time the copy must go in for the April issue. As was expected, the writers array themselves into two distinct schools,—the conservative and the radical. The conservatives—and in these replies they greatly outnumber the radicals—hold that "The Adventure of Tillerman McDermott" has no place in a properly planned news report, because it subordinates information to emotion. The radicals insist that while they would not use the story as a "lead" to the report of the fire, they would by all means give it place after the hunger of the reader for mere facts had been satisfied. As important principles are involved in this discussion, it may be well to select two of the ablest replies and let each one represent his side.

* * *

The questions were: 1. Is this story done in "newspaper English?" 2. Would it be suitable as an introduction to the report of the fire? 3. Would you use it in any part of a report? 4. Does the story give information or emotion? To what extent may emotion be used to intensify a newspaper report? 5. If work of this kind could be done by reporters in time to print in the morning, would it be advisable to use it?

* * *

The leading advocate of the conservative side writes:

1. No. It is somewhat more correct and perhaps too formal, though it has a decided "family resemblance."
2. No. Because it is in form and motive primarily a dramatic incident ostensibly worked up for dramatic effect; and also because it is much too long for that use.
3. No. The primary object of a report is a succinct statement of important facts and incidents for their own sake. In the regular report of the fire this incident should have prominence, and be related with some degree of dramatic force, but within the space of about twenty lines.
4. The story gives emotion and not information. The amount of emotion permissible in a newspaper report should depend upon the character of the incident and the capacity of the reporter. Ordinary news, which comprises a very large part of all news worth reporting, should be given in concise and direct manner, with little coloring, but of course avoiding abruptness. But there can be no hard and fast rule. In a political convention, for example, there are many picturesque people and incidents, and in the course of the report these should be described in an appreciative spirit and this matter should be worked into the body of the report, but with due regard to brevity and proportion. And so, in the case of an unusual fire, the reporter may lag from time to time on his journey through the facts which constitute legitimate news to describe at more length and in more elaborate manner any extraordinary incident. And here there may be some regard shown for emotional

effect. But the specific, formal story in the December McClure illustrates how far a reporter may not go in his regular account of the fire. How far a newspaper may give episodes of current life and enliven them with touches of imagination is a matter of taste and convenience, but they should be given as episodes and not as news. Perhaps for the sake of the readers this feature should be carefully circumscribed. The worst, that is the most wearisome and hurtful, feature of the daily newspaper is its original matter outside of legitimate news.

* * *

The strongest letter on the radical side of the question is given entire:

1. While the story is not written in what tradition has taught us is "newspaper English," yet I see nothing in it that a news-editor could, unless swayed by the prejudices of a contrary training or by finicky taste, reasonably object to. Unusual forms of description are used, as for example, this description of McDermott in the second paragraph. He also pays more attention to detail, notably as to the accident upon the ladder, than a reporter would be expected to do. But the story is well told.

2. I scarcely think it would be suitable as a lead to the story of the fire. It is too indefinite in essentials. The man who reads newspapers has become accustomed to the style of having the story summarized in the opening paragraphs, and, to hold him, a hint at least of what the entire story is about is necessary in the beginning. If you interest him at the start, however, you will hold him.

3. Certainly. As an important happening, concisely told, it forms part of the whole. I would use it, if the most exciting story of rescue, immediately after having satisfied the curiosity of the habitual reader as to where the fire was, what damage was done and who were injured, because an essential to a complete story of the tragedy.

4. I should say information, although the emotional part is well to the fore. The newspaper editor must use emotion in his news columns very sparingly. Unless well handled, it is apt to pall upon the reader even as sweetmeats.

5. Yes. A good story well told will always find more hearers than the same story told in a mechanical way. Many reporters, in a desire to observe the "style" of their paper, lose all individuality and use words and phrases as a child would use wooden blocks. "Emotional" work, however, in unskilled hands, and if injected into all of the "big stories," creates a false intensity, a superficiality that tires the reader, because of the effect upon the nerves. There is no reason why newspapers should not print "literature," because "literature" pays better than mere newspaper writing. If a reporter can tell the story in a way that interests and holds, let him do it, even if it violates all canons of the profession. Give full scope to his individuality, and restrain him only as to his imagination, insisting always upon essential facts and truthful pictures.

The issue is fairly joined between those who believe that a newspaper report should consist of the truth told in an orderly, consecutive manner, "news for its own sake," and those who favor a stirring tale so told as to catch and hold the reader, attracting quite as much by the manner of telling as the substance of the tale itself.

The debate is again open to the house. Every reader of the National Printer-Journalist is asked to send in his opinion on this the most important of all the questions connected with the work of the reporter for the daily and weekly press.

THE JOB PRINTER.

By Charles H. Cochrane, New York.

MORE or less discretionary power is given to the compositor, in every large office, with each job intrusted to him. If it is a job of importance, as a catalogue of a good many pages, it is usually supposed to be the business of the foreman (who ought to be exactly familiar with the office equipment, to the minutest detail) to give some general, or even special, instructions to the man to whom he gives it in charge, besides the obvious information as to the size of the page and the body-type he is to use. Some foremen will go no further than this, leaving everything else to the judgment or intelligence of the compositor. And, of course, where you know your man, this is safe enough. If you have tried him before, and know that he will take the copy, look it all through for anything unexpected; will calculate the detail of the pages, ascertain whether or not it is to be set all at once without any release of type through working it a form at a time; look at the rule-cases and estimate how the piece-rule will probably hold out; whether or not rules will have to be cut, and if this appears on the face of it, how such cutting could be avoided, as by some internal adjustment of subordinate tables, which might be set slightly large or smaller without detriment to the general harmony if anything was thus to be gained; how the head-line sorts are likely to hold out, etc., etc.—if you know your compositor will go into all these questions, it is not worth while for the foreman to take the time to inquire into these matters himself. I have known compositors who would do all this; I have known a great many more to whom such ideas would never occur. The average man, I fear, would be apt to take things for granted, and go ahead with the work till he found he was “stuck” for something; then, of course, the office facilities were to blame—not he. As illustrating the loss that may come to an office if such points as this are disregarded, an incident in my own experience may prove interesting.

Back in the seventies, when I was younger than I am now, I was, with another young man, running a newspaper and job-office in a New England town. One day I received a telegram from the proprietor of a large job-office in a neighboring city, asking me if I could not send him a good job-hand for a few weeks, as a man had just left and he was terribly rushed. Business was a little dull with us, my partner was competent to run the business, and so I concluded, as much for the sake of a change as anything else, that I would run down and fill the bill myself. Arrived at the office, I was asked to tackle a catalogue that was to make 120 pages, and about 40 pages of which had been set. It was for a wholesale house that sold small goods of various kinds, and was, of course, more a list of goods, styles, sizes, and prices than anything else. The goods were divided into a great number of classes, with styles A, B, C, etc., each with a number and price. Consequently there were more rules than anything else in the book—and very short rules at that. The body-type was brevier, set solid, and the rules, of course, were justified to pica. Most of the tables were short, often only three or four lines, and each contained from three to ten longitudinal divisions, or columns, each column requiring a six-to-pica rule. The brevier, of course, didn't justify with the pica, and in the pages already set some of the rules were a little too short and in others a little too long. This was bad enough; but the worst was yet to come. I discovered next that all the available piece-rule of short sizes had been used, and that, if the work was continued without working any of the forms, there would be a good many hundred short rules to cut—on a rickety rule-cutter that didn't bite off sharply, but bent and battered the ends, so that it was necessary to use a coarse file to trim them off satisfactorily. I cut and fitted short rules for one table, observed how long it had taken me, and then calculated how long it would take

me to cut the rest that would be required. The result was that I concluded it would be an atrocious waste of time and money; so I called the foreman over and explained the situation to him.

He scratched his head in some perplexity at my suggestion that I finish up enough for 48 pages, so that two forms might be worked and a release of type obtained.

“The deuce of it is,” said he, “I have no press. It was planned that this job should be entirely set before any of it was printed, and the man who had charge of it before you never told me that there would be any trouble about finishing it, so I have made no arrangements to run off part of it. We have only two presses suitable for this job, and I have long runs made ready on both of them—’twill be ten days before either of them is clear. This job is due by that time, so we can't wait. Why in ————!”

The remainder of his remarks were too strong for these columns, and indicated his state of mind at the problem with which he was unexpectedly confronted. The man who had started the job had left two days before, so he could not be sworn at. There was absolutely no other press that was available. To go on and cut rules wholesale with such poor machinery was a waste of time too shocking to contemplate, though that was at first what the foreman told me I had better do. But when I showed him the calculation I had made as to the time this would take he was staggered, and finally agreed with me that it would be better to finish 48 pages and have them printed at a neighboring office. It was a choice of evils. Of course the proprietor had to be called in, and the situation explained to him. The foreman threw all the blame on the man who had left, and took to himself what credit there was in the discovery of the condition of affairs before matters were any worse. This, I expected, and so said nothing. Of course the foreman was to blame for not having looked after the job more closely himself. He realized this when too late, and was now making himself as solid as he could under the circumstances. By discovering what he should have found out, and allowing him to take all the credit, I made a good friend of him, and things went like pie for me in that office while the rush lasted and I remained; indeed, he finally made me a good offer to remain with him permanently. But that, of course, has nothing to do with the point I have been illustrating.

* * * *

The compositor of to-day will be, or may be, the proprietor of to-morrow. Did you ever think of that? The more you learn, the better you understand your business—not only what you are supposed to know in your department, but in every other branch—the better it will be for the house, the better it will be for you, both now and in the future. For this reason, the compositor ought to try and learn something about the value of the work he is doing. Too many are satisfied if they can turn out a neat job and make a satisfactory report on the time-card concerning it. That should not be the proper attitude. Consider, when you are given a piece of work, about what you consider it would be worth to turn it out complete; estimate it for yourself. Then, if you have the chance, compare your estimate with the price actually given the customer. Don't go about asking impertinent questions; but if the foreman and proprietor observe that you are anxious to learn everything so as to raise the standard of your own knowledge, assistance will be given you. There are many men in business to-day, in small offices (and sometimes in large ones also), who have no proper knowledge of what their work is costing them and of what they should charge for it. The other day I said to a young man whom I had known as an employee, and who had since branched out for himself in a small way:

“How do you figure your expenses?”

Seeing a puzzled look on his face, I continued: “I mean, how do you estimate your work, so as to be sure you are covering all the expenses of rent, ink, expressage, and other incidentals?”

“Oh,” said he, in an off-hand manner, “in a simple, business like mine you don't need any elaborate bookkeeping. My rent is \$350 a year, my express bill about \$1 a week. That is \$400 a year. I know I must meet one-twelfth of this every month, and I always do. That comes out of the general business. My stock I count up on every job. The ink I don't count—that costs almost nothing, and figures among the incidentals. I figure the cost of every job, and then add 20 per cent for profit and incidentals. That brings me out all right. For example, I should figure a thou-

sand circulars (supposing I went into the details) about like this:

Stock	\$0.30
Composition, one hour.....	.60
Feeder, and time of press.....	.20
	\$1.10
Add 20 per cent for profit.....	.22
	\$1.32

"I should ask my customer \$1.50 for this, and probably get it; but I would take \$1.30 before I would let the job go. Oh, I can figure as close as anybody, if I am young in the business."

I then figured on this same job myself, like this:

Stock	\$0.30
Cutting paper	.10
Add 10 per cent for handling stock.....	.03
Composition, one hour, .50; add 100 per cent for office expenses.....	1.00
Feeder	.15
Press	.15
Distribution of job (including actual time and office charges).....	.25
Total	\$1.98
Add 10 per cent for profit.....	.20

Proper charge to customer.....\$2.18

(Or, of course, \$2.20, to make even figuring.) There is no use in either deceiving yourself as to the cost of your work, or in making the customer a present to which he is not entitled. Always figure every detail of your job. And remember that rent and interest go on, and material wears out, and the hands have to be paid, whether they are engaged in profitable work or only sorting out pi and cleaning out the cases.

Specimens of all kinds of job printing, books, and pamphlets will be reviewed in this department. It is desirable that they be mailed flat when possible. If only favorable notice is desired it should be so stated in a letter accompanying the work, and should the specimens not be deemed worthy of praise no comment will be made. Address all communications to the office of this paper plainly marked on corner "OCTAVO, for Review."

VERY beautiful and artistic piece of work is that of a booklet of twelve proofs in half-tone from reproductions of famous paintings and etchings by the Illinois Engraving Company, Dearborn Street, Chicago. The engravings are printed on fine enamel stock, and then fastened onto nice deckle-edge tinted paper, then inclosed in a unique, dark green envelope, which has a very attractive design on the front page. The work is well done.

* * * *

It is worth while any printer to take the time and trouble of writing to the American Type Founders' Company for a copy of the booklet "Camelot Old Style." It is intended to show the uses of this new face of type, and is a splendid specimen of modern typography. The type was shown in the March number of this magazine.

* * * *

The Sprague Electric Company, of New York, always have nicely printed catalogues, and No. 58 has arrived at this office, showing the application of the motor to the Linotype, the printing press, embossing presses, cutters, ruling machines, book stitching machines, gathering machines, punch presses, die, notching, beveling, and routing, and almost every kind of a machine used in the printing industry in any way. The catalogue is well gotten up, and shows the advantage of doing away with shafting and belt-

ing. The growth of the use of electricity goes steadily on, among the principal advantages being those of economy, reliability, efficiency, simplicity, flexibility, and cleanliness. The printing was done by Bartlett & Company, New York.

* * * *

It seems as though the type foundries try to outshine each other in the way of brochures. The Inland Type Foundry, St. Louis, has just issued one to call attention to a display of the new Becker series, in connection with the St. John and St. John Outline. The booklet is intended to show a few of the many ways in which these three characteristic faces may be used in regular work to give a stamp of individuality. It is printed mainly in black and red, with a dark green cover; and, of course, is excellently well done.

* * * *

The Cincinnati Enquirer is sending out a neat vest-pocket memorandum or diary. It contains a lot of useful information and is sure to prove a lasting advertisement for the paper, which seems to be an important feature these days, when so much advertising is consigned to the waste basket, without a glance from the receiver.

* * * *

It has often been stated that the day of the pamphlet was over, but the evidence does not seem to bear out the statement as being true, for there seems to be a revival in this line of advertising at present. The Pontiac Engraving & Publishing Company, of Chicago, have issued a booklet for the State Bank of this city, containing views of the British Isles and continental Europe. The illustrations are printed in green ink, and the reading matter in brown; a typographical error is easily found on the first page. The presswork is fair.

* * * *

Quite a pretentious piece of work comes from the office of the Forrester (Ill.) Herald. The card was designed, the tint blocks cut, and the presswork done by S. F. Haller. The card measured 7x14 inches, and advertised the Herald and the job office. It was printed in six colors, and was illustrated with a job press, a cylinder press, and a paper cutter. The work was fairly well executed, and must have taken considerable time. It is quite a credit to Mr. Haller, when it is considered that he did all the work himself.

PRIZES FOR FINE JOB WORK.

PRINTING EXPOSITION.

We are assured that the Printing Exposition to be held in New York in May will be the greatest affair of its kind. The committee having the matter in charge desires to show at the Exposition samples of the finest job work done in the country, and to accomplish that end has decided to offer prizes for the best samples submitted. That all may have an equal opportunity, it is required that the same copy be used by all contestants, and that the same conditions shall govern each case. Two prizes and five certificates will be awarded to the contestants, and there will be an additional award of a gold medal to the establishment in which the winning job is set up. The copy and conditions are as follows:

COPY.

America's First Great Printing Exposition, embracing all the trades connected with the Art Preservative of Arts—Letter press printing, Engraving, Electrotyping, Stereotyping, Binding and Lithography—will be held during May, 1900, at the Grand Central Palace, New York, by Typographical Union, No. 6, to celebrate the occasion of its Semi-Centennial. It will be an exposition for the makers of machines and the users thereof; the labor and capital of the Printing Industry; the writer, the typesetter, the electrotyper, the engraver, the printer the lithographer, the binder, the publisher, the retailer, the wholesaler, and the reader. All those interested in the art of Printing should attend. This exhibit will be the greatest of its kind ever held. The price of admission will be 25 cents.

CONDITIONS.

Outside measurements of type form must be 6 by 9 inches. There are no restrictions as to type, ornaments or border, excepting that everything used must be the product of a type foundry. One dozen proofs (preferably press proofs) in one color of ink, on paper 8 by 11 inches in size,

must be mailed flat in time to reach the Committee not later than April 30, 1900. On the proofs, and on a sealed envelope accompanying them, must appear some nom de plume by which the name of the compositor may be determined, the name being within the envelope. Announcement of the names of the prize winners will be made on the opening day of the Exposition. All specimens for competition must be addressed to J. Clyde Oswald, Editor of the American Printer, 150 Nassau Street, New York, who will act as honorary chairman of the Committee, and should be sent by prepaid mail or express not later than April 25.

AWARDS.

Two prizes and five certificates will be awarded to the successful contestants. The first prize will be a handsome

14-carat, 16 size, solid gold hunting-case watch, either Waltham, Elgin or Hamden movement, and engine-turned or ornamentally engraved. The second prize will be a 14-carat, 16 size, gold-filled watch, either Waltham, Elgin or Hamden movement, and engine turned or ornamentally engraved. The five engrossed certificates will be given to the five compositors whose work is judged next in quality to that of the winners of the prizes. A gold medal, suitably engraved, will be presented to the proprietor of the establishment in which the job is set up that wins the first prize.

The time is limited, though sufficient if the matter is taken in hand at once. We trust that all printers will do their best in helping to make the contest as interesting as possible. All specimens submitted will be exhibited at the Exposition, so that it is desired that it be as representative as possible.

CIRCULATION Department

This department is intended as a clearing-house of suggestions and opinions as to the best means of securing, handling, and retaining subscriptions to all kinds of newspapers. Communications are solicited.

SECURING AND HOLDING SUBSCRIBERS.

By H. C. Hotaling, Mapleton, Minn.

CIRCULATION of a newspaper is, to a certain extent, like circulation of blood in the human body. Unless it is good and kept in that condition the publication is likely to be dull and lifeless. There is no royal road to securing such a circulation, and the paper which wins success must attain it by hard work and by keeping everlastingly at it. The various schemes, contests, and coupon deals, which have a tendency to inflate the circulation, do so only temporarily. They do not bring permanent subscribers, but, on the contrary, swell the list with short-time readers. I say readers, yet it is doubtful whether they can be classed as such, as their main idea in taking the publication is not because they want it, but because they want some friend to take a trip to Paris, etc., etc.

Clubbing with farm publications, city weeklies and monthly periodicals, all have an inclination to build up the other fellow, make extra work, and cut down profits. No actual benefit can be attributed to clubbing, as those deal which strikes their fancy is offered. They are, as a who are always looking for such bargain-counter snaps will not hesitate to go to some other office as soon as a new class, the opposite of generous, and were the local paper to depend upon their patronage, it would ever continue a weak, puny affair.

The old stand-by subscriber is the enterprising man of the community. He has faith in the future possibilities of the town, and subscribes for the paper because of its own worth. He is proud of it, and sends a few copies to friends at a distance, that they may see and realize what a progressive town he is living in.

To secure this class of subscribers, the paper must not be of the croaking class. Though times be hard, business dull, the paper-bills pressing, keep a cheerful demeanor. Inspire all with the idea, and the fact, if possible, that the paper is a financial success, that it is one of the solid institutions of the village or town. Eradicate the mistaken notion that the country editor is a dependent, and secure patronage on business grounds.

Let the man who is patronizing the paper, just to help the editor, know that the publication is not a charitable institution, and is not soliciting alms, but that it gives

value received, and should be looked upon as any other business concern in the community.

Open a bank account, even though small, pay bills promptly, avoid all truck propositions, and prove by square dealing that the paper and its editor are reliable.

Having inspired the feeling that the paper is upon a permanent basis, and is not of the fly-away-by-night kind, subscribers, of almost necessity, continue adding their names to the list, providing, of course, that the paper publishes all local news in a clean, attractive, and readable manner, giving local manufactures, industries, churches, schools, societies, etc., etc., the attention which they merit. Have the paper neatly printed, and occasionally issue special numbers, taking up the pioneer and historical matters of the country. Exert every effort to make the paper the best and rest not satisfied simply in issuing the paper every week. See to it that every issue of that paper has at least one special article, and more, if possible, thereby keeping the readers expectant and anxious for the next number. Have the paper an authority, so that it will be quoted, not only in local exchanges, but by the people at home. Having attained this standing, a solicitor may be sent out with profit, as the reputation of the paper has preceded him, and the people for miles around have already heard it talked about. They know that if they subscribe for it they will get it, that its market reports are reliable, and that it will always be on time. If possible, secure a solicitor who is a good newspaper man, and have him, in addition to securing subscribers, plan to hold them and secure others by arranging for a local correspondent in each township or school district, who can be depended upon to send in the news from that particular locality each week. Regular and permanent correspondence secures prompt-paying and permanent subscribers.

Having secured a representative list of subscribers, there is but one way to retain them, that is by keeping in mind such precepts as:

- Be impartial.
- Be honest.
- Be liberal.
- Be a leader, not a follower.
- Treat every question fairly.
- Avoid bickerings.
- Don't get scooped.
- Publish all the news.
- Keep up with the times.
- Stand by right and justice.
- Oppose immorality.
- Use discretion and common sense.
- Set the standard high, and strive to attain it.

NOTE.—For further articles pertaining to this department this month see proceedings of National Editorial Association in this issue.

NEWS PAPER

COMPARISON and CRITICISM

By O. G. WOOD, Chicago.

Publishers who wish criticism on their newspapers are respectfully requested to direct the same to this department.

OUR copies of the Rushville (Ill.) Times and an interesting letter from the local editor have arrived at this office. The letter is printed in full, in the hope that the information contained therein may be of value to the readers of the department of Newspaper Comparison and Criticism. Here it is:

Rushville, Ill., March 3, 1900.

Editor Criticism Department.

Dear Sir:—I am sending you by to-day's mail four copies of the Rushville Times for criticism. A year ago I sent in several numbers, and the only criticism made was on the double-head. This feature was original with the Times, and was adopted in the early eighties. It has proved so good a thing that a score of papers in Central Illinois have adopted it. By its use papers for town circulation can be folded local side out, and the others with the "inside" on the outside. Thus we are enabled to give baking-powder firms, who pay local ad rate, the position they require without spoiling our local news page, where a display ad is never seen.

Another suggestion you made I adopted. I had been making pen and ink cartoons and having zinc cuts made at a cost of from \$1.00 to \$2.00. By an ad in the National Printer-Journalist I was led to correspond with the Hoke Chalk Plate Company of St. Louis, and now make all my cartoons in the office by this process at a cost of 25 cents.

A "Carrier's Address of 1836," republished in the December 14 issue of the Times sent you, is evidence that Rushville has a newspaper history of some seventy-five years.

HOWARD F. DYSON, Local Editor.

Offering suggestions for adoption is what this department is for, and it is always gratifying to know that somebody has gained by reading these columns. I remember about the double-head criticism at the time, and now see the point. There is a marked improvement in the cartoons referred to; the one in the issue of December 14, 1899, is the best; take a little more time to the drawings, filling in the detail carefully; try to make the cartoons as good as possible—speed will come later. The Times is a good paper, and gives small opportunity for criticism.

* * *

The Prison Mirror, Stillwater, Minn., seems to have troubles in regard to delinquent subscribers; I don't know exactly how, but here is an editorial cut from a recent edition of that paper:

THE DELINQUENT SUBSCRIBER.

Ever since the great genius Gutenberg made the much-talked-of discovery of printing type, that human hyena, known from the sun-kissed billows of Manila Bay to Greenland's icy mountains as the delinquent subscriber, has existed. The printer has been pestered and had his profits punctured by these ghouls.

Their origin is unknown, but they must have received a generous measure of the mysterious miasma of paganism, as there are no authentic records to show that these pee-wee pirates have been granted letters of marque in order to hover around the humble but erstwhile honest printer, like chinchbugs camping alongside of a dirty highway waiting for the wheat to wiggle its way upward.

These ghoulish, graveyard-haunted gentlemen (God save the mark) get on the printer's subscription books in about the same stealthy and stately manner that a fly displays in mounting a horse's back, after its tail has been tied in a knot.

We suppose that these despised and honor-denuded, gallows-intended individuals will cast their dark, dago-like shadow across the printer's horizon as long as man will be unable to dispense with a keyhole in the front door of his castle.

* * *

The third annual edition of the Stanley (Wis.) Republican was very creditable. The illustration consisted chiefly of halftones. "Stanley's Choicest Product"—a halftone measuring 9¾x15¼ inches—showing thirty nice baby pictures, would have been very fine if the presswork had been perfect, but it is no easy matter to print so large a halftone perfectly, even with the best of presses, and I don't know how Mr. Bridgman is situated in this particular. This might be a good opportunity to state that letters in regard to what press to use for best producing a country paper will be gladly printed. Also as to folders. Constant changes are being made in the press rooms, and experience thus gained would no doubt prove of general interest if sent in for publication. For instance, when power is necessary,

and what kind of power to use; which is the best and most economical press for a four, six, or eight-page paper, daily or weekly. The care of rollers is also very important. Letters on any of these subjects will be gladly printed if addressed to this department.

* * *

The Democrat-Message, Mount Sterling, Ill., comes out on Wednesdays with four pages and on Saturdays with eight pages, the price being \$1 a year. It is nicely made up and well printed. The words "Wednesday Edition" and "Saturday Edition," which appear in the center of the first page over the head, should be set in smaller type, and placed over to right hand side of the page; it would then show at a glance which edition it was when the paper was folded, which is not the case now. I see 18-point De Vinne in the ads; this type would do very well. The display heads on the first page of the Wednesday edition should be set larger and spaced more. I would be pleased to note these changes at an early date.

* * *

Farm and Factory, Binghamton, N. Y., in a recent editorial, said:

No newspaper was ever published that pleased all its readers all the time. Such a paper is a physical and intellectual impossibility. No two persons think exactly alike on all subjects, and what pleases one will displease another. The best that any paper can do is to print what it believes to be right. A good many papers do not do this, but publish what is popular even though the editor knows it to be wrong. Farm and Factory is not conducted on that principle. We know that some of the ideas we advocate are thought to be wrong by the majority of our readers, but we think they are right. If they are not we shall be pleased to learn that fact, and at any time any reader differs with us they will do us a favor by giving us their ideas. We are all liable to be mistaken, and any person who is honest ought to be willing to learn the truth.

This has often been said before, but it is a good thing to print many times such declarations.

* * *

Editor Ewing Herbert recently devoted the front page of the Brown County (Kan.) World to an article on the newspaper business, and among others things said:

Those newspaper men who are printing papers which are unappreciated ought to pull out and leave Shacktown.

No honest, capable newspaper man can afford to waste his life in trying to help build a town which does not appreciate or second his efforts.

We can only pity the good newspapers that have no patronage. The bad newspapers are not entitled to either patronage or pity. The sooner they perish the better it will be for the town in which they exist.

But every town can afford to patronize from one to two papers. And every merchant and every professional man should give them his loyal support. Not only because it will pay him to do so in many, many ways, but because the very existence of town life centers around the newspapers.

Wherever there are poor newspapers there is a poor town.

Well, I guess Mr. Herbert is about right.

* * *

John W. Spaight, editor and publisher of the Fishkill (N. Y.) Standard, entered upon the thirty-ninth year of his connection with the paper on February 10. There are few editors and publishers who have a record covering so many years continuously on one paper.

* * *

The San Francisco Tageblatt is a well-printed German paper of eight pages and eight columns to the page. I regret that I am not a German scholar, for I am sure I could find something of interest in its pages to read.

* * *

The screen used on the halftones of the Agriculturist, Minneapolis, is too fine for the kind of paper on which they are printed.

* * *

The Nortonville (Kan.) News of February 16 devoted a page to the newspaper women of Kansas, and stated that

there are over a hundred women employed in newspaper work as editors, reporters and publishers in that State.

* * *

It is always a pleasure to look over the Kent News, Chestertown, Md., it is so clean and nicely printed.

* * *

The Svenska Amerikanska Posten, published at Minneapolis, claims to be the largest in size and circulation of any Scandinavian paper printed in America.

* * *

The Arlington (Wash.) Enterprise promised to change to an eight-page, five-column paper recently, and I would be pleased to see a copy and note the improvement.

* * *

From the Butler County Democrat Company, of Hamilton, Ohio, comes a small booklet and the following letter:

Hamilton, Ohio, February 22, 1900.

Editor National Printer-Journalist.

Dear Sir:—The little booklet enclosed herewith was issued by this office about a year ago for the purpose of soliciting foreign advertising by mail. We have found it very effective, possibly on account of there being no similar book (until here recently when a contemporary of ours issued one) used for that purpose. If you care to comment on same in your publication, and will mail us a copy we shall be glad. Thanking you for the courtesy, which we feel sure you will grant, we remain,

Fraternally yours,
THE BUTLER COUNTY DEMOCRAT CO.

The booklet consists of zinc reproductions of a number of letters from local advertisers showing the value of the

perfection of a paper than those who have charge of your criticism department, yet the copy of the Humphrey Democrat, which I am sending with this, ought to be entitled to as much consideration as some of the Illinois weekly papers. The first page of our paper is not in any way intended as a model of beauty or artistic genius, but it serves to show that even in Nebraska the newspapers, the Democrat at least, believe in a plain way of doing business without the frills and embellishments that make so many papers frequently visit the waste basket. With fraternal regards,

Yours truly,

L. A. EWING.

The reproductions given at different times in the pages of the National Printer-Journalist are generally selected for the purpose of showing some special feature or new idea for the purpose of helping the readers whenever it is possible. A reproduction of the Humphrey Democrat is given herewith, and the writer fully agrees with Mr. Ewing when he says the first page "is not in any way intended as a model of beauty or artistic genius." The words under the date line, "Don't Be Woozy and Make New Resolutions," is anything but dignified. However, the reproduction is shown for the purpose of allowing all the interested readers of this department an opportunity to judge for themselves as to the merits of the make-up of the Democrat, a copy of which will always be welcome at this office. With fraternal regards to Mr. Ewing for his candid letter.

* * *

The Humphrey Democrat.

VOL. XIII, No. 46.

HUMPHREY, PLATTE CO., NEB., FRIDAY, DECEMBER 27, 1899.

\$1.00 A YEAR.

Don't be Woozy and Make new Resolutions: Just change the Date on The one you Made January 1, 1899.

Let Us Forget We say it O'er: I Resolve to Patronize Humphrey Business Institutions as Exclusively as Possible During the Year 1899.

Santa Claus at Grim's Ranch A Story for Christmas. "A THOUSAND pardons, but could the senior the change give for two gold pieces of twenty dollars?" John Wells jerked his newly-urged horses to a standstill and glared his annoyance at the heavily-bearded Mexican who, with doffed sombrero, had suddenly confronted him at a point where the Menardville road extricated itself from the scattered juncos of Fort McKavett and headed out for the open prairie. It was early morning of the 25th of December, 1899. Wells had freshly risen from an unappetizing and indigestible breakfast of grease-sodden tortillas and rancid bacon; had quarreled with the hotel keeper over his extortionate charges for the last night's lodging; was hungry; angry with the sharp sleet that came drifting against his face from the northeast; angry with the "infernal luck" that doomed him to wander over the wild prairies of southwestern Texas as the rest of mankind were happily at home for the holiday festivities. Ident of the morning hung over him during the entire day. Without making his usual noonday halt, he drove steadily on, occasionally glancing back over the dim trail, in momentary expectation of finding himself pursued. However evening came without anything having transpired to increase his alarm, and an hour before darkness closed down upon the bleak plains he drew rein before the door of a lone ranch and, without the useless preliminary of applying for accommodations, began driving his tired horses of the harness. As he unhooked the tug of the off horse a towheaded urchin of eight or nine years came stooping up from the rear by corral, crouched in the buggy seat and drew the blankets over his head until only his boyish face and sparkling eyes were visible. "What's your name mister?" he asked, with childlike directness. "Jack Wells. What's yours?" "Hank Grim. I'm only little Hank." "Is my gran' and he call	THE NEW YEAR. L. A. EWING is Omaha's Sen. EACH year, in speeding onward to its end Makes life a tablet, which we must all leave. Let us endeavor now it so to spend, That from our lives the world may good receive. Each year, behold! the magic of Death's wand Exerts its power; and we must all obey— We leave this life to enter one beyond: Behind us leave we deeds that live for aye. Then, when in Death's embrace we have resigned All claims to fortune, glory and to fame, This monument let each one leave behind: In life, in deed, he earned an honored name. Some time afterwards however, he was aroused again; and this time so thoroughly that he heard and understood the words that awoke him. They evidently came from the "living room" into which his apartment opened, and were uttered as the top of Little Hank's childish treble. "That now, Santa Claus. I've got you this time, and either that winch or I down your meat-hov the Mexican goat-herder who had trailed Wells all the way from McKavett, had come directly to his death. He lay, prostrate the window, as he had fallen when the bulk of two loads of buckshot had struck him, and when Little Hank gazed into his dead face, its pallor more ghastly still in the lamp-light, he screamed and staggered back, covering his eyes with trembling hands. "I don't want to be a soldier," he cried, "I want to kill an	...ONE NEW YEAR'S EVE... By Manda L. Crocker. THE swish of a blue dress, a faint breath of violets, as in passing and he felt rather than saw Marie Summerfield go by. Standing a little apart from the knots of merry young people thronging the pleasant rooms, he was conscious of a thread of pain running through the last night of the old year, touching only Miss Summerfield and himself. Bye, I mean Leigh Reyburn, the owner of the old-fashioned, low-roofed grange beneath whose roof the young people of Gladbrook had gathered to keep a merry watchnight. With music and laughter and gay repartee they meant to dance a welcome to the joyous New Year without much thought for the staid old twelve-month which had served them so faithfully. But Leigh mowed uneasily, sending imploring glances after the blue gown, all to no purpose. Marie was absorbed with the fascinating company of Maurice Davenport, and was smiling her sweetest—and Marie could smile divinely—and entertaining him admirably. Leigh was thinking hard, and it seemed, uncharitably. Had Reyburn been in just the state of mind he intended, half-way between nervous, glad excitement stealing over him, like the coming of a new day. A ten-minute's walk brought him to the station. "Going away for the New Year?" queried the agent, pleasantly handing Reyburn the required pasteboard. "A little way," he replied, absently, pulling on his gloves. Scarcely had he settled himself in the outward-bound train than Joe Antrim thumped him on the shoulder and sang out: "Hallo! going away on a blow-out, I suppose? Well, so am I. Some are going away, and some are coming home." In the awkward silence which followed to read Reyburn's thoughts, for without looking further for reply he began again: "Miss Summerfield is coming to-night, they say; and they say, too, that she is bringing her best fellow with her. Gladbrook looks for a wedding at the Summerfield home tomorrow. But, of course, I don't know; it is only gossip, maybe." Having thus delivered himself Joe Antrim, without waiting for reply, betook himself to the smoker, leaving Reyburn in just the state of mind he intended, half-way between
---	---	---

paper as an advertising medium. Along the bottom of each page, printed in red ink, is a short notice by the publisher telling what the firm is and the amount of advertising used in a year. As stated in the letter, the booklet was issued for the purpose of soliciting foreign advertising, and proved very effective. It looks well and is convincing.

* * *

Another interesting letter, from Nebraska, is given herewith:

Humphrey, Neb., February 12, 1900.

Editor National Printer-Journalist.

Dear Sir:—I note that your valued paper contains a number of reproductions of holiday editions of country newspapers throughout the country, and it occurred to me that some of the reproductions were not in keeping with the items of credit and praise given them. I do not assume that I am better qualified to judge the mechanical

could long exist. Now a daily paper from there, containing ads of "Exclusive Men's Furnishers" and "Ladies' Golf Capes" reaches this office.

* * *

The ad composition of the El Reno (Okla.) Democrat is a long way above the average. It is a very neat paper every way.

* * *

The Lawrence (Mich.) Times would look better and cleaner if the type was well washed.

* * *

The Superior (Neb.) Journal is well made up, but the presswork could be improved. One electro is so high that it bears off the impression almost entirely on a headed

article on page four of the issue of February 8. It is an easy matter to rub down an electro a little on emery or sandpaper.

* * *

Many papers now use the plain Linotype caps for headings of small items. It saves time, and they always look clean.

* * *

On Thursday, February 22, the Tropical Sun, West Palm Beach, Fla., began the fourteenth year of its career.

* * *

There is a marked improvement in the appearance of the Mulhall (Okla.) Enterprise. The color of the paper used is much better. Keep it up, Mr. Woosley. You must have noted the Criticism Department for March.

* * *

A neat family paper is the Grant County Witness of Platteville, Wis., of which Mr. M. P. Rindlaub is editor and proprietor. There is a little too much ornamentation in the ad display, and the pointing fists at the beginning of paragraphs does not help the appearance. However, the paper is dignified and has a substantial appearance.

* * *

This is from the Hoquiam (Wash.) Washingtonian of March 1:

With this issue the Washingtonian begins again an "all-home-print" paper, of six pages. A home-print paper is the ideal paper, and we hope business in Hoquiam will be such that a patent will not be needed again. The extra pages will give us plenty of room to make a better advertising display, and we hope our progressive merchants will see their way clear to increase their advertising space, especially in opening of spring trade.

* * *

No criticism is required on the Bloomfield (Ind.) News. It is just about as nice and clean as it can be. Make-up, presswork and arrangement are excellent. The liberty is taken of cutting the following paragraph from the issue of March 9:

There are many places not regularly represented in the News correspondence columns. We would like to hear from all our correspondents and every locality each week. Please let your items be a weekly letter of all true events and regarding everybody, whether they are your special friends or not. Many people and happenings in each locality are never mentioned because the correspondents have some personal dislike, but this should not be. Be liberal, look at the rosy side and mail items early each week.

Personal items cut such a large figure in local papers that the above may be worth making a note of.

THE TRADE JOURNAL HELD IN HIGH ESTEEM.

Too few advertisers realize trade papers' importance. The trade journal is the business guide of the men engaged in the line of trade of which it is the representative. It is held in highest esteem, and instead of finding its way to the waste basket it is preserved carefully. By placing an ad in a medium of that sort you are putting your proposition directly to possible customers and not merely people, as would be the case were you to place it in newspapers and magazines.—Dairy Report.

* * *

A well-known business man in Chicago has this to say about advertising: "I must advertise if I would get results from the men on the road. Before I advertised, my travelers, on entering an office, would be told: 'We are not acquainted with your firm,' and in many cases found they could not secure an order, which would be given to a competitor before their eyes. As soon as I began to advertise I had a different experience. My men found it was equivalent to a letter of introduction from a mutual friend. 'Oh, yes, we have noted your advertisement, and feel acquainted with your house.' In this influence alone our advertising pays, whether we get direct orders from it or not."—Business.

EVERYBODY ENJOYS EVERY PAGE.

East Hartford, Conn., March 10, 1900.

Mr. B. B. Herbert.

My Dear Sir: Please enclosed find check No. 400, to pay in full to the only reliable and valuable journal published for the profession. Every member of the office down to the devil enjoys every page, and especially the March number. I remain
Yours truly,
H. B. Hale.

PRACTICAL CO-OPERATION.

An Interesting Letter from Michigan on an Important Subject

Battle Creek, Mich., March 8, 1900.

B. B. Herbert, Chicago, Ill.

I NOTICE in your March number of the Printer-Journalist the Questions, Nos. 24 and 25, asked at the Kansas Press Association meeting, as follows: "Would it be profitable for our Association to manufacture its own ready-print and plate service?"

In response to the inquiry, possibly the experience of our Michigan Association would be of some value to our Kansas brethren.

A little over two years ago, the publishers of the interior dailies of Michigan formed a practical co-operative association, called the Michigan Associated Dailies, for the purpose of supplying themselves with a 500-word daily telegraph report, and the manufacture of daily news plates, and miscellaneous plates, for its members. Every publisher agreed to use the service for one year to guarantee its establishment. So successful was the experiment, that the number has more than doubled, and we have now thirty-three daily newspapers and eighty weekly papers, as members of our Association.

We issue a 500-word wire service at a cost of one-eighth of a cent per word for day messages and one sixteenth of a cent per word for night messages. We also issue six columns of daily telegraph news plates at a cost of \$6.00 per week to each member. We also manufacture twelve pages of miscellany, consisting of continued stories, illustrated pages, short stories, sermons, and all kinds of ordinary plates issued by news-plate associations, at a cost of 50 cents per page.

At these low prices, which is just half what we formerly paid to the trust, we have been enabled from our profits to purchase \$1,000 worth of new stereotype machinery, and improve our service in other ways. All this has been accomplished, despite the intense competition from the trust, who have even offered to sell pages of miscellany, for which they formerly charged \$2.00 to our members, for 30 and 40 cents, if they would agree not to patronize us for one year. Their intention was so plain that none of our members were deceived, as they well knew that in case the trust succeeded in starving us out, they would soon return the prices to the old standard.

We also maintain an advertising and purchasing bureau for our members, and are enabled to buy paper and other necessities at greatly reduced prices by combining our orders.

Several other States have followed our example the past year in organizing similar associations, and it is the intention to have them meet next September in Chicago, and organize into a National Association for the exchange of telegraph news and other matter.

Every Association which has followed along our lines has been successful, and there is no reason why the Kansas publishers can not do equally as well. All that is necessary is that they will agree to stand by each other for one year to test the experiment, and not allow any cutting of the trust to interfere with such determination, then secure a good practical newspaper man to edit the plate matter, and transact the other business of the Association, at some central point, for the obtaining of news and easy shipment by express to all members. Put in a suitable stereotype plant, or arrange with one already established, which is the easier and cheaper way, and such a business can be easily established, with very little money. It simply needs the co-operation of those who enter into it. You will thus be enabled to get your plates and ready-print at about half the price now charged by the trust, and plates can be produced so cheaply for its members that they can print their paper all at home much cheaper than they can buy ready-print, and also retain all the foreign advertising, which the ready-print houses now secure on the patent insides.

I have outlined the plans very briefly for the benefit of our brethren as gained by our experience. If any of the States are sufficiently interested to organize such an association, I shall be only too glad to furnish them with any information in regard to the same. Yours very truly,

Martin E. Brown,

Secretary of Michigan Associated Dailies.

By CHARLES AUSTIN BATES, New York.

Communications to this Department are solicited. Questions will be answered and criticism made on advertising matters.

WHERE there is one man who fails in business through audacity, there are ten who fail in business through timidity and over-caution. I know this to be a fact.

* * * *

I have done a great deal of proprietary medicine advertising, consequently I have become familiar with most of the problems that confront the proprietary medicine advertiser. I have also become familiar with their methods. I noticed among other things that one of their strongest cards was their symptom blanks; blanks that put questions to people about how they felt in this way and that way. Upon receipt of these blanks with the proper answers, any proprietary concerns gave free advice to their correspondents. Now, it struck me that this style of a blank would be advantageous in my business as an advertising expert. I got up a series of blanks. The questions were of a nature that would bring out the vital points and show me the perplexing problems in pretty near any business.

I advertised these blanks and offered to write a letter of advice and give a plan of advertising to firms or business men who would fill out the answers to my questions.

A great many—I do not know exactly how many—but a very great many business men have filled out these blanks and paid me for letters of advice.

* * * *

At the outset I said that more men failed in business through timidity than through audacity. That statement was based upon the information contained in the answers of business men to the questions in my blank. I find scattered all over the country retailers in minor cities, who are carrying, for instance, \$60,000 worth of stock and doing only \$30,000 worth of business. In a little larger cities, I find men who are carrying \$150,000 worth of stock and doing only seventy or eighty thousand dollars' worth of business. Of course, I mean annually.

* * * *

Nine out of ten minor city retailers who apply to me for advice are in this position. They don't seem to comprehend where the trouble is, or what it is. They know that their competitor across the street is carrying an even smaller stock, but doing a larger business. They seem to imagine because they carry a larger stock than their competitor that they should do a larger business.

* * * *

A careful consideration of their answers shows that they give very little consideration to advertising. A man who is doing \$50,000 worth of business and carrying \$60,000 worth of stock states very calmly that he is spending only 2 per cent for advertising. He admits that his more successful competitor across the street is spending more, but thinks he is a chump for doing so. He can't see his own weak spot. He recognizes that a great deal of his stock is getting dead on his shelves, but he doesn't seem to know how to avoid this.

* * * *

The man who does only \$30,000 worth of business on a \$60,000 stock can see his finish if he is at all shrewd. He is piling up dead stock every day and every hour and every minute. There is only one possible solution of this problem. That is—more advertising. It doesn't make any difference how much he is spending now—whether it is 2 per cent or 3 per cent or 4 per cent—he has got to do one of two things. He has either got to cut down his stock tremendously or increase his advertising. If he doesn't do one

or the other, he is bound to be a bankrupt within a very short time. There is no money in dead stock on the shelves of a store. Better give it away for half-price than keep it there.

And take my word for it—a retailer can't even give away dead stock without advertising.

* * * *

The theory of the bargain is this:

The retailer sells certain lines at low prices without profit, if necessary, to bring people to the store. The people buy the bargains and they will buy other things that are being sold at the regular margin of profit, and in that way the retailer gets his money back and a little bit more. Or, they will find the thing advertised not just what they wanted and will take something better at a higher price. That nets the retailer a greater profit. This is all perfectly fair and legitimate.

* * * *

The best lines to use for bargains are the slow selling ones, or those that are going out of season, or that will depreciate in value, or that have become damaged or shop-worn. The retailer should be frank with his reasons; tell the truth about the goods and the prices. Have a bargain counter. Use the bargain counter judiciously and clean up stocks, thus preventing accumulation which will eat up all profits.

* * * *

When staple articles are used as bargains, they are to be sold as such for a definite time, or a definite number of yards are thus sold. Advertise the facts distinctly and live up to statements. Then there can be no trouble about putting the goods back into the regular stock.

ADVERTISATORIAL.

In advertising, it is not how much you do, but how well you do it.—The Advisor.

* * *

The same old faces for years and new ones every year—that's the test that tells whether ads are good.—Printers' Ink.

* * *

The man who puts his advertisement in a daily paper takes the surest and most economical way of giving publicity to his desires.—Bangor (Me.) News.

* * *

The publisher who is not willing to offer an advertiser convincing proof of circulation may be passed by as having no such proof to offer.—Reliable Poultry Journal.

* * *

A plan of advertising that has succeeded will be found to have general points, which would help win business any place and under almost any circumstances.—Advertising World.

* * *

A newspaper ad is the merchant's best salesman. Dress it neatly, put a bright face on it, make it speak truthful, cheery words and it cannot fail to bring trade.—The Advertiser.

* * *

An advertisement is something like a mechanic's tool. You would not expect a dull saw to do good work, nor to bore a clean hole with a broken auger. A dull pick makes slow work, a plow that does not scour turns up little soil; so a meaningless, unattractive advertisement does injustice

to your store, to your ability as a business man, narrows your sphere of business, and is unprofitable.—D. T. Mallet.

* * *

The arguments that are used by salespeople in the store and prove convincing, will be equally so if employed in the newspaper advertisement.—Muscatine (Ia.) Journal.

* * *

One unreasonable claim in a business announcement will cast suspicion upon all other claims in the same advertisement, no matter how fair and reasonable these may be.—Printers' Ink.

* * *

The satisfied man doesn't advertise. The man who wants that which he has not, or has that which he does not want, lets the world know it—advertises—in one way or another.—Business Problems.

* * *

It is a poor paper that can not make circulation claims and promise results to the advertiser; but it is quite another proposition to support the claims with facts that the advertiser can prove up himself.—Machinery.

* * *

The grocer's advertisement that suggests tempting edibles to the regular customers will find that the business is largely increased among those regular customers without any increase of customers at all.—Butte Miner.

* * *

There never was a time when the strength of newspapers as advertising mediums was so apparent as it is at the present day. Advertisers are using them to a greater extent than ever before. Within the last few months business that once appeared exclusively in the magazines has begun to appear in the daily press also, while the trend of events seems to be toward including the latter in every advertising campaign of any pretensions whatever.—Indianapolis (Ind.) Sentinel.

* * *

The principal reason why country merchants fail to advertise profitably is that in their advertisements they do not talk specifically about the article they want to sell nor do they give prices. They must learn the Wanamaker system. If the reader is at all interested in an article he wants to know its good points. If these are favorable he wants to know the price. If this is satisfactory he becomes a buyer and the advertisement has served both seller and buyer. If no misrepresentation has been made the sale of this article may have created a steady customer, the profit on whose trade may become large enough to pay for the advertising necessary to secure one hundred more customers like him.—Making a Country Newspaper.

* * *

Ewing Herbert, editor of the Hiawatha (Kan.) Brown County World, in an article on advertising in Newspaperdom, says:

"One advertiser, who began by using six inches double, changing each issue, and always quoting prices, twice last year occupied two entire pages. He started in business about five years ago almost without a penny, and was not at the beginning a full-fledged convert to the value of advertising. I feared he would not give publicity a fair trial, but I had the satisfaction of seeing him use all the space he could furnish copy for, and also saw his store filled with more people than his twenty-five clerks could wait on—and all this in a small store in a country town of 3,500 people. Not long ago this advertiser sold out, with a gain of \$20,000. He admitted he owes his success to liberal and judicious advertising."

The evolution of advertising as an art has developed, within the past few years, a greater tendency towards reliability and truthfulness, and while the day of the sham and fake advertisement has not passed, yet such methods have become well-nigh obsolete. There is no doubt that not long since a great deal of advertising was characterized by brag and bluster, and consequently failed to gain the confidence of the public in the same degree as the present system has. Nowadays, it is the exception, rather than the rule, to find misstatements in advertisements, and in fact some States have made it a misdemeanor for an advertiser to falsify the merits of an advertised article. Unquestionably, such a law is proper. It protects honest, competing merchants and prospective purchasers, and makes reliability the cornerstone for all successful advertising.—New England Editor.

IMPROVEMENT IN COLOR HALFTONES.

WHEN speaking last month of improvements in halftone work we had special reference to color work. Ordinary halftones as now made from all sorts and conditions of subjects are perhaps best handled as at present, the wet plate and screen lending themselves to alterations which may be, and often are, improvements on the original. Especially is this the case in a poor and flat original.

But when you come to color, the whole question becomes entirely different. It is not shade you want in black and white, but color, pure color, and the question is, is the present method the best means of getting that true and simple coloring?

Do we get, by the number of operations gone through, anything like a correct result, except by a great deal of trouble and re-etching? You have first to take the original negative from the colored picture, and as is well known by all photographers, you cannot even get them absolutely correct with present knowledge.

The second step is the transparencies from the three negatives. This readily lends itself to changes which are not improvements, for in color a change can be no improvement if a faithful copy of the original is required.

Then comes the halftone negative, and if, as we said before, that it is impossible to get the original negatives correct, what must it be by the time you have reached this point?

The good work done throughout the country is willingly granted, and some of it is surprising, but the makers know just as well as the writer does what trouble there has been to get there.

Then the etching and printing which, of course, must be considered in any process.

One great drawback to photoengravers who try color work is their very natural ignorance in color and what certain combinations of colors will do, and this fact makes it surprising that more lithographers have not gone into three-color work, but the fact of their not going in for it may be ascribed to the long process necessary before it reaches the stone.

If some easy method can be invented which will give a transfer somewhat nearer the original than present methods are capable of, then photoengravers must look to their laurels, for what between rotary presses and a greater knowledge of color among the lithographers they will lose what color business they already worked hard for.

A process of color work which can be printed from the original color negatives, and which can be used to transfer to stone, has a great field of usefulness before it, and the simplest means of reaching such a process is by an irregular grain.

Many is the attempt that has been made to reach a good practical process. The grain process is the oldest of all the processes, as instanced by the photogravure, an altogether different affair from photogelatine or coleotype print.

I don't know whether any of our readers remember to have seen in the Russian section at the World's Fair several colored photogravures. These were made by the three-color process, and without doubt were the finest things in that line that have ever been printed. Of course, they had the full benefit of all the talent of the Russian Imperial printing and photographing departments, but they showed conclusively the possibilities of grain in connection with color, and the advantage of the closeness to the original.

Some months ago I saw, in the pages of a contemporary, illustrations in black and white made with an irregular grain, and though by no means as good as they might have been they showed what could be done when the firm took up color work. Since then I have seen some of the color work done by the Lithotone Co., of Chicago, which is the nearest approach to the Russian work before mentioned that I have ever seen.

It is printed in irregular grain from the original negatives and thus gives a closeness to the picture which is apparent in every point.

It is not only a question of grain which lends itself to all the modulations of color, but the fact that so few operations are necessary.

It seems to us that it is now only a matter of time before we get proper inks, and then be able with comparative ease to turn out color prints identical with the original. The process is now up to the inkmaker.

SCENES EN ROUTE AND IN NEW ORLEANS.

1.—Awaiting the coming of Rex parade. 2.—Sam Sloan, President of the Iowa Press Association, amusing editors with cakewalk on steamer Thorne. 3.—Editors waiting for steamer Thorne on levee at New Orleans. 4.—Entrance to United States cemetery at Vicksburg. 5.—Gen. Stephen D. Lee (on the left), who commanded the center of Pemberton's army at Vicksburg, telling how the battle was fought and lost. 6.—Vessels escorting King Rex on yacht Galveston. 7.—Street scene, Mardi Gras day, New Orleans.

Entered at the Chicago Postoffice as Second-class Matter.

BENJAMIN B. HERBERT, Editor.

Official Paper of the National Editorial Association.

Published Monthly by the

NATIONAL PRINTER-JOURNALIST COMPANY.

*Business Office and Editorial Rooms, 400 Caxton Building,
334 Dearborn Street, Chicago, Ill.*

SUBSCRIPTION PRICE, \$2 PER YEAR.

In England, 10s. 6d.

May be obtained in England from the International News Company,
Brems Buildings, Chancery Lane, London, E. C.; and
F. O. Strong, 111 Fleet Street, London, E. C.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep this monthly on sale regularly.

Advertising Rates Promptly Furnished on Application.

CHICAGO, - - - - - APRIL, 1900.

The fact still remains that a newspaper is the gatherer and distributor of news, and news is made up of the doings of mankind and all occurrences that interest, concern or instruct and entertain members of this great human family.

* * *

Churches advertised in newspapers, newspaper reading rooms in churches, and newspapers in schools and colleges are indications that those who are seeking after goodness and knowledge, taught through a living record of human events and endeavors, are coming more and more to prize the free, outspoken American press, which has been rightly called "the epitome of contemporaneous history, the concentrated news of the universe, each paper the handiwork of a thousand men." As the conveyor of more facts, more truths, more messages, more information than any other, it is the greatest teacher of the age.

* * *

With the somewhat extended article on the advanced price in paper published in the February issue of the National Printer-Journalist and the exhaustive discussion at the convention of the National Editorial Association reported in this issue, it is not deemed necessary, at present, to treat the subject further in this department except to say that the advance in price is evidently largely due to economic causes, so that there is no politics involved in the question.

* * *

A number of leading, active and successful churches in several cities of the nation have decided to use advertising space in newspapers to increase the attendance upon public worship and to advance the cause of religion. Why should they not? Religion, pure and undefiled, is certainly good, and if the churches have the means of dispensing or promoting it, why should they not advertise the fact? Religion is for mankind, just as is flour or clothing, and possibly is more essential. It costs the newspaper just as much to advertise

churches, in proportion to the space occupied, as it does to advertise any other necessity, and why should the publisher bear the expense, in addition to his regular contributions, any more than any other members. This recognition of the newspapers by the churches shows a getting together of two of the great moral and educative agencies of the age.

* * *

Rabbi Samuel Marks of Los Angeles, Calif., said in a recent discourse that the work of the newspaper "is that of a missionary in bringing all mankind into a closer brotherhood." The members of the National Editorial Association who have just returned from the warm welcome extended by southern states will be able to appreciate this statement to its fullest extent. The friendly but vigorous rivalry shown by cities and states in their persistent efforts to secure the next convention of the Association was another expressive lesson as to how highly the modern newspaper press is esteemed as a missionary for good and the promotion of "a closer brotherhood."

* * *

Indiana, Wisconsin, Ohio and New York, with the cities of Indianapolis, Milwaukee, Cleveland and Buffalo as the objective points, contested most ably at New Orleans for the meeting of the National Editorial Association in 1901. New York with its Pan-American Exposition and its earnest, eloquent representatives in the persons of C. M. Treat, Garry A. Willard and last but not least Past President A. O. Bunnell, won. However, great credit is due the representatives of other states, especially to Past President Holtman and Mrs. Barnes of Indiana, and Treasurer Gibbs of Ohio, for the able and earnest words in behalf of their states and cities. They will not be forgotten and the delegates only wished that they could meet in four or five places at the same time.

* * *

A very good rule for editors as well as for others is to fully and impartially investigate a subject before expressing an opinion thereon. This is most essential to the editorial calling for the reason that printed words cannot be effaced, and retractions or explanations are positively injurious to the standing, influence and business of the paper.

* * *

The newspaper publishers of the United States are not the only ones who have troubles of their own. The president of the Western Canada Press Association at the meeting of that body in Winnipeg, March 1, dwelt upon "the problem created by the great advance in the cost of paper." It is worthy of note, here, that many publishers are solving this problem by advancing the prices of their publications which were too low before the advance in paper. The rises in material and labor are a good and substantial reason for this, and the opportunity afforded should not be neglected.

* * *

Every worthy newspaper man hails with pleasure any attempt at improvement in the morals and usefulness of the press. With the view that newspapers are designed to help to instruct and to improve mankind, it may well be claimed that they should follow in the steps of Him who gave His life as a Teacher, Exemplar and Prophet to the work of uplifting humanity; but when any one undertakes to dogmatically set up rules as those which would have been followed by the Great Teacher, in the conduct of a newspaper, failure might be expected. Creed is a poor foundation on which to publish a newspaper, run a state or conduct a business. By creeds the humble Nazarene was adjudged a blasphemer, a friend of publicans and sinners, and a wine-bibber, and was crucified as a malefactor. By creeds, backed by sentimentality and cant, newspapers have been condemned, as have been many other useful and valuable agencies.

* * *

Rev. Charles M. Sheldon of Topeka, Kan., commencing with March 12, and closing with March 17, undertook to show how to run a newspaper as he thought Christ would. Viewed from the practical or even Bible standpoint, the well-meaning minister came nearer showing how Christ would not have run a newspaper. The Bible and He who came in the fulfillment of

its prophecies, types and ceremonial law never undertook to make men good by silence as to men's crimes or misdeeds, by the promotion of cant, or the stirring up of strife, unrest or hate between the employed and their employers, by calling those who have labor and skill to sell to those who have the aptitude to manage affairs wage-slaves. Christ never condemned just war, through which only the wicked can be subdued and the rights of men and permanent peace be established. Christ never became so illogical as to claim that because abstemiousness or temperance coexisted with certain laws in one community such laws, without a prevailing sentiment that would insure their honest enforcement, would necessarily produce beneficial results in other communities where entirely different conditions, different habits, education, traditions and beliefs as to individual rights, ideas of religion, or duty and as to the means of health and happiness, existed.

* * *

Christ taught individualism, individual responsibility, individual salvation; that while the laborer was worthy of his hire, and service was honorable, the employer had a full right to the control and disposition of that which was his own. He taught that to Caesar must be rendered that which was Caesar's; to the government was due tribute and loyalty, and to the employer faithful service.

* * *

One of the cruelest and most false and disloyal features of Rev. Sheldon's paper appeared in the issue of March 14, depicting a stage scene in which the stage was crowded with dead and dying and the actors in a hotly-contested hand-to-hand battle, while men and women, near the stage, witnessing the spectacle, were overcome with horror and weeping. Underneath was printed a list, transmitted by General Otis, under date of March 12, of casualties in the Philippines. The news item was preceded by the following specimen of maudlin sentimentalism, in the shape of an editorial signed "The Editor": "The following dispatch from General Otis is a stronger comment on the horrors of war than a sermon might be. As a Christian nation, shall we not pray that this war in the Philippines shall be our last?" At one side of the stage above is a figure holding a streamer containing the word "Militarism," at the other side a rotund figure bearing a banner with the device "Commercialism." Such a cartoon would have been more appropriate in depicting any battle of the War of the Revolution or of the war for the preservation of the Union. Yet this slander on heroism, patriotism and self-sacrifice to establish liberty and stable government is given as a sample of the manner in which One, called "Faithful and True," who "in righteousness doth judge and make war" (Rev., 19: 11) and who while on earth declared, "I came not to bring peace but a sword" (Matt., 10: 34), would run a newspaper. This in the face of the records of all history that liberty and free government and true Christianity, which is but another name for the rights and salvation of the people, have been advanced by bloody wars against oppressors, against priestcraft, against ignorance, superstition and their unholy or deluded defenders. On this same first page, which by every newspaper standard, and by the Bible standard as well, should have been given up to a record of the doings of men, their struggles, their victories, their noble deeds and their crimes, with their rewards or blessed results on the one hand, and with their punishment or fearful retribution on the other, a column and a half is given up to misleading statements and fulsome praise of the advance of the Social Democracy of Eugene V. Debs, whose teachings made scores of even Kansas families homeless, and the heads of those families blood-thirsty malcontents or worthless mendicants. Space does not allow further notice of this attempt—sacrilegious, if it had not been so sincere, and surpassing in folly and failure—to run a newspaper on fads instead of news, with the poor excuse that it was to follow in "His steps" who was the friend of sinners and understood all the weaknesses as well as all the aspirations, relations and rights of humanity. It may be permitted to state that, in the careful judgment of those who are capable to judge of present social conditions, should all newspapers

be run on the lines mapped out by Rev. Sheldon and command general belief, the streets of our cities would very soon run with blood, and violence, a disregard of the right of individuals or of property would take the place of a mutual respect and care for the rights and possessions of others, riot and anarchy would displace good citizenship, loyalty and good government.

* * *

Rev. Sheldon did the world splendid service in his book entitled "In His Steps" by showing how the church might be made helpful to mankind instead of being a place for vain repetitions, meaningless and unneeded adulations, self-righteous selfishness, and emotional dissipation, a school of cant, hypocrisy and pride; of narrowness, uncharitableness, censoriousness, backbitings, maudlin sentimentalism, vanity and such, but he utterly failed to show, by example, at least, how a newspaper could be made more useful or successful. The publisher claimed that the paper had increased the contributions to the famine sufferers of India, but secular papers have hundreds of times led in such benefactions and claimed no especial holiness or unusual credit. Editor Sheldon's ideas of making Topeka better by individual virtue and good government are not new to the secular press. His idea of getting denominations together to work for all kinds of goodness and righteousness is something that every secular newspaper, finding its patrons among the members of the different denominations, is ever ready to aid and advance within practical lines. Yet power instead of weakness comes from a rivalry and competition among the churches. Soldiers can not wisely be all united in one regiment. No one leader can direct all the religious activities of even so small a city as Topeka. Another thing in which Rev. Sheldon failed as a newspaper editor was lack of vigor, earnestness and pungency. A comparison might be made between the editorial comments of the Great Teacher on the wrongs of His day and the weak, pointless suggestions of Rev. Sheldon; but we have written much more than we intended and such comparison need not be made here. Rev. Sheldon's attempt revealed one important fact, and that is, that the people are anxious for improvement, for better moral conditions, and no editor need fear loss through making his newspaper purer and more outspoken for all that is of good report, for all that tends to good government, temperance, justice, equal opportunity for all, morality and true righteousness.

* * *

KIND WORDS FOR A BENEFACTOR.

Dear Mr. Herbert:

As our good friend, Doctor D. K. Pearsons, has just given a choice promise to "Lake Forest University," accompanied with such wholesome advice as his wisdom prompts, I hope you will note the facts in your issue of this week. And put in a few extracts from Mr. Thomas Kane's letter in "The Interior." It seems to me that Mr. Kane gives a just tribute to a practical philanthropist and noble man.

Mr. Kane says to Dr. Pearsons: "You seem to have kept a few things always in mind. First, you have not founded any new institutions. You have acted upon the principle that where other men have laid strong and permanent foundations it was wiser to build on them than to waste money laying new foundations where they were not necessary. Second, you have realized the necessity of a constituency already established. You have given due value to the elements of time and long years of usefulness in the formation of a loyal constituency as the strongest evidence of worthiness for help. Third, you have discriminated in favor of institutions which foster self-help on the part of students. Fourth, you have required practical evidence on the part of your beneficiaries that their friends must show their interest by supplementing your gifts. In other words, you have applied the same principle of self-help to the institutions themselves which, in your judgment, they should apply to their students. Fifth, you have in each case established a new cordon of friends and helpers around every school and college you have aided. You have in this way made practical application of the invariable rule that people really care for what they are willing either to work or pay for. Of all the rich men I have ever known you have had the most pleasure, the most genuine enjoyment, out of your wealth. You have had the satisfaction every business man feels in witnessing the growth and prosperity of the educational or other enterprises in which he has invested his capital. Often you have been able to advise in the matter of investments and building. I also congratulate you on your recently expressed intention to devote the remainder of your fortune to the same institutions you have helped in the past. They have proved to you their worthiness, hence you can safely have faith in their future."

Doctor Pearsons always has a kind word for our Lincoln Memorial at Cumberland Gap, which he has already generously aided. May our Father make all his life a happy one.

Very sincerely yours,

O. O. HOWARD,
Maj.-Gen. U. S. Army, Retired.

First Preliminary Meeting.

THE initial meeting of the fifteenth convention of the National Editorial Association was one of the most successful in the history of the organization. The proceedings were given in full in the New Orleans Daily Picayune.

The speakers were Sidney Story, representing the Mayor; Norman Walker, for the New Orleans newspapers; M. J. Sanders, representing the maritime interests; J. Y. Gilmore, for the press of the state; John Dymond, representing the State Agricultural Society, and President R. H. Henry, in response to these addresses of welcome.

John Dymond of the Louisiana Planters and Sugar Manufacturers presided, and those on the platform were, besides himself, President R. H. Henry, General J. Y. Gilmore, M. J. Sanders, Norman Walker and Sidney Story.

The reception committee for the evening consisted of John Dymond, representing the Louisiana Planter; Thomas G. Rapier, representing the Picayune; Page M. Baker, representing the Times-Democrat; Robert Ewing, representing the States; General Cosgrove, representing the Item, and Peter Kiernan, for the Telegram.

In opening the meeting Mr. Dymond said that he welcomed the delegates to the city and its hospitalities, and that the people of New Orleans and Louisiana appreciated having so many thinking and writing people to come to investigate their resources and advantages. He regretted that Governor Foster was unable to be present, owing to sickness in his family. He introduced Hon. Sidney Story as the representative of the Mayor. Mr. Story spoke as follows:

Mr. President and Gentlemen of the National Editorial Association: It is my distinguished honor, in the absence of the mayor, who conveys through me his regrets at not being able to be with you this evening, owing to certain official duties requiring his presence elsewhere, to bid you welcome in the name of the people to our beloved city. It is with a sense of pride and gratification that we realize the growth of your association and the many benefits that have accrued therefrom; for the reason that the movement which gave birth to it was started in the city in 1885, during our cotton centennial exposition.

We are pleased beyond expression in your having chosen this city for this your annual convention, and we feel honored indeed in having as guests within our gates an association representing the brains and intellect of this great republic.

We hope, gentlemen, that your deliberations will be fruitful of great results and that you will carry home with you pleasant souvenirs of your sojourn in our midst.

Whilst we are grateful at all times for complimentary mention of our hospitality, for which our people have ever been noted, and whilst you will entertain your friends at home about the glories of our mid-winter carnival, we are anxious to impress upon you the fact that there are other things of which we are still prouder; and that is that New Orleans is now making leaps forward on the highway of progress and prosperity, and having shaken off the conservatism of the past, is rapidly taking her place among the great municipalities of the world.

Many of you who were here a few years ago must witness the signs of progress visible on every side.

Whilst our advance has not been as rapid as that which marked the marvelous development of the great western cities during the last quarter of a century, yet it has been sure and sound. The last four years have witnessed a great revolution in the public mind. We are moving to that high eminence, political and commercial, which is part of this great nation and by virtue of the great natural advantages we possess, we are sure to attain.

Our great commonwealth of Louisiana, rich in agricultural, mineral and timber resources, and possessing the most beautiful

climate in the world, has never been in a better or more flourishing condition.

The finances of both the state and municipality of Orleans are on as sound a basis as that of any state or city in the nation. There isn't a security of ours, state or municipal, that isn't worth a premium in the market. Our city doesn't owe a dollar but what is provided for, and the rate of taxation, 2 per cent for the city and 7 mills for the state, is low, when you take into consideration that not more than twenty-five years ago the rate was 5 per cent, due, of course, to the chaotic condition of government which followed the close of the civil war.

Our property is very reasonably assessed, only on the basis of two-thirds of its value. It may be a source of interest to you to learn of the advance we are making in municipal progress and sanitation. Gradually the campaign of education in favor of better streets, of improved public service, public buildings, parks and municipal sanitation, is bearing fruit.

Our people, realizing the great needs of the hour and the future greatness and wealth which awaits the metropolis of the South, if we but stretch out our arms, have but recently, by an overwhelming majority at the polls, voted a 2-mill tax upon their property for forty-two years for sewerage, drainage and an improved and abundant water supply. It might not be amiss to state that out of the thousands of property holders in our city only some 400 votes were recorded against the tax.

The action of the people at the polls was ratified by the legislature of the state, called in extra session by his excellency, the governor. A board, known as the water and sewerage board, was created and organized, and the gentlemen composing this board, men of the highest probity and ability, are now at work preparing the plans and specifications for the construction of these great public works.

This 2-mill tax, which is to run to 1942, will enable the city to issue \$16,000,000 of bonds to construct a modern and scientific system of sewerage, to protect our water supply, so as to give every man, woman and child in the community an abundance of pure water for all purposes whatsoever; to complete also our drainage system for carrying off the storm waters, so that, when these three great systems are completed, which will be within the next five years, every inch of ground in the corporate limits of New Orleans will be drained and sewered and the moisture in our soil reduced several feet and our municipal sanitation made perfect.

This will be followed by a system of street paving, inaugurated during the last two years. The old conditions that have prevailed for a century will give place to the new. The stranger returning to our midst to enjoy the carnival will no longer have his sense of sight or smell offended by the hideous-looking gutter. Our old stone streets will give place to a modern and scientific pavement.

It gives me pleasure to state that we have been no less attentive to the improvement of our parks and the creation of new ones. We realize, in a climate like ours especially, where the population lives outdoors more than anywhere else, that parks are a necessity from a hygienic standpoint as well as places of pleasure and recreation for the toiling masses.

The attention of our city officials has been given considerably to the question of garbage cremation, municipal lighting, improved fire and police service.

Our experiments with garbage cremation have been thoroughly successful. But a few years ago the system in vogue here was the reduction system. But that proved such a failure that it has been abandoned. Cremation, we have concluded, is the only scientific and sanitary method of disposing of the city's garbage, and a measure having for its object the erection of crematories in different parts of the city is now under consideration.

Our fire department we can boast of as being one of the most efficient in the country. The management of this branch of the city's service by a legislative board, the members of which are appointed by the mayor and confirmed by the city

council, has been eminently satisfactory. The city has just purchased one of the finest horseless fire engines ever built. Our new fire alarm system, now under construction, when completed will prove the finest system in the United States. The fire alarm wires will be run under ground in the conduits of the wire companies. Apropos of these underground conduits, allow me to say that this work is another evidence of the progress and enterprise of our people.

When the question was first broached it was considered absurd to suppose a conduit system could be constructed in a soil like ours. But nothing is impossible today, when backed by energy and enterprise. The conduits, or underground system, has been under construction for the last year and a half. Hundreds of thousands of dollars have been expended in building the system. In a very few months all the poles and surface wires which stand today as a menace to life and which disfigure the looks of the city will be removed.

Our police department is not what it ought to be, but it will compare favorably with many others.

We venture to say that for the area covered by the city of New Orleans, which is larger than that covered by the city of New York, our municipality can be considered well lighted. The city's lighting is now done by a private company and costs some \$210,000 per annum, or \$127.50 per arc light per annum. This is high as compared to other cities, whose lighting under municipal control is done for \$50 to \$65 per lamp. This system within the next two years will undergo vast improvement. Our contract with the present company expires in 1902 and the municipality proposes to do her own lighting and for the amount of money now paid can double our present lighting capacity. We consider that municipalities should be liberal in furnishing light to the people.

It is with no little feeling of pride we can point to our system of public schools. During the last four years we have expended hundreds of thousands in the construction of new school-houses and in the continued perfection of our system. Our school board we are justly proud of. Half of its membership is appointed by the governor and the other half by the council of the city of New Orleans. The appropriation for this branch of the service is a liberal one and the public school system of New Orleans can stand comparison with that of any large city in the country. Our motto is, "Liberal appropriation for free education." Educate the children if you desire to make good men and women; if you desire to inculcate in the rising generation that patriotism and public spirit that only can insure pure and honest government, the only bulwark of republican institutions.

Gentlemen, our municipal development in the last few years, which must continue with redoubled strides as each year advances, has not only kept pace but accelerated our commercial and industrial development.

I shall not tire your patience with a long account of our commercial advancement and all our great commercial possibilities. Suffice it to say that New Orleans today stands upon the threshold of the greatest period in her history.

We enjoy fifteen miles of the finest dock facilities in the world. These docks are at present in the hands of a private corporation, but in little over a year will pass into the hands of a dock commission created by the legislature. This means that New Orleans is to have practically free wharfage. Only dues sufficient to pay for the maintenance of the docks. The result will be that no port on the gulf or Atlantic will be able to compete with us. Every ship that sails these southern seas in search of commerce will come to this port. Competition in ocean carriers means reduction in freight rates and low freights via New Orleans to the sea means that the great West will continue to pour its increasing commerce and production into our laps.

The Nicaragua canal, gentlemen, is an assured fact. The Spanish-American war has demonstrated its necessity. It is a commercial necessity as well. If pushed the work of construction can be completed in a decade. Its completion means the revolutionizing of the world's commerce. It means that Europe will be nearer the ports of Asia via the Nicaragua canal than what she is at present via the Suez canal. It means that America will be nearer the ports of Asia than what Europe will be. It means that New Orleans will be the key to the Nicaragua canal and will be nearer its mouth by several hundred miles than what is New York, and will be several thousands of miles nearer to Asia and the ports of the South Pacific islands than what is Europe.

Gentlemen, to the south of us are the Latin-American countries. These Spanish-Americans import annually merchandise to the amount of \$400,000,000. Three-fourths of these imports come from Europe—France, England and Germany furnishing the bulk. The United States is one of the heaviest buyers of those countries, yet only controls a quarter of their commerce.

This condition should not be, and under the new policy of the republic we expect within a few years to see the figures reversed.

What city in America is more advantageously situated to command and control this commerce than New Orleans? Our export and import trade has been on a phenomenal increase. We stand second today as the greatest grain-exporting port of America, and there are times when we even outstrip the im-

perial city of New York. That this port is to become the greatest grain-exporting port in the country is only a question of two or three years more. The great grain-producing states are situated on the Mississippi and its tributaries.

The railroads in the past have been causing the grain movement to flow up hill, as it were, across the mountains to the Atlantic seaboard. Competition has come and the great wheat-producing states of the valley and the great West find it cheaper and shorter to ship their products by water to New Orleans to be loaded on shipboard for the markets of the world.

The Chicago drainage canal is bound to result in great benefits to our city. The improvement of this waterway for navigation purposes will divert a great portion of the trade of the northern lakes down the Mississippi river via New Orleans.

New Orleans, gentlemen, is to have a naval dry dock, now under construction. This means in time the establishment of a navy yard at this point by the government. There is no better place in the country for such a plant. Deep and fresh water and near the base of supply; out of the reach of storms or the enemy in times of war. In short, gentlemen, we have a state which is blessed by Providence with the most equable climate, the most fertile soil and the happiest people in the world. We have a city which has been favored by nature with the greatest natural advantages ever lavished on a people. A city which stands guard at the entrance of the greatest river and the richest valley of the globe. A people that belongs to the great American branch of the Anglo-Saxon race, the all-powerful dominant race of the world, and whose Americanism is as lofty as that of Washington or Lincoln, and whose restless enterprise and energy, recently awakened, will convert in the next five years this city into a beautiful spot where the seeker after health and comfort can flock to, where the capitalist can invest with the surety of large returns, and where the immigrant, from either foreign clime or our own cold and frozen northwest, can come with his family and his wealth and invest in the most productive of soils that yield from two to three harvests in a year.

We are building on the banks of this great river an imperial city and an imperial commonwealth—rich in the pursuits of peace and civilization, the pride of all Americans, and which in all years to come shall shine as the brightest gem in the diadem of this great republic. These, gentlemen, are things we are justly proud of and things we would have you tell your friends about on your return home. I thank you for your kind attention and bid you once more welcome to our hospitable city.

At the conclusion of Mr. Story's remarks Norman Walker was introduced as the representative of the local papers. He read the following address:

Ladies and Gentlemen:—I am instructed by the members of the press of New Orleans to offer you a hearty and fraternal welcome to our city. We are glad to have so many of our profession here, in order that our fellow-citizens may see and appreciate the majesty and dignity of journalism, to which you have consecrated yourselves—to the service of the people in building up morally, prosperity and happiness for all.

If you find our city somewhat quiet and lacking in excitement just now, let me assure you that it was not always so, but that we have sobered down very much of late, so that I sometimes cannot believe I am still in New Orleans, and imagine that some mysterious power has transported me to a quiet city like Chicago.

As brothers and sisters in the profession, let me tell you that this is a good place for news. When I was a small boy I imagined that New Orleans must be a very great city, because it was always bobbing up in American history and was mentioned oftener than even New York. When I came back from school in one of the sleepest of Virginia towns and branched out into journalism, filled with the collegian's ambition to write something grand and glorious, almost my first assignment was a mass meeting, held only a few squares distant from this hall. It proved a very lively mass meeting, lively enough to suit even my ambitious fancy. Several hundred people met at Clay statue—you have all seen it, only a few squares distant, where this street (St. Charles) meets our central boulevard, Canal—and appointed a committee to wait on the governor and ask him to resign. He declined this modest request, and before I had had time to write out my notes of the speeches made, my mass meeting was marching down Canal street with several hundred rifles and a half dozen cannon, in order to express their dislike of Governor Kellogg in a more emphatic manner. The city was quite lively for a few hours with the rattle of rifles and the booming of cannon, and when I walked out Canal, over the line of march the carnival parades took yesterday, there were more dead and wounded along that thoroughfare than we have lost on any Filipino battlefield. It was exciting enough to suit Richard Harding Davis himself, and I quite thought myself a war correspondent on the field of battle as I dodged the whizzing bullets, and I felt that journalism was truly a grand and exciting profession.

This was my introduction to journalism in New Orleans, my baptism of fire, as it were, and I never found any lack of news—and exciting news, too—in all my reportorial days here. There was always something stirring to help the reporters. They make

a fuss over a few weeks of dual state government in Kentucky. We had it for five long, weary years, years full of excitement and bullets, with a battle in Jackson square and another on the levee, and the capture of the statehouse and the Supreme Court building. And when there was nothing stirring in political circles, we had floods and overflows to keep things lively. When the wind blew from the south it piled up the waters in Lake Pontchartrain, just north of us, and sent them swirling over our only mountains, Metairie ridge, which rise to the august height of four feet, and flooded the rear of the city. The young reporter with the facile pen had plenty to write about then; picturesque tales to tell of beauteous maidens rescued from the upper stories of houses, in whose parlors the water stood eight feet deep or more.

There was always plenty of good, exciting news lying around, and we knights of the quill congratulated ourselves on this, that New Orleans was not a humdrum town, where we had to confine ourselves to church sociables or fire parades. Perhaps we regretted a little that some of the journalistic customs and amenities of ante-bellum days were going out of favor just then, and that it was no longer necessary for a journalist to introduce himself to the profession by a meeting on the field of honor, just as the Indian youth does not become a brave until he has won his first scalp. The duello was going out of New Orleans journalism just as I came into it. There were some very pretty editorial meetings even then, but it was no longer considered necessary for one to prove himself an editor with the pistol or rapier as well as with the pencil.

But all this is over now, and we are becoming as quiet as a New England village, and news—real live news—the delight of the reporter—is becoming scarcer.

We no longer have battles on Canal street. We no longer have overflows for the young reporter to write about, for we have built a levee around the city over which all the four winds cannot carry the waters of Lake Pontchartrain. We have drained New Orleans, and we will soon sewer it, and we have made so many sanitary improvements that we no longer will be able to write even of epidemics. For all of this, much praise. Life is not so exciting in New Orleans as in those earlier days, but it is safer and longer and more comfortable. We are able to appreciate the old apothegm, "Happy are the people who have no history." We are growing more serious, too. Last spring the women of New Orleans talked of nothing but sewerage and drainage—and they did more than talk—for they secured the election which gave us these great sanitary improvements, with their campaigning and their votes. Our hot blood has cooled down somewhat with time, and we are getting in line with all the progress of the day. I hope we will not be carried too far in this reach for progress, that we will not surrender everything of the past, but preserve some of the individuality of New Orleans, its difference from any other place of the world, some of the manners, ideas and customs of the past. Only a few years ago one of our fellow-citizens came forward with a proposition to change all our street names. They were queer and unusual, he said, a constant worry to visitors, who could never get the hang of them, and it would be far better to adopt the western numerical system and call the first street on the river First street, instead of sticking to our outlandish Tchoupitoulas.

Many years ago one of our mayors, a New England man, whose place of business was in this very Tchoupitoulas street, objected to it and other local names. "My letters come," he said, "with Tchoupitoulas spelled a hundred different ways, and all of them wrong. How much better would it be to give it a simple name, like one of New York's commercial streets, and call it Pearl. Everyone can spell that—P-e-r-l—Pearl."

But Mayor Peters did not succeed in getting rid of our street names then; and we hope no innovator will be more successful than he. New Orleans can get in line with the world in every improvement, in every mark of progress, without turning its back on its past. You will find its name on every page of American history. It was here that the first rising against Spanish rule took place—a hundred and thirty years ago; it was the Louisiana Creole who, under Lafreniere and Villere, first declared the right to be consulted in their government by the mother country; and it was upon the field of Chalmette that America won its greatest victory. If we rename our streets, rebuild our old Creole houses in modern American architecture, if we wipe out every feature of the past, and New Orleans loses every trace of individuality, I am afraid that you, ladies and gentlemen, and the other visitors who come to see us now may not think it worth while to travel so far from your homes to see a city that is as like your cities of the North and West and South as two peas.

We seem already to be trying to do this, for in order that our friends from the North may feel thoroughly at home we have got up for their special benefit a touch of a Dakota blizzard. Could we do more to prove how anxious we are to please and welcome you?

But, seriously, we are glad to see you all, and to welcome to New Orleans representatives from the press of every section of the Union—the press that has made this country what it is, and that rules it today, and I sincerely hope that whatever is done in your convention here will tend to further elevate and strengthen the profession to which are all so proud to belong.

Mr. Dymond then introduced M. J. Sanders to speak for the shipping interests. Mr. Sanders said that when he

accepted the invitation to speak he did not appreciate the responsibility which he was assuming. He had thought about addressing congressmen or some such ordinary people. But when he found that he was to speak to men and women who write down what is said to them and by whom a short speech is not quickly forgotten, he realized that it was an important undertaking for a young man. From the speakers who had preceded him the editors had learned that the people of New Orleans were proud of themselves and their city, and that the city already lived in the records of history, but the people expected to leave a still greater record. The city is proud of its wide streets, of the great territory within its borders—greater than that of New York or London; proud of many of the old customs, and, incidentally, proud even of the carnival, which the visitors had seen and, he hoped, enjoyed.

But, said the speaker, we are proud most of the fact that we stand at the gateway of the great Mississippi river, the greatest inland highway that God has given, the most important stream that the world has, on which so many of you live, and are but an iota of the population which will border its banks, and also that we stand on the border of that great body of water destined to be the greatest highway of the commerce which is to be developed by the millions of population that is coming. I am sure that you will pardon me if I broach a subject very important to myself. My forte in life is to represent shipping interests, and representing the ocean interests coming to New Orleans, that interest closely identifies me with the great and glorious river. I am sure that few realize the importance, the immensity of the body of water on which are floated millions that roll southward every day, bearing volumes of tonnage from your doors and depositing the soil of the lands on which you live at our doors. Formerly our commerce with you was entirely by the river, but this has been changed by the railroads, which are making a gridiron across the country. Through this port 45,000,000 bushels of grain are sent to foreign markets of the world every year, and these are taken through a narrow pass in endeavoring to get to the ocean and the world's markets. We have been trying to relieve ourselves of a pressing danger. We are but custodians for you; we do not own the river nor the mouths of the river, nor the commerce, but act as agents for the people in the interior, in passing the commerce on. There is danger that all may be suddenly stopped at the mouth of the river, the only one improved and now entirely inadequate and dangerous and liable to be blocked, so that no goods can get beyond.

The famous Captain Eads made a channel at that time considered entirely adequate, but the great ships of today can carry enormous cargoes, taking the freight of four miles of cars, and these monstrous machines of commerce must attempt to navigate a long, narrow pass with very little water to spare underneath or on the sides and a strong current. One of the great ships might get across the channel and then commerce would be stopped until it could be removed. You editors from the West and Northwest who influence the minds and thoughts of so many readers can appreciate that while asking the federal government for aid in making the improvements which we have under consideration we are acting for you and for the masses of the people throughout the West and Northwest, and that in the interest of yourselves as well as ourselves this important work must be carried out by the government.

I am entirely overburdened by the responsibility of addressing so important a body, and can only hope that you will see the importance of bringing your influence to bear so that we may not be subject to the catastrophe.

Mr. Sanders alluded to the legislation asked of congress for the deepening of Southwest pass to the depth of thirty-five feet, so that it will be auxiliary to South pass, which has now a depth of twenty-six feet, thus enabling the use of both and the safeguarding of the commerce of the river. The address was received with applause and interest, and one of the leading editors said at its conclusion that he had struck the keynote of the situation, and brought to the attention of the editors the most important thing that could have been introduced.

General J. Y. Gilmore, on behalf of the Louisiana Press Association, said:

Mr. President, Confreres of the National Editorial Association, Ladies and Gentlemen:

On behalf of the Louisiana Press Association, I also have the honor and great pleasure of welcoming you to our state and the commercial metropolis of the South; to greet you in the place of nativity of this most important organization, on this your fifteenth anniversary. This pleasure is enhanced because it was my privilege to be present at the organization of this association, and because I have had the good fortune to attend all but two of your meetings and to visit with you all portions of our beloved country, as well as Mexico and British Columbia. As with the speaker, so it has been with other members of our State Press Association, and our hearts have been made glad at again meeting so many of the old members and

at the opportunity to form the acquaintance of many new fellow-workers in the field of journalism.

None know better than we the beneficent effects of this organization. Formed at a time when there still unfortunately remained some bitter recollections of our civil war, association soon brought political and sectional toleration, and this at once grew into mutual respect and genuine affection. Now we realize that both sides, in the unfortunate struggle, were imbued with the highest sense of patriotism—the armies of the North to save the Union, and we of the South to maintain the constitutional principles laid down by our forefathers, and both fortunately survived the terrible carnage of the greatest war the world ever saw. Secession was only resorted to for peace—not that we desired a change of form of government. Hence we were both right, from our respective points of view, and the South has been as loyal ever since we surrendered as the North, and we revere alike the glorious history and progress of our common country.

It has long been a cherished wish of the speaker and other members of the press that this association should again hold its sessions in this city, and glad indeed are we that you are now among us. For several days, now, you have mingled with our people and witnessed our carnival pageants; you have seen a great deal of our city and will see much more before you depart, and we hope you will carry home pleasant recollections of our people and city.

Now you are on historic grounds, within the borders of the greatest "Mother of States." Louisiana is proud of her children, the great and prosperous states extending northward to the British possessions. While the speaker is not a territorial expansionist, neither were the masses in the time of Thomas Jefferson and James Monroe. As they were condemned for buying territory which has since become of untold value to our republic—although it took much time to develop it—let us hope that such will be the case with our recent acquisitions. Its addition seems Providential and for that reason will end well, if wisdom is used in forming a system of government for our colonies.

No state abounds in richer or more poetic romance than Louisiana. Her 350 years of history record the early struggle of the intrepid band of warriors under De Soto, whose remains still rest at the bottom of the Mississippi; of Father Marquette and Joliet, who invaded this wilderness in 1673; of La Salle in 1682, who, after most terrific experiences, finally reached Texas, where he was assassinated by one of his own men in 1687; of the coming of the French Canadians, Iberville and Bienville, who sailed up the Mississippi river in 1699 and established the first successful colony in Louisiana; of the founding of New Orleans in 1718; the naming of Lakes Pontchartrain and Maurepas after two of the leading ministers of Louis XIV.; the alternate struggles of the Spanish and French for the possession of this vast territory; the sufferings from disease and battles with Indians; the great colonization and banking schemes of John Law, the latter bringing disaster, but whose German settlers on the upper coast of the Mississippi river became one of the most important acquisitions to the new colony, and while their language was soon lost by intermarriage with the French, yet they to this day retain the energy and thrift of their German ancestors; the establishment of the slave trade; the building of the old Ursuline Convent; the erection of the cathedral and adjacent public buildings still in front of Jackson square, the latter donated by Mme. Pontalba, the wealthy daughter of an early Spanish governor; the cession of Louisiana to Spain in 1762; the administration of O'Reilly under the new government; the granting of concessions of land to those performing valuable service for the crown; the restlessness of the French settlers under the new ownership; the acts of successive governors; the arrival of the persecuted Acadians from Nova Scotia, a splendid class of French colonists, who were the very soul of honor, and whose descendants to this time are among Louisiana's best citizens; the growing fears of American aggression; the visit and services of Gen. Wilkinson, the ancestor of a large family of Louisiana's best people; the land speculations of Daniel Clark, the father of Myra Clark Gaines, who inherited such large landed estates here, and about which litigation lasted throughout that lady's long and eventful life, she being impelled more by the desire to establish the legitimacy of her birth than for the money; the retrocession of Louisiana to Spain, and the final purchase of this territory in April, 1803—all abound in heroic and poetic incidents, beautifully told by our own lately deceased and much lamented Charles Gayarre, a descendant of one of the noble French families of Louisiana.

But the history of Louisiana under American domination, while less romantic, is equally interesting. Her early governors, Claiborne, Villere and others, gave every encouragement to new settlers, and agriculture and commerce grew rapidly. Indigo and cotton were the principal crops of the colonists, but the Jesuit fathers having, long before, in 1766, introduced tropical sugar cane culture, which did not pay because they did not know how to properly granulate the juice, it remained for Etienne de Bore, the grandfather of Charles Gayarre, the historian, to solve that problem, and hence he became the first successful sugar planter, and his sugar house was located at the point now known as Audubon Park, where most appropriately can be found the Louisiana sugar experiment station, so ably conducted by Dr. Wm. C. Stubbs. De Bore's success soon

revolutionized Louisiana agriculture, and hence that became the chief industry under American control.

Every Louisianian, whether or not to the manor born, is proud of his state and her history—of the generations of brave men and beautiful women whose virtues should be emulated by all—of her Villeres, De Clouets, Claibornes; of her Soule, Roselius, Dimitrys; and, more recently, of her Beauregard, Polk, Nicholls, and scores of others whom we cannot now name.

We regret that you will not have the opportunity, on this occasion, to visit interior Louisiana, whose soil is unsurpassed in richness and whose principal crops, sugar and rice, employ many millions of dollars. You saw on your way here from Baton Rouge several sugar factories, which have cost fully half a million dollars each, and one (The Gramercy Central Factory) will soon have a full million dollars thus invested in the factory alone. Altogether, Louisiana has invested upward of one hundred millions of dollars in the sugar industry, and yet the United States annually sends abroad fully that much money for foreign-grown sugar. The gulf states alone could produce the total amount required for the nation's use, and as the beet sugar industry has been established on parallel lines, it will not be long before we stop that great national leak by supplying Americans with American-grown sugar alone—this desirable result being contingent upon the wise policy now being pursued by our government toward sugar.

Until within a few years the rice industry of Louisiana occupied a small place in commerce, but since the advent into our state, a few years ago, of a large number of farmers from more northern states (Iowa principally), their knowledge of wheat culture enabled them to at once enter largely into rice planting, since the two crops are treated identically alike, except that rice has to be irrigated. Entering government land at \$1.25 per acre and buying much from the state at the low price of 12½ cents per acre, the industry grew with astounding strides, and those same lands cannot now be bought for less than \$20 to \$40 an acre—all this within twenty years. Louisiana now produces more rice than all the other states combined, and large fortunes have been made therefrom by cultivators.

No other branch of agriculture, excepting sugar growing, is so profitable, but this industry also needs (as it now fortunately receives) the fostering care of the government. Whatever thus rapidly develops a country, like sugar and rice growing, adds to the wealth of the nation, for by the one-crop plan the cultivator and manufacturer must buy all his machinery and implements; his work stock, meats, corn, oats, and sometimes even hay, from other states, and thus millions of dollars are annually sent from Louisiana to enrich others of our fellow-citizens. It is pleasant to note that several well-to-do editors, members of this association, have embarked in rice culture in this state, among whom may be mentioned Brother Arnold of Indiana and Editor Snyder of Pennsylvania—one or both present at this meeting. We have room for thousands more in the same fields of industry, and our people and state officials will do all they can to encourage the settlement among us of such worthy people as have made western Louisiana to "bloom as a rose."

Cane culture is much like corn growing, except that the cane itself is planted, and its eyes at the joints sprout as do those on potatoes. They stool or sucker freely, producing from four to a dozen stalks per eye. Primitive and wasteful methods were employed so long as sugar sold well, but foreign competition compelled us to adopt improved machinery, and now, instead of the open-kettle system, where sugar was cooked by direct application of fire, the vacuum pan process, or cooking by steam, has been largely adopted, thus securing a better grade and a much greater percentage of sugar. The same rapid improvements have been made in juice extraction, by means of macerators or crushers, to prepare the cane for the mill, and by the erection of powerful six-roller mills, instead of former three-roller machines.

As in the factory, so in the field have great improvements been made in cultivating implements, and with these one man can do twice as much work as by the old-style cultivators or plows. Thus has the sugar output of Louisiana been more than doubled within the past ten years. We had expected today to land you at the sugar plantation of the Ames' of Massachusetts, directly opposite the city, to explain the whole system of cane culture and sugar manufacture, but the unfavorable weather unfortunately prevented.

With a soil and climate unequalled by any other locality in North America; with a most healthful climate, since, by quarantine, we have learned to control tropical fevers, when introduced; with capacity for a great diversity of crops; with immense deposits of sulphur and petroleum and inexhaustible mines of the purest salt the world ever produced in western Louisiana; with valuable stone quarries, excellent marble and some coal in north Louisiana; with millions of acres of virgin forest, including the southern live oak, the durable cypress, the best of oak for manufacturing purposes and immense areas in Southern pine, our state is rich in resources, and only needs more population to develop them. The object in this long recital (for which your pardon is asked) is to beg you to send us all who need a change of climate or fortune, for health can here be restored and success attained.

But, best of all are the people of Louisiana. I would not say this were I a native of the state, but a residence here for up-

ward of forty years enables me to speak advisedly. Nowhere will you find a more hospitable or liberal-minded people; nowhere a higher sense of honor or a loftier conception of true citizenship. Here are found many peculiarities, such as the retention of the French language for hundreds of years, and, even within the speaker's journalistic career, it was necessary for fifteen years to publish his paper one-half in English and the other part in French. Our population in rural south Louisiana is largely of French and Spanish descent, thus constituting the real Creoles. While the word implies native, as usually employed (for we have Creole chickens, Creole eggs, Creole horses, etc.), when applied to people the proper definition is a native of French or Spanish descent. An erroneous opinion has been obtained abroad that Creole implied a touch of colored blood, but that originates from the fact that in Alabama at one time there was a large population, descendants of the earliest settlers, who had taken colored or Indian women as wives. Our rural population, as well as those resident in towns and cities, are exceedingly polite; the ladies dress with great taste, even though often deprived of educational and social advantages. They are a devoutly religious people, and this accounts for their many virtues. Of this type of people were Longfellow's Evangeline and Gabriel, and the scene of the pretty poem was laid near the speaker's old home on Bayou Teche, down which came the Washington and Oregon delegation on their way here.

This paper would not be complete without reference to Paul Tulane, the generous founder of our great southern university here which bears his name, and to two of the grandest characters our nation ever produced. The latter came from Baltimore, Md., and they were the great philanthropist, John McDonogh, who came to New Orleans in his youth, in the early part of this century—a gay, dashing, handsome young man of culture, but unrequited love made of him a recluse. Most of the people for the balance of his long life thought him a miser, because he avoided the world and devoted himself strictly to business. He, however, had a noble purpose for his accumulations, and when he died it was found that he had left a large fortune to be equally divided between his native city, Baltimore, and his adopted home, New Orleans, for educational purposes. It was also found that in youth he had formulated for his personal guidance the finest rules of life that a pure and noble-minded man could devise. A poor monument to the noble man has been placed in Lafayette Square, opposite here, yet this was not needed, as the thirty beautiful public schoolhouses in this city, built with his money, are a sufficient monument to his memory.

The other saintly character was good Margaret Haughery, who, having lost her husband and children, devoted her long life most unselfishly to the care of orphan children. Although a very poor woman, she prospered in her milk business; then she established an humble bakery, but all the profits were given the orphan asylums, and this rare charity brought her friends and custom; her business assumed such proportions that at length she was able to supply all the orphan asylums in the city with bread, and when called home to her Maker her funeral was attended by the governor, mayor and other state and city officials, and the best people of the place. Soon a monument arose to her memory, the first erected to a woman in America, and, most appropriately, it was placed in front of one of the principal asylums, at the intersection of Camp and Prytania streets, and two orphans are pictured lovingly clinging to her knee.

I thank you for your patient hearing.

Mr. Dymond, speaking for the State Agricultural Society, welcomed the convention and spoke of the vast agricultural interests of the state. He spoke of the development along various lines and gave a glowing description of the climate and agricultural facilities of the state. He then turned the meeting over to President R. H. Henry, who responded to the addresses of welcome as follows:

RESPONSE OF PRESIDENT R. H. HENRY.

Gentlemen of the Committee:

For your courteous, cordial speeches; for your hearty, kindly greeting;

For your tender words of welcome, are we truly deeply grateful. By your generous, cheerful manner; by your free and earnest method;

By your frank and open faces, do we feel that we are welcome. Welcome to the Sunny Southland, with its genial, balmy breezes, Cheery homes and grand old places, choice fruits and fragrant flowers.

Welcome to dear old Louisiana, Creole state of great renown; To its fertile hills and valleys; to its broad and verdant plains; To the land of cane and cotton, fields of rice and orange groves; To the home of grand old patriots, gallant soldiers and statesmen wise.

Welcome to the Crescent City, home of comfort, elegance, ease. With its bright and charming people, equal the best of any clime.

It were needless for me, gentlemen, on behalf of the National Editorial association, to say that we appreciate to the fullest this splendid reception, this magnificent welcome, by the representative citizens of Louisiana and New Orleans; and an honor

do we esteem it to mingle and associate with a people who proudly trace their ancestry back to the days of Iberville, and whose records illumine the brightest pages in the history of the world.

And, as La Salle took charge of this territory over two hundred years ago, in the name of the "most powerful and victorious prince Louis XIV, king of France," in whose honor the state was named, so do the editors of the United States, desiring to extend their dominion to these friendly shores, having visited and conquered all other parts of the country, now take possession of this land of perennial bloom and cerulean skies. for and in the name of the National Editorial association, and proclaim it theirs by right of voluntary surrender, if not by discovery and conquest. And who is there to molest or make afraid?

We are delighted to hold the fifteenth anniversary of our association in New Orleans, where it was organized fifteen years ago, during the Cotton Centennial Exposition. As the wanderer

President R. H. Henry and family at home, Jackson, Miss.

in many climes gladly revisits the scenes of his youth, so are we happy to return to the home of our birth, the lovely Crescent City, known far and wide for its generous hospitality, its warm-hearted people, its luxurious homes, rare flower gardens, gallant men and beautiful women; where we are welcomed with bright smiles, hearty hand-shakes, and the assurance that we are at home and among friends.

The National Editorial association is what its name implies, national in its character. Made up of delegates from all the states in the Union, it knows no section, no party, its underlying principle being fraternity and good-fellowship. A homogeneous organization without faction, partisan feeling or sectional bias, it tends to broaden, liberalize, and fraternize, its members being equally at home in Massachusetts, California, North Dakota and Louisiana. No pent up Utica contracts its powers, and when off on an annual tour, its members feel and act as one great family; become acquainted and fast friends for life.

It is difficult for our members who come from the far North to realize the difference in temperature in this country, or the changes wrought by a few hundred miles of latitude. Leaving their homes locked in the embrace of the ice-king, mother earth covered with snow, and heavy wraps much in evidence, they here find real spring weather, under these Southern skies, with roses and violets in bloom and evenings comfortable out-doors. What a change! What a delight!

Arriving in your city as the advance guard of his imperial majesty Rex, with New Orleans aglow in pomp and splendor, and gorgeous in its carnival habiliments, we have seen much of interest, wonder and amazement. We have been regaled by regal carnivals by day and enjoyed royal pageants by night; have attended receptions, balls and entertainments, till sight became dim and brain tired, wearied with the intoxicating pleasure of the ever-changing kaleidoscope. In brief, we have seen Mardi Gras—and shall not soon forget it. The recollection of its grandeur, of historic tableaux, beautiful pictures moving as though floating in air, of classic groupings, of exquisite blendings, of princely robes, of rich costumes, of gilded floats, of gay cavaliers and dark-eyed maidens, will remain with us as beautiful memories, till we come again and live over with you once more these moments of perfect bliss.

We are happy to meet in this famous historic old city, founded in 1718 by that kind French-Canadian, Jean Bienville, who wrested it from Indian wilds and laid the foundation for this great Southern metropolis. Many of our members, especially those who have never before visited here, have tramped through its quaint old quarters, spending hours in its shops of

SCENES IN NEW ORLEANS, MARDI GRAS, REX PARADE.

- 1.—Float on St. Charles Street. 2.—Float on St. Charles Avenue. 3.—Flower Dance, Mardi Gras Parade. 4.—Snow Flake Dance.

antique wares; have given a morning to French market, talked to the Gascon, bought fruit from the Dago, drank dripped coffee with the Spaniard, purchased boutonnières from the old Creole woman, and attempted to joke with the stolid aborigine of the forest; have admired your odd old buildings, and learned of their ancient and interesting history; strolled through your parks, and plucked roses from your flower gardens; have paused with uncovered heads in Jackson Square, at the spot where "Old Hickory" was crowned with laurel by young ladies, who scattered flowers in his pathway as he returned to the city after defeating Packenham on the plains of Chalmette.

Louisiana is a state rich in historic characters. It has nursed and cradled celebrated historians, distinguished novelists, sweet poets, great lawyers, eminent judges, famous educators, able clergy, worthy statesmen, grand soldiers, renowned musicians, splendid doctors and strong editors.

To read of the history of Louisiana, is to recall the trials and struggles not only of the early French settlers, but its later-day heroes as well, men who have impressed themselves on the history of the times, and written their names high on the scroll of fame.

This state has given to the country some of the grandest men of earth. They have always been true in every relation of life—in pioneer days, in the formative period of the state, in civil affairs and military matters; always the same consistent patriots, always the devoted friends of the state; whether in the home, on the hustings or marching to the notes of martial music. They have ever been grand men, great men, noble men!

Time cannot efface the deeds and acts of Gen. Claiborne, your first civil governor, or dim the lustre that hovers around the names of Villere, Roman, White, Johnson and Allen. And who can forget John Randolph Grimes, the compeer and associate of Webster and Stephen Mazarou, great masters of the law, who gave majesty and power to hustings; and that wizard of language, Lafcadio Hearne, and George W. Cable, who charmed your finer senses and administered to your refined intellect.

Your state honored the country in giving to it one of the best presidents, Gen. Zachary Taylor, who won his spurs on the battlefields of Mexico, while commander-in-chief of the American army.

Here was also born the great naturalist and ornithologist, Audubon, whose works on birds are regarded as standard authority the world over. He brought woodland songsters from glen and dell, and made them speak and sing to us from his books.

Louisiana contributed to the "Lost Cause" a trio of great generals—C. T. Beauregard, Leonidas Polk, and Braxton Bragg; and though the cause for which they fought went down in defeat, they will ever be known in the history of this grand and magnanimous country, which recognizes merit wherever found, as great military commanders, and the compeers of Sherman, Grant and Sheridan, great generals of the opposing army, the former of whom resigned the superintendency of a military college of this state, when the tocsin of war was sounded in 1861, to take up arms with the people of his own section.

This state sent to the United States senate her greatest constitutional lawyer, Judah P. Benjamin, who held three successive positions in the Confederate cabinet. A voluntary exile from his country after the civil war, he went to London, acquired a large practice, and was there honored by the appointment of Queen's counsel, an unusual distinction for an American. Louisiana also sent to the United States senate the lamented Eustis, who was the first ambassador appointed from the United States to the court of France, and in thus honoring him, the country honored itself.

Here lived for many years of his eventful life the grand old chieftain, Jefferson Davis; here he died, and here his body found temporary sepulture. Here the gallant Hood lived and died. Here lived Longstreet, the sole surviving general of the war between the states.

Here Father Ryan, the poet priest, spent many years of his beautiful life. And this was the home, also, of the world's greatest prima donna, Adelaide Patti, who has thrilled the earth with her matchless voice.

Coming down to a later period and passing over the most humiliating epoch in Louisiana's history, when vice stalked abroad at noonday and ignorance sat in the temples of justice, we cannot pass by, without a word of praise to the glorious record, and splendid achievements, of brave Gen. Ogden, of D. B. Penn, Francis T. Nichols, L. A. Wiltz, S. D. McEnery, N. C. Blanchard, and last, but by no means least, Murphy J. Foster.

What lover of sweet thoughts, lofty ideas and pure English has not read and admired the descriptive sketches of Mrs. M. R. Field (known as "Catharine Cole"), the beautiful poems of Mrs. Nicholson, who wrote under the nom de plume of "Pearl Rivers," or the poems and criticisms of Mrs. Marion A. Baker? They graced literature, honored their state, and their works will live after them.

It is said that New Orleans is unlike any other American city, and we are glad that it is so, for much of the city's pride and glory are largely due to its distinctive characteristics. Founded and peopled by the French, her streets and institutions largely partake of the nomenclature of that nationality. The state also differs with others in its system of jurisprudence, adhering to the old civil law of the code Napoleon, while others have adopted the common law practice. But these differences

affect not the people, unless, following after the old French idea, they still retain the proverbial politeness and polished courtesy of their distinguished progenitors, striking examples of which we see on every hand, and enjoy here tonight.

The National Editorial association is grateful, gentlemen, for the courteous hospitality you have so generously extended during its pleasant sojourn in your lovely city, and in the name of the delegates here assembled I thank you most heartily for your words of welcome and cordial greeting,

And may our members from the North,
The East, the South, the West,
When home once more, from Southern shore,
Feel by this visit blest.

FIFTEENTH ANNUAL CONVENTION OF THE NATIONAL EDITORIAL ASSOCIATION

Held at New Orleans, La., March 1, 2, and 3, 1900.

R. M. WHITE, Recording Secretary.

OFFICIAL REPORT. ERASTE VIDRINE, Stenographer.

FIRST BUSINESS MEETING.

Morning Session.

The delegates assembled on Thursday morning at 10 o'clock a. m., in the Odd Fellows' Hall, on the first day of March, 1900.

Chairman R. H. Henry called the meeting to order.

Mr. J. L. Powers of Jackson, Miss., on being called upon by the chairman, offered prayer as follows:

"Our Father, we thank Thee that in Thy good providence we are again spared to come together as an association. We do thank Thee for the rest of another night, and the light of this beautiful day, and for the privileges which we are permitted to enjoy at Thy hands. Be with us in our deliberations, guide our thoughts and direct what we shall say and do. We thank Thee that our time is in Thy hands, and that we are directed and controlled and governed and provided for by Thee. Help each and every one of us to put our trust in Thee and seek to be guided by Thine eye, through all the affairs and vicissitudes of life. Be with us, we pray Thee, in all of our labors and in all our journeyings. Remember our loved ones at home. Remember us, O Lord, in all our undertakings. May we be alive to the responsibilities and privileges and duties that rest upon us, and when Thou hast been served on earth, be with us in heaven. This we humbly ask for our Redeemer's sake. Amen."

The chairman then proceeded to name the committee on credentials as follows:

COMMITTEE ON CREDENTIALS.

James J. Gibbs of Ohio.

J. E. Junkins of Kansas.

A. B. Burke of Pennsylvania.

Will A. Steele of Washington.

W. W. Folsom of Arkansas.

The committee was requested to retire to some suitable place and make its report within twenty minutes.

The chairman next appointed Mr. W. Bolton of Oklahoma sergeant-at-arms, and then delivered the following address:

ANNUAL ADDRESS OF PRESIDENT R. H. HENRY.

Ladies and Gentlemen of the National Editorial Association:

The fifteenth annual convention of the National Editorial association assembles today in the city of its birth, having been organized in New Orleans, Feb. 19, 1885, during the Cotton Centennial Exposition, Hon. B. B. Herbert being the originator of the idea and the real founder of the association.

The initial meeting was held in the press headquarters of the exposition; was called to order by Mr. Wm. H. H. Judson, chief of the department of publicity. He requested Mr. Herbert to act as chairman and explain the object of the meeting, which he did. In noting the new organization, the city papers said that over one hundred editors were present, but it is matter of regret that a full list of the organizers was not printed. A constitution was adopted, business matters discussed, and the following officers elected: President, B. B. Herbert, Red

Wing, Minn.; vice president, C. H. Jones, Jacksonville, Fla.; secretary, John G. Elliott, Dallas, Texas; treasurer, Ezra Whitman, Baltimore, Md. And thus was launched the great National organization which holds its fifteenth anniversary here today.

The fourteenth annual meeting, held at Portland, Ore., July 5-7, 1899, selected New Orleans as the present place of meeting, and gave the executive committee power to fix the date. The committee assembled in St. Louis, Oct. 12, 1899, on the call of the chairman, with some forty members present. After some discussion as to the time of holding the New Orleans meeting, a resolution was adopted fixing the date March 12. This action was afterwards reconsidered, and a substitute adopted, authorizing the officers to call the convention between March 1 and 15, as to them might seem best after conferring with citizens of New Orleans. The matter was taken up and discussed with the papers, Press club and commercial bodies of the city, and the consensus of opinion was that the association should reach here in time to see the Mardi Gras festivities, Feb. 26, and hold its first regular business meeting March 1. This suggestion was adopted. This explanation is made to show that the officers have not exceeded their instructions.

The executive committee also directed the officers to arrange for a trip to Havana, if found practicable; or provide for a visit to California, in the event the Cuban trip could not be made.

Your president, acting under direction of the other officers, made several visits to New Orleans with a view of arranging for the Cuban tour, and wrote numerous letters to different steamboat agencies in New York, in which he was assisted by your corresponding secretary, Gen. G. Y. Gilmore, Col. John Dymond and others, but was unable to secure a steamer with sufficient capacity to carry even one-third of our membership. Every effort possible was made to secure a steamer, but without avail—and we were forced, reluctantly, to abandon the Havana trip. Your corresponding secretary then, after a lengthy correspondence, and much delay, succeeded in getting transportation to and from Southern California for such delegates as may desire to make the trip, and will lay the matter before the convention.

PROGRAM FOR THIS MEETING.

The executive committee also authorized your president to arrange a business program for this meeting, or rather adopted the plan he had outlined, giving him power to arrange for the carrying out of the details. Acting under that authority, he has appointed a number of gentlemen to prepare and read, during the sitting of this convention, practical papers pertaining to the interest of the craft, which will be open for discussion by the association.

ADVERTISING RATES.

The greatest problem presented to the press, and the one most difficult of solution, is that of advertising rates. It is the vital question of the day, from the publisher's standpoint, the one most affecting his interest, as from this source must come the greater part of his revenue. It may be likened to the tariff question, as the object is the same—the raising of sufficient revenue. The rate must not be fixed so high as to become prohibitive, nor should it be so low that it will not produce the revenue required in the successful conduct of our business. A fair and equitable rate should be established, one alike just to advertisers and publisher. How shall we reach this? Is the question of all questions. How shall we determine this? Is the problem which now confronts us, and which should receive the careful and intelligent consideration of this association. Let us approach it in a plain, practical, business-like way, as the merchant figures his profits and losses, as the banker computes his discounts and interests, as commercial associations estimate the value of their investments. Why should not the press, the boasted leader of thought, the advance guard of progress and molders of public opinion, not know the real value of its advertising space? And when once determined, why not have the courage to stand by the rates agreed upon? The question is difficult to reach, but can, and should be, worked out. A paper on advertising rates is to be read and discussed at this meeting, and should be referred to a special committee, with instructions to figure out a reasonable and just basis, and report the result of their action to this convention.

VALUE OF ADVERTISING SPACE.

Desiring to ascertain the value placed upon advertising space by advertising agents, your president visited a number of the agencies last fall, and asked the head of each concern what he considered a fair value per line per thousand circulation, and found their estimates to vary from one-third to one-half cent net per agate line on yearly contracts. As the advertising agents cannot be charged with figuring a higher rate than the real value, these estimates can not be considered excessive, and are submitted for what they are worth, as they may form the basis for reaching a rate that the association can accept and stand by.

CARD AND FLAT RATE.

In this connection attention has been called to the rate-card adopted by the California Press association, as published in the National Printer Journalist, Chicago, which is herewith sub-

mitted, as it shows much thought and careful study of this annoying and complex question. The only objection that can be urged against it is that it provides for a sliding scale instead of a flat rate, the latter being regarded as preferable and more business-like by advertisers. The flat-rate system has been adopted by most of the large newspapers, and has proven more satisfactory than the old card-rate. The advertiser is at once impressed by it, and naturally concludes that the paper adopting it knows the real value of advertising, and is conducted on established, business-like principles. He will soon decide that the rate is reasonable and close a contract, or dismiss the matter without further correspondence. The flat-rate plan is growing in favor, and the time will come when it will be universally adopted by publishers.

THE ADVERTISING AGENT AND FOREIGN ADVERTISER.

The advertising agent and foreign advertiser will never fail to be objects of interest to this association and the press of the country. They are regarded as the cheapest class of patrons with whom we deal. They know more about our business than we do ourselves, and are not slow in offering us kind and fatherly advice. Especially is this the case with the advertising agent. He is a rare genius, of distinguishing characteristics of nerve, gall, and brass, and these frequently constitute the greater part of his capital, assets only available for credit in the average newspaper office. Modesty is a word unknown in the lexicon of the advertising agent. He needs it not. So considerate is the advertising agent for his country cousin that he never worries him by asking the rate on advertising. He always fixes it himself, and his feelings are ruffled and nature shocked, if the rate is not promptly accepted by return mail. If we decline to accept the price he offers for a monthly "ad" figured on a yearly rate basis, he expresses great surprise and intense indignation, and forthwith enters upon a long and labored correspondence to convince us that we are wrong, don't understand our business, and endanger the stability of our institutions by refusing his kind and unselfish offers. He argues with the skill of a trained lawyer, and almost convinces us to believe in him.

The advertising agent is a good judge of human nature and newspaper affairs. His memory is wonderful, and woe to the

paper that ever, in a thoughtless moment, permits an advertisement inserted at a low rate. Once allowed, this rate will be quoted as a basis for all future contracts by the agent, until the end of time.

There is but one way to deal with advertising agents—fix your rates and stand firmly by them. After you have carefully submitted your estimates and given the lowest price at which you think you can afford to do their work, yield not to their importunities or counter-propositions. They will soon learn that they are dealing with business establishments, and must either pay their prices or stay out, and as a rule, they will pay the rate demanded. In this connection, the following extract is taken from an address delivered before the Agate club at Chicago, a few days ago, by an advertising agent. It contains food for thought. Discussing advertising rates, etc., the speaker said:

"The publisher, it seems to me, needs really more education than the advertiser. How many publishers are there who really comprehend the value of the advertising space which they sell?"

This same agent, in conversation with the speaker a few months since, and from whom much valuable information was obtained, said that publishers did more to cheapen their wares than advertisers or advertising agents, by accepting any and all propositions made them; that there was but one thing for publishers to do, name their rate and force advertisers to pay it. They are masters of the situation, if they would come together, agree on a rate, and stand immovable when importuned by advertisers and advertising agents.

TRUSTS AFFECT ADVERTISING.

One among the many evil effects of trusts—and they are too numerous to discuss here—is that they tend to decrease advertising. Notably is this the case in the baking powder trust. Formerly the three companies composing this trust were large advertisers, two of them spending, it is understood, over a million dollars each, annually, with the newspapers of the United States. But since the formation of the combination more than two-thirds of the advertising has been withdrawn, and an army of clerks, laborers, salesmen, etc., thrown out of employment. The trust evil is a difficult one to reach, but our association should, in view of the fact that it is an economic, and not a political question, speak out in no uncertain terms against trusts.

THE PAPER TRUST.

This leads to a reference to the paper trust, which is now receiving so much attention from press associations of different states, and the papers of the country generally, without regard to party predilections. As you know, the paper trust has advanced the price of news print from 40 to 60 per cent, and threatens to still further advance it. There is no reason why the papers of the country, regardless of party lines, should not unite and make war upon the paper octopus. It is a matter of self-preservation, and this association should adopt a courteous, but earnest, memorial to congress praying for the removal of all duties upon newspaper print, upon wood pulp, and other articles which enter into the manufacture of paper.

The American Newspaper Publishers' association has adopted resolutions demanding the repeal of all laws calculated in any way to foster or protect the paper trust. The Pennsylvania State Editors' association have passed similar resolutions, as follows:

"Resolved, By the Pennsylvania State Editorial association. That no trust should be fostered by legislation, such as tariff duties; in other words, that, if trusts are honestly organized to reduce expenses, and consequently, the cost of products, they should depend upon their own business sagacity, not upon protection given to them by the government.

"Resolved, That, holding this belief as to all trusts, and believing that the recent increase in the cost of white paper and type metal is due, in part at least, to the organization of trusts, and that it is made possible by tariff duties, we appeal to congress to repeal such tariff duties as serve to protect the trusts in their extortionate charges."

The Colorado State Editorial association declared against the paper trust in the following emphatic terms:

"In the paper trust we recognize only an enemy to the newspaper publishers and readers, and therefore to society and good government. By combining to destroy competition in the manufacture of paper and thereby unduly to raise the price to the publisher, it has forfeited all claim to the consideration and bounty of the government, and it is the plain duty of congress to repeal all laws that tend to enable the trust to carry out its nefarious system of plunder.

"To the end that the newspapers of the United States may free themselves in part, at least, from the exactions of the paper trust, we demand that the congress of the United States shall immediately repeal all duties on paper, upon wood pulp for the manufacture of paper, and upon every other article that enters materially into the manufacture of paper, and we will consider as our enemies every senator and congressman who shall fail to do his utmost to repeal such laws at the present session of congress."

The Missouri Press association, at its recent meeting, adopted a resolution authorizing the drafting of a memorial to congress against the paper trust, in words as follows:

"Whereas, It is alleged that the heavy advance in the price of print paper is the work of the International Paper company, and that the tariff of \$6 per ton upon white paper and \$1.67 per ton on wood pulp is to the advantage of said trust in fixing higher prices on paper; therefore, be it

"Resolved, That the president and secretaries of this association be and are hereby instructed to prepare a memorial asking congress to provide legislation placing white paper and the material from which it is made, upon the free list, and such other legislation as will prohibit combinations and trusts of like nature; that we cordially indorse the action of Hon. Champ Clarke and Hon. Dorsey W. Shackleford in introducing bills in congress removing this tariff from white paper, as well as other congressmen who are aiding such legislation, and we hereby earnestly petition our senators and representatives to heartily support this and all similar measures."

The above are only samples of resolutions adopted by other State Press associations, and are commended to the National Editorial Association, with the suggestion that some action be taken against the great paper trust.

BUSINESS IN OUR BUSINESS.

It is true, and pity it is, that newspapers, as a rule, are lacking in correct business methods, a fact that the public is not slow to learn and profit by. We need more business in our business, and should conduct our papers upon the same business principles as are applied to other enterprises. The lack of such rules has brought the newspaper business into disrepute, and practically bankrupted many worthy publishers. An old and successful publisher has agreed to read a paper under this heading, which will doubtless be one of the most interesting of the meeting; and by its discussion, many new and valuable thoughts will be developed.

FRATERNAL DELEGATES.

Following a line of precedent, your president, in September last, appointed from the membership of this association a list of fraternal delegates to the National Typothetae, which held its annual meeting in New Haven, Conn. A report will be made by those attending the meeting, and the proceedings of the Typothetae should interest every publisher, as the association deals largely with the important question of labor and other matters affecting the interest of publishers.

QUESTION OF REPRESENTATION.

Notice has been given that another effort will be made at this meeting to change Article 3, Section 1, of the constitution so that representation will be restricted to state and territorial associations only. This matter has been brought up at several meetings, and ably argued on both sides. Desiring to treat all parties with absolute fairness and strict impartiality, your chairman will endeavor to appoint a liberal, conservative committee on constitution, to whom all contemplated changes in the instrument must be referred.

THE NEWSPAPER DIRECTORY FIEND.

The newspaper directory fiend is again in the land. This fertile genius comes around regularly every year, in and out of season. He springs up with every new agency, and sings his siren song to the unsuspecting publishers. The advertising agency that has no newspaper directory is a sad and lonesome concern. It is behind the times, not up-to-date, and will be compelled, sooner or later, to go into involuntary bankruptcy. The directory scheme, fraud and swindle that it generally is, is about all the assets some agencies have. Of course all publishers know the purpose, object and aim of the average directory—to gull publishers by exchanging worthless space for advertising bills. There are a few creditable directories, which are carefully edited and are really valuable mediums, as they contain information that advertisers desire, but most of them are humbugs, and printed for no other purpose than to secure credit in newspaper offices, used to place cash advertising on an exchange basis. Give them a wide berth.

AN EXTRAORDINARY PROPOSITION.

An association styling itself the "Association of American Advertisers," has recently sent to publishers a most extraordinary proposition. The main purpose of the association is explained in its circular to be to "establish the actual circulation of newspapers," and it might have added because it did not believe the statements of the publishers. The letter of the secretary modestly says: "I am instructed to ask if you would be willing to submit your books and records to the inspection of an accredited representative of the association, at any time that might be selected by the association during the present year, without further notice?" This possibly exceeds in cheek any proposition ever before submitted to the press of the country. This association is made up of two or three dozen advertisers, but it would be difficult to find three of their advertisements in the same paper. There should be but one answer to the question, "No." Why should we permit a class of men to prowl around our office who have little or no representation in our advertising columns? This only shows to what extremes ad-

vertisers will go if permitted, and the little confidence they have in publishers.

PUBLISHERS' UNIONS.

The advertising agent is a resourceful genius. If he can not induce a publisher to accept ink, type, space in directories or such other trade as his storehouse is usually filled with, and most of it worthless, he will endeavor, as a last resort, to induce him to subscribe to the publishers' union in payment of advertisements. These publishers' unions are gotten up for the same reason that most of the directories were conceived, to pay advertising bills, to take the place of cash. Beware of the publishers' unions, for as a rule they are a delusion and a snare, set to catch the unsuspecting.

TRADE ADVERTISEMENTS.

Trade advertisements should also be shunned, for they cheapen and tend to degrade our business. You can not pay printers, rent, paper bills, or feed a growing family on trade advertisements. There are rare exceptions where a trade advertisement might be made profitable, but as a rule they are a good thing to let alone. The paper that once establishes a reputation in the trade advertisement line soon forfeits its independence and stalwart manhood. Better sell your space for cash and pay for what you buy in the currency of the realm. And, speaking of independence, nothing pays so well in a newspaper unless it be politeness or civility; and the two combined prove a great capital. Independence, politeness, and firmness will do more to secure a good advertising contract than anything else. These prerequisites are absolutely necessary in the successful conduct of a newspaper.

PROCEEDINGS SHOULD BE PRINTED IN PAMPHLET FORM.

Your chairman would urge upon the association the necessity for printing an accurate report of our proceedings in pamphlet form, as well as in the official journal. This, an association that aims higher than most organizations, is perhaps the only national organization in existence that does not print its proceedings in an enduring form. It is made up of state and district associations, not one of which neglects to print its proceedings. The proceedings should contain only the actual record of the association, that which occurs within the convention hall, and the secretary should, in addition to the copy furnished the printer, record the proceedings in a book kept for this purpose, making a permanent record. This suggestion has been made before, but always defeated on the plea of lack of funds. Such an excuse should not be tolerated longer. If we have not sufficient funds to pay for this work, levy an assessment and raise it. We owe it to our association and ourselves, to the dignity of the position we occupy before the world, to have our proceedings printed. The plan adopted some years ago to make a complete stenographic report of our proceedings should not, under any circumstances, be abandoned, and when the stenographer is not furnished by the town in which we meet, he should be employed by the association.

LIBEL COMMITTEE.

The libel committee appointed to draft and submit a uniform libel law will report the result of their deliberations to this meeting, and their work should result in some tangible good, as the libel question is one in which we are all more or less interested. The report should be intelligently discussed, and some definite action agreed upon, as the committee, which has been continued for several years, should have matured some definite plan of action by this time.

THE LEGISLATIVE COMMITTEE.

The committee on legislation will also submit an important report, as they have made a careful examination of all matters before congress affecting the interests of publishers, and have important suggestions to make.

COMMITTEE ON NECROLOGY.

A committee on necrology has been appointed, and should submit their report during the present session. This committee made no report at the last meeting and, as a result, the records failed to show proper respect to our deceased members. This is a serious and important matter, and should be given earnest consideration.

BROADEN OUR ASSOCIATION.

It is a matter of regret that larger dailies, with a few honorable exceptions, neither affiliate with nor give this association proper recognition in their columns. Considering the national character, beneficial aims, and lofty purposes of our organization—the largest newspaper association in the world—this disposition to ignore us on the part of the larger dailies, and notably the Associated Press, to which many of our members belong, is cause of surprise, and suggests the thought that we should endeavor to broaden our association, and try to induce the leading dailies of the country to join it and become active members, for our interests are identical.

THE ASSOCIATION FLAG.

The officers of the association were authorized by the Portland meeting to take into consideration the suggestion of Col. D. H. Elliott, flag custodian, that the association flag be sent to Paris to be used at the unveiling of the statue of Lafayette, July 4, 1900; and will report the result of their decision to this meeting.

ANNIVERSARY MEETING.

Under the direction of the executive committee, your president has made up a program for anniversary evening, and has invited many distinguished ladies and gentlemen to take part. This will doubtless prove one of the most interesting events of this annual meeting, and should be attended by all members.

Asking your indulgence and support during the deliberations of the convention, with the pledge that every member shall be accorded courteous treatment, and given a hearing upon all

Group of Missouri Editors in Summer House at National Cemetery, Vicksburg.

questions that may come before the body, your president now declares the fifteenth annual session of the National Editorial association open, and awaits the pleasure of the convention.

Mr. James J. Gibbs then made a report for the committee on credentials, and moved the adoption of said report, which motion, being duly seconded, was put to the house and carried.

The report was as follows:

DELEGATES TO THE FIFTEENTH ANNUAL CONVENTION OF THE NATIONAL EDITORIAL ASSOCIATION, NEW ORLEANS, LOUISIANA, MARCH 1-3, 1900.

A star (*) preceding name of delegate indicates that he is accompanied by his wife or other person.
Two stars (**) indicate two persons.

OFFICERS:

President—*R. H. Henry, Clarion-Ledger, Jackson, Miss.
Vice Presidents—*Matt Parrott, Reporter, Waterloo, Iowa; *F. B. Baillio, Review, Cleburne, Texas; *Albert Tozier, Pythias, Portland, Oregon.
Corresponding Secretary—**J. M. Page, Democrat, Jerseyville, Ill.
Recording Secretary—*R. M. White, Ledger, Mexico, Mo.
Treasurer—**James G. Gibbs, Reflector, Norwalk, Ohio.
Past Presidents and Life Members—*B. B. Herbert, National Printer Journalist, Chicago, Ill.; C. H. Jones, Paper World, New York; A. B. White, State Journal, Parkersburg, W. Va.; James R. Bettis, 212 South Third street, St. Louis, Mo.; Charles A. Lee, Gazette and Chronicle, Pawtucket, R. I.; *E. W. Stephens, Herald, Columbia, Mo.; W. S. Capeller, News, Mansfield, Ohio; B. J. Price, Star and Times, Hudson, Wis.; Walter Williams, Herald, Columbia, Mo.; A. O. Bunnell, Advertiser, Dansville, N. Y.; R. H. Thomas, Farmers' Friend, Mechanicsburg, Pa.; Louis Holtman, Democrat, Brazil, Ind.; Joseph B. Maccabe, Argus, East Boston, Mass.
D. H. Elliott, flag custodian, Charleston, S. C.; W. E. Pabor, poet laureate, Fact, Denver, Colo.
Alabama, 8—*W. H. H. Judson, executive committeeman, Bessemer Weekly, Bessemer; *W. W. Screws, Advertiser, Montgomery; *Jacob Pepperman, Alabama Knight, Montgomery; Emil Lesser, Courier, Birmingham; J. A. Rountree, Dixie Manu-

facturer, Birmingham; I. A. Levy, Mirror, Forkland; **Mrs. M. B. Pierce, Times, Citronelle; J. B. Stanley, Advocate, Greenville.

Arkansas, 6—W. W. Folsom, executive committeeman, Gazette, Hope; G. W. Hendricks, Democrat, Lonoke; Powell E. Carden, Meteor, Malvern; Miss Myrtle Carden, Meteor, Malvern; Miss Willie Hicks, Democrat, Lonoke; Miss Annie Webb Folsom, Gazette, Hope.

California, 2—D. W. Ravenscroft, Courier, Petaluma; Paul W. Moore, News, Redland.

California, Southern, 2—Edgar Johnson, Tribune, Fullerton; R. E. Nickel, Rooster, Acton.

Colorado, 5—Wolfe Londoner, Cyclone Cellar, Denver; *W. C. Calhoun, Illustrated Weekly, Denver; **F. J. Arkins, Times, Cripple Creek; T. M. Patterson, Rocky Mountain News, Denver; L. Gaylord, Evening Telegraph, Colorado Springs.

Connecticut, 3—Geo. C. Woodruff, executive committeeman, Enquirer, Litchfield; J. A. Bolles, Gazette, New Milford; H. B. Hale, Gazette, East Hartford.

Delaware, 1—*Robert G. Houston, executive committeeman, Republican, Georgetown.

Idaho, 2—T. G. Reese, Times, Moscow; Miss Jessie Davis, Press, Kalama.

Illinois, 17—*W. H. Hainline, Journal, Macomb; Geo. W. Cyrus, Journal, Camp Point; *F. E. Pinkerton, Public, Clinton; *J. J. Penny, Independent, Murphysboro; *F. S. Greenleaf, Journal, Savana; *C. C. Chain, Democrat, Bushnell; **Geo. W. Harper, Argus, Robinson; *Miss F. E. Wright, Herald, Hinsdale; *S. W. Culp, Times, Morrisonville; *W. W. Lewis, Advocate, Greenville; *J. S. Abbott, Constitution, Robinson; *J. A. Mehlhop, Democrat, Havana; *C. E. Hull, Advocate, Salem; C. D. Tufts, Democrat, Centralia; F. H. Hall, News, Joliet; C. W. Tietz, Messenger, Medora; *H. Jayne, Courier, Taylorville.

Illinois—Democratic, 1—C. J. Lumpkin, executive committeeman, Enquirer, Carlinville.

Illinois—Military Tract, 4—Miss Effie M. Coulson, proxy for J. C. Coulson, executive committeeman, La Harper, La Harpe; *L. S. Reid, Review, Dallas City; I. A. Ewing, Review, Monmouth; *Jos. F. Moore, Review, Monmouth.

Illinois—Republican, 2—W. L. Jones, executive committeeman, Journal, Lebanon; W. E. Craft, Gazette, Virginia.

Illinois, Southern, 1—H. D. O'Brien, executive committeeman, Picket Guard, East St. Louis.

Illinois—Woman's, 5—*Mrs. Fannie M. Harley, Universal Truth, Chicago; *Mrs. Amelia S. Sullivan, West End Advocate, Chicago; *Mrs. Frances E. Owens, The Chef, Chicago; *Mrs. Cynthia A. Mead, Standard, Galva; *Mrs. E. Jeannette Abbott, Argus, Sandwich.

Indiana—Democratic, 9—*B. F. Louthian, executive committeeman, Pharos, Logansport; F. A. Arnold, Star-Press, Greencastle; *John W. Barnes, Pharos, Logansport; *E. E. Cox, Telegram, Hartford City; *A. B. Crampton, Citizen, Delphi; *W. S. Chambers, Democrat, Newcastle; **B. F. McKey, Pioneer, Lebanon; *Luther Short, Democrat, Franklin; W. H. Campbell, Telegram, Hartford City.

Indiana, Northern, 3—F. W. Willis, executive committeeman, Press, Waterloo; C. B. Unger, News, Middletown; *George Barnes, Journal, Logansport.

Indiana—Republican, 7—*S. N. Cragun, executive committeeman, Patriot, Lebanon; Will Beeson, Journal, Winchester; *Will H. Craig, Ledger, Noblesville; J. A. Kemp, Leader, Salem; M. E. Garber, Courier, Madison; Henry Geisler, Times, Hartford City; E. O. Rose, Magnet, Angola.

Indiana, Southern, 4—*J. W. Cockrum, executive committeeman, Journal, Oakland City; L. G. Newby, Tribune, New Castle; C. W. Thomas, Democrat, Corydon; *J. P. Cox, Messenger, Owensville.

Inland Dailies, 5—*A. W. Glessner, executive committeeman, Gazette, Galena, Ill.; *P. S. McGlynn, Despatch, Moline, Ill.; *F. R. Gilson, Palladium, Benton Harbor, Mich.; Jas. J. LaVelle, Argus, Rock Island, Ill.; *G. T. Campbell, Argus, Owosso, Mich.

Iowa, 5—C. M. Junkin, executive committeeman, Ledger, Fairfield; *A. W. Lee, Courier, Ottumwa; **F. S. Verbeck, Eagle, Vinton; **W. F. Parrott, Reporter, Waterloo; *I. A. Nichols, Citizen, Iowa Falls.

Iowa, Fifth District, 1—*E. E. Taylor, executive committeeman, Star-Clipper, Traer.

Iowa, Northeast, 2—*Sam G. Sloane, executive committeeman, Citizen, Charles City; G. P. Linn, Gazette, Sumner.

Iowa, Upper Des Moines, 2—A. M. Adams, executive committeeman, Independent, Humboldt; *W. I. Branegan, Democrat, Emmetsburg.

W. W. FOLSOM, Arkansas.

Committee on Credentials.

By Mr. E. W. Stevens of Missouri—I move that the address of the president be referred to such committee or

committees as he in his judgment might think fit to appoint, with the request that they take up the suggestions contained in his paper and report at this meeting.

By the President—There is a committee already, I believe, appointed at Portland, under the head of Officers' Report. I expect that it will probably take the place of the motion. Shall I appoint the committee—the committee that Mr. Stevens refers to? The committee suggested by Mr. Stevens of Missouri will consist of J. W. N. Burkett of Tennessee, Wolfe, Londoner of Colorado, J. M. S. Hunter of Maine, Miss Edith Meredith of Kansas, H. C. Page of New Jersey.

Mr. R. M. White moved that all resolutions be referred to the proper committees without being read. Motion adopted.

The chairman then announced other committees as follows:

Committee on Program—Joseph Leicht of Minnesota, Mrs. E. Jeannette Abbot of Illinois, Miss Delia Amos of Ohio, Mr. W. M. Pierce of Virginia.

Committee on Constitution—E. W. Stevens of Missouri, W. E. Bolton of Oklahoma, J. H. Smith of New York, J. W. Cockrum of Indiana, T. J. Cunningham of Wisconsin.

Committee on Resolutions—W. W. Severs of Alabama, Mrs. Edyth Weatherred of Oregon, F. A. Arnold of Indiana, L. A. Sherman of Michigan, J. C. Hemphill of South Carolina.

Committee on Finance—A. W. Glessner of Galena, Ill.; T. J. Laning of Norwalk, Ohio; J. L. Power of Mississippi, J. Irvin Steele of Pennsylvania, R. J. Houston of Delaware.

Committee on Ways and Means—W. F. Jarvis of Boston, M. G. Sperry of West Virginia, C. F. Lehman of Texas, D. W. Ravenscroft of California, H. B. Hale of Connecticut.

In Front of the Old State Capitol, Jackson, Miss.

Col. J. L. Powers, the nestor of Mississippi editors and Secretary of State, with group of citizens.

Committee on Necrology—F. G. Usilton of Maryland, M. F. Conley of Kentucky, M. B. Pierce of Alabama, C. T. Fairfield of Vermont, J. G. Trimble of Louisiana.

Committee on Legislation—Garry A. Willard of New York, L. C. Taylor of South Dakota, H. B. Varner of North Carolina, E. H. Pierce of Massachusetts, A. J. Langer of Nebraska.

The president then stated that these were all the committees, except the committee on legislation, which is a standing committee.

The president stated that he desired to call out the list of names of those who had been appointed to read papers. This disclosed the fact that several of the gentlemen mentioned on the list were absent; but among them it appeared that Mr. Lynch Perry of Tennessee and Mr. C. J. Kendrick

of Arkansas had sent their papers to be read, whereupon some member moved that the papers of Mr. Perry and Mr. Kendrick be read by the gentlemen in whose hands they were. This gave rise to some discussion, the president stating that there had been a resolution adopted to the effect that no papers be read at the anniversary meeting, except by those by whom they were prepared, but concluding that the matter was in the hands of the assembly, as it could not be bound by a resolution of a committee. Some member then moved to lay the matter on the table, subject to call. This motion was carried.

The convention then adjourned until 2 o'clock p. m.

AFTERNOON SESSION.

March 1.

On the meeting being called to order, Mr. Stevens of Missouri made the following motion:

"Mr. Chairman: When I made the motion this morning to lay the motion to read Mr. Perry's address on the table, I did so in order that we might begin the regular program this afternoon. This morning's session was a preliminary one entirely, and, as we have no regular program, we must have one, and I move, first, that we adopt the program as printed in the National Printer-Journalist and proceed with that order; and, second, that the papers of gentlemen who are absent, and which have been sent here, be read by their representatives in the order in which they appear on the program."

This motion was duly seconded and carried.

The first paper read was that of Mr. A. W. Lee, editor and owner of the Courier, of Ottumwa, Iowa, on "The Best Method of Securing Circulation for a Local Daily," which follows:

BEST METHOD OF SECURING CIRCULATION FOR A LOCAL DAILY.

By H. W. Lee, Ottumwa, Iowa.

When President Henry invited me to address the National Editorial Association upon "The Best Method of Securing Circulation for a Local Daily," he evidently was attending strictly to business, and thinking only of business. The subject calls neither for rhetoric nor oratory. It admits of no flights of fancy or display of sentiment. It contains no elements of passion, politics or partisanship. It does not come within the range of editorial courtesy, or even the mildest of newspaper warfare; it offers no opportunity for heated discussion; it is indeed a cold, hard, matter-of-fact business proposition, which persists in thrusting itself day after day upon the progressive publisher, who, the more he thinks about it, the more he is not sure that he has solved the problem correctly, or indeed that he has ever solved the problem at all.

If I held in my possession a dead sure method for securing circulation for a local daily, regardless of quality or conditions, there would be "millions in it," and I would immediately organize a newspaper trust, in which I would be president, vice president, secretary, treasurer, chairman of the board of directors, and stockholder, all in one. That trust would at once proceed to do business, and it would not give the snap away, either, even upon so courteous an invitation as that extended me by our honorable President.

Speaking of trusts, if you will permit a slight digression. So far as the yearly profits of the local daily are concerned, the print paper trust cuts no figure alongside of the guileless and childlike trust of the country editor, in the belief that the average subscriber and advertiser will always pay his bill when due, or at any time whatsoever. One of the most imperative needs of the newspaper today is the expansion of cash transactions and the limiting of credits to reasonable and proper bounds. We all extend credit too readily and indiscriminately, and the result is a sorry showing each year, on the debit side of the profit and loss account, when a long and melancholy array of dead beats are charged off. But to proceed with the business in hand: What is the BEST method of securing circulation for a local daily? Generally speaking, there are six requirements that must be met in order to solve this problem with any degree of success. They are:

First—Print a good local newspaper.

Second—Print a better local newspaper.

Third—Print the best local newspaper.

Fourth—Solicit intelligently all the time.

Fifth—Make systematic collections frequently and require every subscriber to pay for the paper.

Sixth—If the subscriber does not pay, stop the paper.

These six requirements I hold to be absolutely essential to any considerable degree of newspaper success. Building up the circulation of any local daily is nothing more nor less than selling the news. In order to sell the news, you must have

it on sale. So, like our colored friend who started out to tell how to carve a possum, "First, catch your possum, and then cook him." In order to sell the news, you must "first get the news which the people want, and then present it in interesting, readable shape." What, then, constitutes a good local newspaper; what will make it a better local newspaper; and when will it reach the superlative degree of being the best local newspaper.

I am one of those who hold that the publication of a local newspaper is a business enterprise pure and simple. A newspaper should be, in no sense, an eleemosynary institution; it should not be controlled by, or be subject to, the dictation of any person, faction or party, excepting only its owner. The latter should conduct it along honorable, straightforward and truthful lines, and should make it a commercial enterprise of the highest character. It should be the synonym of business probity, unimpeachable integrity and absolute fair dealing. There should be no claim that it is conducted for the public benefit any more than are banks, dry goods stores, manufactories or any other commercial enterprises which supply to the public, for a fair and reasonable compensation, those things which the public wants and needs. A good local newspaper is a business enterprise, conducted for the financial benefit of the person who owns it, and should ask and receive patronage, solely upon the intrinsic merit and value of the commodities which it has to sell. What are these commodities?

First, and primarily, the NEWS.

Second, and incidentally, advertising space.

The NEWS is the principal, the most important, and the most valuable commodity sold by the successful local newspaper. Possibly there may be those who will challenge this statement, but twenty years' successful experience in publishing a local daily has convinced me that it cannot be successfully controverted. The NEWS is all-important, and the good local newspaper is the one which fills its columns to overflowing with the news of the community in which it is published. This is the news which I firmly believe 99 per cent of the people who buy that paper want and pay for. The better local newspaper covers its local field still more carefully and publishes still more local news. The best local newspaper has its local department so organized that no item of news will escape its corps of reporters and correspondents. This organization should comprise a comprehensive plan to cover, not only the community or city in which the paper is published, but should extend to the surrounding county, and adjacent towns and counties, so as to embrace, practically, the entire field in which the paper circulates. The public will soon come to recognize that while the news may be found in other papers (for we all have competition, and it would not be well for us if we did not have) the public, we say, will soon recognize that the news will always be published at the earliest possible moment, and that with the greatest accuracy in this newspaper which we are talking about, viz: The best local newspaper. In other words, the best local newspaper will organize a news service of its own, so that it can say truthfully that no paper on earth successfully competes with it in securing and publishing the news of its own territory. It is assumed, of course, that every local daily will publish, in some form, the telegraphic news of the day. Those whose business will warrant it, will use the regular Associated Press, or other telegraphic news service. The papers published in smaller towns will use the excellent plate telegraphic service of the American Press Association or the A. N. Kellogg Newspaper Company. In this case it should always be supplemented with brief telegraphic specials, covering any matter of general news of great importance that may happen on the day or night of publication. The rule of every publisher of a local daily should be to assume that his subscribers read no other newspaper; and then see to it that no item of news the world over fails to have some representation in that paper. In other words, if the subscriber takes no other paper excepting the local daily, he should be intelligently informed as to everything of importance that is happening on the face of the earth. But after all, in these days of fast mail and cheap metropolitan papers, the matter of vital importance to the local daily is the local news. This is what the local publisher sells, and if he does not keep it on sale he never will, and never can, build up a circulation. "Local news, that's it," should be the shibboleth of the publisher of every local daily. Sensationalism should be strictly avoided, and the most exact accuracy and truthfulness in the securing and preparation of news, should be rigidly insisted upon. I would not keep in my employ a day a reporter, or editor, who would knowingly permit an untruthful statement to be made in my paper; nor will I retain in my employ anyone who will not take the time and most exacting care to secure the facts and state them accurately. Inaccuracy in the presentation of news means disaster and ruin for the publisher. The public buys a newspaper to learn facts. When it finds therein senseless exaggerations, careless and unreliable statements, or willful misrepresentations, it not only will not continue to buy such a newspaper, but will refuse to accept it for any length of time, even if sent free of charge.

In my own newspaper (an afternoon daily, published in a city of 20,000 people), local news has the right-of-way over

everything else, excepting only the most important telegraphic matter, during the two hours before going to press. Editorial, miscellany, correspondence, press notes, advertising, everything in fact that goes to make up the daily paper, must, in my office, give way to local news. In the larger factories and railroad shops, I have special correspondents, who furnish the news generally of these establishments, but particularly and specifically the news of the men and women who are employed therein. A standing rule requires that a reporter from my paper shall personally visit every home in the city on the occasion of a wedding or a death (unless the latter results from a contagious disease), and secure for publication the desired facts. There is no way in which a newspaper can make more sincere and lasting friendships than by the proper handling of deaths and weddings. Reporters are prone to pay too much attention to the comings, goings and doings of people of wealth and social prominence, and too little to the masses. The best local newspaper will be so conducted as to be of di-

opinions and stand firmly by them, but he should rigidly confine all expression of opinion to the editorial columns, and see to it that absolute impartiality is preserved in publishing all matters of news. A People's Pulpit column, wherein any one can, over his own signature, and in a proper manner, express any opinion, no matter how much it may differ from that of the editor, is a great assistance to the subscription solicitor. When the solicitor finds a party who doesn't like the editor, thinks he's a crank, and knows he is an offensive partisan, it is a wonderful palliative to be able to say, "The editor has his opinions and stands by them, but he respects yours, and those of every other honest man. Write out your ideas over your own signature and he will gladly publish them."

The publisher of the best local daily will rigorously avoid personalities. The editor who uses the columns of his own paper to vent personal spite, or dislikes, is as foolish as a merchant would be to take a position out in front of his establishment and loudly and publicly berate anyone in a community whom

A Second View Showing Editors in Front of Headquarters, St. Charles Hotel, New Orleans.

rect personal interest to just as large a number of people in the community as it is possible to make it. Workman Jones does not cut a very big figure in the community, excepting of course at election time, but when Workman Jones' daughter gets married, or to a still greater degree, when Workman Jones' little boy dies, there is nothing in the world of so much interest to him, his family, and all their relations as these events. If they are properly noticed (not effusively or at length), by the local paper, Workman Jones will gratefully remember it as long as he lives. Furthermore Workman Smith, his neighbor, will notice it and will appreciate it, too. And thus the work of circulation building is made sure and lasting. Any scheme of circulation building that does not count on securing the friendly support of the laboring man, cannot hope of success. He is the big part of the community and numbers are vitally essential to the large subscription list. For this reason, if no other, the best local newspaper will avoid acrimonious political discussions. The editor will have

he does not like. News is news, whether it applies to friend or foe. The business of the publisher is to supply the news.

Though I am considerable of a crank on the subject of local news and believe that a local paper cannot publish too much of it, still I will readily admit that there are other things which should also appear in the best local daily. It took me years to find out that I was starving my readers in the matter of miscellaneous reading matter. This was a mistake, which I am convinced, has cost me many a good dollar. Less than a year ago I began the publication, for my Saturday edition, of a four-page supplement, containing one page of continued story, one page of illustrated humorous, one page of illustrated miscellany, and one page on which there are three columns of "Farm and Garden," and four columns of short, complete stories. This same supplement I also run in the weekly edition. The results have been exceedingly gratifying and I would not think of discontinuing this feature. Though it costs me over \$1,300 per year, I am confident that it pays. It has

been a powerful lever in securing new subscribers, and in holding old ones. There is much more that I might say about what goes to make up the best local daily. I have only mentioned those things which I regard as vitally essential, and which must form the foundation for successful effort in the line of circulation building. To sell the news you must have the kind of news on sale which the people want to buy.

My fourth rule in circulation building, is intelligent soliciting all the time. Less than ten years ago, when I purchased the Ottumwa Courier, it had, in a city of 15,000 people, a total daily circulation of 575. To-day, with 20,000 people, it has a circulation of over 3,500. It was the declaration of my predecessor, an influential and forceful editor of the old school, that he had never solicited any one to take his paper. It is my solemn declaration, made here and now upon this interesting occasion, that if there is anyone in the community in which I live who has not been asked to take my paper, I am firmly convinced that he is resting under ground, among the calm and peaceful shades of our city cemetery. But soliciting, to be effective, must be intelligently done, and the same ground must be gone over again and again. By intelligent soliciting, I mean that the solicitor must know what he is selling, and be able to demonstrate that he has a better article for the money than anybody else. Out of a possible one thousand people solicited I venture to say not over ten will be found who will answer "yes" to the question, "Don't you want to subscribe?" even though the paper offered has the general reputation of being the best in the community. Nearly everyone in this day and age is taking more papers and periodicals than he wants, and if the question put by the solicitor was, "Do you want to stop any of the papers which you are now taking?" there would be an overwhelming response in the affirmative. The solicitor must know what is in the paper each day, and also know what is and is not in those with which he comes in competition, and be quick enough and intelligent enough to point out each and every point of excellence in the paper which he represents. He must be able to make the person solicited really want the paper, and the rest is then easy. Little things utilized by the solicitor will accomplish a great deal. When the late D. L. Moody died, the fact was announced on the bulletin board at my office within a half hour. This fact was noticed by the solicitor, and going out that afternoon he put on fourteen new daily subscriptions on the strength of the talk which he could make about this incident. Here was the death of a prominent man, which had occurred in a city over 1,200 miles away. In less than thirty minutes the Courier was conveying this news to the people of Ottumwa. Naturally, such a newspaper was the one which people wanted to buy.

I imagine that those who have followed me thus far are already anxious to inquire, "Where do you find such solicitors?" That is the problem, of course, but they exist and can be found. You never know who will make a good solicitor until you try him. Nearly twenty years ago a farmer walked into the office of a newspaper, of which I was then business manager, and handed me the name of a new subscriber, with payment for the first year. "Wouldn't you like to do this kind of work right along?" I asked. He said he would be willing to try. He was thereupon engaged, has been with that paper as solicitor ever since, and is with it today, a most valuable man. Four years ago a young man who had recently failed in mercantile business, walked into my office and asked for a job. I said I had none. He replied, "You want subscribers, do you not?" The answer was, "Yes, always." He then said, "Let me go out and get them." I gave him a trial and he is today in my employ, the best subscription man I have ever known. Solicitors are an unknown quantity until tried. When I need a solicitor, I try every young man of good character that comes along until I find the right one.

The solicitor hears more kicks and complaints than anybody else connected with a newspaper, and I require those in my employ to keep me posted on this line. I have secured many a good idea in this way. There is nothing like a vigorous kick once in awhile to bring a publisher to a realizing sense of the weak spots in his own publication.

In my office a careful record is kept of stops and commences. Each morning a report is laid on my desk, showing the loss or gain for the day previous. These reports are tabulated weekly, and when a number of weeks show a continual loss, active, special soliciting is vigorously prosecuted. I endeavor to have the entire city gone over completely, four or five times each year.

The question of premiums is an important one and needs to be handled carefully. I seldom advertise a premium, and never use a premium which I cannot give away without extra charge, and give to an old subscriber as well as a new one. I have used many hundreds of cook books, costing from 9 to 12 cents each, which were given with three months' subscriptions. The best premium I have ever used in connection with daily subscriptions was a free city directory, of which I have a sample here, and the ads in which paid the cost of the work. This was given to all old or new subscribers who signed an order for a six months' subscription from the date the directory was delivered. For the weekly edition the best premium

I have found was a law book, a condensed code, sample of which I have here, and which was given to all old subscribers paying one year in advance, and to all new subscribers who ordered the paper for a year. I do not believe in any premium which is not given away, and which cannot be given to any old subscriber who asks for it. When the premium is not advertised in the paper, only a small percentage of the old subscribers ever know anything about it, and when they do learn of it and ask for it, I always furnish them the premium the same as to new subscribers. To this extent I believe in the use of premiums, and have found them very valuable in building up circulation. But they are only used primarily to get the first order from the subscriber. After that I expect the merits of the paper itself to hold him in line.

And now I come to the subject of collections, which I regard of the highest importance in securing and holding circulation. Collections should be made frequently and systematically, and every subscriber should be required to pay for the paper. I believe in weekly collections to just as great an extent as is possible. Indeed I am convinced that it is only by regular, systematic, weekly collections that a large circulation can be secured and held among the laboring masses. Twelve cents, which is the rate per week that I charge for my paper, is a small amount if paid regularly out of the weekly wages. If allowed to run two weeks, 24 cents is usually more than the laborer can conveniently spare; while if it runs a month, 50 cents cuts such a hole in his earnings that he at once decides he must economize, and he thereupon stops the paper. If allowed to run three months without paying, it is simply out of the question for him to pay \$1.50, and he not only stops the paper, but usually does not pay at all, and is thereafter permanently lost as a subscriber. My rule is, if the subscription is not paid at the end of two weeks, to stop the paper. This gives no offense, as I have found in actual practice, the contrary to the general idea, and usually on the next pay day, the delinquent will hand a quarter to the collector, or carrier, and tell him to send the paper on again. Thus by stopping the paper we not only get our money, but, with the exception of a brief interval, retain a subscriber. From railroad employes and others, who are paid monthly, we collect monthly. There are a few business men who pay quarterly, but more than half of my daily subscription accounts are paid weekly. The rate is 12 cents per week, or 50 cents per month. I have my city daily subscription list arranged in collection routes so that when a collector goes into an office building, he collects from every subscriber in that building, no matter in what part of town the subscriber may live. Receipts are made out in advance for each subscriber. This work is done by a \$6.00 per week clerk and the collecting from 2,500 city subscribers is done by one man with the aid of a horse and buggy. My cash city subscription receipts will each week nearly, if not quite, meet my pay roll. My total cash subscription receipts last year exceeded my total advertising receipts by \$295, and yet the advertising receipts were the largest of any year in the history of my paper. Furthermore, my cash subscription receipts were just \$9,319 more for the year than they were for the same period five years ago. I attribute these results to earnest and unremitting efforts to build up circulation along the lines which I have endeavored to present for your consideration. And now just a word in conclusion: The subscriber is the publisher's best friend and is entitled to his first consideration. Make him pay for what he gets but hold steadfastly and with unyielding determination to the policy of furnishing him all the news without fear, favor or discrimination. With the large subscription list once secured on a permanent paying basis, advertising patronage is sure to follow and in many instances will be found capable of simply astonishing development. The reason for this goes without saying. All permanent newspaper success must inevitably be founded upon the mercantile principle of furnishing value received.

The publisher to succeed must supply commodities in the shape of news and advertising which have intrinsic value greater than the price asked for them. The best advertising solicitor for any publication is the known fact that this publication gives definite, tangible, profitable results to the advertiser. I have never had any sympathy or patience with the idea, now happily becoming more and more obsolete, that the editor is either an object of charity or a public benefactor. Let us be thankful that to-day the successful publisher of a local newspaper is a free-born, progressive, liberty-loving, God-fearing American citizen, who by unremitting hard work and intelligent effort earns all that he gets and in the majority of cases gets all that he earns. Certain it is if he does not obtain his full due it is his own fault.

When Mr. Lee finished reading his paper, the president stated that it was open for discussion, whereupon Mr. Fairfield of Vermont made the following remarks:

Mr. Chairman:

This is a subject that ought not to be allowed to go by without some discussion. I have been intensely interested in Mr. Lee's paper, for the reason that he is surrounded by just about the same circumstances which surround me at home in Vermont. I think the size of his city is just about the size of

mine. I will state that I established an afternoon daily in Rutland, Vermont, about a year ago, where there had existed for over a century a weekly, and for over forty years a morning daily. Several attempts to establish an evening paper, or a second morning paper, had proved failures; but I received such encouragement that I determined to start one, and build it on a new plan from the ground floor up. I have to say that my little city of Rutland has a population of about fifteen or twenty thousand inhabitants, and is surrounded by a newspaper territory of about sixty thousand people. At that time we only had one paper, a morning paper, with a weekly edition attached. I started this evening paper with the idea of publishing all the news. I hired rather expensive but hustling reporters and gave them absolute instructions to get all the local news. As a result, in the third issue of my daily, our circulation exceeded that of the morning edition of over forty years' standing. That is the point I want to emphasize in Mr. Lee's paper. Get all the news. He says publish all the news, and that is what I say.

The proprietor of the morning paper, who is quite a wealthy railroad magnate in Rutland, instructed his editor not to pay any attention to the new daily, and not to follow it on any items of news. If a thing occurred in the afternoon or during the day before we went to press, it was against the morning paper's principle to touch that the next morning, but to get an entirely new class of news. We acted the other way. If anything occurred in time for the morning paper and too late for the evening paper, we published it the next day, just as if our readers simply read the evening news and never saw another paper. In other words, we tried to cover the local field for the whole twenty-four hours. The Herald, for that is the name of my competitor, probably because they did not care to notice their new competitor, went upon the other theory, that they would not touch any item of news that had been touched by the evening edition. They kept that up about three months. Now they take everything, no matter whether we got it first or not. They try to cover, as we did from the start, the whole twenty-four hours; and in the brief space of a year, as I said, we have clinched a circulation that exceeds the Herald's. I think that is proof conclusive that it pays an evening paper, or a morning paper, as the case might be, to publish all the news for the whole twenty-four hours, whether a competitor, morning or evening as the case may be, has had it in advance or not.

Mr. George W. Harper of Robinson, Ill., next followed with a few observations, as follows:

I am not the publisher of a daily paper. I am the publisher of a weekly, and I think the majority of us here are publishers of weekly papers also, but I look upon the matter very much like the old Mexican who said that "what is food for the gander is food for the goose." I think it is good for a weekly paper as well as for a daily. But with this, as with the liniments that we read testimonials of, it is not sufficient to read or hear about it, but we must put it to practice. I think there are a great many here who will consider that there are good things in the paper, but the question is, are they going to put them to practice? We can derive benefit by the suggestions made in these papers, but if we simply come to hear them, and do not put them to practice, the remedy will do us no good. If put to practice there are things in this paper which pay a man to come to this meeting of this association. There are some good things there in reference to news. I desire to emphasize the point; but as I have said, we must be careful that we put them to practice."

The next paper which was read was that of Mr. E. W. Harris, editor of the Herald, of Greenville, Texas, upon "The Influence of the Press Upon Society and Government," which follows:

INFLUENCE OF THE PRESS UPON SOCIETY AND GOVERNMENT.

By E. W. Harris, of the Greenville, Texas, Herald.

Mr. President, Members of the National Editorial Association, Ladies and Gentlemen:

Three of the most powerful factors in modern civilization are the railroad, the telegraph, the printing press. These mighty agencies operate upon distinct lines, yet they are the allied forces that are glorifying the closing century as the golden age of material progress. Of this trinity of modern civilization, the printing press is pre-eminently the ruling power in the world's affairs, but made so by the discovery and application of steam and electricity. Were it not for the railroad and the telegraph the power of the press could not be felt as it is today. With these wonderful auxiliaries the printing press exerts a supreme influence upon society and government. For with its dissemination of news and expression of views it forms the opinions, colors the life and moulds the character of the whole people. The newspaper goes into the office, the shop, the home and operates upon the mind and heart of the individual. As the newspaper directs the thought and forms the character of the individual, it shapes the destiny of the nation,

for "the worth of a state, in the long run, is the worth of the individuals composing it." The enduring foundations of liberty rest upon individual character, the only guarantee of social security and national progress. We are free not because of our institutions, but because we love liberty. As long as the people are right at heart institutions will take care of themselves. The law and government of a nation represents simply the collective character and capacity of its citizens. This being true the press is most patriotic, most philanthropic, when it best teaches men how to improve and protect themselves.

We hold that government best which deprives the citizen of the fewest natural rights consistent with the good of all; which recognizes the equality of man; which gives him the best security in the enjoyment of life, liberty and property; whose laws best conform to the natural law of reason and equity. It is our boast that we have such government. The democracy under which we live is founded in man's natural rights, man's capacity for self-government.

The genius of christianity is spiritual liberty; the genius of democracy is natural freedom. As religion is to the spiritual world, democracy is to the material; the best guarantee of happiness and security.

It is our greatest pride that we are governed only by laws to which we have given our consent. We know that our Constitution is founded on free and benevolent principles. Upon it we rely for the protection of liberty, the advancement of happiness, the promotion of the general welfare. As public happiness depends upon a virtuous and unshaken attachment to a free constitution, the press exercises a mighty influence of power for good when it correctly interprets the people in the application of the principles of democracy as a vital force in government. In this constitutional government, this democracy, the people are the source of all political power. Hence the press best serves the state when its influence tends to the moral and intellectual advancement of the citizen, for thereby patriotism is exalted, good government maintained and the liberties of the people preserved.

No one is competent to edit or control a newspaper, great or small, who has not a right conception of the true nature of his work—who does not appreciate the varied obligations to the public which his position places upon him. A newspaper enterprise is complex in that it is a business institution, yet the manner in which it is conducted is of vital importance to the public, effecting as it does individual character, society and government. The successful newspaper, therefore, is that paper which honestly earns a net income on the investment, while faithfully discharging the varied obligations to the public inherent in the business.

A newspaper to exert the best influence must have character. To possess character it must be managed with sound judgment, edited with ability, and be absolutely unpurchasable.

The main function of a newspaper is to give the public such news as is fit to print, but the press stands for a great deal more than a mere conveyor of information. While posting the people upon current events, the manner in which news is presented, the general reading served and the opinions and policies of these papers have a far-reaching influence. The true editor, whether in an obscure rural office or in a magnificent metropolitan establishment, keeps this fact in mind, and endeavors in all that he writes to contribute to the betterment of his fellow-men.

A newspaper, to exert the best influence upon society, should preserve a high moral standard in every department. Its columns should be free from evil suggestions. Indecent medical and inviting personal advertisements that lure to sin should be avoided like a pestilence. The pure atmosphere of home should not be tainted with poisonous miasma from the street. News service should be so edited that nothing appears which would bring a blush to the cheek of modesty or arouse a spirit of evil in the heart of youth. Crime is often the result of suggestion. The great prominence the press gives to criminal news is a crying evil. Many newspapers vie in an effort to present, in the most lurid style, every disgusting detail of evil-doing. A philanthropist endows a college or founds an asylum or a public library and is given a dozen lines. A murder or an elopement occurs. If the criminals are at all known to the public many columns are devoted to exploiting their nefarious acts. Horrors from the jail and the criminal court room may gratify a decadent, morbid curiosity, but its portrayal in newspapers has an evil effect, especially upon the youth. There are certain newspapers in our larger cities whose chief delight, especially in their Sunday editions, is to parade, with monster glittering illustrations and with vivid narration, every abnormal phase of life. Their pages suggest products of riotous imaginations reveling in revolting nightmares. These papers help manufacture subjects for the courthouse and asylum. There is a reform movement which aims to correct this evil, and I hope it will accomplish good. Our newspaper writers should know that the true grandeur of humanity is in moral elevation, sustained and enlightened by intelligence. Carlyle says, "He is wise who can instruct us in the business of daily virtuous living."

It is one of the gratifying tendencies of secular newspapers to enlarge the space assigned to purely religious matters. Here

the press wields a wholesome influence. Every metropolitan newspaper now gives a sermon in full occasionally, and religious services are regularly reported. It is rare that one finds a deliberate editorial expression which questions the necessity for religion as a guiding and sustaining principle in human life. In this the press is doing a great work. Daniel Webster declared that Christianity made better citizens; Burke affirmed that "religion is the basis of civil society and the source of all good and all comfort," while Josiah Quincy stated the conclusion of the whole matter when he wrote that "Human happiness has no perfect security but freedom; freedom none but virtue; virtue none but knowledge; and neither freedom nor virtue nor knowledge has any vigor or immortal hope except in the principles of the Christian faith and in the sanction of the Christian religion."

Law enacted for the government of society is public opinion crystallized. It is important, then, that the press should so direct public sentiment that just and wholesome laws will be enacted, and that they will be respected and enforced. The press can render no greater service to society than to help maintain the supremacy of law and order. It should not only co-operate with the preacher and the school teacher, but it should stand with the policeman and the sheriff.

The highest duty of the press is to know and to declare the truth. Newspapers should hold well defined opinions upon all public questions, and should possess the courage to express them. Independence of thought is essential to progress. Political parties are necessary to carry into operation certain policies in government, but the partisan organ, whose individuality and whose fidelity to truth cannot raise it above party expediency, does not represent the best type of journalism.

If the press impresses high intellectual and moral ideals upon the minds and hearts of the people—the source of all political power—the dangers which confront this republic will be overcome and our liberties will remain secure. With the uplifting influence of the press in morals; with its dissemination of intelligence; with right guidance in all things, the spirit of democracy—the principle of the rule of the people—will be carried to its highest development. With true men in the editorial chair—men who can see clearly, think soberly and act nobly—with such men representing an intelligent, independent and unpurchasable press, the most difficult problems in government will be met as they arise and solved aright, and the liberties of the people will remain secure.

The stability of our government does not rest upon our physical prosperity. Our enormous wealth may prove our greatest danger. The strength of our institutions rests in the virtue and intelligence of our citizenship. With an army of high-minded, God-fearing, man-loving newspaper men, whose work in the main is helpful to society; with myriad journals, their cheapness making ignorance almost criminal negligence; with a free press in a free government, there is no cause for apprehension for the future. With an honest, intelligent and patriotic press educating the people, impressing upon them their personal responsibility for good government, the few purchasable papers can do little harm; the corporations which deal with men as mere parts of a great machine cannot destroy individuality; political bosses, who make merchandise of votes, cannot corrupt the entire body politic; the demagogue and the labor agitator cannot bring general disorder, and last, but not least, giant corporations may consolidate into monster trusts and violate the laws of God and man, but with a courageous, intelligent press, alive to its great responsibilities, these forces will beat in vain. I am no optimist without cause. I have faith in the press, in the people and in the government which they compose. Yea, verily there is health in the bones of this government by the people. It shall not perish from the earth. It is far from realizing its magnificent ideal of a self-governing nation, in which every citizen is fit for personal and national self-government, but it has no greater danger than a tendency to lessen the personal responsibility of the common citizen. Every genuine remedy for all wrong must be based in confidence in their wisdom and justice. Our greatest statesmen have had the largest faith in them, and that faith has been justified in every great crisis. The duty of the press is to help the citizen work out his own salvation, to the honor of his fellow-man, his country and his God.

Ladies and gentlemen of the National Editorial Association, the newspapers of America exercise a far-reaching influence upon society and government. We thank God that this power, in the main, is exercised for good. And may it ever be said of our beloved country to its immortal glory:

"Here shall the press the people's rights maintain,
Unawed by influence and unbribed by gain;
Here patriot truth her glorious precepts draw,
Pledged to religion, liberty and law."

Mr. A. W. Lee made the following comments on Mr. Harris' paper:

"I would like to emphasize one point in the paper, from two standpoints—first, of morals, and second, of cash in the safe. The point that the speaker made in regard to a certain class of advertising. I have had an experience

with that kind of advertising that convinces me that it does not pay, and that a first-class local daily, at any rate, cannot afford to publish such advertising. A few years ago I threw out of my office every advertisement of the character named, and it nearly broke my heart to see a thousand dollars go into the streets, but I have been more than gratified by the result, for I very soon secured a large amount of desirable advertising to fill up the empty space created. A large portion of it came from advertisers who told me that they would not, for any consideration, go into a newspaper that carried advertising of the character mentioned by the speaker. I had occasion to meet the member of a firm in Chicago some time since, who told me that the contracts for next year all specify that under no circumstances are their advertisements to be placed on the same page with advertising of the class referred to. So, look at it from either standpoint—from the standpoint of morals, or the standpoint of dollars and cents—and it pays to keep a certain class of vile, filthy advertising out of your paper."

At the conclusion of Mr. Lee's remarks, Mr. J. W. N. Burkett of Jackson, Tenn., read the paper of Mr. Lynch Perry of the Democrat, at Columbia, Tenn., which is as follows:

PERSONAL EXPERIENCE IN SOLICITING ADVERTISING.

By Lynch Perry, Maury Democrat, Columbia, Tenn.

"Pay as much attention to your newspaper advertising as you do to other purchases, and you will get equally satisfactory results."

For several years we have kept the above in small bold type running at the top of a column; whether or not the idea is original, or whether it originated with some one else from whom I borrowed it, I do not now remember.

However, some time since I received a letter from a personal friend who had moved from Tennessee to Mississippi and entered the newspaper field, telling me that he had borrowed the above from the Democrat, together with other points, without giving credit, and of course I appreciated the compliment and I trust that results have been as equally satisfactory to him, his merchants and business men generally of his town as they have been to us.

In January, 1888, I took charge of the Democrat, together with a partner, a paper which was started in 1882, and which had at the time one Washington hand press, a hard-worked crippled roller, several cases of bottled brevity, no job office, a very small circulation; less influence and no credit—for the paper had been run through a hot political campaign under a cold collar, as the organ of the Prohibitionists, and in a rock-ribbed Democratic section at that. Think of it; of course it was weak. And had it not proclaimed from its masthead that "The Will of the People Shall Be Obeyed" and that it had the largest circulation, and "had come to stay," I don't know what would have been the result. It had another chance for its life, however, which perhaps helped it breathe at that time. The top of the second page started off with patent medicine ads, which were continued through the third. It was also bolstered up on the back, the fourth, with cures for complaints and diseases and for which the Auxiliary company got pay from the doctors, while the editor had, of course, to take his medicine.

Its escape from death was miraculous, under existing circumstances, and its growth and gradual gain of circulation as surprising to the community at large as it was gratifying to the advertisers.

My aim was to get the people to read it and not throw it aside as they would a street circular, for I realized to secure advertising I had to convince the business community that it was appreciated and read.

My partner was manager while I was supposed to be the editor. He was a Republican, while I a Democrat and practical printer. He and I would not agree, as he persisted in using my Democratic scissors to write Republican editorials, which I objected to most seriously. I finally convinced him that the manager had no authority over the editorial columns, and we dissolved; for, as I said before, this was and still is a Democratic community, and I wanted a circulation to secure advertising.

I soon after took my brother in business with me, who is with you today, and who has ever since made a first-class business manager, and who is careful about contracts and positions, but when made has them carried out to the letter, if possible. This has been the rule without deviation for ten years past.

As soon as practical we discarded the patent folio and changed to an eight-page, all home print and home set paper. A little later on we made it a ten-page and a year or so following increased it to a twelve-page and so have ever since been so running it, setting the body in minion and nonpareil, with a first-class job office attached, and improved presses, all

of which are run by power. Neat job work in connection with a country weekly helps the paper along immensely, as the publisher can well attest, provided he turns out neat, sharp commercial work promptly.

The auxiliary establishment from whom we had been getting patent print seemed anxious to get us back, and even proposed to furnish us a patent sheet at almost the cost of the raw paper (but that was before we heard of a paper trust), but we, of course, declined, as we wanted to control our advertising columns absolutely, as all editors should, just as they should their editorial columns.

I was amused to hear a newspaper man remark at the Denver meeting that under no circumstances would he allow a patent medicine "ad" to appear in his columns. I thereupon asked him what kind and style of paper he conducted, when he replied, it was an eight-column, four-page, patent inside, (and it wasn't of that class, either, which gets all news and miscellany and no patent "ads"). I remarked to him that he carried more medicine ads perhaps on two pages than we did in twelve, for which he received no pay; he replied he had never before thought of that.

Some eight or nine years since we inaugurated the plan of giving our correspondents a picnic, and we had quite a number of them, but not as many as now. Our aim was to bring them more closely in personal contact with each other and the paper.

The first year we chartered one coach, the correspondents furnishing the basket dinner, when all went to a summer watering place some twenty-five miles away. The next year we chartered two coaches, and every year since we have chartered a special train, the last one consisting of ten cars.

At these outings a program is carried out consisting of music, recitations, papers on agriculture, horticulture, interspersed with suitable addresses. These affairs are kept free from politics—the gold bug as well as the free silverite, the expansionist as well as the anti, the Republican as well as the Independent—all join and enjoy a day's pleasure, and the result is that the "Maury Democrat Picnic and Excursion" are known far and near. Not only do our home merchants who attend upon invitation realize the fact that the paper is read and appreciated by the people of the town and country, but accounts of these gatherings have also attracted advertisers from a distance. I will here state that both the Printer-Journalist and Newspaperdom, together with many other contemporaries, have very kindly given us notices of these affairs, which have been of great benefit to our advertising columns, and for which it gives me great pleasure to here make my acknowledgments and to thank them.

The publisher who evades the changing of advertisements of his patrons constantly may save time, but if he keeps it up he will eventually have more time than money, and more space than ads. We have thoroughly tested this.

A merchant who makes a contract for six months or a year and who fails to change constantly gets little benefit, consequently when his "ad" expires and you approach him for a renewal, he will reply that his "ad" has not paid him and as business is dull he will discontinue for awhile. We go after changes as regularly as we do new business, and have a great many patrons to whom we sell special positions and space per year, which they change regularly, giving prices and having special days for drive sales.

I have in my mind one firm of our town who, when they commenced advertising with us some eight or ten years since had perhaps a three or five-inch single column space, who today have columns. Their business has also grown wonderfully, as they have just moved into their new quarters, three stories high, a magnificent house with all modern improvements and appointments; this establishment would do credit to a much larger place. They not only advertise judiciously in our paper, but others of the place and county, there being five in all.

The head of this firm is a liberal advertiser, as are many other merchants here, who devote time and study to this important branch, for such it is to their business, having done as much to increase it as any other one feature.

The newspapers here have assisted greatly in educating and convincing merchants that it pays to advertise.

A kindly local mention occasionally, unexpected to merchants, also helps both publisher and advertiser.

Should a merchant be too busy to write a change for his "ad," we have a competent man write it, and submit it to him, and also proof, for his approval.

It of course requires time and money to make these changes, but it recompenses the merchant, and what benefits him pays the publisher.

We also guard carefully against carrying dead ads, or running them beyond specified time. No merchant cares to pay for something he does not order, and any attempt to so force it upon him not only compromises the paper but also lowers it in the estimation of the business man as an advertising medium.

An editor and publisher also lowers his dignity and that of his paper when he persists in sending it to those who order it discontinued. Work for subscribers as persistently as you solicit advertising; conduct your paper on a high plane, free from sensation and vituperation, give all the news, paying strict attention to local happenings, and then you will find no

trouble in holding your subscribers. Don't make your advertising rates too high, but have the same rate for all in your several departments and stand by them.

If you give one advertiser a cut-rate, the other fellow sooner or later finds it out, and when he does he is pretty sure to lose confidence in both you and your paper as an advertising medium.

"If you see it in our ad, it's so," is the established motto of assurance printed in all ads of one of our most successful firms, and you can make your publication just as proportionately popular as Mr. Dana's Sun by so establishing it in the public's confidence.

Prompt and honest dealing, coupled with personal courtesy, is the best way to secure and hold advertisers month in and year out.

During the reading of Mr. Perry's paper, President Henry was relieved in the chair by Mr. F. B. Baillio of Cleburne, Texas.

At the conclusion, Mr. F. T. Cook of Cloud Chief, Okla., stated that he wished to introduce an amendment to the constitution.

By the President—A resolution was adopted this morning that all resolutions go to the proper committee without being read.

By Mr. Harper of Illinois—Mr. Chairman, I move that we now adjourn to tomorrow at 10 o'clock.

By the President—There is to be an anniversary meeting—the fifteenth anniversary of the association—tonight at 8 o'clock.

By Mr. Harper—I move that the convention adjourn to tonight at 8 o'clock.

This motion was seconded and put to the house, but was defeated.

By the President—The convention refuses to adjourn. What is the further pleasure of the association?

By Mr. A. J. Langer of Nebraska—Mr. Chairman, there seems to be an effort to shut out debate. The object seems to be to shut out the reading of amendments such as has just now been introduced.

By the President—I understand from the secretary that a resolution was passed to the effect that all resolutions be submitted to the proper committee without being read.

By Mr. F. F. Laning of Ohio—I move that the resolution just introduced be read.

This motion was seconded, put to the house and carried.

The proposed amendment offered by Mr. Cook was read as follows:

"Be it enacted that section 1 of article III. of the constitution of the National Editorial Association is hereby amended, by substituting in lieu thereof, the following:

"Article III., section 1. Membership in this association shall consist of duly accredited delegates, or their alternates, from the state and territorial association only, state and territorial executive committeemen, and all Past Presidents who have served for one term."

By Mr. H. A. London of North Carolina—I move that the committee be requested to report on that amendment tomorrow, as the special order at 11 o'clock. I do so in order that members may be prepared for its consideration.

This motion was seconded, put and carried.

Mr. J. B. Stanley then moved that the association proceed with the reading of papers, in the order in which they were arranged to be read.

Whereupon Mr. W. W. Folsom of Hope, Ark., read the following paper:

"THE NEWS FEATURE."

By A. J. Kendrick, Editor and Publisher of the Fort Smith (Ark.) Daily News Record.

"Boys," once said J. B. McCullagh, for many years editor of the St. Louis Globe-Democrat, "the secret of being a good newspaper man is to master the knack of always being on the spot when h—ll breaks loose."

Mr. McCullagh was, as his friends and intimates know, somewhat given to picturesque profanity, and the above expression savors, to a degree, of this addiction. But there is no question that in this not exactly pious expression the great editor condensed a great deal of truth. History does not record the exact language that McCullagh used in describing the way to acquire the mastery of this knack of being "on the spot," but old-time reporters who have worked under "Mac," as they used to call the "old man," know that in his moments of relaxation he was wont to emerge from his editorial cubby-hole, to drop into the local room of the old building on Fourth and Pine streets and deliver brief and epigrammatic utterances.

on the subject of news-gathering, which many of the boys have not forgotten to this day.

The matter of being on the spot when Hades breaks loose—in other words, of being able to handle great news emergencies whenever and wherever they may develop, is very largely a matter of proper system and organization, and of the application of certain fixed principles, the description of some of which this paper will attempt.

This is an age of inkless printing, wireless telegraphy, horseless carriages, and all that sort of thing; and these inventions have proved more or less successful. But the newsless newspaper will never achieve distinction, though, it must be confessed, there are a goodly number of specimens extant that appear to be trying the experiment. The very name "news-paper" shows that the paramount characteristic of the daily publication is the dissemination of information regarding the happenings of the hour. The most successful journal is the one that gathers those happenings most quickly, accurately and completely.

For the purposes of this discussion, news, as handled by the small city daily, may be divided into several branches: Tele-

how many thousands of dollars he must appropriate a month for special telegraphic and cable service. For the purposes of this discussion, it may be assumed that the matter of securing general wire news is, therefore, very largely reduced to a question of taking one or the other of the reports of the news-gathering associations, and meeting the weekly drafts therefor. Since the demise of the United Press, there are but two of these major news-gathering associations, the Associated Press and the Scripps-McIntae Press association, the latter furnishing a service for afternoon papers exclusively. These associations furnish daily reports of different volume, from the pony of 500 or 600 words to the full report of many thousands. In general, it may be said that no daily paper of any pretensions, even in a limited field, should be without a telegraphic service of some kind. Where a report at such a figure as is within the means of the newspaper cannot be secured, because that paper does not happen to be in a city which can be located in a circuit, then an arrangement can often be made with a special correspondent in the nearest large city to send in brief bulletins of important happenings. In fact, there are a number of minor associations scattered throughout the country, which make a business of supplying just this sort of service.

The pony reports sent out by the news associations are generally more or less carefully skeletonized, and the general effect and value of such a service, when it finally appears in print, depend largely upon how and by whom it is edited. The man who handles such a report should keep thoroughly posted on the general news of the day, by reading one or more of the larger papers. He should be able to write, and write well. He should put brains and enthusiasm into his work. Such a man can take a comparatively limited telegraphic service, and, by editing it and building it up, and then properly heading it, can cause it to assume very interesting and very respectable proportions. I do not mean by this that a report should be "padded" by unnecessary repetitions, or undue verbosity. But by keeping posted on the general news of the day, the competent telegraph editor will be able to put the flesh of detail and color on the skeleton, and very gratifying results will follow. During the war with Spain, quite a number of small dailies scored a decided hit by making some sort of wire arrangements that enabled them to publish the facts about the great events of the day, eight to fifteen hours ahead of the arrival of the metropolitan dailies; and many such papers have gone on, from such a beginning, and developed into journals with something more than a local circulation, because the people of neighboring towns have learned to depend upon them for the latest important news.

As the circulation and income of the small city daily increase, a larger report may be taken, and very often, quite possibly, the problem will become one of condensing, instead of expanding, the service.

The point of all this may be briefly stated as follows: Give the important wire news, and give it as fully as circumstances will permit. As you are able to do so, increase this report. Make a strong local paper, but remember that there are other towns on the map besides your own. Above all, don't adopt the sixteen to one policy in presenting your telegraphic matter—sixteen lines of slughead to one line of news.

The question of handling the state, county and neighborhood news may now be considered. In addition to having a department of state news notes compiled from the exchanges, it is well to provide for brief telegraphic reports to cover news of importance that may develop from time to time. The plan of having a state association of daily papers to exchange the more important items of state news by wire has been successfully tried in a number of states, notably in Michigan and Texas. This plan was described, somewhat in detail, by delegates from the two states named at the last convention in Portland, Oregon. By making up a large circuit, a low rate can be obtained, and the service adds greatly to the value of the paper, and at the same time is not expensive. Where this plan is not feasible, arrangements can be made with the editors of the local weekly papers on the exchange list to forward brief telegraphic bulletins when occasion requires it. Some papers are able to remunerate such correspondents by merely putting them on the exchange list, while others allow them some moderate compensation.

Then, too, there is the question of county and neighborhood news. This is a feature that ought to receive the most careful attention, and its painstaking development means much toward building up the circulation of a daily paper. In every town where the daily has a subscription list, it ought to have a correspondent who will send in regular letters, and keep the paper posted as to more important happenings by telegraph or telephone. It is much easier to maintain a list in a town where the people feel that the paper takes some interest in them and in their doings, and the value of a good correspondent in such towns is not to be lightly estimated. The better way to remunerate these correspondents is to pay them a fixed amount per column, but in many cases they can be secured in consideration of sending them the daily and furnishing them with stamps and envelopes, and, in case the correspondent is a young lawyer, as is very often the case, of publishing his professional card regularly. This matter of compensation is one that each publisher must arrange for himself, but the main

graphic news, state news, county and neighborhood news, and local news. Although the writer has placed local news last in this classification, it by no means indicates that he regards this department as of the least importance—but rather, in the case of the small city daily, of the greatest moment.

To take up these different classifications in the order named will be the object of this paper.

Telegraphic News.—There is probably no publisher in this association who is brought face to face with the problem of

thing is to get a first-class list of correspondents, instruct them how to furnish interesting, newsy letters, and keep up the good work all along the line. In case a correspondent becomes lax or remiss, it does no harm to send him an occasional letter giving him a gentle jogging.

If you can secure a traveling subscription agent who is also a fair writer, he can do the paper an immense amount of good by giving each town that he visits a descriptive article, saying some pleasant things about the place and its people. Out-of-town subscribers appreciate this sort of thing, and are generally ready to reciprocate. At least, that has been the experience of the writer, and human nature is pretty much the same the world over. In short, don't be afraid to give plenty of free advertising, or booming, if you please to call it so, to a locality in which you are building up a circulation. Instruct your correspondents along this line, and give them to understand that they cannot say too many good things about their different towns and the people living therein. Of course, however, it is the news, fresh, reliable, interesting and complete, that the publisher wishes to secure from his staff of correspondents, and those correspondents should be made to understand this. Each publisher must, to a certain extent, work up the details of his own system, but he will find that the labor, pains and gray matter that he may expend upon this branch of his work will be amply repaid, both in adding to the newsmanship of his paper and in the direction of increasing his subscription renewals.

And lastly, there comes the question of building up a successful and up-to-date city news department.

A good sized volume might be written on the one subject of the proper gathering and handling of local news. It would be impossible in a paper of this scope to treat the subject in anything like an exhaustive manner. The writer will, therefore, confine himself to making a series of suggestions which may be of some benefit.

The first essential to securing a first-class local department is to put the right man in charge of it—to find the proper individual for the city editor. On the metropolitan paper, the city editor is an important factor in the success of the big daily. He is held responsible for the work of reporters whose work he supervises and plans. He must keep posted not only on the news of the city, but on the news of the state and of the world at large—for all these matters have a direct bearing on his work. He must be alert, resourceful, ready to handle any emergency that may present itself. He must be able to direct his men as a general directs the officers under him, assigning to each man his proper place in the daily campaign for news.

In a smaller field, the head of the local department is very often the city editor and reporter's staff combined—"the whole thing," in fact, to use a slang phrase. But he should be in supreme charge of the local department, and be held strictly responsible for the success or failure of it. Call him the city editor, or call him just a plain every-day reporter, but give him to understand that he is in charge of the local field.

It is not the easiest thing in the world to find such a man. A first-class reporter as has been said, is born, not made. The nose for news is a nasal appendage that does not adorn the frontpiece of every aspirant in the newspaper field. A good local man who is keen, alert, resourceful, abreast of the times—who will remain on the trail of an elusive news item until he has exhausted every effort to run it down—is a jewel worthy of a rare setting, and is easily distinguished from a Barrios diamond.

Right here is a good place to interject the remark that some newspaper publishers hold the local department too cheaply. They put it in the hands of a cheap man, and they get cheap work. This is false economy. The writer has heard on more than one occasion the owners of newspapers comment in a boastful way about the close margin of expense upon which they conducted this department, paying \$10 to \$12 a week for a man who did all the local news-gathering. A policy of this kind is a great mistake. The function of a daily newspaper is to print the news. The one that does this the most thoroughly is the one that will win in the long run. The people will read the paper that gives them the most news for their money—exactly as a woman will patronize the merchant that gives the best margin for her cash. A first-class local page has started many a paper on the road to wealth. It therefore follows, in view of all this, that the man who carries the burden as the head of this department should be amply able to sustain it. One first-class, experienced news-rustler is worth ten callow, half-baked youngsters who refer to themselves as "journalists," and imagine that they know all there is to be learned about the business. Therefore, get the right kind of a man to handle your city news. Don't make a kindergarten of your local room. Give the head of the department as many assistants as you think best, or care to pay for, but have some one who is capable of supervising and correcting their work, with the understanding that the more important assignments and features he himself is to cover. If you can't find such a man in your own city, there are plenty of bright, resourceful reporters in the larger cities who would be glad of a change to a smaller field, where their work would be more individualized, and they would have more chance of promotion.

The famous recipe how to cook a hare begins: "First, catch your hare." The primary essential of the building up of a

good local department is to get a first-class man in whom you have confidence and who, you can feel, will do the work as it should be done.

With these general remarks, the writer will close this paper with a few observations based upon his experience as reporter and city editor of a metropolitan paper, and later as proprietor of a small city daily in a town of 25,000 people. These latter remarks are supposed to be addressed directly to the head of the city news force.

First—The local news area should be covered thoroughly. The head of the local department should make a careful study of his field, and of the different classes of people therein, and bestow a great deal of study on the question: "What news can I gather in order to interest as many different classes as possible?" Run at least once a week several departments devoted to the different classes whom you seek to interest.

Second—The personal column should be carefully developed and maintained. In a large city such a department is considered impracticable, but in places of 50,000 or less, this feature is immensely important, and cannot only be made of great interest to the readers of the paper, but can be developed so as to make friends for the paper and bring in subscriptions and even advertising. There is an inherent weakness that causes the majority of human beings to enjoy seeing their own names in print—also knowing what their neighbors are doing. Nature implanted this trait for some purpose or other—let us make the most of it, brethren.

Third—The news centers of your field should be carefully studied, and a system of working them devised. They should be visited at least once or twice a day, and the most important centers should be covered by telephone just before going to press. Many a scoop has been secured by telephone just before the publication hour. Try to work up news centers that the other fellows don't know anything about. Pull out of the beaten paths. The man who gets his push-cart out of the rut is the man who makes the best time.

Fourth—Speaking of news centers, cultivate the ministers of your city and make them your friends and allies. They can give you many an item of church and social news, weddings, etc., which make the local columns interesting. Print one sermon, or a condensation, every Monday. Remember, that there are plenty of people who are interested in reading something besides the sporting, dramatic or the society page. Have the ministers visited once a week by a messenger to gather up such news notes, church news or communications as they may care to send in. Ask them to telephone anything of special importance, and reciprocate in every way you can. You will find the gentlemen of the cloth valuable allies, not only in the direction of giving you news, but in the way of putting in a good word for the paper where it will mean a direct benefit.

Fifth—In this connection the writer will mention a plan which is believed to be original with his own paper, and which has worked very successfully so far. To a large extent in every small city social life is divided up by church lines. Each church congregation has a social side of its own, and in order to gather the personal and general news of these different groups, the News Record has a correspondent in every church in the city, who is instructed to write up any matter that he or she may think of special interest in his or her own immediate circles. A wooden box, fashioned somewhat after the manner of mail boxes, is placed in the yard of each of these special correspondents, and one of the office boys makes a round of these boxes every day and gathers up the contents of the same. Many an important item of personal, social and general news is gathered in this way, and it has occurred quite often that valuable "tips" in regard to big news happenings have been secured by this system. These correspondents, of course, cannot be expected to correctly gauge the value of a news item, and it has often happened that a piece of intelligence that is worth a half-column or a column, has been disposed of in two or three lines. Of course the thing to do in that event is to put the paragraph in the hands of one of your local men and have it worked up for all it is worth. The News Record compensates its correspondents by furnishing the daily paper free, by giving them the choice of one of the monthly magazines, and occasional tickets to entertainments, theatrical and otherwise. In selecting these city correspondents, great pains should be exercised to get hold of the right material. There are plenty of bright, ambitious young men and women, however, who can be induced to take hold of the work, and are glad to do it. The News Record has had this system in operation something over nine months, and has found that while it is inexpensive, it is of great value to the paper. The idea is hereby turned over to you, fellow newspaper men, and you may each of you do with it as you see fit.

Sixth—An important thing is to study the local columns of your rival paper or papers. If you are "scooped," don't make a howl about it, or pretend that "it doesn't amount to anything, anyway." Study the facts as to how your contemporary secured the "beat," and try to make your plans so that it will not occur again, at least, in the same way. It may be that the other fellow is paying attention to some quiet little news center that you have overlooked. If so, find out where that news center is located, and put it on your list. Or it may be that one of your reporters has been remiss in his work, and was "scooped" by failing to cover a certain point in his daily

rounds. It is well to watch these matters carefully, because, if every member of the local staff feels that his work is under close surveillance all the time, he will do better work, and be more upon his mettle, as it were.

Another reason why your local contemporaries should be carefully studied is that very often you will find in their columns small news items which can be worked up to better advantage than they have done it. One reporter may incorrectly gauge the value of a matter of news, and dispose of it in a dozen lines or so, and another reporter may come along and grasp its full value, working it up into a bright, newsy article of a half-column or a column. In short, you will find the "tip" to many a good story floating around in the short paragraphs of the local contemporary. The writer well remembers, with no particular degree of pleasure, however, that the most exacting part of his work as a city editor on a Chicago daily paper was the reading of eight or ten other Chicago papers, morning and evening, in order to keep the city news situation well in hand; and on more than one occasion a short paragraph in a contemporary led to the digging up of a sensational case which furnished columns of news for days thereafter, not only to his own paper, but to the other dailies which afterwards took the matter up. The lucky or unlucky reporter who got the first inkling of the famous Dr. Cronin murder case, one of the most noted tragedies that ever came to light in the world, thought so little of it that he disposed of it in such an article as would hardly have done justice to a first-class dog-fight—and a stupid copy-reader let it go at that.

The moral of all this is—keep your field-glass to your eye, and observe what the enemy is doing at every point.

Seventh—Reference has already been made to the assignment book, the proper maintenance of which is most essential to a good local department. It should be provided with blank dated pages for a year ahead, and under each date the happenings of the day and the different assignments to be covered should be carefully recorded. It is not enough to put down a record of the news events that are going to occur in the future, but to carefully study in advance these news events, whether they be meetings, conventions, important trials, hangings, or what not—and to plan how they can be handled to the best advantage.

And then again in some convenient corner of the assignment book, a list of special subjects should be kept, which can be worked up on days when news is dull, or can be prepared for the Saturday or Sunday paper. In a word, by all means keep the assignment book up-to-date. It is one of the foundation stones of a first-class local department.

Eighth—A great deal might be written about the methods of preparing copy for the local department, but this paper is already too long, and only a passing observation or two are admissible. The best reporter is he who, in handling a subject gets right to the most important point, and in his opening paragraph tells the story in a few words, following them up with the facts in detail. The writer who spoils five or six sheets of good white paper, worth at present trust prices about four cents a pound, before he lets the reader know what he is talking about, is a back number and ought to be laid away among the moth-balls on the shelf. Insist upon it that the news shall be put in terse, concise language, without the use of slovenly grammar or syntax, and that all proper names shall be correctly spelled. The matter of spelling proper names correctly is a most important one. Nothing disgusts a man more than to see his name spelled incorrectly, and nothing makes a paper more a subject for ridicule than careless work in this direction on the part of its reporters. Keep a city directory close at hand, and see that it is carefully consulted when the spelling of a proper name is in doubt.

Ninth—The interview ought to be a prominent feature of every local page. Editor McCullagh of the *Globe-Democrat* is credited with being the father of the modern newspaper interview, and there are no grounds upon which his paternity can be denied. He introduced this feature of newspaper work during his service as a war correspondent in the early '60's, and it scored a hit from the start. The interview, when properly prepared, puts the reader in closer communion with the man who is speaking through the columns of the paper. Another point to be considered is that the interview, with its broken paragraphs, quotation marks, question marks and white spacing, makes a page look vastly more interesting than when the matter is run solid, with everything in the third person. One of the best known city editors that ever managed the local department of a newspaper used to give his reporters the terse instruction: "Start 'em out talking." By this he meant that he wanted the article begun with the opening words of the interview, or with an expression in the first person, between quotation marks. This feature, however, can be used to excess, but developed in moderation, it is all right. At all events, interviewing is an essential and highly important part of reportorial work, and one upon which too much pains and study cannot be bestowed.

Passing by the thousand other phases of this important question that could be touched upon, and an elaboration of which would provoke the delegates to a point of tedium whereat they might wish the writer of this paper at the bottom of the great river that flows past this majestic Crescent City, it may simply be said, in closing, that news is news wherever it is

found, and the aggressive publisher must relentlessly pursue it night and day. Each man must decide for himself as to what classes of matter he will admit to his columns, or exclude therefrom. A safe policy to follow is that outlined by the motto of a New York paper, which, under the guidance of a brainy newspaper man from the Southland, is achieving a great success, without resort to methods of yellow journalism—

"All the news that's fit to print."

The meeting then adjourned until 8 o'clock p. m.

THE EVENING SESSION CELEBRATING THE FIFTEENTH ANNIVERSARY.

The meeting was called to order at about 8:30 p. m., President Henry in the chair.

The president stated that this was the fifteenth anniversary meeting of the National Editorial Association, and called upon Mr. B. B. Herbert, the originator of the organization, whose name was first on the program.

THE CONCEPTION AND ORGANIZATION OF THE NATIONAL EDITORIAL ASSOCIATION AND CONVENTION OF 1885, 1886, AND 1887.

By B. B. Herbert, National Printer-Journalist, Chicago.

Mr. Herbert then spoke as follows, detailing "The Conception and Organization of the National Editorial Association":

It is well for every man, every nation, and every organization to pause at times and take a retrospect. It was Patrick Henry, the splendid patriot and fearless, peerless orator of his day, who, in the climax of his thrilling appeal for national independence declared "experience to be the only lamp by which his feet were guided."

Tonight as we gather here in this hall after our triumphal progress to the Southland and the glorious reception accorded our beloved association in this mighty city—situated at the point where the greatest river of earth, the outlet and highway of the richest valley of the world mingles her waters with the sea—it is well to pause and look backwards over the fifteen years of our history.

Our journey hither and our reception here may be well named a triumph, for never did a Caesar returning with conquering legions to proud Rome, mistress of the world, receive a more worthy welcome.

Free cities and states through their governors, their mayors, their congressmen, ministers, bishops, great educators and the representatives of their industries, have greeted us with praise of the accomplishments of the calling which we represent, and assurances of love and esteem, recounting in glowing words the obligations, the power and the possibilities of this association.

At Memphis, Grenada, at Jackson, at Vicksburg, at Baton Rouge, and here in New Orleans words have been spoken too earnest, warm and hearty in eloquence not to have been sincere, not to have come from hearts beating with highest esteem.

Dull indeed is the mind and cold the heart of any editor among us who has not been inspired by all this with a higher and nobler ambition to measure up to the fullness of his duty and opportunity as a member of the free American press.

We have been welcomed as those bearing no trophies of blood, spoils of violence, enslavement, oppression or wrong, but as the guardians of liberty, the promoters of prosperity, the active agents of progress, of education, morality and patriotism, of a true union, one and inseparable through mutual understanding, esteem, friendship and love. And all this was in the original design of this organization, that is the child of the North Star state, on whose broad bosom rests, in the beautiful Lake Itasca, the head of the great Father of Waters, at whose feet we are now gathered to celebrate our fifteenth anniversary.

The idea of this organization was conceived in July, 1882. Here in this city on the 19th day of February, 1885, it reached an organic existence and a name.

While accompanying the Minnesota Editorial association down the Mississippi river, on an excursion from St. Paul to St. Louis, the speaker was chosen its president, and as the splendid steamer ploughed its way between the great states of Minnesota and Wisconsin, Illinois, Iowa and Missouri on either side, thought was busy with plans for making the state association more attractive, useful and powerful. Then the idea came to form a National Editorial association, to be made up of delegates from the different state organizations, founded on the basis of representatives and senators of the United States congress. It was felt and believed that the election and sending of delegates to a national organization would give new life, cause a friendly rivalry for the real honor and useful position, as representatives of the several states, and thereby help the attendance, increase the interest in and make the state conventions in every way more useful. It was remembered that the wise man had said that those who compare themselves with themselves and measure themselves among themselves are not

OFFICERS OF THE NATIONAL EDITORIAL ASSOCIATION.

wise. It was the fond hope that with the opportunity to the editors of each state, through their delegates, to measure themselves with the editors of the nation there would be a wonderful increase of wisdom in every section.

The plan was at first considered illusory, as is every new thing until it becomes an accomplished fact. It would have proved such had not the idea taken so strong a hold and been followed by four years of very trying effort, that has received a glorious reward in the splendid organization that is so grandly represented in this convention and has been represented in like manner at the conventions in Cincinnati, Denver, San Antonio, Detroit, Boston, St. Paul, San Francisco, Chicago, Asbury Park, San Augustine, Galveston, Denver again, and last but not least at Portland, Oregon, and now again in the Crescent City of the Southland. The mention of these cities awakens thousands of happy memories, and recalls a splendid education in all that pertains to every section of our glorious Union, and to every branch of this noble calling.

In 1884, taking advantage of the approaching World's Cotton Exposition of New Orleans, in the president's annual address, the speaker presented the plan of the formation of this association to the Minnesota editors in convention assembled at St. Paul.

The subject was treated at length, and the objects outlined in the following terms:

"Then let us look forward to a national association formed of delegates from the state associations. There is no other calling in the country that will be so much benefited by a national organization as would be the publishers of newspapers in the United States. In the matter of advertising alone, through a properly organized and properly conducted national body, hundreds of thousands of dollars might be saved annually to the fraternity. Besides this, there would come the broader knowledge and the security from loss and from the humiliation of being imposed upon, as well as a new feeling of national fraternity and interest, and in favor of united action backed by a wider information, that will result in much good to the best interests of every section of our grand and beloved land."

The association indorsed the recommendation by the adoption of the following resolution:

"Resolved, That the recommendation of the president of this association for the calling of a convention to organize a National Editors' and Publishers' association, in and for the United States of America, be and the same are hereby adopted:

"That the representatives of the several states and territories in said proposed convention shall be the same as in the national house of representatives; that the president of this association and for the four other members to be selected by the president, shall be appointed delegates to represent Minnesota in the proposed national organization, with authority to call such convention to meet in New Orleans during the coming winter or spring."

On Dec. 28, 1884, as chairman of the committee, the speaker issued a letter circular and sent a copy to the officers of every state press association in the United States. The objects as briefly stated in the circular were as follows:

"It is therefore recommended that a meeting of the editors of the United States and territories be held at New Orleans, commencing Thursday evening, Feb. 12, for the formation of a National Editors' and Publishers' association, to be a representative body from the several state and territorial associations, with the general object of promoting the interests of the editorial profession throughout this country, by addresses, discussions, and the consideration and adoption of such measures as may be adjudged for the benefit of the fraternity."

Arrangements were made through correspondence from Red Wing, Minn., with all the railroads of the United States, to carry duly accredited delegates to New Orleans and return, taking in the dedication of the Washington monument at Washington, D. C., as well as the World's Cotton Exposition, wholly on the basis of exchange of courtesies. A start was made for New Orleans from Minnesota and other Northern states, but a terrible snow storm that caused railroad blockades throughout the West and East, occasioned a delay of from two to three days. Arriving in this city two days after the appointed date of the meeting, it was found necessary to issue a new call through the local papers, and through posters and hand-bills scattered throughout the exposition grounds, placing the date of the first meeting on Feb. 19. On that day, a hundred delegates, representing eighteen states, met in the Press headquarters, and proceeded to the work of organization. Having been introduced by W. H. E. Judson, head of the exposition department of printing and publishing, who is happily with us here today as a delegate from Alabama, the speaker defined the objects of the convention, saying among other things, as reported in the Times Democrat of this city, Feb. 20: "that the design was to form a closer bond of union between the editors, to broaden the views of the members of the profession, who are deeply interested in the development of this whole land, and to increase their knowledge of and interest in every section as well as of and in each other."

The courtesies extended were generous and although the weather was damp and chilling, in response to the address of welcome, the speaker coming from the North Star state was so far warmed with the hospitality as to say, as reported in The Times-Democrat, that "The editors who had come from

the ice-locked and snow-bound Northland, from the prairies and the plains, from the granite hills and the Pacific coast, had been received in the homes of the residents of this great city of the Sunny South, had mingled with them socially, and in their grand festivities, and had everywhere been grasped with warm hands.

"In this grand exposition of the arts and industries of the world, each and every editor had come to an ownership, and each was proud, not only of the exhibit of each state or section, from which he had come, but of the grander whole. In this exposition, the workers of all climes and states had clasped strong hands, and to those who had been important instruments working out the grand results, all present felt genuine gratitude. All unite in kindlier feeling, and as from the broad expanse of waters which stretch out at the foot of your grand city and beyond, mount the mists on the sunbeams to the clouds, and floating to the distant northern states of this great valley, descend in gentle showers to quicken the rich fruitage of the fields, or to unite with springs and rivulets in the grand river, the mighty artery of commerce, to bear hither products of many states, so on the wings of the press shall rise all the stimulating influences of this display of the world's greatest efforts to quicken industries, as well as to create kindlier feeling and cement a happier union throughout all the states, territories and nations, and finally to return to you a rich cargo of broad and generous prosperity."

The constitution was adopted, and the officers elected, as stated by the President in his annual address this morning.

A committee on resolutions was appointed, of which J. H. Brewster of Los Angeles, Cal., was chairman, and our honored past president, R. H. Thomas, who is with us here tonight, was secretary.

As further outlining the objects of the Association in the minds of the organizers, the following extracts from the resolutions then adopted, will be of interest:

"Whereas, the press is now recognized in all civilized countries as the bulwark of society, the protector of the people, and the educator of the masses, therefore

"Be it unanimously resolved, That the men and women conducting this great agency of advancement of the world's interests, of right, ought to organize into one great brotherhood, having for its object mutual protection, financial advantage and social enjoyment.

"That while the design of this organization is to strengthen the power and extend the goodly influences of the press far into the future, we shall ever recall with pride and pleasure its conception and birth during the course of one of the grandest events this world has ever seen—this Industrial and Cotton Centennial; that the foundations of an organization as herein contemplated should be deep, broad and strong, with a view to permanency and with a steady determination of its founders to make it a popular and enduring institution; that all genuine journalists be and are hereby cordially invited to join with us in this enterprise."

The second convention was held in Cincinnati, the Queen City of the West. The secretary, Mr. Elliott of Texas, had been demoralized into the accepting of a position of private secretary to a politician in Washington, and reported neither the funds left with him for the publication of the proceedings, nor the proceedings. So far as the Association is concerned, he dropped out of existence. All the work fell upon the president, including the transportation arrangements and preparing of a program.

On February 23, 1886, the second convention was called to order in the Music Hall, Cincinnati, and of the first session the Commercial Gazette says: "While from the adjoining rooms of the College of Music, the singing of its pupils came like a chorus from a region enchanted, through the windows encircling the gallery of the Odeon, the sun came shining on the heads of the delegates to the National Editorial Association, with a geniality hardly expected of Cincinnati atmosphere in the month of February. The appearance of the hall, when the members of the Association were assembled, the executive committee with the officers on the stage, was most satisfactory, and everyone who claims connection with the press of the country, ought to feel proud of the guild as represented in the city."

At this convention the objects of the Association were further defined in the president's annual address. Among those further enumerated were the building up of a professional literature; the creating of an esprit de corps among the members, a professional pride and feeling, through organization, special professional training and the establishing of higher standards of qualification and ethics. The establishing of a journal as a means of communication among the members and as a medium for the discussion of topics and the diffusion of knowledge pertaining to the profession was recommended. Papers on "Editorial Responsibility," "The Press as an Educator," and a score of other practical subjects were presented.

The board of trade, the factories and great commercial institutions, the art galleries, and museums were visited. A splendid banquet was enjoyed, at which "Field Marshall" Murat Halstead and representatives of a score of different states responded to toasts. Following the convention a tour was made by a special committee through Florida, in order to view the state and to correct errors that had gone out at that time

A FEW OF THOSE WHO TOOK PART IN THE PROCEEDINGS.

with regard to the destruction of the orange industry in that state. It was during this trip that the idea of an editorial winter resort was first suggested, and lands tendered for its establishment. The plan was kept alive until the visit of the Association to that state in 1895; finally, the undertaking was ratified by the action of this Association at Galveston, Texas, in 1896, and lands donated by the citizens of Interlochen for that purpose. Unfortunately the change of the climate, the lack of interest or aid from the association, and other causes that need not be mentioned, followed by freezes and frosts that destroyed plants, flowers and trees, and finally by a fire that destroyed the buildings, defeated this benevolent enterprise, and at a meeting of the board of control, held at St. Louis, February 22, it was decided to abandon that which had been cherished as a sentiment and looked forward to as a possible educational benefit.

I have, in these remarks, reviewed rather what has been set forth from time to time, as the objects of the organization, than given a narration of its doings, believing that these objects should ever be kept in view. I have been requested to say a few words for the past presidents of the Association who are not able to be present at this convention.

The third convention was held at Denver and was presided over by Hon. Charles H. Jones. Good work was done as to libel legislation—a resolution was adopted for the establishment of the National Printer Journalist, and the editors were made acquainted with the Hon. Wolfe Londoner and the boundless hospitality of the Centennial state. The mountains and the cataracts were viewed, and amidst the grandest scenery of earth, amid riven rocks and Heaven touching peaks, the editors joined in the grand old song, "Rock of Ages, Cleft for Me, Let Me Hide Myself in Thee."

The fourth convention was presided over by the Hon. A. B. White of West Virginia, at San Antonio, Texas. Unfortunately he has fallen from grace, and is now conducting a campaign for the governorship of West Virginia, and for that reason he is absent from our midst on this occasion. He and Jas. R. Bettis, who presided at the splendid meeting in Detroit, Mich., are represented by papers that under the rule adopted will be printed in the minutes of this convention.

Now, while this association has not accomplished all that was contemplated in its original formation, it has moved forward as a great educational force, until its influence is felt in every state of the Union. The calling it represents has been improved, and its standing and power advanced. The good work of the fifteen conventions has been recognized and what the Association has achieved since the first president laid down the gavel, will be narrated by the noble men who have presided over its destinies from year to year—men who are known and beloved by every member of the Association and by every progressive editor in the Nation.

Next on the program was a poem of welcome by Mrs. Margaret Hunt Brisbane of New Orleans.

Mrs. Brisbane was fittingly introduced by President Henry, and, after a few preliminary observations, delivered the following original poem, which was much applauded and encored:

Oh, welcome! thrice welcome! Before you I stand
A glad Southern woman to hold out the hand
Of courtesy, greeting and fellowship, too—
So proud to be ranked with brain-workers, like you!
From the fair, smiling face of our beautiful land
Ye have gathered to-night, such a glorious band,
And with joy-bells set ringing and flags all unfurled
We would give you a welcome to ring through the world.

Here's a health to the press! oh, so mighty the pen
To uplift or demolish the fortunes of men:
It rises, an angel, the guiltless to save,
A bloodhound, the guilty it tracks to the grave.
It paints for the millions the pictures that teem
In the brain of the poet who works in a dream.
The pen is a fairy, God-given, to bless
The whole civilized world—here's a health to the press!

Here's a health to the brave and courageous who stand
On the lookout to guard the best hopes of the land;
Who ring out the tocsin of danger when trust
And corruption are bending our brows to the dust;
Here's a health to the men who can handle the type
And stand by the press when the moment is ripe—
Brave workers, so ready to answer life's call.
Oh! brothers beloved, here's a health to you all!

Fling open the doors of the home and the heart!
From temples so sacred let no one depart;
A loving-cup brimmed with a welcome divine
We would lift to your lips—will you drink of the wine?
The lees are not bitter, the cordial is sweet,
The draught you may often and often repeat,
Yet never of wine in the beaker find less—
Will you drink of our loving-cup, friends of the press?

Such communion is holy! The wine, it is blessed,
And precious the grapes when the vintage was pressed;
In brotherly love now together we meet
With a joy in our hearts that is sacred and sweet.
Oh! greatest Proof Reader, whose paper is Time,
Grant each of thy workers a "story" sublime;
Correct every error, make perfect and bless
Our final proof sheets when they fall from the press!

Following Mrs. Brisbane came Mrs. Janie Garland Stewart Boyeson of Chicago, who sang her own production, entitled:

NEWSPAPER WOMEN.

(Copyrighted, 1899.

Words and Music by Janie Garland Stewart (Boyesen).

I.

We're newspaper women—but not of one mind;
We're all of us scribblers—but not the same kind;
For some take to rhyming and some take to prose,
And some go reporting, as all the world knows.
For newspaper women have quite a large field
In which to sow talents—but slow is the yield.
When hope and ambition have reached to the top,
An editor's frown will frost many a crop.

CHORUS.

We're newspaper women and full of our fun,
We're brave as the bravest—but know when to run,
Reporting's no pleasure, we seldom gain treasure,
But labor is sweet when we hear, "'Tis well done!"

II.

The newspaper woman's in every domain,
No hardship can daunt or her ardor restrain.
In slums, or society, quite at her ease—
No fears she the "devil's" call, "More copy, please."
The newspaper woman is full of soft guile;
When critics are cruel she knows how to smile;
She smiles so serenely yet gets in her blow
In a way that avenges, yet disarms her foe.

CHORUS.

III.

The newspaper woman must throny paths tread
Ere she can wear Fame's laurel wreath on her head.
While struggling and striving she e'er must have pluck
If she would achieve what the world calls "good luck."
Her spirit, undaunted, must soar to the sky,
A champion of Justice, her banner floats high.
A leader of women, she answers their call;
In bat'ling 'gainst evil she's foremost of all.

CHORUS.

IV.

When a newspaper woman tries writing a book
Of hist'ry or fiction, or ways one should cook,
She launches her craft on a perilous sea
Where windy reviewers with language make free.
The editor's pencil 's a dangerous reef
Where newspaper women come often to grief.
But whether on land or on sea, 'tis the same,
The newspaper woman will always die game.

CHORUS.

Mrs. Boyeson was encored, and sang another production of her own, entitled "Only a Silver Shield."

Before singing the song, Mrs. Boyeson said: "This little song, which I wrote some time ago, but which has never been dedicated, with the permission of the National Editorial Association, I would like to dedicate to this association. It may not be a great honor to the association, but it will be a great pleasure to me, if the permission is given."

THE FOURTH ANNUAL CONVENTION.

By Jas. R. Bettis, for Past President A. B. White.

Mr. President and Gentlemen:

In carrying out that part of your program which calls for a sketch from each past president of the year of his administration, Mr. A. B. White should speak for 1888; myself for 1889. He is prevented from attending your meeting, and called upon me to represent him before you. In my turn, I have been debarred by circumstances from appearing in person, and not wishing to shirk any part of my duty to my friend White or the Association, send you this communication as the only means at my command of redeeming my pledge. Mr. White is at present engaged in running for the nomination for governorship of his state. I am sure all his numerous friends will wish him success in his laudable ambition. I suggested to him that if the West Virginians did not suitably appreciate their

opportunities, to obtain a change of venue to the National Editorial Association, and we would elect him unanimously.

The meeting of 1888 at San Antonio, Texas, was not a large one. Twenty-two associations were represented by about 140 delegates. There were difficulties in advance in securing transportation that partly accounted for the small attendance. The inter-state commerce law was in the period of its bitterest enforcement, and was freely used by the railways to discourage editorial travel. In arranging for the meeting, President White

Past President A. B. WHITE, Parkersburg, West Va.

found himself confronted by great difficulties which only the hardest and most persistent work could overcome. It is said the great drain on his amiability, and the tremendous demand for vituperation from this cause changed the color of his hair in a single month. At any rate, he has been red-headed ever since.

The fourth annual convention of the National Editorial Association convened in Casino Hall, San Antonio, November 21, 1888. The meeting was exceedingly pleasant, though a quiet one. Probably the most important business transacted was in connection with libel law reform. The subject was introduced by a lengthy and complete exposition of the condition of the law at that time, under the title of "Libel Laws of Different States Compared," prepared by Mr. W. H. Brearley, of the Detroit Journal. The paper closed with a series of excellent and pertinent suggestions. The whole was carefully considered by the convention, and a report including a series of recommendations to the state associations adopted.

The sessions of the Association were continued for three days, and adjourned on November 23, to meet in Detroit the following August.

A majority of the delegates started on Saturday, the 24th, via the International and Great Northern Railway, for the City of Mexico. There they spent three days very agreeably, being received by President Diaz and shown many and various courtesies. The party reached Galveston on its return on December 5th and finally separated at Dallas on the 7th.

FIFTH ANNUAL CONVENTION, DETROIT, MICHIGAN.

By Jas. R. Bettis.

The fifth annual convention of the National Editorial Association at Detroit marked the emergence of the organization from its youth into full and strong maturity. The central location of the place of meeting, the victory of the newspaper advertising contract over the transportation difficulties of the inter-state commerce law, and the activity and ability of the Association and Detroit managers of affairs, all contributed to secure the largest attendance in the history of the organization up to that time, and rarely exceeded since. There were nearly 300 votes cast by forty associations in the convention, and, including the ladies and others accompanying delegates, there were about 450 in attendance.

The people of Detroit set about the work of preparing for the entertainment of their editorial guests in a most systematic way. They organized, several months in advance, a citizens' executive committee, of which the mayor was chairman, and Col. Fred E. Farnsworth, secretary. They had permanent headquarters, used special lithograph stationery, and carried along the work with a system and thoroughness that I

am sure has never been equaled by any other city entertaining the National Editorial Association. All the Association officers had to do with the Detroit arrangements was to sit and look on. An idea of the fine detail to which the preparations were carried may be gained from the fact that each delegate whose name had appeared as such in the Journalist was handed, on his arrival, a large envelope, addressed to his name. Opening this he found within a badge inscribed with his special office, if he had any; a pack of handsomely lithographed cards, with his newspaper and home address; a printed description and guide to Detroit; a bunch of street car tickets, and some other items I have forgotten. Could completeness of preparation go much further? Being relieved of other cares, the president was enabled to devote all his attention to securing the attendance of associations not hitherto affiliated with us.

As at San Antonio the year before, the subject given most attention at the sessions of the Detroit convention was "The Progress of Libel Law Reform." Mr. E. H. Butler of the Buffalo (N. Y.) News, gave, in a very able paper, a complete exposition of the situation at that time. Advertising schedules and agencies, and many other matters pertaining to the publishing business were discussed and acted upon. One of the frequent speakers, always popular and gladly heard, was Mr. James W. Scott of Chicago, since passed away. The Association was entertained by a carriage drive and river excursion, a reception at the residence of Hon. Don M. Dickinson, and a grand banquet at the Star Island House, Lake St. Clair, which was attended by over 500 people.

One episode that will not be forgotten by those who were in attendance at Detroit occurred in connection with Hon. Elliott F. Shepherd of New York. This gentleman was present by invitation and addressed the convention very pleasantly and acceptably. Afterwards, in an interview with a reporter, he gave expression to some of his peculiar and rabidly partisan views on Southern conditions, which naturally raised a storm among our Southern delegates, and was greatly regretted by all. The presiding officer spent a number of rather unhappy hours trying to keep public censure of our injudicious guest out of the minutes. There was no extended trip after adjournment, a few only going to Niagara Falls.

The President—We will now listen to addresses from past presidents—from the men who have so ably assisted in making this association and the history of the country. I now have the pleasure of introducing to you Hon. E. W. Stephens of Missouri.

THE CONVENTION OF 1891, IN ST. PAUL.

At this point Mr. Stephens stepped forward on the platform and spoke in substance as follows:

Mr. President, Ladies and Gentlemen:

Max O'Rell in one of his lectures upon American life, has made the statement that, for beauty, for elegance of manner,

Past President E. W. STEPHENS, Columbia, Mo.

for genius, for amiability of character or soul, the world has nowhere a type to compare with the Southern woman. After listening to the excellent poem of Mrs. Brisbane and the sweet music which is yet tingling in our ears, I think we can here to-night re-echo the sentiment of Max O'Rell. I listened last night with a great deal of pleasure to the gentlemen who were

before us on that occasion, and heard what they said about the enterprise of New Orleans and the glory of Louisiana, what they said about the jetties and the Mississippi river, and high water, for a long time; but I never heard them say anything about the Southern women and the Southern home. Of all spots on this green earth I know of none that to me has always possessed a more ideal interest than has the Southern home. I congratulate the members of this Association on their meeting in New Orleans, in this center of Southern homes, in this city of the Southern women.

I congratulate you, ladies and gentlemen, that after fifteen years of history of which you may be proud, you came back to this your first love. I did not have the honor of being a member of this organization when it was organized fifteen years ago, but I have always taken a great deal of interest in its history and am proud of its achievements. No organization in this country has done so much for the press of the United States. None has done so much to elevate it to a higher plane, none to-day is so representative of the press of this country as this Association, composed of men who stand close to the people, representatives of the people who are in touch with the people, who wield the power of this country, who wield more power and possess greater influence than the members of any other organization in the history of the United States. I hope the time will never come when any root of bitterness will grow up in it, when it will be dissolved or lose its power.

Now, there are several other speakers to follow me, and I shall advert but briefly to ten years ago, when in the city of Boston this Association conferred upon me the greatest honor that is within its hands, one which I will always esteem the highest honor of my professional career. The era of glory that followed that selection has had no counterpart in my history except the nine years of obscurity that have followed it. In common with my fellow-associates as ex-presidents, who can all sympathize in my experience, and exclaim with Wolsey, "Farewell to all my greatness, this is the state of man; to-day he puts forth the tender buds of hope, to-morrow blossoms, and bears the blushing honors thick upon him. The third day comes a frost, a killing frost, and when he thinks, good easy man, full surely his greatness is a ripening, it nips his root and then he falls as I do."

We met nine years ago in the city of St. Paul, at the source of the Mississippi river, near whose mouth we meet to-day. How the march of ideas, that like the current of that majestic river, has flown on since then, and how our country has prospered; and how upon the stream of public opinion has been borne that greatest of all forces, the press. Though New Orleans and St. Paul are separated by hundreds of miles, the same life giving river which has its source near St. Paul bears its life giving waters down and pours them at the feet of New Orleans. And so does the stream of public opinion flow; the same great ideas flow from one end of this land to the other. America is indeed one people, with one thought, one sympathy, one press and one destiny.

THE EIGHTH ANNUAL CONVENTION, 1893.

By Past President B. J. Price, Hudson, Wis.

Any gathering of the National Editorial Association is a noteworthy event. The eighth annual convention was especially so from the fact it was in the year of the wonderful Columbian Exposition, at the wonderful city of Chicago. Preliminary plans had been outlined for this meeting in May, 1892, at that never-to-be-forgotten convention in San Francisco, in the selection of Colonel John C. Bundy, of Chicago, as chairman of the local committee of arrangements. The following officers were also chosen to join with the executive committee in the labors of the year:

President, Byron J. Price, Wisconsin; first vice president, Walter Williams, Missouri; second vice president, H. J. Knapp, New York; third vice president, James H. Duke, Mississippi; corresponding secretary, Joseph M. Page, Illinois; recording secretary, William Kennedy, Pennsylvania; treasurer, A. H. Lowrie, Illinois.

A meeting of the executive committee was called at the Tremont House, Chicago, October 19, 1892, to formulate program and fix date of convention. But time had wrought many and sad changes. Colonel Bundy and Secretary William Kennedy had died, Benjamin B. Herbert, the "Good Father Endeavor" of the Association, had been frightfully injured in an elevator accident, and Treasurer A. H. Lowrie had gone abroad to fill a foreign mission. Reports that had been planned were accordingly not in readiness for the fall meeting, and little was done aside from passing resolutions of sympathy, and selecting a sub-committee to perfect arrangements. This body met January 19, 1893, and accepted an invitation to hold the next convention in conjunction with the World's Press Congress, conducted by President C. C. Bonney; also invitations from World's Fair management to enjoy the freedom of the grounds during the progress of the convention. Colonel Herbert had, in a large measure, recovered from his injuries, and as is always the case, rendered Herculean service in a thousand ways toward making the editors stay in the Garden City of the West one steady round of interest and pleasure.

He was joined in this by a large force of his fellow-townsmen. May 16 to 20 were the dates fixed for the convention, so

as to get the first flush of the great exposition, and also to be in touch with the Press Congress.

Joseph M. Page, our Napoleon of management, chartered the Mecca Hotel, or so much as was necessary, as the permanent home of the editors while in Chicago. This was half way between the fair grounds and the heart of the city. Its capacious parlor and telescopic balconies were well suited for our public gatherings, and the headquarters were all that could be wished. As the great exposition and the hospitality of the generous people of Chicago vouchsafed bountiful entertainment for the association, the officers purposely provided as limited a literary

Past President B. J. PRICE, Hudson, Wis.

and business menu as the necessities of the case would warrant. The stated program was formally opened on the evening of May 16, in the parlor of the Mecca Hotel. James G. Gibbs was selected as treasurer in the place of A. H. Lowrie and W. E. Pabor recording secretary in the place of William Kennedy. The opening session was memorable—interspersed with brilliant speeches and delightful music. Among the speakers were Hon. B. B. Herbert, Hon. Adolph Kraus, to represent Mayor Harrison, the late Major Moses P. Handy, chief of the Bureau of Publicity; the late James W. Scott, the gifted editor and the president of the American Publisher's Association; Governor George W. Peck of Wisconsin and President Price. The annual address was delivered by G. C. Matthews of Memphis.

Past President Cappeller, in a neat speech, then presented to the Association the gold gavel which had been bestowed upon it by the people of California, the year previous.

During the remainder of the convention only one session a day was held and that in the forenoon; but a number of valuable papers were read and many live topics discussed. The one session afforded the delegates and their ladies much time for the exposition and for the outings provided by the hospitable people of Chicago.

The convention proper, the exposition and the outings afforded joyful experiences enough for many pages of description, but time will not now permit a review. On Sunday evening the association attended Plymouth Church and heard an eloquent sermon by Rev. Frank W. Gunsaulus, on the text, "Acquit Yourselves Like Men."

Convention met Monday morning and wound up the business details, then adjourned to participate in the World's Press Congress at Memorial Art Palace in the evening. An elaborate program was provided, rather too elaborate for the time and endurance of the assembled throng. This was supplemented by two or three days of literary surfeit; which, it must be confessed, was far more laborious and tedious to the officers than it was valuable to the members of the National Editorial Association; for, out of respect to good Brother Bonney's well meant endeavors, some of your martyrs were in duty bound to dance attendance at the grind, while the great mass of the delegates were reveling in the joys of the Midway Plaisance. The officers elected to maintain the succession were:

Walter Williams of Columbia, Mo., president; J. B. Eddy, Pendleton, Ore., first vice president; James H. Duke, Scooba, Miss., second vice president; Ewing Herbert, Hiawatha, Kan., third vice president; Joseph M. Page, Jerseyville, Ill., corresponding secretary; E. J. Acheson, Washington, Pa., recording secretary; James G. Gibbs, Norwalk, Ohio, treasurer.

Brilliant Walter Williams and his able aids made a fine record at the Asbury Park meeting the following year; and many

enjoyable gatherings have been held since; still, the manifold delights at Chicago, in spring of 1893, continue to enchant the minds of all who had the good fortune to participate. May the useful National Editorial Association live long to be a source of strength and delight to the editors of the land, is the wish of your eighth president.

Ex-President A. O. Bunnell of New York was introduced, and delighted his audience with an address full of pleasant reminiscences and replete with the most humorous remarks. He said in part:

ANNIVERSARY ADDRESS.

By A. O. Bunnell.

Mr. Bunnell commenced his address with a war story illustrating the size and potentiality of the National Editorial Association. He said these anniversary occasions fill our hearts with songs of reminiscent joy, albeit with now and then a minor note because of those we shall forever miss. He had been asked to speak of the tenth annual convention of this Association, of St. Augustine and of the southeast coast of the United States. He told of the two great railway trains of delegates, one from Washington and one from St. Louis, converging at Tampa; of an evening "Way Down Upon the Suwanee River," with veritable darkeys playing on the banjo the old familiar tune and singing the familiar words; of the pleasures enjoyed at the great Tampa Bay hotel, the inn, and on the bay itself, and of the final arrival at St. Augustine. He spoke glowingly of this most ancient city of North America, a city around which hangs the romance of Spanish chivalry,

Past President A. O. BUNNELL, Dansville, N. Y.

of English tenacity, and the final all-conquering power of Americanism; of San Marco's imperishable walls, of the old city gates and the great trio of modern world-renowned hotels.

The convention opened in the Hotel Cordova, January 22, 1896, with an elaborate program, in which the women took prominent part. He said: "Of all the many subjects discussed that one pertaining to the elevation of the standard of journalism and the moral tone of the press stands out in my memory like a peak rising from a plain. The convention did me the great honor to unanimously adopt as a resolution the recommendation on this subject in my annual address. Have we been true to our pledges then made, to refuse all questionable and impure advertising, and to exclude from our newspapers all that has a tendency to degrade?"

"To illustrate this serious question and to fix it more firmly in your minds, allow me to recall a romantic page in English history. Centuries ago, the Countess of Salisbury, the grandmother many times removed of the present marquis of that noble house, was dining with Edward III., when her garter fell to the ground. The gallant king at once picked it up and placed it on his own person. Noticing the sinister smiles of some of those about him he restored the garter to the countess, at the same time repeating the famous French maxim, 'Honi soit qui mal y pense'—Evil to him who evil thinks. From this incident originated that most famous of all British knighthoods, the Order of the Garter, to which only high-minded men are admitted.

"Why not resolve this great Association into the Knighthood of the Press, with its motto, 'Evil to him who evil prints'? How true it is that the evil which the newspaper

man does to his kind by printing evil things for the sake of profit comes back upon him with its shadowy power, shriveling his heart and blackening his character, and taking out of his life all the manliness and sweetness which make life worth living; while the good things that a newspaper man prints are like the mercy for which the peerless Portia plead; 'dropping as the gentle rain from heaven, it blesteth him that gives and him that takes.'

"The southeast coast of this country has been projected thousands of miles outward from Florida since our memorable debate on Cuba at St. Augustine. It is the coast of the Sulu islands and all the islands north of them in the great Philippine group, which are now an integral part of the United States, and to remain so! This is not politics. It is Americanism. And I predict here to-night that no future administration of this government, be it republican or democratic, will dare to give up one foot of soil won by American arms, baptized by American blood and dedicated to American freedom. It is one of the duties of this great Association, which has done more than anything else to make us one great homogeneous people, to bring together the new peoples and the old and to make the greater United States coherent and strong for the good of all peoples who shall dwell under the star-spangled banner."

THE SESSION OF 1897 AND OUR SISTER REPUBLIC.

By Past President R. H. Thomas, Mechanicsburg, Pa.

Mr. R. H. Thomas of Mechanicsburg, Pa., also ex-president, followed with an address entitled "The Session of 1897, and Our Sister Republic." He said:

"'Tis sweet to remember,
I would not forego—
The charms which the past
O'er the present can throw."

This is a time for memory, an occasion for a glance backward. Here in this beautiful city, this home of culture, refinement, business activity and chivalric patriotism, in 1885, was cradled the child that in the intervening years has grown to stalwart manhood, and now stands before the nation a giant in strength and a Hercules in influence. Nor do I esteem it a light honor that I was one of the few who then and there laid the foundation of the National Editorial Association.

The leading spirit, the guiding mind on that memorable occasion, Mr. Herbert, is with us yet, and to his untiring industry and calm judgment we are indebted for much of our present prosperity.

In that year I came to this city, a stranger, to represent the state of Pennsylvania at the great Cotton Centennial Exposition, and soon found myself surrounded by hosts of chivalric friends, who valued honor more than life, and from that hour down to the present moment I have entertained a feeling of high regard and deep friendship for the citizens of this city; the commercial mart of the largest, richest and most beautiful valley in the world.

Time will not permit me to indulge longer in these pleasant personal recollections, agreeable so ever as the task may be, I must, therefore, give attention to duties more in harmony with the purpose for which we are again assembled, in annual session.

In the years which have elapsed since our convention of 1897 I have found nothing to change the views I then expressed in my annual address as president of this Association; but much has come under my observation during that time to strengthen my former convictions, so that at this meeting I can but accentuate more forcibly the views I then enunciated.

I am convinced more thoroughly than ever that the press is the great educator of the age. It is a fact conceded, even by enemies, that in no country in the world can you find a people to compare with the high standard of intelligence found among our own people, the common people, the wage-earners, laborers, mechanics and artisans. And I am not claiming too much when I say that to the press of this country, the rural press, we are indebted for this proud distinction more than to any other power or influence.

And the same power holds in check ambitious and designing men who would not hesitate to rob the people of vested rights to realize their own wild dreams. It is difficult to enforce a law that is unsupported by public sentiment, and I conceive it to be the duty of the country newspapers to create and foster an aggressive and elevated moral sentiment that will demand the enactment of just and salutary laws.

Nothing that is for the public weal should fail to receive our endorsement and earnest support and nothing that militates against the general good of the community, the municipality, the state and the nation, should escape our censure and denunciation.

It is the glory of this Association that it has brought together in a common fraternity those engaged in a common calling and laboring for the accomplishment of the same noble end. North and South, East and West, know each other as never before. So strong are the ties of brotherhood that he who should now attempt to stir up sectional bitterness would

be denied a hearing and be relegated to the shades of obscurity. We are a united and a glorious country, marching to the music of industry, under one flag, the flag borne by Jackson and the brave defenders of this beautiful city, in the morning of the century now nearing its close.

Recurring to the meeting of 1897 awakens in the mind many fond recollections. A goodly number of us came from the rigors of a Northern winter to the land where summers never end; from a region where the mountains and valleys were covered with ice and snow to the flower strewn vales of the fair Southland, from where rivers and rills were ice bound to where rolled the waters of the noble rivers of the Lone Star state. The warmth of the climate was only equaled by the warmth with which the Press Club of Texas and the citizens of Galveston welcomed the members of the Association.

Buried deep beneath the silent flow
Of grateful, humble joy
Such precious scenes are ne'er forgot.
Mind locked in kindred mind, and heart in heart.
Pleasant, though brief had been our stay,
Now, stopped we, momentarily, to take our part
In sportive jest, and wit's sarcastic play;
Now armed our thoughts to try the friendly fray
On Reason's battle ground, but oh, if ever
The evil ones who love, and then betray,
Have tempted us affections bond to sever,
Here be the foe repelled, and love recalled forever

Our meeting at Galveston was a revelation to many Northern editors. We thought we knew something of this great state, an empire in itself, rich in mineral wealth, and possessing a soil of unsurpassed fertility; something of the glorious struggle her citizens made for liberty and independence, under that invincible leader, as brilliant in legislative halls, as he was brave on the field of battle, the hero of San Jacinto, but we found on our visit that we had formed too low an estimate of the resources of her broad valleys, the richness of her mines and the intelligence of her noble, brave and chivalric sons and beautiful daughters.

As we journeyed through her cities, by her sweeping rivers and across her broad valleys we were constrained to say, with the famous Queen of Sheba, "The half had not been told us." It was never my pleasure to meet and mingle with a more generous people than I became acquainted with during our stay at Galveston.

Texas is full of places of historic interest, places where her loyal sons fought bravely for liberty and gave up their lives nobly for independence, but these incidents are so familiar to my auditors, members of the editorial fraternity, that it would be presumptuous in me to take time to particularize where all are so meritorious. The story of the heroic struggle and terrible massacre of the Alamo is one of the milestones in history; a showing of American bravery that is forever the nation's pride.

Beyond the great Empire state we have a sister republic, Mexico, the land of the Montezumas, the home of romance and ballad, the land to which Cortez came a conquering hero, overpowering former kings and rulers; a land of wonderful but undeveloped resources!

Rich in scenes of historic interest as well as of poetic beauty. But from these twice-told tales, however thrilling we turn to the present, the Mexico of today, which, as a republic, is making giant strides in the art of good government.

The country, under the wise and sagacious administration of President Diaz, is advancing in the arts and sciences; in agriculture and commerce and in moral and mental education. The progress is great and good, but substantial progress cannot be made until caste is abolished and class distinctions no longer exist.

True reform can only be brought about through the newspapers of the nation, and it is because I thoroughly believe that fact that I hail with delight every move to bring the editors of Mexico into closer touch with the editors of our own great republic. We must point them the way to true greatness and prosperity. While we may be egotistical it is also natural that we should appreciate our own way, for we hope for the best. We must teach them the power of the press, and impress upon them the almost sacred trust an editor assumes.

The influence which we shall exert upon our sister republic will not arise from the circumstances of our possessing a peculiar form of government, but from the manifestation of our national mind, which is molded and fashioned by our newspaper literature more than by books.

The philosophy of our national mind is the philosophy of applied common sense, exalted patriotism and unswerving adherence to the right. Our sister republic can imitate our prosperity and happiness, only so far and so fast as she obtains the possession of this grand postulate of all prosperity, the philosophy of common sense. That our country has a great mission to fulfill I do most sincerely believe. It is destined to accomplish that mission through the education imparted by our newspapers, by the example of our institutions and by the influence of our literature.

In conclusion permit me to congratulate you, my fellow-editors, upon the good work already accomplished by this Association. It has brought into friendly and fraternal touch the

"ready writers" of the different states of our glorious Union. Before the organization of this Association there was no bond of sympathy between us. We scarcely knew of the existence of each other, and, each was left to pursue the bent of his own inclinations or the whim of his own fancy. Now we are a great brotherhood working together for the common good, and what is the interest of one is the interest of all.

I entertain high hopes of the future of our Association, and of the work yet to be achieved by the press of this country. Let us recognize that our duty to our readers requires that we tell them the truth, the whole truth and nothing but the truth, that neither for gain nor for a mere partisan success will we mislead or deceive them.

Public men will cease to disregard the will of the people when they know they are to be tried for misdemeanor in office by the newspapers of the country and that a true verdict will be rendered in accordance with the facts in the case. The masses are honest and incorruptible and look to the editor of their weekly paper to tell them when danger approaches and protect them from the machinations of demagogues.

Knowing that the members of this Association will be true to duty and always be found contending for what will be for the good of the whole people and the future glory and prosperity of our great country, never as great as at this hour, I bid you good evening.

THE THIRTEENTH ANNUAL CONVENTION.

By Past President Louis Holtman.

Ex-President Louis Holtman, editor of the Democrat, at Brazil, Ind., next addressed the association, his subject being "The Thirteenth Convention of the National Editorial Association, in the City of Denver, Colo., on Monday Evening, Sept. 5, 1898." Following are his remarks:

The thirteenth convention of the National Editorial Association assembled in the city of Denver, Colorado, Monday evening, September 5, 1898. Welcome was extended by Hon. Alva Adams, governor, on the part of the state of Colorado, and by Hon. T. S. Murray, mayor, in behalf of the city of Denver. The program for the convention was arranged with a view to

Past President LOUIS HOLTMAN, Brazil, Ind.

giving one day to each, the business, the editorial, and the mechanical departments of newspaper making. On Tuesday, September 6, twenty-three addresses and papers were presented, all relating to the business and financial conducting of newspapers. The next day twenty-six contributions on the editorial work of the newspaper were presented, and in the evening a practical lecture, with stereopticon illustrations. Thursday, September 8, fourteen addresses on the mechanical department, and an exhaustive report on libel legislation, constituted the program. In the evening a banquet was given by citizens of Denver. Friday was devoted to committee reports, unfinished business and the election of officers. Saturday the excursion to various points in Colorado was begun, and the week following devoted to a continuous feast of sight-seeing in the Centennial state. I would not disparage the preceding or following conventions, yet it is with pride that I recall the enjoyments of the Denver, or thirteenth National Editorial Association meet-

ing, and can conscientiously say that it truly was a "feast of reason," and a journey of pleasure. The National Editorial Association had on a previous occasion enjoyed the hospitality of Denver and Colorado, and on the way to the San Francisco convention the editorial party were guests for a day at Colorado Springs, nevertheless the ladies and gentlemen constituting the thirteenth convention of the National Editorial Association learned more of and about the glories of Colorado in 1898 than they previously knew, and the citizens of that state now feel even more kindly towards the editors. As an evidence of the latter statement I recall to memory the presentation made the Association of a beautiful loving cup by citizens of Denver. Viewed from an educational standpoint the thirteenth convention was a success, and in its social character it was a success also. For this credit is due the people of Denver, the state of Colorado, and the ladies and gentlemen who prepared and presented the many excellent literary and practical addresses. On the way to Denver from Chicago a stop of three days was made at Omaha, where the editors attended the exposition, and on Sunday before reaching the convention city a sojourn of several hours at Lincoln, Neb., was delightfully spent.

Past-President Joseph Maccabe of Boston made a rousing little speech, displaying a large amount of wit and humor, all bearing the genuine Bostonian polish, and concluded in a serious vein as follows: "I sincerely hope that we will go on. I hope that we shall never hear of disintegration in this association as long as we live. I trust that we shall always remain united, for one cause, with one thought—that of the upbuilding of our profession, and the perpetuation of everything that is good and true and pure."

The next item on the program of the evening was an address by Mrs. Edith Weatherred of Oregon, on "Brain Commission."

After making a few introductory remarks, Mrs. Weatherred said:

Now, the subject which I have chosen is "Brain Commission." It is really not a very flowery subject; but I am not a very flowery person. I might have taken a subject on "The Highest Standard of Journalism," but if I had you would have expected something of a high order. I have taken a plainer subject. You might probably ask, What can a person say on this subject of "Brain Commission?" Well, there is this thought which occurs to me at the outset. Every line of business, almost every profession or occupation, has some provision made for its protection in its favor, to elevate it to a higher standard, except that of the editor. We have boards of examination for doctors, for dentists, for lawyers, for professors, in colleges; we have commissioners to look at the quality of our food, we have even heard of barbers having boards or commissioners in some places, but the profession of the editor has no provision whatever as a safeguard or to elevate it in the estimation of the people and to raise the standard among those who follow that occupation. I claim that we should have similar provision made in behalf of journalism; that those who wish to be editors or follow the profession of journalist, should be taught to be editors; that before any one is permitted to enter in that field he should be properly commissioned just as lawyers, doctors, dentists and even barbers in some places, have to be. If even barbers are not permitted to exercise their trade without evidence of their competency, for fear they might perhaps sever the windpipe of their patrons, why should any one be permitted to arm himself with a newspaper, the most powerful weapon which can be placed in the hands of any one, and be allowed to exercise it on the moral character of the people?

Do not think that I propose to act as censor here to-night. There are a great many other things which I might speak of. I might speak on the power of the press to do good. Take the minister for instance. His influence for good is not as great as an editor's. He is expected to be good, and if he is, nobody thinks anything of it; but an editor is not expected to be good, necessarily, and when he does anything which displays his goodness, it attracts general attention and exerts a much more powerful influence than if the same act were done by a minister.

There is another point to which I might call your attention, that is the commercialism of our profession. Of course, it is perfectly natural that we should look to the bread and butter side of journalism, but for all that I claim that we should endeavor to elevate ourselves to a higher standard; that in trying to furnish the people with what they look for we should never fail to endeavor always to elevate ourselves and to elevate the public with us, to a higher standard.

I must not forget to tell you how much I enjoyed the song of Mrs. Boyesen on "Women in Journalism." I appreciate it more than I can express, what you men have done for us, in having us come down, hand in hand with you. We appreciate it because we know that you all have excellent tastes, and we accept this act on your part as a compliment. We hope that we will succeed in behaving in such manner that you will always strive to have us by your side. I am sorry for those women who say that they have no confidence in mankind. I wish I could meet them to tell them that if they ever traveled

with the National Editorial Association they would never think that way. I wish to say that I have yet to see anything that could be considered in the slightest degree discourteous, or anything but what is expected of the highest and most honorable manhood.

In conclusion Miss Weathered said:

Let us see if something cannot be done in the future; let us see if we cannot secure legislation in such a way that we shall have a higher standard of journalism; that our profession shall be protected, and raised to a higher level, as lawyers, doctors, dentists and any other professions are.

Mr. W. E. Pabor, the poet laureate of the association, who hails from Denver, Colo., then read the following poem, entitled

MY LADY OF SIAM.

By W. E. Pabor.

PRELUDE.

Often in some little fancy there's a moral to be found,
Just as rose-buds lie in hiding in the rose-roots in the ground;
And, as sunshine in the summer opens up the perfect flower,
So a simple rhyme may sometimes be a thought-rose in Time's
bower,
And this oriental legend of a lady's changing dress,
Find suggestions of the splendor and the power of the press.

THE LEGEND.

On the sacred day of Sunday, robed in crimson, edged with
gold,
And with rubies on her bosom, flashing in the sunlight cold,
Came the Lady of Siam to kneel before the temple's shrine,
While the eyes of countless lovers waited for a single sign,
That she saw them, that she heard them, while the rustle of
her dress
Made a musical low murmur, as when lips with lips caress.

But on Monday, when they met her she was gowned in virgin
white
And, with moonstones on her bosom, was a vision of delight;
They were set upon her sandals and they gleamed upon her
hands,
And her face shone like an angel's coming from the Heavenly
lands;
She seemed like a vestal virgin from whose eyes there shone
a light
Brighter than from ancient Pharos, when it lit the Grecian
night.

Then on Tuesday, when the Sun-god rose above the ocean's
bars,
Lo! My Lady of Siam stood in the scarlet robe of Mars;
On her forehead flashed great garnets, as if, with their fatal
fire
She would pierce each lover's bosom with unquenchable desire;
And her heralds with their trumpets called the world to see
her face,
As, in scarlet robe of splendor, she moved through the mar-
ket-place.

Yet, on Wednesday, when they met her, what a wondrous
change was seen,
Winged Mercury was honored by the wearing of the green;
There were emeralds on bosom, on her forehead, on her arms,
And her movements matched the Sirens in display of maiden's
charms;
Were she walking in the greenwood every tree would bow
and say,
she is coming, she is coming, Queen of Elfland and of May.

But on Thursday all the colors that have ever graced the
globe
Blent in iridescent splendor in her lissome rainbow robe;
And the cat's-eye was the jewel moving with her pulsing breast—
Type of Jupiter, the brilliant, moving slowly down the west;
While her mood was sad or mirthful, as her lips by thought
were stirred,
Like the ever changing carols of our Southland mocking-bird.

When came Friday, oh! my lady! she was fair and sweet to
see,
Garbed in delicate blue veiling, such as fairy robes might be;
On her bosom glittered diamonds, and, like Hebe she held up,
In its gold enameled glory, Pleasure's bliss begotten cup!
Oh! her lovers, how they yielded to the magic of her charms,
As she smiled upon them sweetly—just beyond their open arms.

Then on Saturday she finished with the fashion's of the days,
In a gown of deeper color than are blue ethereal rays;
And her breast was starred with sapphires for the zodiacal
sign
Showed that Saturn in the star-spheres, called its subjects to
its shrine,
So, in magical surrender, meek and gentle as a lamb,
On the seventh day, in the sunset, stood my Lady of Siam.

Now the story of the lady who on each recurring day
By a time-old law of fashion, gowned in changeable array,
Seems to me to be suggestive of a paper, as it speeds
Every morning on its missions, meeting all man's varied needs;
Like chameleons in its changes, from which eager eyes may find
Every color of the rainbow, matching mood of mortal mind.

For the story on its pages, as on each day it unrolls,
Is a symbol of the changes of the actions of men's souls;
And no day is like another, in the green or in the gold,
Now tones that show the crimson as Life's vices are unrolled,
Telling on the printed pages how a heritage of crime
Follows on and follows after, on the calendar of time.

Days are but as was the lady who upon her rounded breast
Each morn hung a different jewel, putting lovers to the test
Of delirium of passion, or the anguish of despair,
Or of mood when hope triumphant waved its white wings in
the air;
Ever ready with her tempting, as once, on the Aegean rocks
Sat the Lorelei of olden, combing down their golden locks.

So the paper has its jewels that on each day of the week
Should give solace to the sad heart and give strength to those
who seek;
But it lifts one man and crowns him, while another it casts
down,
As the mood is on the writer for a smile or for a frown;
With his slowing moving finger down the white and virgin
page
He becomes a Nero fiddling or the Buddha of the age.

Never yet in lifted pulpit stood a preacher who could preach
To a greater congregation than an editor can reach;
With the wide world as the bible from which to select his
theme
And the lightning, at his bidding, doing duty; till a stream
Of electric tidings reach him as he waits to write the words
That shall be as thunderous echoes, or as song of singing
birds.

And there never yet was teacher, be he poet, sage or seer,
Who could ring so many changes on the days, as they appear,
As the editor whose fingers in the solemn midnight hour
Robs a monarch of his scepter, lifts a president to power;
Who metes judgment on his fellows, weaves a crown of thorns
for one,
Or a wreath of Fame's green laurels, when his type-touched task
is done.

So each jewel of my Lady of Siam shines but to say
That it typifies the pages of the journals of to-day;
Pinioning Time's passing story as an artist paints his thought,
So that he who runs may read it and the moral it has brought;
Time-proof as the stone of Egypt whereon, in pictorial style
There are printed world-old stories of the Pharaohs of the
Nile.

Oh, my brothers, in selecting topics for each passing day,
Take the themes that lift men upward, as they pass upon
their way;
And deal gently with the erring, for the mercy others plead
May be wanting at the moment when your own soul feels its
need;
Like the jewels of the lady, let your printed pages show,
Rainbow colors softly blending to the whiteness of the snow.

CLOSING WITH COMEDY AND PATHOS.

Last among the speakers of the evening was Hon. Wolfe
Londoner, editor of the Cyclone Cellar, who told the asso-
ciation what he knew about the N. E. A.

WHAT I KNOW ABOUT THE N. E. A.

By Hon. Wolfe Londoner, Denver, Colo.

Ladies and Gentlemen, Brothers' and Sisters of the National
Editorial Association:

I am not going to address you formally; I do enough of that
when we are separated, and, as the old formula runs, "I take
my pen in hand and drop you a few lines." But I am glad
to be with you, and I need make no affidavit to such a state-
ment. Look at me! Do I not look glad? Well, I am. I
might deceive myself or my customers, but I do not deceive
my looks. Yes, I am glad—glad to see you, not through a
glass, redly, as I have in times gone by, in a certain modest
subterranean parlor, on a street called Arapahoe, in a city
known as Denver—but face to face. And speaking of faces,
it does me good to once more gaze upon the countenance of
good old Mother Herbert, who is also father of the Associa-
tion, and who has for so many years been living for the chil-
dren. He is looking all sorts of daggers and shotguns at me

now, but, bless his dear old motherly heart, he wouldn't hurt
one of us for the price of a big bottle.

And there is Parson Gibbs, our treasurer, who is playing
double on us by laying up treasures in Heaven. Methinks I
see him now in the Sunday-school of which he is superin-
tendent—

"While the Sabbath bells are calling,
As he passes round the hat,
While the dimes and halves are falling,
And he winks—'get onto that!'"

Forgive the verse; I seldom drop into poetry, but when I
do I am like the preacher with the chicken; if it fills the void,
we don't care who was the owner. Gibbs may be compared
to the piano-player; he's doing the best he can and we must
help him. I would like all who are within the sound of my
voice to do what they can to discourage the lively tendencies
Gibbs is sure to display during this trip. Remind him of the
vows he has taken; cut him off the third time round, and if
necessary, bear him gently but firmly to his hotel, where he
may sleep it off and then devote the balance of his time to
fasting and prayer.

And there is Secretary Page. I am sorely tempted to take
a few leaves out of him. I am handicapped by but one con-
sideration—he has gone into mining, and has struck it rich in
Colorado, and if I should prod him up, as I had it in mind to
do, he might get huffy and retire to his rich property, and
shake us for good and all. Indeed he has become so independ-
ent and high-minded that I shouldn't be surprised if we would
have to elect him president in order to retain him in the As-
sociation.

Over yonder I don't see another face as familiar to us all
as that of the town clock in a country village. I refer to the
hairless but otherwise agreeable phiz of Walter Williams, he
of the falsetto voice, the silver tongue and the gold teeth.
Thus endowed by nature for leadership in either the Populist,
Democratic or Republican parties, the strong personal pull
he has with all of us is fully explained. Long may we remain
in the sound of the first, the thrall of the second and the cheer-
ful gleam of the third. Talking about Williams reminds me of
a noted character in the history of the early days of Colorado,
Judge Bradford. He also was from Missouri, and dressed pic-
turesquely in linen duster, high plug hat and was otherwise
ornamented with a high C voice, which sadly needed manicur-
ing. He used to make the circuit with light wagon and a pair
of mules. On one of his trips through the mountains to attend
court he lost his mules, and in his search came across a pros-
pecting miner, of whom he inquired if he had seen the animals
anywhere. The poor miner was very much impressed by the
queer tone of the voice, and his sympathies went out directly
to the much troubled judge. Said he, "Pard, we'll find your
mules if they're in the mountains, so don't you cry about it!"
The judge, pale with anger, squeaked back, "You damned fool,
I ain't crying, that's my natural voice!"

I am glad to mark the classic profile of Edwin W. Stephens.
His air of gentle refinement has long been the subject of com-
ment, but few know how he came by it, hence it may be inter-
esting to learn that when Edwin was a little lad, his father,
Hon. James L. Stephens, endowed the Stephens Female Col-
lege at Columbia, Mo., and Edwin, being small of his age, was
allowed to accompany his sister to this excellent institution of
learning. It was here that he acquired his ladylike manner
and modest deportment. But he grew—that gentle boy—and in
time he began to appreciate his opportunities. He began to
pass notes to the girls, and to lean over the fence and greet
them, not in words, but in a thoroughly satisfactory manner,
and then—it is sad, but one must tell the truth—the principal
of the school peeped over the fence, and—well Eddie had to
go. But he has never forgotten the sweet rudiments of earthly
knowledge there received, imparted from lip to lip.

Isn't that Mott Parrott over there? Yes, it is. Dear
old Parrott—he's a bird. By gracious, that's a happy thought!
I believe I'll let him go at that—and besides, what succinct
comment could express more!

For this opportunity of addressing you I am under lasting
obligations to our esteemed and highly honored president, Mr.
Henry. I honor him to the extreme limit of his 200 pounds of
rotundity, and to the topmost lift of his majestic height. I
honor the great ponderosity of this modern colossus of physical
perfection, who so genially and so condescendingly makes of us
less favored mortals his obedient Cyrano de Bergerac, to pull
his fuming chestnuts from the brilliant fires of surrounding
oratory, and while we blow our scorched fingers, he placidly
gathers to himself the enticing meat, the glory and the eclat
of the feast. If the outward structure of this perfect edifice be
any indication of its inward furnishing, what a mine of elo-
quence, what a territory of information, what a bewildering
area of intelligence lies here to exploit! Like our rich moun-
tain fastnesses of Colorado it needs but the pick and shovel to
turn it loose.

But I'm talking too long. When I find myself among you,
old friends and begin chaffing, I hardly know enough to stop.
But I will not tire you. I will be good to you as you all
have been good to me, and to show you how delighted I am to
be with you, I will add that I am going to be in at the death.

I came to stay with you to the finish. With a heart full of fraternal joy I bid you lead on, and I exclaim with Ruth, "Whither thou goest I will go, and where thou lodgest, I will lodge."

Mr. Londoner's concluding remarks came from the heart, and were as follows:

"I want to say this, that I have never had a chance, strange, though it may seem, to thank you one and all for the splendid, generous, open-hearted kindness that you have shown me on many occasions; but above all, I want to thank you for the loving cup that you sent me, after the adjournment of the convention at Denver. It is a compliment that was highly appreciated. As we stand here face to face, I want to say that I think more of that cup than of anything I have in this world. I will always keep it before me as long as I live. And it is not much to say that when I am dead, my daughter Ruth, whom you are acquainted with, has said that so long as she may live, she will always keep it."

The set program of the evening was completed when Mrs. Janie Garland Stewart Boyeson again delighted the audience by singing "My Southern Love."

Mr. Wolfe Londoner then moved that the convention adjourn until Friday morning, March 2, at 9:30 o'clock, which motion, being seconded, was carried, and the convention adjourned.

MORNING SESSION.

March 2, 1900.

At 10:30 o'clock President R. H. Henry ascended to the chair and called the meeting to order.

The following telegram was read:

March 1, 1900.

Colonel R. H. Henry, President National Editorial Association: Please express my great regret at inability to be present. Appoint some one to take my place on program.

An inflexible rate of one-fourth to one-half cent per agate line per thousand circulation for yearly display contracts, with twenty-five per cent extra for position, and double price for pure reading is my idea, sustained by vigorous editorial and commercial management, giving full value received.

The newspaper can fill its high purpose and destiny only by conducting its business on the same thorough plan as other successful vocations by true and progressive merit, with prices for space and goods based on a fair profit above cost of production.

FRANK H. GREER.

The President—Ladies and Gentlemen: Mr. Greer was the first one mentioned among those who were appointed to read papers before this convention. I rather think it is too late to appoint some one else to take the place of Mr. Greer, but there is a suggestion that this paper of Mr. Greer on advertising rates should be referred to a special committee, who should take this matter up and report to this convention a rate. I would like the opportunity of appointing that committee. If there is no objection, I shall make the appointment. Is there any objection? There is none. I therefore appoint the following committee:

A. W. Lee of Iowa (chairman).

B. G. Louthian of Indiana.

L. G. Niblock of Oklahoma.

Irving Todd of Minnesota.

I notice in the printed proceedings this morning the omission of one name. There are four names, when there should be five. The fifth name to be added is that of Mr. Sam Sloan of Iowa.

The president then announced the program for the day.

The first speaker was Mr. T. J. Daniels of Alameda, Cal., who delivered an address on

"AMITY AND RECIPROCITY AMONG PUBLISHERS."

By T. G. Daniels.

When I modestly announced in the Alameda Argus that I had been invited to read before the National Editorial Association a paper on "Amity and Reciprocity Among Publishers," I provoked the California brethren to mirth. It seemed to strike them as a joke that anybody should assume that there were any relations approaching cordiality between editors, especially editors who were rivals in business.

A publisher in Marysville invited me in sarcastic vein to come up to his town and get some instructive lessons in brotherly love. Another at Santa Cruz made no end of merriment over the idea of there being any amity down his way between newspaper men. There was hilarity all along the line. When I saw the frank acknowledgment of the generally understood editorial shortcoming, I was more than ever impressed with the grave importance of the subject. I felt that it was indeed a matter to be seriously discussed before such a body of publishers as this National Association.

It is worth while to recall, at the outset, that the guild of publishers is almost the only profession which the spirit of

reciprocity does not largely control. In all professions, and especially in all business, it has come to be the prevailing feature. We see men in all walks of life combining, or at least coming to an understanding, for mutual benefit. But publishers so often remain aloof, separated by jealousies and hatreds that should have no place in this progressive and co-operative age. Too many of them continue to print the tax list for one cent a thousand ems to overreach the reptile contemporary down the street, who is anxious to print it for two!

The lack of amity between publishers is the weakness of the profession. The quarrels of newspapers one with another are the chief things that keep the press from the enjoyment of its full and rightful power. And I speak for the class of publishers which composes this Association, though there are others. The big publishers are as full of the taint as the smaller ones, and make more dazzling spectacles when indulging in the professional failing.

If publishers live far enough apart, they may get on fairly well, but their amity pales as distance decreases, and when they find themselves in the same town, there is almost sure to be none at all. In a majority of instances there is open hostility. This is often pursued to the point where profit and influence are immensely lessened, if not entirely dissipated.

We have all seen editors, honest in their convictions, loyal to their principles and true to their professions, performing prodigies of valorous service for their communities, yet falling far short of their honors and their reward through their inability to refrain from quarreling one with the other.

In whatever may be said here, it is understood of course, that none of the publishers composing this assemblage is referred to. We are all right; but we all know of those who delight in strife—who never will be good—and it is these who need reproof.

The journal that is close to the people, is the minor newspaper; that is to say, the country newspaper. This division of the press was never so influential as at the present time, and I might add, never fell farther short of its just reward. In the evolution of journalism, the minor press has come the nearest to maintaining its pristine power. The major press—the big metropolitan newspaper—has become enormously commercialized. It has been magnificently developed mechanically, but it is to be questioned if the hold it has on the public conscience has kept pace. But the country press remains much as it was, the counsellor and leader of its clientele.

The metropolitan paper is impersonal to a degree. Nobody can find the editor or anybody responsible should he start out to protest against its contents, but the minor paper is acutely personal. Its editor is seen and known of and mingles with, his patrons, and is answerable to them always for the things he utters day by day. They know who is talking. Consequently his paper is a closer reflex of public sentiment. The very fact that its editor is more directly responsible to his patrons; that his success must come through personal goodwill; that personal power is not possible for him without personal esteem on the part of his patrons—all these facts make him truer to the best journalistic ideas.

Out in California the State Editorial Association has taken this subject up. Its leading members saw the great disadvantage that publishers labored under in having no concert of action or understanding. They saw they were prey to advertising agents, who played one publisher of a town against another and those of one community against those of another, till he got his business at ridiculous figures. They saw that the isolated publisher, just as the isolated man of any vocation, had no just comprehension of the emergencies continually arising, and if he has, that he was not free to take the wisest action to meet them, because of his fears, jealousies and hates. A committee was appointed, of which I had the honor to be a member, and which took the matter in hand and devoted a good deal of study and discussion to it. The committee formulated a plan of organizing the publishers of the state which now is in process of being carried out. I cannot report definite results yet, for it is newly launched and there is much work to do to overcome the habit and drift of years; but I feel sure the plan is sound, and can be made to succeed with discrimination and persistence.

The committee found that the chief fault lies with publishers who are acute competitors. The publishers in widely separated sections of the state, get on well enough. But this is not important. Those of towns not so widely separated are often on fairly good terms; but it is the exception when those of the same town, or even county, fraternize sincerely. They have a sinister distrust of each other, if they are not positively at war.

The committee concluded that the key to the situation was to establish mutual relations between publishers in every town. They must be got together and given object lessons on the folly of staying apart. It was decided to send out a missionary. The missionary was to acquaint himself as far as possible with the situation in each town before he summoned the publishers together. He was to learn both sides and so be in a position to effectually mediate. One of his strong points was to show how advertising agents thrive through the jealousies of contemporary publishers.

It is astonishing what a man of tact, thoroughly conversant with the publishing business, and who comes impartially to the task, can do in the direction of harmonizing antagonistic publishers. Of course, he is first regaled with the several tales of woe. Each in turn tells how he would come to an understand-

ing, but the other fellows are possessed of such astonishing unworth! There is no hope of harmony with them. But gradually, by showing how all are a prey to the buzzards of business when they stand asunder; by adroitly fetching out here and there that in the differences of the past the right has not been wholly on the one side, nor the wrong on the other, he is generally able to form a basis of understanding, and finally to fetch the warring factions together.

The basis of any such arrangement must always rest on good sense—the ability to see the necessity of concentrated action. There should never be a cinch proposition sprung. Combination should never have the aim of exorbitant prices. If it can be ingrained into the rivals that the salvation of both depends upon both being tolerant and fair, they will be much more likely to hold to a compact than if it is only a question of cinch.

After the close rivals of a town are made in some measure homogeneous, those of all the towns of a county should be organized. This is much easier, and if the first effort has been genuinely successful, will follow with comparatively little effort. Then there should be organization of districts, natural divisions of the state, if there are well-marked diverse sections. State organizations already exist, but they are too thoroughly given over to pleasure and perfunctory proceedings. The business end of the profession should receive more attention.

That which one publisher has learned in his experience and another has not, should be told for mutual advantage.

This plan we sincerely hope will greatly improve the lot of publishers of California. But we realize it will require some effort. It will be some time before those whom it is to benefit will appreciate its advantages so as to heartily co-operate. But it is worth trying. It is worth all the effort that must be exerted. It is the only way that I can see to get the publisher out of the rut in which he has ploughed so long, and in which so many have become discouraged.

And now, another thing: After the publisher has found it possible to get on better terms with his rival and contemporary he should have a season of introspection and see if he can not get on better terms with himself. The general public has too insignificant an opinion of the local publisher and editor. This is undoubtedly due in large part to the fact that the local editor has too insignificant an idea of himself. He does not within bounds take himself at his worth. Often he fails to comprehend the part he plays or should play in the community. He permits people to assume his insignificance without protest. He even cracks jokes at his own expense. How familiar we all are with the publisher who always reproduces every jest about the proverbial poverty of the editor! My idea is that the profession should never give assent to the belittling things, even though uttered in jest, that are heard and read of the journalistic profession. Let all stand up for the guild. Let every one feel that his calling is highly honorable, and that he is determined to do something to add to its importance and respectability. Let him feel that he is worthy of his hire. And when a patron says, as we have all heard patrons say, that their patronage is bestowed to help the enterprise along, and not as a business proposition, let him take issue.

The typical country editor is still more in evidence than he should be, though I am glad to say he is not in attendance at this convention. We all know him by his carelessness of attire, his cluttered den, his unkempt appearance, frequently his lack of energy, and the slovenliness of his columns. Anything that anybody will write up and send in, goes. If he is ever stirred to effort himself, he is likely to overdo it as he is sure to underdo it all the rest of the time. Those who assume that the local paper is but a begging institution have their justification in this class.

In no profession or business is the line of merit between individuals so faintly drawn. Of course, there is a general reputation, and discerning ones know the relative value of the papers of their community; but the general run holds that a newspaper is a newspaper, and the services of one are as valuable as the services of another. We practical newspaper men know the utter fallacy of such contention, but we realize how the public's disinclination to acknowledge it is one of the things which operates to keep from the meritorious their just reward.

I would have the publisher come up at the heel in every respect. He ought to become a better business man; he ought to become a better journalist. He ought to sleek up and have as much style about him as any professional man in his community. The preacher has no call to go before him in the affairs of his community, nor the doctor, nor the lawyer. Let him take his rightful place. Let him not complain through his columns week after week that he is not appreciated, or adequately remunerated. Invariably he is appreciated and remunerated to the full extent that he deserves to be. Instead of repining, let him go to work and command support by his energy, discretion and public spirit.

And I have a theory that this legitimate self-esteem, this proper feeling of self worth, comes with improved relations with his contemporaries. A man who is distracted with small controversies and quarrels grows petty in nature. Take these away and he broadens and feels that he is occupying more space.

Gentlemen, the evils of the profession are lack of real fraternal relations, and lack of a true self-appreciation,—though the latter is more the result of the former than an evil of itself.

Cast out the small jealousies; come together in mutual interest, and you will have done more to elevate the press than is possible in any other course of action.

The next speaker was Mr. Joseph Leicht, editor of the *Westlicher Herold*, at Winona, Minn., who delivered the following instructive address on

"HOW TO CONDUCT A SUCCESSFUL WEEKLY PAPER."

Ladies and Gentlemen:

At the request of the president I stand before you as a special, or substitute, not because I have anything special to say, but for the reason that the "regulars" have broken faith with the president and have not responded to the papers assigned to them. I was instructed to tell you all that I know or don't know about conducting successfully a weekly country newspaper. Most of you, ladies and gentlemen, heard yesterday the masterly explanation and instructive address as to "How to Conduct a Newspaper," and those who did not hear it will have a chance to read it in the April number of the *National Printer-Journalist*; therefore, it would be useless for me to go over the same ground, but I will say that most of the methods of a successful daily are, with the necessary changes to suit the circumstances, essential in conducting a weekly newspaper which shall be financially and otherwise a success. The first question, under the circumstances and to avoid covering the same ground covered by the paper yesterday, would be perhaps: Who will be a successful publisher and why are we not all successful? The foundation of every success in life is to do things right, and this answers both of the above questions. To do things right we must know how, and we must have the earnest desire to do everything right. This requires business ability, tact, intelligence and energy. Most all the failures in newspaper life are due to a lack of business ability, which is more important than the ability of writing good editorials. President Henry criticized very severely the advertising agencies yesterday, and he was without doubt correct in his utterances from the standpoint of the publisher, but I do claim that all the fault lies with us. The advertising agent is a shrewd business man; we, as a rule, are not shrewd business men. The advertising agent knows what he wants; we do not. To illustrate this, I will call your attention to a little incident that happened about a year ago. A certain agent from one of our western cities sent out a proposition for a six-inch "ad" and offered the magnificent sum of \$12 per year. I buried the glorious offer in my waste basket. By glancing over my exchanges the following weeks I detected the "ad" in a dozen or more papers. A few weeks afterward another communication of the said agency offered me the same "ad" for \$24, saying that they paid for the "ad" in other papers from \$6 to \$10 cash. I honored the firm with a postal card and said that my price was 45 cents an inch net, i. e., \$140.40 for the period of one year, and they should not waste any stationery on me, if they could not pay that price. They certainly would have to send stamped envelopes if they expected an answer to any of their business propositions, as Uncle Sam had not granted me the privilege yet to print my own postage stamps. The advertisement runs now in enlarged form in one of my papers, and we agreed on a yearly price of \$940, a slight reduction on my regular price.

A successful country weekly must also have a good local news-gatherer and a man at the head who is respected by all. To be a good social, all-around fellow is all right, but your constituents must respect you, and when you fight, your blows must strike hard and be effective, that the unscrupulous may be made to fear you. Your editorials must be regarded free from personalities and prejudice. All this requires a moral standing, which only can be acquired by strict integrity and uncompromising honesty. You must not be a tool in the hands of politicians, because they will discard you as soon as they have gained their end.

A publisher of a successful country weekly must be a man in the full sense of the word, "a man for a' that," as Robert Burns expressed it.

I could go further, but you have been taxed enough with this rough sketch of a successful country publisher, and I will only add that it requires more to be a successful publisher of a country weekly than to be a good politician, chew tobacco, drink whiskey and to make chips out of a stick of wood or from a box in a country grocery store.

After Mr. Leicht's address, Hon. Thomas M. Patterson, editor of the *Rocky Mountain News*, Denver, Colo., delivered an address

ON THE PAPER TRUST.

Mr. Patterson said in part:

I have not had time to prepare an address such as the importance of the subject allotted and the dignity of this association demand. Indeed, I thought I could not attend the association's meeting until three days ago, and I have been limited to time on the cars to arranging my thoughts for this occasion.

The trust, and incidentally the tariff is a delicate subject. The first question to confront one is, can such a matter be

discussed without thrusting a partisan question before a body essentially non-partisan, and disturbing its harmony and propriety? But we represent a great institution—the press. Its welfare is beyond every other consideration to this association, and the honest effort should be to learn what ills, if any, affect it, and if ills, what the cure.

The power and influence of the press are constantly advancing.

GOVERNMENT BY NEWSPAPERS.

There may be government by representative bodies today, but in the twentieth century, so near at hand, we shall have, practically, government by the newspaper. The modern newspaper is the lyceum, the debating society, the lecture room, the schoolhouse and the hustings of America. It molds thought, directs legislation, arrests wrongs and leads in all great reforms. It is the eye, the ear and the tongue of modern progress and civilization. Whatever hurts the press hurts the country. Whatever cripples the press cripples intelligence and education. Our fathers inserted in the constitution the declaration that the freedom of the press should never be abridged. The necessity that the press should be untrammelled, except as the publisher is amenable to him whom he wrongs, is greater today than ever before in the country's career.

MODERN TRUST A MONOPOLY.

Whatever may be our views upon free trade or protection, upon one thing all parties seem to be agreed—that the modern trust is a monopoly, and there can be no good monopoly controlled by private persons. Out in the Rocky mountain country, where the pioneers felt the treachery and cruelty of the Indian, there is an accepted saying: "There is no good Indian but a dead Indian." Before the country shall be five years longer in the grip of the 400 and more trusts, its patient and long-suffering people will cry aloud: "There is no good trust but a dead trust."

OPOSES FREE TRADE.

I am not an advocate of free trade in its accepted sense. I have not failed to recognize that duties may be so levied as to benefit young and struggling industries. In Colorado we are quite willing to protect hides and wool and lead and other outputs of the state by reasonable tariff duties, but at the same time whenever monopoly entrenches itself behind a tariff to destroy competition, lower the cost of production and increase commodity cost to the consumer, we demand that the tariff be removed in order that monopoly shall be destroyed.

What is a trust? In the main it is the offspring of falling markets and ruinous competition. Commencing with the panic of 1893, the trust had its greatest growth. Dwindling profits, competition that continuously lessened profits led to co-operation to bring about economy in production, cheapened production, and with it stability and increase in profits. At first monopoly did not enter into the problem—that is the bastard child of greed, begotten out of the possibilities of a tariff with co-operation.

COMPETITION DESTROYED.

Do they destroy competition? How easy! Where some well organized and well developed trust has a monopoly of a commodity let the company of moderate or even large means try conclusions with it. Emboldened by the prospect of generous profits they invest their capital. Notice is wired from the central office to undersell the daring venturer. The price goes down. The new company falls to the new price; again the price of the trust goes down. Yet again the trust sends down the price. The process of underselling continues until the capital of the new company is exhausted and it goes into bankruptcy. The concentrated capital of the many easily exhausts the capital of the single company.

BOURKE COCKRAN'S QUESTIONS.

Bourke Cockran, in his address to the convention that met not long ago in Chicago to consider the trust question, in mocking tones asked whether a "monopoly that hurts exists?" "Where is it?" "Who is hurt and where?" "Has the octopus possession of somebody?" "Where is its lair?" The members of this association can answer, the white print paper monopoly hurts. Its hurts are felt in every newspaper office of the land. The white paper octopus has possession of the press, and its lair is in the customs tariff that excludes foreign-made paper from competition and shuts the door against Canadian wood pulp. The International Paper company is the name of the octopus.

THE PAPER TRUST.

On Jan. 31 the International Paper company was incorporated with a capital of \$45,000,000 and authority to issue \$10,000,000 in bonds. Since its organization the company has taken over about thirty-five mills; it commands 85 per cent of the print paper product.

From a paper signed by 157 American daily newspapers and submitted to the Anglo-American Joint High commission upon Dec. 27, 1898, the following facts appear: The company issued \$40,000,000 in stock for mills, spruce lands, etc., which at the highest possible market value are not worth \$12,000,000.

Ninety-eight paper machines were comprised in the plants of these mills, but only forty-eight were of recent construction

or desirable pattern. Not one of the mills in all the combination possessed all of the six essentials of the cheapest and most successful manufacture—cheap wood, cheap and ample water power, cheap rates to markets, modern machinery, wholesale production and concentration at one place under one supervision.

One plant which could not make newspaper on a number of its machines was unloaded upon the trust at a valuation of \$22,000 per ton of daily output, whereas intelligent authorities all agree that plants equipped with modern machinery, capable of producing paper under the most economical and most satisfactory conditions, can be installed at less than \$10,000 per ton of daily output.

For a mill that made no profit in 1897—a mill without water power and no sulphite attachment and which carted its pulp two miles—\$570,000 was its agreed value.

The organizers of the trust frankly admitted at the outset that its common stock represented but good will, yet a year ago that stock was selling at 60 cents with the par value of \$1.

Since the company was formed it has leased or bought in fee woodland in Maine, New Hampshire, Vermont and New York 1,000,000 acres, and more than 2,000 square miles of timber limits in Canada, and has acquired as a basis for future development water power capable of developing 100,000 horse power. The company has established agencies in New England, South America, Japan and Australia.

The Paper Trust thus controls the most available sources of supply of its raw materials and water power in this country. The water power and much of its spruce timber have undoubtedly been acquired not for present or future legitimate use but for monopoly purposes, to prevent competitors from entering the field.

A TARIFF TRUST.

That this is a tariff trust is made clear by the American Newspaper Publishers' Association. It says:

"The present tariff rate on printing paper, unsized, sized or glued, suitable for books and newspapers, valued at not above 2 cents per pound, is 3-10 of a cent per pound, or \$6 per ton. The tariff rates on mechanically ground wood pulp is 1-12 of a cent per pound, or \$1.67 per ton.

"Our spruce wood supply is limited."

The trust, to stifle competition, has increased its timber holdings more than sufficient to give it a wood supply for a long period of years. There are no considerable water powers beyond the control of the trust which can be operated for large plants, so that all that might be done in the United States toward the enlistment of capital, etc., would be inconsiderable in comparison with the wiping out of the duty on paper and the opening of Canada to our relief.

PROOF OF RESPONSIBILITY.

In charging that the tariff is responsible for many of the trusts I do not rest upon Democratic, but rather upon Republican, authority, and in urging that where the tariff is the citadel behind which the trust is formed and from which it raids both labor, competition and capital, the true remedy is to withdraw the protection of the tariff from it, I am supported by the highest Republican authority.

Ex-Senator Washburn of Minnesota recently wrote to the New York Tribune that "many of the trusts are benefited by protective duties. It is the duty of a Republican Congress to remove the duties at once whenever it finds that a trust is depending for its exorbitant profits largely on protective duties."

The St. Paul Pioneer Press, the acknowledged Republican organ of Minnesota, takes the same position.

The Chicago Times-Herald, the mouthpiece of President McKinley in Chicago, says:

"When the Pioneer Press says that it is the duty of the Republican party to repeal every protective duty under the shelter of which its beneficiaries have organized a trust or combination of any sort, to advance prices, it meets the views of the Times-Herald to a dot. Most certainly it should be the duty of Congress to abolish or suspend the protective duties on the products of any industry which has been organized into a trust and which has arbitrarily raised the prices of such products. No mercy or consideration should be shown to any combination of capital that takes advantage of a protective tariff to mulct American consumers."

Senator John Sherman said a few years ago:

"Whenever free competition is evaded or avoided by combinations of individuals or corporations the duties should be reduced and foreign competition promptly invited."

REPEAL THE DUTIES.

Then the remedy against the white paper trust, and the only remedy, is to repeal the duties on white paper and wood pulp.

H. O. Havemeyer stated last June before the Industrial Commercial Commission that "the mother of all trusts is the customs tariff bill."

It is idle to stop short of admitting white paper and wood pulp free. The quack doctor proclaims that his nostrums will cure everything from a wooden leg to unrequited affections. So quack politicians prescribe as a sovereign specific cure for every evil a penal statute. You can't convict for violating anti-trust laws; for, as in railway dealings, a way to evade

the strictest law against pooling was found, and now the same thing as pooling flourishes unchecked.

If tariff duties favor the paper trust, then the only way to defeat the trust is to repeal these tariff duties.

Canada is covered with spruce timber from Labrador to Alaska—enough to supply wood pulp for Canada and the United States for more than a century. Nine hundred thousand horse water power convenient to this continent of spruce is also in Canada. This vast supply should be drawn upon, if for no other purpose than to preserve our own forests. Were there no tariff barriers—if it were proclaimed the settled policy of the United States as to printing paper and wood pulp that our markets were open to Canada product—immense pulp mills, and even paper mills, would be operating in Canada and paper would not again exceed from 1½ to 2 cents per pound.

Surely the most rabid protectionist will admit that some articles should go upon the free list. In fact there is a very large free list—it comprises more than 3,000 commodities. Why not white paper and wood pulp be added to them? To add them would remove a heavy burden from education and intelligence—the means of enlightenment would be strengthened and multiplied.

Certainly the American Newspaper Publishers' Association is nonpartisan. Its membership comprises the leading daily papers of the country, and this without reference to creed or political belief. This association, in a brief in behalf of free paper and free pulp, said:

"While the enlistment of capital in American enterprises may exercise a slightly deterrent influence on the paper trust, the effect cannot be material because the trust owns the largest and best powers in localities where spruce wood is cheap and from which transportation is prompt and cheap. A successful and energetic competition cannot be maintained within the United States. The outside mills that do, or can, make paper are not equipped for the economical manufacture of newspaper. We must look to Canada and the foreign countries, where ground wood pulp can be produced at a cost of \$7.50 per ton, and where newspaper can be produced for 1 cent per pound. Free paper is therefore the only strong and permanent assurance of protection from this combination.

"The duty on paper stops cheap books and cheap newspapers. It taxes intelligence, because the newspapers are the people's school and library. All taxes upon paper are taxes upon reading and knowledge, upon the dissemination of information. Under any government such a tax would be oppressive and proscriptive. In a government based as ours is upon the intelligence and resultant virtue of the people, it is anomalous and monstrous. When this is done or proposed simply to add to the profits of a monopoly, the injury to public interests becomes a matter demanding the intervention of the government."

In a speech made by Mr. Bryan a year and a half ago he used a homely but fitting illustration. He said that when he was young he noticed that the farmers of his neighborhood in Illinois put rings in the noses of their hogs. At the time he wondered why they did this, but he didn't then learn the reason. Since he understood that it was to keep them from rooting up the sod and crops while getting fat, to keep them from destroying more than they were worth while getting fat. He urged that one of the chief functions of government was to put rings in the noses of corporation hogs. Let it be the resolve of this Association to do what it can to induce Congress to put a ring in the nose of the white paper trust hog. If it succeeds it will have accomplished more for this brotherhood of publishers and editors than everything else it has done, combined, during the fifteen years of its existence."

At the conclusion of Mr. Patterson's address, the convention adjourned to 2:30 o'clock p. m.

AFTERNOON SESSION.

March 2, 1900.

The meeting was called to order by President R. H. Henry.

The first thing on the program was an interesting and instructive address by Mr. M. E. Brown of Battle Creek, Mich., who spoke on the subject of "Type-Setting Machines."

At the conclusion of Mr. Brown's address, Mr. Cunningham of Wisconsin called for the report of the committee on constitution, to which was referred the amendment proposed by Mr. F. T. Cook of Oklahoma, to section 1 of article III. of the constitution.

The President—Mr. Stephens, chairman of the committee, will read the report.

Mr. Stephens read the following report:

Mr. President: We, a majority of your committee, to whom was referred the amendment to Section 1 of Article III of the Constitution, introduced by Mr. Cook of Okla-

homa, have examined the same and recommend that it do not pass.

E. W. STEPHENS,
JAS. H. SMITH,
J. W. COCRUM.

Mr. Stephens—Mr. President, I move the adoption of the report. Seconded.

Mr. Cunningham of Wisconsin—Mr. President, on behalf of the minority, I would like to submit a report.

The President—Mr. Cunningham will read the minority report. As follows:

Mr. President: We, of the committee on constitution and by-laws, submit this minority report on proposed amendment to Section 1 of Article III of the Constitution, and recommend that it do pass.

W. E. BOLTON,
T. J. CUNNINGHAM.

A Member—I move, Mr. President, that this minority report be a substitute for the majority report.

Mr. Arnold—Mr. President, I move that the minority report be laid on the table.

The President—Mr. Arnold of Indiana moves that the minority report be laid on the table. That question is not debatable.

A Member—Mr. President, I rise for information. I want to know whether if the minority report be laid on the table, that will not lay the whole motion on the table?

A Member—I call for a vote by associations. I ask that the roll be called.

This motion was duly seconded by the requisite number, and the secretary then called the roll.

The vote stood 206 yeas and 95 noes to table the motion.

The President—The motion is tabled once and for all for this convention.

Mr. G. Sperry, of West Virginia—I ask to go over this Article III of the constitution. While I know that these resolutions must go to the proper committee first, still I would like to state briefly that I think the article as it stands now works injustice, and that the evil should be remedied. I therefore wish to offer the following resolution:

Resolved, That Section 2, Article 3, of the Constitution of this Association be repealed, amended and readopted to read as follows:

Section 2. Each state and territory shall be entitled to representation in the National Editorial Association by one delegate for each three hundred thousand inhabitants thereof, or fraction of more than one-half of said number, based upon the census of 1900, who shall be admitted upon a duly attested certificate, signed by the president and secretary of their respective associations, attested by the executive committeeman of the National Association, acting for said organization; and on the receipt of the treasurer of the National Editorial Association showing the payment of annual dues amounting to ten (\$10.00) dollars for each delegate.

Members of the executive committee of the National Editorial Association shall be ex-officio delegates to the annual or special meetings of said Association, and they shall be charged the same dues as the regularly chosen delegates, and included in the total number of delegates to which any state or territory may be entitled. Provided, that each state and territory shall be entitled to at least one delegate.

The President—That resolution will go to the committee on constitution, I presume. Which committee do you wish it to go to, Mr. Sperry?

Mr. Sperry—The committee on constitution.

A Member—Mr. President, I rise to a point of order. The association has already refused to amend this article of the constitution. Its power over this article has been lost.

The President—It is Article II. It is a different article: the same article but a different section. It is Article III, Section 2.

Member from North Carolina—Mr. President, I have a resolution also to refer to the committee on constitution; an amendment to the constitution. In order that the whole matter may be considered at one time, I move to strike out all of Section 3 of Article I, from the word "from," and substitute instead "from all District and Editorial Associations in the United States," so that Illinois can have six associations represented here, and every state can have the same.

Mr. Blunk, of New York—Mr. President, you will allow me to go into this first resolution that was presented without opposition, because it will seem to you eminently fair that no association shall be admitted to representation in this convention that has not held an annual meeting in two

years. I understand that there are today in this convention represented associations that have not held a meeting in six years, and that their only existence consists in having a president and vice-president.

A Member—I arise to renew the point of order that I made a while ago. The association has already decided that we will not change our method of representation. That question is therefore settled for this meeting. We don't want to thrash old straw. We have decided that our membership suits us as it is.

The President—I think that is true as to Section 3 of Article III. It does not strike me as being applicable to Section 2 of Article III.

Mr. Sperry—I would suggest that there could not be a more ridiculous proposition than that just advanced by the member from Ohio. An amendment made or rejected as to one section of the article in no way prevents the assembly from considering amendments as to any other section of the same article. It is impossible to conceive how any man familiar with parliamentary law would support himself in such a proposition.

Member from Indiana—If our worthy president will take the constitution I think he will see that this other resolution to amend the constitution is clearly out of order. The last amendment to Section 2 of Article I simply provides that the representation shall be placed according to the citizens, or the number of inhabitants of the state, which is in direct opposition to the other one. It is impossible for the two to stand together. The number of editors is what we represent. We do not represent the Philippine Islands or Cuba. I say that that resolution is clearly out of order.

Gentleman from Wisconsin—Mr. President, it strikes me this discussion is out of order. I understand when this amendment was offered that the chair referred it to the proper committee.

The President—You are correct; I did. All this discussion arose after the question was disposed of. It arose after another resolution was offered by Mr. Blunk of New York. The Chair will hold that all these questions go to the committee on constitution.

A Member—Mr. President, there was a resolution offered that was laid on the table. Is a resolution to take that from the table in order?

The President—A resolution to table is understood to put the death knell to the motion.

The Member—I have a motion to make before this house. This organization can undo what it has done.

The President—State your motion.

The Member—I move that the resolution be taken from the table.

The President—Gentlemen, you have heard the motion; has it a second? The Chair will hold the motion is out of order. Gentlemen, what is the further pleasure of the convention?

The President—Gentlemen, the next thing on the program will be an address by Col. Hirma Young, editor of the Dispatch, at York, Pa.

Col. Young was thereupon introduced and read the following paper, on the question:

"CAN A JOB OFFICE BE CONDUCTED SUCCESSFULLY IN CONNECTION WITH A DAILY?"

By Hiram Young, Editor and Proprietor of the York, Pa., Dispatch.

Mr. President, Ladies and Gentlemen, and Members and Delegates of the National Editorial Association:

Your president, Mr. Henry, has assigned to me for consideration the question:

"Can a job office be conducted successfully in connection with a daily?"

"Yes" or "No" will answer this question. At the present time I know of job offices being run successfully in connection with dailies. I know of others being conducted at a loss.

Why are some profitable and some not? You might as well ask, Why do some men fail in business and others succeed? The same general rules which contribute to success in any line of business apply to the printing trade. A man to make a success of the printing business must understand the details of that business just as thoroughly as does the grocer or dealer in dry goods know the details of his business.

The more familiar the business man is with his calling the more intelligent is his direction and the desired results are acquired more economically and expeditiously.

There are many publishers who argue that a job department is an encumbrance to a live daily and that there is no

longer profit in job work. Some dailies, for these reasons, are abandoning their job plants. When I look around and see the large and profitable job patronage some newspapers of my acquaintances enjoy, I wonder whether those who failed have really given the matter a fair test. Have they managed the business properly? Did they not sacrifice the job end to make their newspaper a success? Did not newspaper work appeal more to their tastes than the exacting and monotonous detail of the job department? Or were they better adapted to hustling after job work and figuring than to discerning and catering to the tastes of an intelligent and discriminating reading public? No one can devise an infallible formula for successfully conducting in combination these two branches of printing. One may excel as an editor and publisher and vice versa. Some, even, combine the two branches and make a brilliant success. There is but one condition that assures that success. That condition applies to any other business. It is "Adaptability."

If a man is not fitted for it he can never successfully run a newspaper, no matter how successful a job printer he may be. Likewise a newspaper publisher, no matter how successful he may be or how big his bank account, cannot make a success of a job department if he does not know how to get the work in and turn it out at a profit. Some will say the times have changed and there is no profit in prevailing prices. These new conditions must be met with new methods. You must abandon theories which applied to past generations and accept things as they present themselves. You must have the latest mechanical devices and machinery of the greatest output. You must get out of the leisurely gait of the days when you figured \$1 per thousand impressions on a Gordon eighth medium. Go down the street and look at your successful rival; he has no idle presses, his hands have no standing time. He not only knows how to conduct two departments in his business, but every one of his employees is skilled in his department. Of course, under the present conditions, profits are smaller than ever before, but this loss is being made up by increased output, on the same principle as the storekeeper's motto: "Quick sales and small profits."

In this discussion it is no doubt fully understood that the great metropolitan newspapers are not being considered. Their fields and profits are large enough to make them independent of such adjuncts as job offices. All instances referred to in this paper are in the smaller cities and towns and refer to papers doing a business of from \$5,000 a year to probably \$50,000 a year. To such papers I argue that a job office is not only a benefit but a positive necessity, particularly to the smaller papers. If job work is not to his taste and the publisher applies all of his attention to the newspaper, that man should employ some competent man to run his job department and give him full authority.

If your paper is printed in a county seat town the jobbing department can be made still more profitable. By means already known to publishers of political papers, you can secure much official patronage which will help to keep the balance on the right side of your ledger. This contract with the county officials brings you in touch with an element productive of much news, which finds its way in your paper. The merchant, the manufacturer, the farmer, the mechanic, all read your paper, and naturally are in sympathy with you to such an extent as to use their influence in your behalf when they or their friends have work to place. When these people come in close enough touch with you as to place their business in your hands, they also keep you in mind when news events turn up. They are the ones who telephone you a runaway, railroad accident or death in their vicinity. If they do not have a telephone many will communicate with you by other means. Thus your paper is becoming more newsy. It is making new readers. From these readers you get your share of patronage for the jobbing department. Thus day by day each department is working in the interest of the other. The paper strengthens the printery and the printery strengthens the paper. You find your job patronage reaches \$3,000, \$4,000, \$5,000, or may be considerable more per year, while the extra help employed in that department requires but a small fraction of the total income. At the same time you will probably notice that modern advertising requires more frequent changes in ads than ever before. As most of these ads go on the inside pages of the paper a considerable force is required to get the ads up in the short time necessary. To constantly carry such a force of compositors for the emergency of a busy day would be unprofitable. Here's where your job room becomes a necessity to the small city daily. Your leading dry goods firm may want a half page, consisting of price lists, set in brevier or long primer, and a half a dozen or more other advertisers may increase their space or furnish a change for that day. Without the additional expenditure of one extra cent for composition you have these ads set. You turn your job room force loose on the ad hook and in a few hours the matter is no longer a problem. This makes it possible to produce your advertising space at a lower rate than the paper which has no job office. Thus you stimulate advertising and increase the earning capacity of your newspaper. Then on the other hand, in a pinch, your newspaper force can often give the jobbing department a lift and turn out a job in specified time without additional cost for labor.

Any publisher who does not believe in a job office as an adjunct to a newspaper should make a tour of the daily of-

fices in cities of from 10,000 to 40,000 population or more. An investigation of their methods will reveal that the two departments are working hand in hand. Either one would fail, else exist precariously, if conducted without the other. But by the combination of the two departments a business is established which is at once profitable and recognized by the community as one of the substantial institutions of the city. Of course it is assumed that the man conducting such a business as here described is a newspaper man, not a blacksmith, preacher, or ward politician, who has broken into the profession for the purpose of gratifying a yearning to show the world a model newspaper or to create a corner in county offices.

Because a man who is not equipped for conducting a newspaper and job office fails, is no reason why the two departments cannot be made to pay. The newspaper man who has served an apprenticeship in all the departments of the business, who personally directs the affairs of his plant, and has business acumen in his composition, under ordinary circumstances must and will succeed.

Mr. A. W. Lee, having stated that he had to leave immediately, the Chair announced as the chairman on the committee on advertising the name of Mr. F. R. Gilson of Michigan.

Next on the program was an address by Hon. Louis Holtman, editor of the Democrat, at Brazil, Ind., on "How to Make our Newspapers Popular, Useful and Influential," which is as follows:

HOW TO MAKE NEWSPAPERS POPULAR, USEFUL AND INFLUENTIAL.

Louis Holtman, Brazil, Ind., Democrat.

But few if any subjects in the realm of newspaperdom are any more germane to the craft, or more practical, than the text assigned for this paper; in fact, so eminently practical is it as to render it most difficult of handling without trespassing upon repeatedly trodden ground, suggesting and serving only what has aforesaid been relegated to the commonplace.

To be popular is to be adapted to, accepted and approved by, the populace, in other words, suited to the tastes, wants and whims of the people. Hence, the newspaper, to be popular, in both the generic and the applied sense, must be in favor with the reading public.

To be useful is to be of advantage and profit, conducive to some desired end or purpose, helpful in advancing a cause redounding to the benefit of the community and the state at large.

To be influential is to be potent and effectual in the dissemination of principles and truths and their impress upon the public mind, with their resultant reflexes and sequences.

So inseparably associated are these triplicate desiderata in the relations of cause and effect that it may be axiomatically assumed of our subject as a correlation, that whatever is popular, or in favor with the people, is, in a measure, at least, both useful and influential and that the useful and influential must, of necessity, from the nature of things, be popular.

Equally true is it, that indissolubly linked with the popularity, usefulness and influence of the newspaper are its success and prosperity.

As indispensable precedent material conditions to the popularity of the newspaper are the facilities and means for diffusion and circulation. Had this subject been discussed in the early and undeveloped period of our country's history, when the publisher of the country or home paper could reach his patrons and readers only by special carrier, on foot in the more immediately contiguous territory, and on horseback in the more remote sections of his field, it would have been recommended and urged that some system of facilities for expeditious delivery be devised and adopted as a government function and service. Such function has been established and its service made available to the newspaper, but not yet sufficiently developed and perfected as to afford universal munificence in the scope of its service.

The county or home newspaper, "Our Newspapers," will not have reached the goal of popularity, usefulness and influence until the free delivery system shall have been so extended and appointed as to afford every-day service to rural homes—even the humblest of every reading community.

As the unavoidable and logical deduction from this premise, the essential step to be taken by the newspapers of the people is that of unified effort and mutual co-operation in the direction of free suburban and rural delivery. Such facilities for systemized diffusion and circulation will tend to, and in due time result in, comparatively universal demand and market for the home as well as the metropolitan paper, which will then have become a necessity and no longer regarded, in the main, as a luxury.

Numerous utilities as the product of genius and enterprise have come into general if not universal favor and use in commonplace affairs, through their having been brought directly into contact with the people by a system of universal distribution, whereby a corresponding universality of market demand

has legitimately resulted. The same principle will hold good with the newspaper, through the thorough distribution of which every family may be brought into constant daily touch with the world about them, domestic and foreign, affected by every throbbing impulse of the commonweal—ethical, social, political, educational, industrial and commercial.

Then competition in quality and adaptation to the tastes, selection and appreciation of the patrons and readers of the newspaper will have become as commonplace and discriminative as that in any of the channels of trade in the diversified products and commodities in the markets of the country.

We come now, having provided the open door to the field of nominally universal distribution and circulation, to consider the factors and means by which to meet with correspondingly universal recognition. And here, as elsewhere in the realm of production, merit must be the criterion for usefulness and its logical sequence, influence. As the first corner-stone to be laid upon which to erect our idea of popularity, usefulness and influence is that of candor, truthfulness and reliability, to the scrupulous exclusion of shams and shoddies in dealing with the populace—a strict adherence to the principles which the manufacturer, the producer, the merchant, must maintain and honor in his line, whereby his brand, or trade-mark, in popular favor, becomes a household word, its consumption indispensable, its influence incomputable.

As a stream cannot rise above the level of the fountain, so the dubious, fickle, sensational newspaper can rise no higher in popular esteem, usefulness and influence in the circle of its sphere than the prevaricator, the twaddler, the sensationalist, in the sphere of his personality. The columns of the family newspaper, to attain to the coveted goal of popularity, usefulness and influence, must be as scrupulously guarded against the untruthful and unreliable as the pages of the school book against lessons of venality and the columns of the ledger against false entries and errors.

Do you say that the consummation of this ideal comprehends necessarily the expurgation of much that passes current as legitimate in the world of newspaperdom to-day? So it does. And who is able to compute by count, measure, or volume the service to the cause of common humanity to be realized from the unification and persistent co-operation of the newspapers of the country in honest, conscientious effort to attain and honor this ideal?

To attain to the conditions which our text presumes to be attainable, the newspaper must assume and maintain a plane of self-conviction, individuality and independence. To reason from analogy, observation and experience, the newspaper as a purveyor of news, the exponent of principles, the mentor of its patrons, and as the ready reference of a promiscuous but discriminating clientele, must have the same qualities of adaptability and credibility that inspire the public confidence in the personal capacity in the relation of these functions. Apropos of this axiom we may pause to inquire, What is the measure of usefulness to, and of the influence wrought upon, the populace by the personality devoid of the qualities and capabilities enumerated?

This individuality and independence must be so asserted and adhered to in methods as to radically disabuse the public mind of the too generally accepted notion that the newspaper is a beneficent institution, and not a purely business and commercial undertaking.

At this point it is pertinent to inquire, What are the principles and methods adopted and practiced upon and by which a commercial undertaking is organized and conducted so that it may reap the largest possible share of popular appreciation, and diffuse correspondingly its benefits and influences? Having a practical and clearly defined conception of these things, then from analogy and logical deduction we may lay down the premise upon which, and the methods by which, the business and economic aspects of the newspaper must be conducted that it may approximate the maximum in its sphere. As a proposition in the field of commercial enterprise, it will not be disputed that all patrons, actual and prospective, must be met and dealt with on common ground, to the scrupulous exclusion of all favoritism. Every measure of service rendered, and every article of utility dispensed, must be exchanged at a uniformly established market value. This principle in the world of legitimate, honorable trade is so suggestive and so easy of application that even the most verdant amateur in newspaperdom may not err therein. The subscription price of the paper must be the same to "all and sundry." Any deviation from this rule cannot remain a sealed book, but, on the contrary, like murder, "will out," and that, invariably, to the prejudice and detriment of popularity, usefulness and influence. Instability, slipshod methods in this capacity must, sooner or later, react in emphatic disapproval and the loss of patrons and readers.

So, too, the market price of a given amount of space, and position, other things being equal, must be a fixed quantity, and not determined from the proximity or remoteness of the advertiser, the class and quality of his wares, nor the approximate measure of trade benefits to be realized therefrom, but from an absolute scale, or schedule, corresponding with that of the dealer's staple article in trade, and uniformly maintained. By way of tangible illustration, what would be the gauge of the popularity won, the usefulness subserved, and the

influence wielded by the dealer in general stocks whose prices fluctuate with the phases of the moon, or conform to the diverse whims of customers? The essentially material principle to be impressed in this regard is, that the same laws of equity and compensation obtain everywhere—throughout the avocations of men and the economies of society—that like conditions and common ends as the ideal and goal of human effort are attained along parallel and not diallel lines in all the diversities of human application and invention.

There are certain characteristics of the newspaper, exclusive of quality of reading matter, which appeal to the popular judgment and appreciation, that cannot be ignored in our ideal product of the Faustian art preservative, as, for example, neatness and precision in mechanical execution—in other words, beauty of face lineaments, which captivate the eye; convenience in form, with order of arrangement in subject and matter, which facilitate perusal and economize time, and yet another consideration of vital significance, which is promptness in issue and delivery. The newspaper, to attain and maintain the full measure of popularity, must be placed into the hands of expectant readers with as much regularity as they are served their daily bread.

To quote from our text, the language "Our Newspapers" may be accepted as meaning the press of the country generally, or restrictedly, the daily and weekly press of general scope and circulation, exclusive of publications devoted to and supported by a special class of readers. We take it for granted, however, that "Our Newspapers" are such as presume to glean the whole field of current topics and miscellany, presenting in every issue something of interest to all classes of the reading public, serving something adapted to the capacity and appreciation of every patron, as, by way of illustration, the dealer in general merchandise dispenses his diversified commodities and utilities to all classes of consumers. In this analogy are we not afforded a lesson in order and arrangement, by conforming to which "Our Newspapers" may be made more popular, useful and influential? The dealer in general merchandise, to adapt his heterogeneous trade to the diversified wants and tastes, as well as convenience of the masses, organizes a department store, displaying every distinct line of goods independently of every other, so that the purchaser is guided in his selection by order and arrangement, and is not taken through the labyrinths and jumbles of a promiscuous stock at the expense of time and patience.

Why should not the newspaper recognize and take advantage effectually of this principle in make up by so classifying its contents and columns that the reader may have ready access to just what he wants? Why not subserve and attain the conditions and ends set forth in our text by the department newspaper, thereby saving to American readers not only "golden moments," but in the aggregate years of time, not to enumerate the vexations and annoyances experienced in the repeated random search and scanning of the promiscuous whole to discover and appropriate but a single principle or fact for the time being.

Mr. Taylor of South Dakota—Mr. President, I move that the legislative committee's report be read at this time, and after it is read, that it and the other resolution offered, I think by Mr. Sperry, and that the report of the committee on legislation be made the special order for 10 o'clock tomorrow morning.

The President—Gentlemen, you have heard the motion. Is there any objection that the report be read now. I hear none. It is so ordered.

Mr. G. A. Willard of New York read the report, as follows:

REPORT OF THE COMMITTEE ON LEGISLATION.

To the National Editorial Convention:

The committee on legislation, recognizing the rights given by virtue of the Constitution and the laws of the land, desirous of obtaining for our profession those equitable and just measures that shall permit us to stand upon even ground with all trades and classes, would submit for your favor and consideration:

First—We consider the formation of trusts as detrimental to the best interests of the country, and as President Henry asked for a remedy, so do we, as your legislative committee, urge the newspapers of this Association to speak out in strongest opposition to the Giant Octopus that threatens to strangle individual effort and enterprise, not only in the manufacture of paper, but in every avenue of trade.

Second—The tendency of the times is to advance prices; iron, cotton, corn and wheat, and every product has advanced, as well as paper. It is not the desire of this committee to inject political debate into this convention, and would therefore recommend that a committee be appointed to consider the effect of the tariff on the price of paper, and where it is found that the tariff is used to further exorbitant and illegitimate trust prices, we recommend the suspension of tariff on the raw material and manufactured products controlled by these trusts. This committee to work with other organizations and

enterprises looking for a substitute for wood pulp and sulphide in the manufacture of paper. This proposition will find ready favor with the people throughout the country who are seeing the forests destroyed by the cutting off of timber, which have been so long essential to the rainfall and climate of our country, and that are safeguards against disastrous floods.

Third—The libel laws, as now upon the statute books in many states, are unjust and permit unprincipled, designing and unscrupulous men to take advantage of the newspaper fraternity. We would recommend that as far as possible equitable state laws be secured.

Fourth—We protest against any changes in the postal rates that will discriminate against legitimate publications, or that will favor one section of the country to the detriment of another.

Fifth—One of the great injustices to publishers of newspapers, and one for which there should be a legal remedy, is street car advertising. Under the charters given by the state no privileges are granted except for carrying passengers, and the contracts made by these corporations of street railways are antagonistic to the rights of the newspapers, and are clearly illegal. They come in direct competition with newspaper publishers, and the law as to the meaning of the charters should be enforced.

Sixth—We would recommend that the press of each state, through its representatives, in senate and assembly, ask and petition that the laws of each legislative session be published in two of the newspapers of opposite political faith, in each county in the state, and that a just price be paid for this work. In the state of New York the legislature acts in accordance with this, and the result is that the laws as passed are placed in the hands of the people, at an expense which is not burdensome, but which is very helpful to the newspapers throughout the state. All of which is respectfully submitted.

GARRY A. WILLARD,
L. C. TAYLOR,
H. B. VARNER,
E. H. PIERCE,
A. J. LANGER.

A Member—Mr. President, I desire to call the attention of the convention to the fact that if we pass a national libel law we shall throw all the libel business into the federal courts from the state courts. I know I am not strictly in order, but I wish to state this, so that the matter may be taken in consideration when the motion is submitted.

Mr. Laning of Ohio—Mr. President, I move that we adjourn until tomorrow at 9 o'clock.

Mr. White of Missouri—I second the motion. The motion was put and carried.

THIRD DAY'S SESSION—MARCH 3, 1900.

On motion of J. W. Glessner of Illinois, duly seconded and carried, Mr. F. B. Baillio, second vice-president, took the place of the president, who was absent, and called the meeting to order at about 10 o'clock a. m.

Mr. Hiram Young of Pennsylvania was appointed as committee of one to escort Miss Delia Amos of Sidney, Ohio, to the platform. Having been introduced, Miss Amos delivered the following well considered ideas on "Women in Journalism":

WOMEN IN JOURNALISM.

Paper Read by Miss Delia E. Amos of the Sidney, Ohio, Daily News.

Gentlemen and Ladies of the National Editorial Association:

I have been invited by your president, Mr. Henry, to read a paper before this Association. I have taken for my subject, "Women in Journalism."

In coming here to speak to you I felt that I was coming to stand face to face with an august body—with one of the greatest powers of the world, for such I consider the press to be. No monarch on earth, no autocrat can do what you can do. The responsibilities are great in proportion to the power, yet women as well as men seem willing to assume them.

One of the most wonderful changes of this age of changes is the crusade of womankind in the direction of business and away from her traditional domain of the kitchen and household. Women certainly have the right to do whatever kind of work they prefer, provided they do it better than those with whom they come into competition.

Of late years women have had all the professions thrown open to them, but there is undoubtedly none that requires greater self-denial or more strenuous and continued effort in the woman who pursues it than that of journalism, yet if she is neither an ignoramus, a drone nor a crank, and feels that she is willing to make whatever sacrifices may be necessary, what is she to do? Her ambition is proper. Her frame of mind is proper. Let her plunge into the work. She may prove to be physically or mentally or temperamentally unfit for it, for the strain is a severe one. Yet men fail, and if she fails

she will but line up with the vast majority of experimenters in the same field.

A newspaper woman must make up her mind that work is absolutely first in her life. The exigencies of a newspaper office cannot be predicted and no arrangement for pleasure can be permitted to stand in the way of the demands of the work. If a club meeting or an evening of pleasure has to be put aside it must be done gracefully and taken as a matter of course. She must be as willing to go out on rainy and disagreeable days as on bright and sunshiny ones, without one word of complaint. The woman who writes news, like the man who writes news, must adhere strictly to the truth. No respectable newspaper can afford to print lies or leave essential points of a story in doubt, even if it does involve personal discomfort to get facts. In a controversy each side must be given a fair show and the writer should be ready to swear to every statement made, and should be careful not to misquote anyone interviewed. What a world of trouble in newspaper offices would be put aside if the above was strictly adhered to, but how often reporters anxious for a "good story" are willing to color their articles and make them very sensational by putting in false inferences and leaving out truths until the article when printed would scarcely be recognized by one who knows the truth! Perhaps this will do in large cities on papers which like to be more sensational than reliable, but in a small city, facts are what we want, written in as bright and pleasing a manner as it can be done.

An up-to-date newspaper woman must be full to the brim of energy. She must have the happy faculty of making a good impression on sight and of making friends easily. She must have tact, must be vivacious, yet quiet and womanly enough to command the respect of all, and she must have ability.

A woman of education and literary taste may write occasional articles and do some small amount of newspaper work very acceptably, and finding such literary labors agreeable may conclude that newspaper work is quite easy. But it is not a brilliant article now and then that will keep the paper filled and make people want to read it. It is persistent, never-ceasing research for news, and constant care and watchfulness that every possible matter of local or public interest receives attention. The price of success in journalism is not a spurt of a week or a month and then an easy time, but a strong, steady pull day in and day out, and the ability to continue the work twelve months in the year.

A woman who would become a journalist must fit in wherever needed. She may be expected and called upon to read articles and prepare them for the printer, condense a paper of several thousand words into a much smaller amount without omitting a point or weakening an argument, read proof, hold copy for the proof-reader, write advertising paragraphs, attend to editorial correspondence, look after the make-up of the "forms," prepare advertising circulars, review books, write obituaries, report events, look after the exchanges, make clippings, and do a hundred other things. If she earns a good position she must do some one of these things well, better than any one else, and before she rises to an editorial position she ought to know how to do them all, or, what is more, know when others are doing them right.

Journalism is by no means purely literary work, nor is it without its disadvantages. The halo that surrounds it is largely fictitious. Every department of the work has more or less drudgery connected with it. The editor-in-chief knows what he wants and does not want, and all work must be done in accordance with his views, often in direct opposition to personal tastes. The hurry of the work, particularly on a daily and weekly paper, is very arduous, the associations in reportorial positions are not always the most pleasant; advancement is often slow, as even a person well fitted for the work is a long time obtaining thorough command of his resources.

The finished work of a woman's pen does not differ from that of a man's. The public demands the fulfillment of its requirements in a newspaper. The news, the editorials, the various departments bear no stamp to distinguish whether a feminine or masculine hand turned in the copy, and should bear none. It is facts, it is accuracy, judgment, prophecy, history, wit, knowledge of the present and the past and foresight into the future that the public demands, and these attributes have no sex. In the general field of newspaper work, aside from certain departments devoted especially to women, the journalist must turn out work that commands the respect of men and women alike.

That there was a prejudice against women writers down to within a few years ago is shown from the fact that many of the ablest women writers deemed it necessary to seek recognition for their talents under a pseudonym of a man. George Eliot more readily found a publisher than would have Marian Evans and George Sand than as her plain self. Miss Murfree felt she stood a fairer chance as Charles Egbert Craddock. Now it is an even race between writers of the gentler and those of the sterner sex.

Journalism offers large opportunities for doing good, for influencing public opinion and for purifying the atmosphere of the times. Socially a woman journalist of education and refinement holds large power, but her work is continuous. Mary Booth, late editor of Harper's Bazaar, said: "Editorial

work, like woman's work, is never done, and the planning of which it very largely consists goes on day and night without interruption." When Mrs. Frank Leslie was editor-in-chief and publisher of all the various periodicals bearing that familiar name, she looked after the business and the editing of her large establishment and read all the proofs and approved every make-up.

There is now hardly a newspaper or periodical that boasts of any circulation worth talking about that has not a woman on its staff, and many of them have several, who are doing all kinds of work for their journals, and if she can do as much work and as good work as a man she is apt to be rewarded with a like salary. Perhaps the latest acquisition in journalistic work done by women is that by Lady Sarah Wilson, who is acting as war correspondent in South Africa for the London Daily Mail.

A woman to succeed in journalism must not expect any favors, only a fair and even chance. She must be willing to work like a man, yet not be mannish. Her womanliness is always her chief charm. The field is wide open to her. The standard it raises is high, but the opportunity is as great as her ability, and any woman who can do as strong and finished work as a man can have a position.

The vice-president, F. B. Baillio, who was down for the next paper, speaking from the chair, stated that there was another paper on the program to be read before the convention, on the subject of "Optimism in Journalism," but that he would not impose on the assembly by reading it at this time.

The President—Mr. Screws of Alabama, chairman of the committee on resolutions, has a report to make.

Mr. Screws of Alabama read the report as follows:

REPORT OF THE COMMITTEE ON RESOLUTIONS.

This, the fifteenth session of the National Editorial association, held in New Orleans, where it was first organized, will go down in its history as a memorable one in many respects. Then but a mere handful, now with representatives from every state and territory in the Union, and each one imbued with the patriotic purpose of aiding in the advancement of the honor and prosperity of a common country. It has been amply demonstrated that there can be such wide differences of opinion as to make us "distinct like the billows," but in patriotic purpose "one like the sea."

Coming here in the midst of the carnival, an occasion the like of which can be seen nowhere else on the American continent, we have been impressed by the universal good nature which prevailed and the unvarying courtesy and politeness of the people.

To the various organizations in New Orleans which have contributed to our comfort in many ways, and aided us in the expedition of our business and in sight-seeing, our thanks are due and are hereby extended.

To the editors and publishers of the daily papers, who have furnished such full and elaborate reports of our proceedings, we feel especially grateful.

While there are some here who were not the recipients of the kindness literally showered upon the greater portion of the delegates in their journey from St. Louis to New Orleans, yet we feel that all can join in hearty recognition of the spirit which moved the citizens of Memphis to surrendering that city to our keeping; to the people of Grenada, small in numbers, but great in heart and hospitality, for their generous welcome, and to the people of Jackson, the home of our worthy president, for turning over to us the state capitol and bidding the legislature to adjourn that we might have the right of way. The stay in that goodly city was a round of pleasure from the moment of arrival until departure, and its people will ever have an abiding place in our hearts. At historic Vicksburg and in Baton Rouge, Louisiana's capital, the same warm-hearted hospitality was extended, and it was all a tribute to our profession and recognition of the power which we can exert. With these prefatory remarks, offered for your action, your committee also present the following resolutions:

Therefore, Be it resolved, That in every movement looking to the improvement of the mighty highway extending from the northern limits of the Union to the Gulf of Mexico, this association feels a deep interest and its members stand ready to aid in every legitimate way in advancing legislation that will enable the largest vessels in the world to come safely to the wharves of New Orleans;

Resolved, That to the Illinois Central railroad, for courtesy extended in taking our special train from St. Louis to New Orleans and in offering to take it back to the former city, we acknowledge our deep sense of obligation, which was greatly enhanced by placing us under the guidance of that golden-hearted gentleman, whose name is an index to his character, Assistant General Passenger Agent J. F. Merry;

Resolved, That to the Louisville and Nashville railroad, for taking this association over such part of its system as it desired to travel on; to the Gulf and Ship Island railroad, for transporting us from Gulfport to Hattiesburg; to the New Orleans and Northeastern railroad, for similar kindness, from

Hattiesburg to Meridian, and to the Mobile and Ohio railroad, for taking our special train from Meridian to St. Louis, our grateful thanks are tendered;

Resolved, That our thanks are hereby tendered to the Southern Pacific railroad, for its courtesy in taking to California such of our association as wish to visit that section of our country; for the courtesy extended by the St. Louis Terminal company, for passage both ways over the wonderful Eads bridge at St. Louis; to the Pullman Palace Car company, for many concessions and courtesies, and to the Western Union and Postal Telegraph companies, for generous use of their wires, we tender our sincere thanks; to Mr. A. R. Blakely, of the St. Charles Hotel, every member of this association feels a deep sense of personal obligation, for his unceasing kindness and courtesy during our stay in New Orleans.

W. W. SCREWS, Alabama;
MRS. EDYTH WEATHERED, Oregon;
F. A. ARNOLD, Indiana;
L. A. SHERMAN, Michigan;
J. C. HEMPHILL, South Carolina;
Committee on Resolutions.

A motion was made, seconded and carried unanimously, adopting the report. President Henry in the chair.

The President—Mr. Screws of Alabama has a special report to make for the committee on resolutions.

Mr. Screws—I will state that these are the resolutions which were adopted by the American Newspaper Publishers' association in the City of New York. That association, as you are aware, has among its members some of the greatest dailies in this country. They do not go as far as you might expect, still this is a non-partisan body.

Mr. Screws read the following resolutions:

Whereas, The price of printing paper used by newspapers in the United States has been arbitrarily increased in price from 60 to 100 per cent without reason or warrant to be found in the industry itself; and,

Whereas, It is the common belief that this increase is due to the workings of a trust; therefore, be it

Resolved, That the National Editorial association, voicing the sentiment in this case not only of its own members, but of the thousands of newspapers and publications of the United States, calls upon congress to make inquiry by means of a special committee into the conditions above described, to the end that suitable legislation may be provided to remedy this condition of affairs, in the interest of the best source of public information provided for the people, to-wit: The newspaper press, whose interest the founders of the republic held in the highest regard.

The attention of congress is directed to five bills now in the hands of the ways and means committee, not necessarily to the passage of any of them specifically, but as evidence of a great demand for some form of remedial legislation, to which the inquiry we request would be preliminary. We believe that the entire agitation against trusts presents no more concrete example than this, and your petitioners, relying upon the desire of congress to legislate in the interests of the people, believe you will accept the opportunity to make this inquiry in the spirit in which it is demanded.

The newspaper, it is fair to state, unlike most other forms of industry, sells at a fixed price, and has no means of putting the increased cost on to the consumer. In many instances it means the complete confiscation of profits, and in many others creates an actual loss.

The apparently sincere desire of all parties to deal with the trust questions removes this inquiry from the charge of partisanship, and it makes it what it is intended to be, an inquiry in the public interest.

Mr. Screws—These were the resolutions which were read yesterday and referred to the committee on resolutions.

Mr. Screws—The following amendments were recommended for adoption. The first one was recommended by Mr. Patterson of Colorado. It is as follows:

Resolved, That we request immediate action by congress upon the all-important question, so that the burdens under which the newspapers of the country labor by reason of the increased price of the white print paper trust may be removed at the present session of congress.

The next amendment was offered to the committee by Mr. Thomas of Missouri.

Mr. Screws read the amendment as follows:

Resolved, That a committee of seven members of this association, a majority of whom shall be Republicans in politics, be appointed to visit Washington without delay to urge prompt action in this matter.

A Member—I move the adoption of the report. Seconded.
Mr. W. H. Meyer of Wisconsin:

Mr. President: I think there is too much stress put upon the paper trust. I come from a section of the country where

there are twenty-five or thirty paper mills. Of these paper mills, there is not a single one belonging to the trust. Efforts have been made to get them in, but without success, so far, and there are other paper mills in Wisconsin, which I hear do not belong to the paper trust. I know there is a paper trust, but it seems to me that it has no effect on the price of paper yet at all. The rise in paper is the natural consequence of circumstances. Paper has heretofore been too low in price, the same as all other articles, and when the times have improved enough every factory will raise its prices. Everything that goes into the manufacture of paper, every ingredient, has gone up in price, but especially labor. In our state \$15 or \$20 per month was paid for laborers in the woods, now they cannot get them for less than \$25 and board. I just say this in explanation, to show that in my estimation the trust has nothing, or very little, to do with the rise in paper. For my part, I would rather see high prices and good times than to see low prices, low wages, and hard times.

Mr. Thomas of Missouri:

The rise in the price of paper is a matter that affects every publisher. I am one of those who are disposed to attribute that rise to this International Paper trust largely. The gentleman from Wisconsin, Mr. Meyer, who has just made an excellent defense of the international paper trust, excusing the monster combination in its wanton robbery of the American publishers, is positively mistaken when he asserts the paper trust has had nothing to do with the rise in the price of paper. The facts and figures, with the testimony of 10,000 American publishers, are evidence to the contrary.

The rise in the price of white paper is one that interests all of us. The paper trust is an evil that affects not only the publishers, but readers of your publications are affected as well. If the price of white paper remains as it is now, 70 per cent higher than it was, and 70 per cent higher than it ought to be, it will of necessity result in a corresponding increase in the price of all books, and your Bibles will cost more money.

But before entering upon the discussion of this great national question, permit me to express my gratitude for the privilege of addressing so large and so representative a body of publishers. Representing 15,000 publishers, and acting for the united press of America, there is no body of men in this world more powerful for good. The forces which have just entered Ladysmith, and before which the Boers of South Africa must bow, are weak in comparison to this body of representative editors. You make wars and prevent them; and the battles you have fought and won for civilization, progress and Christianity give you a place first among the world's heroes. And to be permitted to speak in this beautiful southland is indeed a pleasure and an opportunity I should and do appreciate.

I must also cordially and sincerely thank the members of the press all over this broad land, from California to Florida, and from Maine to Texas, for the very earnest manner in which they have taken the suggestion contained in my editorial of Nov. 15 and my circular letter which followed. Irrespective of party, the suggestion has received hearty support by the press all over the country.

Some one has said: "You are selfish. Why do you single out the paper trust when there are other trusts just as damaging? Why not fight all the trusts?"

My answer is that in battle we must strike the enemy nearest to us. We must concentrate our attack, and when one foe is vanquished, the enemy is that much weaker.

I say further that we are only acting in self-defense, for the trusts first attacked us, and our very existence is threatened, and when this great paper trust shall have gobbled up all the little country papers it will sound the death knell to the most potent defenders of the people's rights. The corporations and combines and trusts will flourish, with none to say nay.

Some have argued (and for a purpose) that it was a political question, but it is not a party question. Both great political parties oppose the trusts, and both favor tariff for legitimate purposes and condemn tariff used for illegitimate purposes.

The tariff on paper is used and abused by the paper trust to force the price of paper up, and can find no defense from either great political party.

Gentlemen who seek to make the attack on the paper trust a party question, and who seek further to hide behind the great Republican party and defend their particular pet trust, must come from under cover.

The Republican party that stands to protect and foster infant industries will no sooner protect and foster this gigantic paper trust, which was organized to rob the publishers, than will the chivalrous southern gentleman, who stands to protect any lady, offer that same protection to the robber and despoiler of your homes.

To protect the weak and struggling industries may be patriotism, and a weak viper might be protected by mistake, but when that viper grows to its full size and wraps itself in deadly coil around the publishing interests of America, striking death-blow after death-blow to honest, earnest agents of the nation's progress, it is time for the publishers to arouse and co-operate in self-defense. It is time for congress to give

the publisher an equal showing, at least, with this monster monopoly.

The just and legitimate fostering of useful industries cannot and must not depend on a protection of a trust, which is robbery. If your protection means that this greedy corporation, with its millions, must rob me of my pittance, then that protection is wrong, for there can be no excuse to license robbery. A little of my blood might be needed (and 'twould be gladly given) to keep life in a young and honest industry, but I rebel when that fat and greedy giant, with a financial avoirdupois of \$55,000,000, says I must be bled to death that he may grow fatter.

No sir; the gentlemen from Ohio and Wisconsin are wrong.

This is a non-partisan question and should be treated in a non-partisan manner. When a tariff to encourage the infant industries becomes a tariff to confiscate our property it can receive the support of no political party.

If such robbery does not arouse us to a sense of the wrong done, so that we will, as one man, act in self-defense and demand a remedy for this evil, the oppression will continue and the evil will increase until our property is swept away by the trust avalanche.

The Republican party does not stand for the increase in the price of paper; it does not and cannot advocate an increase in the cost of intelligence; it will not and does not throw a barrier in the way of progress; it will not, for it cannot, retard religious enlightenment by increasing the cost of white paper.

Greed and avarice, robbery and confiscation cannot hope for support at Washington, especially when that greed and avarice is feeding at the expense of the nation's intellectual advancement, when that robbery and confiscation is directed at the very foundation of intelligence.

A tariff to protect the International Paper company is a license to rob the American publishers.

Are the money interests of our country dearer to gentlemen in congress than the publishing interests? Have the corporations a stronger claim on our lawmakers than the people? Shall we stand idly by and see the great paper trust thrive and flourish and fatten at the cost of national ignorance?

What we need is concentrated action. Our cause is strong, but we must pull together for it to win. Our fight is just, but we invite defeat by delay. Let all who love advancement and enlightenment, and religious books and papers and Bibles; let us all unite under one banner and demand the repeal of the robber tariff on white paper.

The editors I address voice the sentiments of 20,000 publishers, representing more than 100,000 laborers in our print shops, and whose interests are directly and adversely affected by the tariff. Are these interests to be robbed while the national government lends a helping hand to the robber? I ask my brethren of the press, Republican, Democratic and Independent, to present a bold front and a determined appeal—a united demand for relief—and congress will not say nay.

The President—Mr. Laning of Ohio has the floor.

A Member—Mr. President, I move that in discussing this question the speaker be limited to five minutes.

The President—The chair has recognized Mr. Laning of Ohio; that motion cannot be put now.

Mr. Laning—Mr. Chairman and Ladies and Gentlemen of the Convention: I deprecate as much as anybody that this question should ever have been brought before this convention. I think that we have made a mistake in undertaking to discuss political questions, or questions that may become political.

The question of trusts ought not to be a political one. What care we as a body as to the question of trusts in general throughout the country? We are all against trusts, and I do not want any one of you to think that I would come here before this assembly as the advocate of any trust, or in defense of any trust. Further than that, I want to say at the outset that I am willing to subscribe to the doctrine that if there is a tariff in existence that makes it possible for a paper trust or any other trust to exist I am against that tariff. (Applause.) But, my friends, because there are trusts in this country, and because there is a tariff on paper, it does not follow that either the trust or the tariff, or both of them, are to blame for high prices.

I want to say that I hope the newspaper fraternity is not going to be misled on that subject, and what I shall have to say will be for the purpose, more than anything else, of showing that this intelligent body of editors cannot afford to deal with these questions; that they are things which we ought to let alone, and that we cannot do ourselves more credit as an organization than by expunging from our record every word that is uttered on this subject. (Applause.)

There are people who think that because two things exist at the same time one must necessarily be the cause of the other. Though it sometimes happens that the city of New Orleans will have the Mississippi river full to the

banks, while in the surrounding country there is prevailing drought, it does not follow, as some people perhaps might think, that the high water at New Orleans is the cause of the drought in the adjacent country, nor that the drought in the country is the cause of the high water at New Orleans. You recollect how, several years ago, when tomatoes were first imported into this country, people began to have cancers. They argued that tomatoes were the cause of the cancers, because the two came into existence about the same time. For a long time the superstitious people thought one was the cause of the other.

Now there is a high price on paper, and there is a paper trust. No one will dispute these facts. But the causes that produce the two things are just as distinct as the cause that produces cancer is distinct from the tomato.

There has been considerable said as to whether there is any tariff on this product or not. There is no tariff on the raw materials that enter into the manufacture of paper. There is no tariff upon woods. I am not going to stand up here and attempt to deceive you. It would be foolish to do so. Any one can go into the forests of Canada and cut all the logs he may choose; he may take all of the woods he desires to make them into pulp, and he can ship the logs or woods into the United States tariff free.

A Member—Which is cheaper, to buy the wood or the pulp?

Mr. Laning—I am not an expert on that question. In order that I might be correct in this I did not go to somebody else's hand-book on the question of tariff. I went to the United States statutes themselves, and there you will find, in volume 30 of the United States Statutes, at page 202, section 699 of the United States Statutes, that woods, or logs, unmanufactured timbers of all kinds, are on the free list. Now I defy anybody to successfully contradict this statement.

Mr. Nagle of Wisconsin interrupted the speaker to say that he had called at the custom house and had been informed by the collector of the port that there was a duty on mechanically ground wood pulp of one-twelfth of a cent per pound, by weight, while on bleached pulp there was a duty of one-seventh of a cent a pound.

Mr. Laning—The trouble with that is that you people read only the tariff list and do not read over the free list. But if you will consult the free list you will see that the statement which I have made is perfectly correct.

You people all understand the theory upon which the republican party has built its tariff. I want to ask your pardon for mentioning that the idea is that all raw material shall be brought in this country free. In obedience to that doctrine, woods for the manufacture of paper were put on the free list. And you, whose memories will carry you back far enough, will remember that representatives of the press went on to Washington to secure the placing of raw materials, rags, etc., on the free list. But that principle goes on further. The moment that work is put upon any material that moment do we put a tariff on it. This is done for protection against the labor of foreign countries, the cheap labor of Europe and other places. We say to you, bring your raw material here and do your labor here; manufacture your wood into pulp here, and it shall be free of duty, but if you take your labor from foreign countries, if you use the cheap labor of foreign countries, then in order to protect the American workman we shall make you pay a duty before you can bring your material into this country.

Mr. Thomas—If it is done to protect the workers in the American mills why is no provision made to protect those who work in the print shops?

Mr. Laning—This is not a place to discuss the tariff question. That being the case, there being no tariff upon raw material, I am unable to see how this question can cut any figure in this association. But suppose it is true, I am willing to concede it for the sake of argument that there is a small tariff upon the manufactured pulp. I am willing to take the question in that condition. But I insist upon this, that the tariff is so small and so infinitesimal that it does not affect the paper interest at all. It does not affect the price of paper in the least today. Why! the tariff is no new thing. The tariff today on paper is the same as it has been for twenty years. If it were a new thing; if last September, when the price began to go up, we had enacted a new tariff in this country, there might be some plausibility for the argument, but it is not a new thing. The tariff has been

the same for years and years. I say, if you insist that the tariff put up the price, you must insist that it also put it down, because you will admit that it went down from 1898 until last September, when it began to go up.

I want to say this to you, that the price of paper is dependent on a number of conditions with which the trust has nothing to do. We had a phenomenal low price for paper in this country for years. You have not forgotten the condition of things that existed here during the Spanish-American war. You know that every newspaper, in a short time, or many of them, more than doubled their circulation. There was an enormous demand for paper, and from that time, more or less, the price of paper began to go up. These high prices are not confined to the newspaper busi-

The experience has been in Europe the same, since the beginning of the Boer-English war. The mills in England and the mills in Europe have not been able to supply the demand. We have been exporting more largely during the last sixty days than ever before.

Now this thing is the test of the question. These prices present a question which is to be decided along the lines of economical principles, or the principles of economy. Paper has gone up just the same as cotton has gone up. The same conditions that sent paper up have sent cotton up. It is just as fair to say that the paper trust is responsible for the rise in cotton as it is to blame the trust for the rise in paper.

Now, another thing. You will understand—perhaps most

ON THE ROOF GARDEN OF THE ST. CHARLES HOTEL.

A snap shot of a portion of a group of the officers and members of the National Editorial Association taken immediately after the presentation of the silver service set to President and Mrs. Henry.

ness; in every line of business prices have gone up. You know what every paper agent used to tell you: "Boys, you better buy now; it's a good thing to buy; it's going up." And what did you do? Every one of you doubled your orders for paper and put in a heavy stock, expecting a rise in price. Then higher prices began to be charged, because the manufacturers had more demands than they could fill. Your order would be booked and you would be told that it has to take its turn. The mills worked night and day. But after a while everybody stopped buying paper. There is not one of you here present who has not paper on hand probably for several months to come, and you have been using this paper which you have in stock. What has been the result? Paper has gradually come down.

of you will; if you don't, I want you to know it—that this paper trust handles nothing but print paper—news paper.

There is no trust upon writing paper, there is no trust upon letter paper, there is no trust upon binders' materials, there is no trust upon book paper. And yet the price of book paper has risen more in dollars and cents than the price of newspaper. Understand the fact that there was no trust to push it up, or anything to foster that particular paper's price. The same movement carried the price of book paper that carried up the price of other paper.

I say this association makes a mistake in discussing this question from a political standpoint or any other standpoint. I hope, as I said in the start, that this association is not going to be misled.

I was about to call your attention to another fact. Suppose it is true that the tariff enables the trust to hold the price up, that the trust is reaching out and absorbing all the lands and placing its grip upon all the water privileges, what do you gain by removing the tariff? If the tariff has given them this power, and we will admit it for the sake of argument; if they have this power now, when you have removed the tariff, will they not still wield that power in their own interest; will they not rake up the thirty cents per hundred covered by the tariff of today. This thirty cents a hundred pounds instead of going into your pockets, would still be retained by them, because they would hold the price of paper up. Where is your interest? Are you sure that you are not being made the tail to somebody else's kite in this matter? Who are the men who compose the American Newspaper Publishers' association? Are they not trying to put the crown of thorns upon your brow that will give you instant pain. They are the men that are flooding this country with cheap papers; they are causing the ruin of every country weekly in this country. Is it your interest to foster them by asking for the repeal of that tariff? There is nobody who will profit more than the cheap novel, and the cheap magazines, and dailies, and the immense Sunday editions, that are ruining your business. These city dailies and city weeklies that are being hawked throughout the country at 25 and 30 cents a year. Where does your interest lie? Nothing on earth will compel them to raise their price, except the rise in paper.

Now, that is the situation. I say this question never should have been brought before this body. And this association cannot do itself any more credit than by simply voting to expunge from its record every word that is uttered upon this subject; every word political or non-political that has been said on the question. I thank you very much for the attention which you have paid me.

Mr. Nagle of Wisconsin followed. Mr. Nagle stated that he had communicated with a correspondent who was making contracts at the time with the paper mills of the Fox River valley, who stated that they had refused to make any advance in the price of pulp wood over what they paid the year previous. Now, said Mr. Nagle, I would like to know what is the cause of the advance in the price of print paper? If these people do not pay any more for pulp wood than formerly, and if the advance in wages is so very slight, why should there be an increase of 100 per cent in the price of print paper?

I understood the gentleman, who addressed the house a short while ago, to say that the tariff which is in existence now is the same as existed under the Wilson bill. It is less, considerably less, than it was under the Wilson bill. It was much higher then. Why, then, has the price of paper been advanced? It is simply because of the trust.

Why can't we draw our own conclusions on this matter? Every single convention that has met, either state or national, has always discussed the persecution and the prosecution of advertising agents. Will gentlemen stand up here and pretend that it is improper for us to protect ourselves against the greed of trusts. Are we going to sit idle when a trust is organized to ruin our business, and say that we must not appeal to congress for redress?

They argue that the great demand which is made for paper is the cause of the advance. The gentleman referred to the demand for paper in Europe. If there is some reason for the advance on account of the demand, why not open these full river stores in Canada, rather than shut the gates, and hold pulp at the mercy of the trust?

It is purely a business proposition, we are told. And gentlemen argue that things had best remain as they are, because the large papers, with their cheap editions, will ultimately be destroyed if the trust is allowed to continue its existence. That is an argument which to my mind has no force. It amounts to nothing more than saying that we must destroy ourselves, in order to destroy competition. I deem that a poor argument.

Now, if you keep this subject off from either a partisanship or individual opinion it is simply a business proposition with me. I feel that I am taxed \$300 a year by the paper trust. If the raw material has not advanced in price, and if wages have not advanced, when the demand for paper is greater, why then it seems to me that paper can be furnished cheaper than it was before. It is easy for any person familiar with mathematics to figure the immense profits

that are made. If there was a profit when paper was selling at \$1.75 a hundred, and it now sells at \$3.75 a hundred, you can figure for yourselves the immense profits that this trust is making.

If politics are mixed up in this matter, all I can say is, so much the worse for politics. But I believe it is our duty to take up this matter and never release it until we have secured redress.

Col. Hiram Young of Pennsylvania followed Mr. Nagle with an address as follows:

Mr. Young—I have been following the paper business as a trade for fifty years. I know that we paid more for print paper twenty-five years ago than we do now. I consider this a business question that we are discussing here. It is not a matter of discussing trusts or tariffs, but it is simply a matter of business. It is a question of making investments in this country. I remember when I paid 30 cents for paper. I paid 23 cents a pound for newspaper print by the carload. We thought when paper came to 10 cents, then to 6 cents and then to 5 cents, that we had cheap print paper. We now pay from \$1.85 to \$3 per hundred.

A Member—Mr. President, will you permit a question? We have important reports to make to this convention and I hope that you confine these speakers to five minutes, according to the constitution, or we may not be able to do the business we have in hand today.

The President—The constitution provides for ten minutes. We won't object if the speaker will limit it to five.

Mr. Young—Capital is seeking investment. We have wealth in this country doubling that of Great Britain. We are becoming from a debtor nation, the creditor nation. Money in this country is growing cheap. To protect the capital invested, capitalists, naturally, as they always will do, try to make the margin of profit that will compensate them for the investment under the circumstances. Capital will always seek profitable investment and thereby create a competition and regulate prices.

Now all agree that the newspaper man is not to be exempt from taxation, and we, as intelligent editors, should not claim any special privileges, and when we pay the price which we are now paying, we are not taxed beyond what we should be, or should properly be under the circumstances.

The advance in price which we have experienced in this country since our revived prosperity is not to fall upon one particular class of people, or one particular interest, but we must expect it to fall upon all. We should all share in the result; we benefit by it, why should we not also share in the advance, or in taxation, as we may call it? There is no reason why we, as an association of editors, should declare that we must be specially exempt from the general advance or from taxation. There is no reason, no justice, no equity in it, and we should be exposing ourselves to the charge of being unfair if we went to congress on such a mission as is proposed.

I might say that there are some among us who attended the anti-trust convention in Chicago some time since and who there committed themselves to certain doctrines, and it is natural that they should endeavor to influence the members of this association one way or the other. They are trying to inject their ideas and their notions into the proceedings of this association; but I say that we cannot afford to go into such business. Such action endangers the existence of this association, and we should eliminate such matters entirely from our conventions.

Mr. Page (New Jersey)—Mr. President, I now move the previous question.

Mr. Patterson—Mr. President, I rise to a point of order. Under parliamentary law the one who opens a debate has the right to close it, and before it is closed in this case I shall ask the privilege of occupying the attention of the house for ten minutes, under the rule.

The President—Gentlemen, you have heard the motion. Mr. Patterson has ten minutes.

Mr. Patterson said he did not think the interior country papers had felt the benefits of prosperity very much. The price of paper had gone up, also composition, and the subscription prices had not gone up, and there could not have been a large increase of advertising.

He went on to show that the increase in the price of white paper was not natural, and said that wherever there were trusts there were those increases in prices.

He said the gentleman from Ohio made exactly the same argument that every trust agent did in trying to satisfy publishers—the Cuban war, the drought, etc.

The rise in the price of white paper was exactly coincident to the formation of the white paper trust, and if it had not been formed, the publishers would now be paying the old price.

He regretted that the word "politics" had been used, as he only referred to the tariff as far as it referred to wood pulp, and went no further, because he saw how easy it was to arouse political prejudices, which is a trick that has been worked from time immemorial, in order to say "our side won," and allow the wrong to continue. He said the resolutions of the publishers' association did not represent his views of what the action of a newspaper publishers' association should be; it was too namby pamby.

Mr. H. C. Page—I now move the previous question.

The President—Gentlemen, you have heard the motion; shall the question be put? The motion is carried.

Mr. Screws (Alabama)—Mr. President, I move that in voting we vote first upon the original question and then upon the amendments. Seconded and carried.

The President—Mr. Screws will now read that portion which we propose to vote on.

Mr. Amos—I understand that in addition to the original resolution there are two additional resolutions, amendments, that were offered yesterday. I call for a division of the question. I move that we vote first on the resolution offered yesterday and then upon the other two resolutions.

The President—That is exactly what is proposed to be done. Mr. Screws will read the resolution, that is, so much of it as we propose to vote on first.

The resolutions above printed, as adopted by the American Newspaper Publishers' association, were then read.

The secretary called the roll, and the resolutions were carried by a vote of 244 in favor to 64 against.

The President—The first proposition is carried. The next portion will now be voted on.

Mr. Screws—This is a portion which was offered as amendment to the resolution yesterday. Mr. Patterson of Colorado handed it to the committee this morning, and we adopted it.

"Resolved, That we request immediate action by congress upon this all-important question, so that the burdens under which the newspapers of the country labor, by reason of the white paper trust, may be removed at the present session of congress."

Mr. Patterson—I move that we dispense with the roll call. Seconded. Carried. The resolution was then adopted.

The President—The secretary will read the third resolution.

The secretary read as follows:

"Resolved, That a committee of seven members of the association, a majority of whom shall be republicans, be appointed to visit Washington, without delay, and to urge prompt action in this matter."

A division was called for, which motion was carried, whereupon the secretary was instructed to call the roll, and did so.

The vote stood 140 in favor and 141 against the resolution. It was, therefore, defeated.

Mr. Holtman of Indiana—Mr. President, I move that we make the election of officers and the selection of the next place of meeting the special order for 2 o'clock this afternoon.

Seconded.

The President—I think, under the constitution, that is out of order.

A Member from Oklahoma—The election of officers generally follows immediately after the committee reports.

The President—Mr. J. W. N. Burkert has a report to submit on officers' reports. If there is no objection he will read it.

Mr. Burkert then read the report, which is as follows; which was adopted on motion duly seconded and carried:

REPORT OF THE COMMITTEE ON OFFICERS' REPORTS.

To the Officers of the National Editorial Association:

We, your committee to whom was referred officers' reports, beg leave to submit the following:

Few of us realize the burdens and extended responsibilities borne by the officers of the Association. It is gratifying to be

able to state that at no time in its history has the Association had more efficient officers than those who were elected at Portland last year.

You have heard with pleasure, no less than profit, the able, practical and businesslike address of President R. H. Henry. His thoughts were well matured, his propositions forcibly presented and conclusions fully sustained by the facts.

We endorse the program arranged by the president, which has been one of the most interesting within the history of our Association.

The remarks and recommendations by the president in regard to advertising rates are both sound and timely, and have our earnest endorsement.

We approve what the president says under the heading of the "Advertising Agent and Foreign Advertisers," and most earnestly commend his suggestions.

We endorse the president's reference to the paper trust, that is daily robbing the publishers of thousands of dollars. We would suggest that each publisher urge his congressman and senators to use every effort to afford relief, so far as Congress has the power. The press of the nation, by making a united effort, can force all political parties to support a measure that would afford relief. There is a remedy, and Congress should find it. If the paper trust is greater than Congress, and more powerful than the nation's press, then, indeed, have we arrived at the beginning of the downfall of American liberty. The people must rule capital, or capital will rule the people. If the paper trust is throttled, it will be a victory for the people and intelligence. If the trust is victorious, many newspapers will go into bankruptcy and the publishers will be forced to seek new and untried fields for employment.

We agree with the president that the proceedings of the association should be printed in pamphlet form, and recommend that 1,000 copies be printed from the type used by the Printer Journalist, the work to be done by said paper at a reasonable rate.

We indorse the remarks of the president in opposition to the "newspaper directories" and "publishers' unions," as we do the stand he takes against submitting our books for examination to the so-called Association of "American Advertiser."

We also endorse the suggestion made by the president that the scope of our association should be broadened so that the larger dailies may be induced to join it.

We desire to commend the work of all the officers for the past year. It has been able and efficient, and the association is to be congratulated in having such splendid and competent officers.

Respectfully submitted,

J. W. N. BURKETT,
Chairman.
WOLFE LONDONER,
EDITH MERIDITH,
J. M. S. HUNTER,
H. C. PAGE.

On motion the report was unanimously adopted.

Mr. L. C. Taylor of South Dakota—There was a report which was made the special order for today at 10:30 a. m.—the legislative committee's report. I now move the adoption of the legislative committee's report.

The President—Has it been read?

Mr. Taylor—It was read yesterday.

The report was then read as printed in the second day's proceedings.

Mr. Sperry of West Virginia. I wish to move an amendment to the report by striking out the clauses that in any way favor the enactment of a national libel law.

Seconded.

Mr. Sperry—Mr. President, Ladies and Gentlemen: When you are asked by any members of the newspaper fraternity to take any action by which you are going to take that matter of actions for libel from the courts of your state and place it in the federal courts, or the courts of the United States, held often in a distant state, you can rest assured that they know not what they do. I am certainly opposed to anything which attempts to substitute a centralized distant for a local, self-government. If your own people at home will not give you justice, it would be unwise to expect it from the Federal government. I hope that this body will never express a preference for national over a state law.

Chairman Willard—On behalf of the committee I will state that it does not object to strike out the portions to which the gentleman objects and accepts the amendment proposed.

The President—The portion objected to will be stricken out, unless there is objection.

The report, as amended, was adopted, on motion made, duly seconded and carried.

The treasurer submitted his report as follows:

TREASURER'S REPORT.

There are 318 names of executive committeemen and delegates on the official roll of the New Orleans convention, March 1-3, 1900; twenty-nine of the executive committeemen attended the meeting of the executive committee at St. Louis, October, 1899, and are exempt from payment of dues, leaving 289 from whom was collected \$6.25 each. The roll shows that 181 other persons accompanied the officers and delegates, and \$2 was collected from each.

Collected from 289 delegates @ \$6.25 each.....	\$1,806.25
Collected from 181 other persons @ \$2 each.....	362.00
Sundry items collected.....	5.25

Total amount collected.....	\$2,173.50
Balance on hand from Portland meeting.....	148.78

Total amount on hand.....	\$2,322.28
---------------------------	------------

I hereby certify that there is now on hand in the treasury available for the bills authorized at the New Orleans meeting the sum of \$2,322.28.

JAMES G. GIBBS,

New Orleans, March 2, 1900.

Treasurer, N. E. A.

The President—The financial report will now be read by Mr. A. W. Glessner.

Mr. Glessner read the following report:

REPORT OF FINANCE COMMITTEE.

Your committee have examined the very gratifying report of Treasurer Gibbs and find it correct. The handsome sum of \$2,173.50 has been collected this year.

Amount of funds available for payment of bills.....	\$2,322.28
---	------------

The payment of the following bills is recommended:

Printing official roll for credentials committee.....	\$ 30.00
President R. H. Henry, for printing and expenses.....	50.00
Secretary J. M. Page, salary.....	500.00
Secretary J. M. Page, assistant.....	200.00
Secretary J. M. Page, expenses.....	118.96
Recording Secretary R. M. White, salary.....	150.00
Treasurer James G. Gibbs, salary.....	150.00
Treasurer James G. Gibbs, expenses.....	117.96
National Printer-Journalist, printing proceedings convention 1900.....	350.00

Total bills.....	\$1,675.92
Leaving balance in treasury.....	646.36

	\$2,322.28
--	------------

Your committee further recommends that the sum of \$200 be allowed, as heretofore, the corresponding secretary for the services of an assistant; also that the practice of collecting \$2 for each person accompanying an officer or delegate be continued.

Respectfully submitted,

A. W. GLESSNER, Chairman.

I. F. LANING,

J. L. Power,

J. IRVIN STEELE.

March 3, 1900.

The report was adopted as read.

Mr. E. W. Stephens of Missouri then read the report of the Committee on Constitution and By-Laws, which was adopted as read. It follows:

Your committee on constitutional amendments and by-laws beg leave to recommend:

1. That the amendment to the constitution submitted by Mr. Londoner of North Carolina be not adopted.
2. That the amendment to section 1 of article 3 of the constitution, submitted by Mr. Blunck of New York, be adopted, as follows:

No member shall be entitled to a seat in this Association who does not bear a certificate from the executive committee of the association he claims to represent, attesting the fact that the said association has a membership of not less than fifteen members, and has held a regular meeting within twelve months prior thereto, and that he is a regularly appointed delegate of such association, and is a bona fide editor or publisher of a newspaper.

E. W. STEPHENS, Missouri;

W. E. BOLTON, Oklahoma;

J. H. SMITH, New York;

J. W. COCKRUM, Indiana;

T. J. CUNNINGHAM, Wisconsin;

Committee.

This report was adopted by unanimous vote.

A majority of the committee, consisting of Messrs. Stephens, Cockrum and Smith, presented a report recommending that the amendment to the constitution proposed by Mr. Sperry of West Virginia be not adopted.

The association adopted the report of the majority of the committee.

Mr. Cunningham of Wisconsin—I have another report—a

minority report—upon the amendment offered by Mr. Sperry of West Virginia.

Mr. Cunningham of Wisconsin—I move that Mr. Sperry be allowed to read the minority report. I trust that you ladies and gentlemen will give it attention, because it is of importance.

Mr. Sperry—I understand that the majority report has already been adopted, and it would be clearly out of order to present the minority report now, unless the adoption of the majority report be reconsidered.

Mr. Stephens—I move that the motion be reconsidered.

This motion was carried, and Mr. Sperry read his report.

A vote was taken on the question of the adoption of the reports, which resulted in the adoption of the majority report, and the defeat of the minority report. A motion was then made by Mr. Cockrum, seconded and carried, that all reference to the minority report be expunged from the record.

Mr. B. F. Louthian, chairman of Committee on Advertising, then read the report of the committee, which was duly adopted by the association. The report is as follows:

Recognizing the impossibility of formulating a rate card that is applicable to all newspapers, regardless of local conditions and special circumstances, your committee has deemed it advisable to report a basis of minimum rates upon which they believe advertising should be figured. These rates are: For dailies, on annual contracts, 3 cents per inch, per thousand circulation, and on weeklies, 5 cents per inch, per thousand circulation, each insertion.

Advertising at these rates should be given one free change of matter per week, and 5 cents per inch should be charged for additional changes. Position should be charged for at from 10 to 25 per cent additional. It is believed that if the country press generally would adopt a minimum basis, such as is here suggested, for figuring display advertising, it would redound greatly to the benefit of such publications.

A. W. LEE (Chairman), Iowa.

B. B. LOUTHIAN, Indiana.

F. R. GILSON, Michigan.

L. G. NIBLOCK, Oklahoma.

IRVING TODD, Minnesota.

The Committee on Necrology made its report, which showed no deaths, reported to the committee.

On behalf of the Committee on Ways and Means Mr. W. F. Jarvis of Boston reported that the committee had nothing to do, as abundant funds had come into the hands of the treasurer to meet all demands and leave a surplus, and therefore reported that they had done nothing.

It was then resolved that the other committees be permitted to print their reports, without being read.

Mr. J. M. Page, corresponding secretary, then made announcements to the association, in the course of which he held up a document, being a list of members of the association who had come to New Orleans from St. Louis on the same train, and said in explanation of remarks that had come out in the heat of debate, we do not want it to go out to the world that any one of us who came here from St. Louis is not a newspaper man. I have pledged to the railroads of the United States that the people who come out on these excursions shall be newspaper men. If there are any here who are not they have crept in without my knowing it. The railroads hold me personally responsible for the pledge. This list has been signed by the conductor of the train. I have been awakened in the night to show this list to the conductor. I have stated to the conductor that there was nobody in there but newspaper men. If you gentlemen who own newspapers have brought people here, have worked in their names as owners or editors of papers, I know nothing of it. Every member on this list has been certified to me by the Executive Committee, or president or secretary of his state association. If any have crept in who are not owners or editors of papers I know nothing of it.

In addition to the 225 men who came here from St. Louis, the gentlemen from West Virginia and all these people that are here from either southern or western states, have come here as newspaper men. They have not come on this list. That is what makes our body so large. Come from Louisiana, Florida, Texas, California, Oregon. All these people that are here from those states are newspaper men. They are not on this list, but their names are printed in full on the roll of members and delegates brought with me from St. Louis—225 newspaper men who are the editors or owners of newspapers.

Mr. Sperry—I move that this paper be printed, and that each delegate of this convention be furnished a copy.

The President—I want to make a personal explanation that I invited Mr. Ballenger to read a paper here, and I should be happy to have him do so now. Mr. Ballenger will proceed to read his paper. Mr. F. L. Ballenger, editor of the Evening News, Jackson, Miss.

Following is Mr. Ballenger's address:

NEWSPAPERS AS BUSINESS INSTITUTIONS.

Mr. President, Ladies and Gentlemen of the National Editorial Association: I appear before you today at the invitation of your president. I have chosen for my subject, "Newspapers as Business Institutions." I believe that there is a crying need for better business methods in our business. We who have lived on this side of the imaginary Mason and Dixon line have had difficulties to contend with which you of the North have not probably encountered. Every Southern editor is a partisan. He has thought more of the record of some big politician in his county than he has thought of his own business. In season and out of season he has advocated the claims of the Hon. Billy Bunkum, the prominent lawyer and politician of his county. He has printed column on top of column about the Hon. Billy Bunkum, and he has printed it for nothing and boarded himself. If perchance the Hon. Billy should, by some hook or crook, be elected governor or make connection with some lucrative office, and the editor, who had been feeding on the husks, should go to him and ask him for an appointment, he would get a gentle slap on the back and something like this: "Why, old man, I am sorry, but really you know in the nominating convention I promised that position to Hon. Jim Trickum from Lonesome county, who gave me the delegation and insured my election." The poor editor goes about his business, and if the Hon. Billy should conclude that he wants to go higher—say to the United States senate—the editor will be found doing the same thing. He will take off his coat and whoop it up for the Hon. Billy, who may perchance take his paper. Gentlemen, as newspaper men, I am here to tell you that the political race of no man is dear to me—I care not who he may be. I have made it a rule that these dear politicians, who want the notices which their home papers—working for nothing and boarding themselves—have given them produced in the Jackson Evening News, must walk before the cashier's desk and pay the tariff. I would not sell editorial opinions for any amount of money, but do reserve the right to say what I shall reproduce, and if the politicians are so anxious to have puffs which are manufactured by the home-puff factory inserted, they must pay for it. We charge the merchants when they are desirous of having the merits of their goods placed before the public, and why not charge the politician when he wants to place before the public the record of the goods that he has to offer.

There are a great many lessons that newspaper men may learn with profit. When I first went into the business I thought that the public demanded that I roast my esteemed contemporary every day. I proceeded upon this idea, but your esteemed President, who was then as now my esteemed contemporary, took into consideration that I had been suddenly thrust from the reporter's desk to the responsible position of editor-in-chief, and he viewed with charity my shortcomings. I made a mistake, and before this intelligent audience of my fellow-workers in one of the grandest fields of human industry I acknowledge my mistake, and if there are any of you editors in this audience who are just starting out, I have one word of admonition: "Don't!" When two newspapers in the same town are engaged in canine strife, the public laughs and reaps the benefit. In Jackson, where your President and myself are at the heads of rival newspapers, there is the utmost good feeling. We never call attention to one another's imperfections. In a town of seventeen thousand people we are publishing two eight-page dailies, which take press report and set between sixty and seventy-five thousand type per day. These two papers have an agreement that all legal notices shall be charged for at legal rates, and then the office with the pull gets the notices, or its share of them, but there is no cutting to get them. Then we tackled the obituary nuisance. We came to the conclusion that where we had handled the death of a person once our duty to the public was at an end, and that if Tom, Dick and Harry wished to tell the public in bad grammar how much they thought of the departed they would have to pay 10 cents per line. Our obituary business fell off fully one-half, but what we did print bore the tax, and we have never had cause to regret making this rule. Then we tackled the sociable nuisance and said that where an entertainment was given where an admission fee was charged we were entitled to charge for noticing it. There was a great wail in the city, but both papers were firm. The public said that we had formed a trust and were indictable before the grand jury, but we were never indicted, and now, when they have these entertainments at which an admission fee is charged, they always pay for the notices. There is the best of feeling between the Clarion-Ledger and the Evening News, and I know that if my office were to burn tonight Mr. Henry would offer me the use of a part of his until I could get on my feet, and I would do the same. Yet with all this friendliness and good will on the part of the men at the head of rival newspapers, there is no let up for news or business, and in no city is there as keen a hunt for a scoop as in Jackson. The publishers in the large

cities have learned that there is nothing in this warfare on one another, and I will but cite the one-day strike of the pressmen in St. Louis a few months ago. The cause of one was the cause of all, and the rich papers which could have stood the unjust demands of the pressmen said that they would suspend first, and the national officers of the union looked into it and said that it was unjust, and called it off. Suppose that one greedy publisher in that city had sought to get ahead of his competitors and had acceded to the demands of the pressmen, it would have forced the others to submit to the imposition and might have seriously crippled one or more. Gentlemen, the bankers and the merchants and the lawyers and the doctors have learned that there is nothing in abusing and fighting their competitors personally and in an unfair way, and they do not indulge in such tactics. The people are bound to have the newspapers and they will pay a legitimate price for the service if the publishers will but let them, but, of course, they will not voluntarily agree to give more than the publisher asks. When one publisher takes a piece of work for a low figure in order that he may keep his competitor out of the job, he is doing an act which will deprive his family and those dependent on him of the necessities of life. The Jackson Evening News, published at the capital of the state of Mississippi, is run for the money that is in the business. The gentlemen who own the stock in that institution are not in the business for their healths—for they are all healthy. This course of "business in our business" has been demonstrated to be the wise one.

When we fail to run our newspapers as business institutions we have made a botch of one of the noblest professions in the world—a profession which is closer to the people than almost any other. The paragrapher has for lo! these many years, made light of the poverty of the editor, and, gentlemen, I am firm in my belief that there is more fact than joke in it, and that the men who are at the head of the weeklies and the small dailies are to blame for this condition. Gentlemen, I hope that my few scattering suggestions will prove of some benefit to some struggling publisher who is endeavoring to conduct his newspaper as a business institution.

Mr. Garry Willard of New York—Mr. President: The paper has been very interesting and reflects honor on the gentleman as well as on the association. I would request that Mr. Herbert print the same complete in the National Printer-Journalist.

Mr. Gibbs then moved that the convention adjourn to 3:30 p. m., which was accordingly done.

AFTERNOON SESSION—MARCH 3D, 1900.

The meeting was called to order at the appointed hour. President Henry in the Chair.

The President—The Chair will appoint the following committee, provided for by the report of the Committee on Legislation:

Mr. L. C. Taylor, South Dakota (chairman).

Mr. W. D. Thomas, of Missouri.

Mr. F. W. Coon, of Wisconsin.

T. M. Patterson, of Colorado.

Wm. H. H. Judson, of Alabama.

Mr. L. W. Puffer, of Massachusetts.

L. A. Sherman, of Michigan.

W. L. Jones, of Illinois.

W. H. McCabe, of Ohio.

Mr. Wm. L. Eaton, chairman of Committee on Uniform Libel Laws, then read the report of that committee, which was fully adopted. The report is as follows:

UNIFORM PRESS LAWS.

Mr. President and Members of the National Editorial Association:

The principal duty in charge of your committee, as many of you are well aware, is that of promoting a system of complete and uniform statutes in the various states bearing on the rights, the duties, and the obligations of the public press. This object it is proposed to attain, if practicable, by the concurrent action of the several legislatures. This aim has taken form through the labors of this Association at the meetings held within the past two years. What has thus far been accomplished is the preparation of the basis of a general statute. The Association has had the services of one of the best living authorities on this branch of practice. The resulting work is in no sense theoretical but is the fruit of experience and thorough trial, and every phase of the question represented has been passed on by the courts. The Association has also learned to a demonstration that very few of the states are even fairly provided for in this great want, and that most of them are practically in as bad shape as though we had no legislation at all.

With the above basis, the Association enters on the undertaking of securing the adoption of these results in the law of the respective states. It is a vast undertaking and may well challenge our courage and supreme effort. The object to be gained, however, is of the first moment to the moral and

material success of those who keep the public press of the country in motion. It is of almost equal moment to the public interest. The public press, theoretically, and, in a large measure, in its actual practice, is the first institution of the great commonality. Let us reiterate in our minds this cardinal principle. Many parts of the country expend as much money in maintaining the public press as for the public schools, even where the latter are maintained on the most liberal scale. The newspaper is nearer to the people than is the public school, because in an intelligent community it practically enters every family, while a large proportion of families have no immediate connection with the public schools excepting as tax-payers and in other indirect ways. Every duty imposed on the press is that which grows out of its relation to the great multitude. It is an unofficial agency, conducted under the ordinary commercial guarantees, which makes inquiry on behalf of the public for all the information of public concern. Every obligation for the performance of its duty is exercised by the press solely as the representative of this public interest.

A large part of the duty we have in hand in the premises is that of enlightening ourselves as to a better way—namely, the essential principles of a law and a practice which corresponds to the functions of the press as it exists today—and of bringing the entire American public and (of bringing the press) in this nobler conception of our duty. This can never be brought about until we have affected something of a revolution in our own minds. It is in its main essentials a moral reform, both in the great army of newspaper workers and in the public feeling. The traditions of the law which we find in existence, traditions which color public feeling and which often form an embarrassment to our most important duties, are a survival of the state of the law born in the old absolutism, which made it a crime to entertain a difference of opinion on the conduct of government, and imposed the most drastic punishments on persons or publications who criticised the king or his underlings. Our first duty is to bring about a complete abolition of that state of feeling.

A law which corresponds with what the public has a right to expect of a public journal today recognizes the paper as acting on behalf of and actually standing in the place of the public desire to secure certain legitimate information. That law corresponds in fact to the best experience and practice in vogue among our brethren today. The journals which represent this spirit long ago departed from any practice of maintaining a censorship or of violating that respect for purely private matters with which the public has properly nothing to do. This class of papers observes the cardinal principle of respecting and conserving the right of every individual to that reputation which his conduct has earned. In fact, there is no worthy standard of public relations existing in the minds of the people which it is not the first desire and the obvious self-interest of the publisher and the newspaper worker to maintain and vindicate. Who is there today discharging these duties under the light of his own trained and discriminating judgment who was not long ago convinced that a general public appreciation, under a well-defined law, correctly defining these important duties, would remove the greater portion of the friction that now and then impairs or defeats the most conscientious discharge of our duty? A large part of the undertaking we have in hand is to establish a reversal of the old public tradition. Such a definition of the law as will bring people and press to a uniform view of our daily duty is one part of what is proposed as the uniform statute of all the states as the law of the press.

If the purpose we have in view is of such moment, is there any one in this Association who would allow any ordinary obstacles to daunt him in that undertaking? Obstacles we shall surely have. Such a result will not be won excepting at the cost of repeated effort and sometimes discouraging failure. We have a right to expect, however, that the importance of the movement will, in time, become generally recognized. We have faith also that after due consideration a few of the most enlightened states, which are an example in legislation to their neighbors, will give the plan a fair trial. We have faith that that experience will work the good results which are already apparent to our own experienced judgment. When that point is gained, it is not believed that opposition can do more than delay the gradual adoption of this reform in every part of the country.

This is the undertaking which the National Editorial Association has laid to heart. In furtherance of this mission we have a right to expect the diligent co-operation of the members of the Association in all the states and the responsible labors of all concerned in the state and other press associations. This Association cannot directly undertake the duty for any state. It must be done by the state and district associations; by the committees appointed to that duty, and by the co-operation of all publishers who have at heart the advancement of their personal interests and of the noble calling in which they share. What the National Association can do is to act in the interchange of suggestions and experience which will enable the movement in one state to profit by what is going on in another. This will have to be done chiefly through correspondence. The means which the National Association can devote to this purpose is small and requires to be carefully husbanded. If the movement has a cordial co-opera-

tion in the various states which it has the right to expect we will have no reason to fear for the result.

Several of the largest newspaper concerns in this country have recently been at large expense to prepare a pamphlet of instructions for all employed in the duty of preparing matter for their columns, as affected by the policy of the public laws. Your committee commend that plan for universal adoption and offer the provisions of the proposed general statute and the admirable address of its author, Hon. A. F. Hatch, at our Denver meeting, as one of the best manuals of instruction that could be devised. Let every publisher and every editor become familiar with its instruction. If you have employees who prepare matter for publication, what more profitable duty can you perform for your business than to sit down and read the address and the statute with your whole force?

The successful men of our business are fully aware of the delicate nature of the duties and the powers committed to our callings. They do not shrink from the rightful responsibility which grows out of those duties, but faithfully and vigilantly discharging them their investments shall not be made hazardous or their discharge of duty be visited with severe penalty by reason of circumstances beyond their control.

Your committee recommend that the members of the executive committee of this Association be instructed to bring the matter of the proposed general reform before their respective associations, by having the address of Mr. Hatch read in those bodies, to the end that our brethren may become informed on the practicability and desirability of bringing about the improved situation, and their hearty effort enlisted to that end. We especially urge emphasis on the point that this reform is not asked on the ground of any favoritism but because it will work well for the general community and for the good of the institutions most closely identified with the public interest; an institution which was especially safeguarded by the founders of our government as vital to the conservation, the advancement of our liberties and the general welfare.

Respectfully submitted,

WM. L. EATON, Chairman.

Mr. Willard of New York—I move that we now proceed to name a place for the next session.

Another Member—I move to amend that, by providing that we elect the officers first, and then proceed to the selection of a place for the next session.

Mr. Stephens—The usage has been to select the place of meeting first.

The President—The question in the mind of the Chair is whether the amendment is in order.

A Member—I rise on a point of order. I say the motion is out of order.

A Member—I move that the rules be suspended, and that the selection of the officers be now proceeded with, to be followed by the determination of the place where the next convention will be held.

The President—The Chair would suggest that you offer that as a substitute.

Member—If the Chair will entertain a substitute then it is so offered as a substitute.

Mr. Willard—I accept the gentlemen's substitute and withdraw my motion. The motion was carried to elect the officers first.

The President—The election of officers will now be in order.

A Member—Mr. President, I move that all nominating speeches be limited to three minutes. Seconded by Massachusetts member, put and carried.

Mr. B. B. Herbert of Illinois—Mr. President: It becomes my pleasant duty, a duty of which I am proud, to name to-day a gentleman, whom you have already in your minds, decreed shall be chosen to preside over the destinies of this association during the coming year. During the fifteen years since the organization of this association I have felt a growing disinclination to participate in any of the contests of the election of officers or the choosing of a place of meeting. I have come to look upon these friendly rivalries as a father looks upon the rivalries among his children, sympathizing with the defeated and triumphing with the victorious. But to-day you are all practically of the same mind, and there can be no idea that I wish to dictate to you, in nominating a man whom you have already in your mind decided to honor, a man who in all the years of his life has devoted himself to his calling with a jealousy that has brought to him a grand success in that grand state which is sometimes called the Massachusetts of the West; a man who, with his honorable wife, has conducted not only a daily and weekly paper, but a grand agricultural paper, that has gone forth to influence the farmers, and the sons and daughters of farmers, through the State of Iowa, who has not only built up and sustained a newspaper

business, daily and weekly, but has also built up a large office and bindery. He is in every way a representative of the men who make up this association, men who are in touch with the people; a true American, who has worked his way up from journeyman to the highest position in our calling, who has been honored by his state with the highest position in her legislative body and as lieutenant-governor; I nominate in accordance with your unanimous desire, Hon. Matt. Parrott of Iowa for president of this association for the ensuing year.

Kansas, Iowa and Pennsylvania delegates immediately seconded the nomination and the rules were suspended and the 331 votes of the convention cast for Mr. Parrott. Mr. Parrott was called for, but he was not in the hall.

Mr. E. W. Stephens of Columbia (Mo.) Herald, nominated Second Vice-President F. B. Baillio of the Review, Cleburne, Tex., for first vice-president, pronouncing an eloquent eulogy on his character, attainments and fitness as a representative member. This nomination was second by several delegates, and then F. R. Gilson of Benton Harbor, Mich., was nominated with Mr. Baillio, and speeches eulogistic and commendatory were made in his behalf by C. T. Fairfields of Vermont, and A. L. Bemis of Carson City, Mich. The balloting gave Baillio 221 to 83 for Mr. Gilson, and the latter at once moved, and had carried, a motion to make the election unanimous.

Mr. Albert Tozier of the Pythian, Portland, Ore., was advanced from the third to the second vice-presidency by a unanimous vote.

Mr. J. W. N. Burkett of the Dispatch, Jackson, Tenn., was elected third vice-president in the same way.

Corresponding Secretary J. M. Page of Jerseyville, Ill., Recording Secretary R. M. White of Mexico, Mo., and Treasurer James G. Gibbs, of the Reflector, Norwalk, O., were all re-elected by unanimous vote.

The President—Each delegation from each state or district association will put in nomination and send forward the name of the party whom it wishes elected executive committeeman.

Thereupon the following list was sent in and the gentlemen named chosen executive men for the ensuing year:

EXECUTIVE COMMITTEEMEN.

Alabama—William H. H. Judson, Bessemer.
 Arkansas—W. W. Folsom, Gazette, Hope.
 California—Raleigh Barcar, Vacaville.
 Colorado—J. W. Work, Florence.
 Connecticut—George C. Woodruff, Litchfield.
 Delaware—Robert G. Houston, Georgetown.
 Idaho—S. C. Herren, Moscow.
 Illinois—E. A. Snively, Canton.
 Illinois Democratic—O. Lumpkin, Carlinville.
 Illinois Woman's—Mrs. Amelia S. Sullivan, West End Advocate, Chicago.
 Illinois Military Tract—I. A. Ewing, Review, Monmouth.
 Illinois Republican—W. L. Jones, Lebanon.
 Illinois Southern—H. D. O'Brien, East St. Louis.
 Indian Territory—M. E. Milford, Vinita.
 Indiana Democratic—B. F. Louthian, Logansport.
 Indiana Northern—F. W. Willis, Waterloo.
 Indiana Republican—S. N. Cragum, Lebanon.
 Indiana Southern—J. W. Cockrum, Oakland City.
 Inland Dailies—A. W. Glessner, Galena, Ill.
 Iowa—C. M. Junkin, Fairfield.
 Iowa Fifth District—E. E. Taylor, Traer.
 Iowa Northeast—Sam G. Sloan, Charles City.
 Iowa Upper Des Moines—A. M. Adams, Humboldt.
 Kansas—H. A. Perkins, Nationalist, Manhattan.
 Kansas Seventh District—J. E. Junkin, Sterling.
 Kansas North Central—S. E. Dodge, Beloit.
 Kentucky—J. G. Craddock, Paris.
 Louisiana—J. G. Trimble, Farmersville.
 Maine—J. M. S. Hunter, Farmington.
 Massachusetts—Ernest H. Pierce, Journal, Revere.
 Michigan—Fred Slocum, Caro.
 Minnesota—Chas. J. Berryhill, Review, St. Paul.
 Minnesota Northwestern Publishers'—Joseph Leicht, Winona.
 Mississippi—J. H. Duke, Scooba.
 Missouri—W. R. Painter, Democrat, Carrollton.
 Missouri Northeast—John W. Jacks, Montgomery City.
 Missouri Northwest—H. E. Robinson, Maryville.
 Missouri Southwest—J. G. Newbill, Springfield.
 Nebraska—A. J. Langer, West Point.
 New Jersey—H. C. Page, Bayonne.
 New England Suburban—Dr. William F. Jarvis, Boston.
 New York—F. B. Garrett, Syracuse.
 North Carolina—Henry B. Varner, Lexington.
 Ohio Associated Dailies—H. R. Snyder, Urbana.
 Ohio Buckeye—W. A. Ashbrook, Johnstown.
 Ohio Editorial Association—C. B. McCoy, Coshocton.

Ohio—Hocking and Ohio Valley—W. H. McCabe, Coshocton.
 Oklahoma—W. E. Bolton, Woodward.
 Oregon—B. F. Alley, Baker City.
 Oregon, Portland Press Club—Frank Lee, Portland.
 Peninsula—F. G. Usilton, Chestertown, Md.
 Pennsylvania—J. Irving Steel, Ashland.
 Rhode Island Press Club—Frank H. Campbell, Arctic.
 Southern California—Charles A. Gardner, Pasadena.
 South Dakota—C. R. Tinan, Kimball.
 South Carolina—James A. Heiryrt, Greenville.
 Tennessee—Lynch Perry, Columbia.
 Texas—Will H. Neel, Dublin.
 Texas Northwest—W. A. Johnson, Memphis.
 Utah—J. E. Diehl, Mammoth.
 Virginia—Fulton Kyley, Bland.
 Washington—Will A. Steel, Seattle.
 West Virginia—W. S. Wiley, New Martinsville.
 Wisconsin—T. J. Cunningham, Chippewa Falls.
 Wyoming—G. W. Perry, Rawlins.

UNIFORM LIBEL LAW COMMITTEE.

W. L. Eaton, Rockford, Ill.

Under motion, a committee composed of Mr. Ashbrook of Ohio, B. F. Passmore of Mississippi, and Mr. S. N. Cragum of Indiana, was appointed to wait on the Hon. Matt Parrott, president-elect, and escort him to the platform.

Mr. Parrott was introduced and said: "Mr. President and Ladies and Gentlemen of the Convention: I wish I could address you, but I have no voice; it is impossible for me to talk loud enough for you to hear me at the other end of the hall. But I wish to thank you sincerely, for the honor that you have conferred upon me, and I pledge my best efforts to serve the association in every way, possible. I thank you."

The President—The next thing in order is the selection of a meeting place for the next convention.

Mr. Page, corresponding secretary, read invitations and communications from various places, from Buffalo, from Indianapolis, Put-in-Bay, Port Huron, Milwaukee and Cincinnati.

Mr. Louis Holtman spoke in favor of Indianapolis, and introduced Mrs. John N. Barnes, who made an address to the association in favor of the same place, eliciting sincere applause.

Mr. Cunningham of Wisconsin spoke in favor of Milwaukee.

Messrs. Treat, Bunnell and Willard of New York spoke in favor of Buffalo.

Whereupon, on Mr. Londoner's motion, the vote was taken, and resulted in favor of Buffalo, whereupon it was unanimously resolved to make Buffalo the next meeting place, and the meeting was adjourned.

Just before declaring the convention formally adjourned, President Henry said: "Before your final adjournment this evening, members of the convention, permit me to express to you, one and all, my warmest thanks for the courtesy and kindness you have shown me during the deliberations of the convention. It has been a real pleasure, as well as distinguished honor, to preside over this splendid body of representative editors, and the recollections of the three days spent with you in this famous old hall will prove one of the most delightful memories of my life. We shall soon separate and go to our several homes, but we cannot forget the pleasant hours spent together at this fifteenth anniversary meeting, in the city that gave birth to our organization. With the best wishes to all, and thanks for the support given me as your presiding officer, I now declare the convention of the National Editorial Association adjourned sine die."

THE OFFICERS OF THE NATIONAL EDITORIAL ASSOCIATION.

HON. MATT. PARROTT,

THE newly elected President of the National Editorial Association, was born in Schoharie, N. Y., May 11, 1837. His education, largely in the district school, was finished, by force of circumstances, at thirteen years of age. In 1850 he commenced work as an apprentice in the office of the Schoharie Patriot, serving three years, and then worked as a "jour." at different places in New York until the summer of 1856, when he moved West, working in Chicago, Ill., and Davenport and Burlington, Ia. In December, 1857, he became one of the publishers of the Anamosa, Eureka, Iowa, retaining the position five years.

He then went to Morris, Ill., and started the Advocate, which proved an unfortunate and unprofitable venture, and was abandoned after a few months' trial. Mr. Parrott then returned to Davenport, securing a position as foreman in a job printing and blank book establishment. In February, 1869, in company with J. J. Smart, he went to Waterloo and purchased the Reporter office. A bindery and other improvements were added and a large business established, Mr. Parrott now being the head of the firm, with his two sons as partners, publishing a daily and weekly, also a popular farmers' paper, the Rural Life. Mr. Parrott was one of the organizers of the Fourth Iowa District Press Association, and its President for several years. He was elected President of the Iowa State Association in 1880, and served until 1884, remaining a member of the Executive Committee several years longer. He was elected State Binder by the Legislature in 1878; was twice re-elected, serving six years. He has served as Mayor of his city three terms. In 1885 he received a nomination by acclamation for the Iowa State Senate, and was elected, and in 1889 he was re-elected, serving in that capacity eight years. In 1895 he was elected Lieutenant Governor of Iowa, a position that he still holds with high honor.

He with his wife sailed for Europe on March 31 ult., where he will pass the spring and summer.

F. B. BAILLIO,

FIRST VICE-PRESIDENT of the National Editorial Association, is a son of the late Judge Gervais Baillio, of Rapides Parish, La., and so is descended on his father's side from one of the earliest settlers of the colony of Louisiana. His mother, Rebecca Leonard, was a descendant of one of the early settlers of the Plymouth, Mass., colony. He was born at Cocoville, Avoyelles Parish, La., February 6, 1848, but removed with his father to Rapides Parish in 1852. In 1864 he entered the Confederate army and was a member of Captain J. A. Benjamin's company of cavalry, which was detached to serve as escort for General S. B. Buckner when that officer was in command of the trans-Mississippi department. In 1867 he moved to Johnson County, Tex., where he has since resided. He is editor and publisher of the Daily and Weekly Review at Cleburne, in that county. He has been President of the Texas Press Association, a member of the State Democratic Executive Committee several times, served on the staff of Governor C. A. Culberson for four years with the rank of colonel, and is now a colonel on the staff of Governor Jos. D. Sayers. He is a patriotic American, and does not believe the attraction of gravitation applies to the flag of his country, and hence resents any proposition to have it lowered at any point over which it has ever been once unfurled.

He has served as Third and then as Second Vice-President of the National Editorial Association.

ALBERT TOZIER,

SECOND VICE-PRESIDENT is an all-around hustler, newspaper writer and publisher of Portland, Ore. He has been connected with several different newspaper enterprises in his city. He has been Secretary of the Oregon Press Association for twelve years, and makes himself generally useful to the papers of the State in looking after their interests and furnishing pointers and news from the metropolis of Oregon. He is a fraternity man, and represented The Pythian at the recent convention. He is active in the Portland Press Club, and ever ready to give his time to advance its interests or the interests of the State Press Association.

JOHN WILLIAM NEWTON BURKETT,

THE Third Vice President, banker and editor, was born in Woodruff County, Arkansas, January 26, 1854, son of Madison and Emily (Welch) Burkett, both of Tennessee. He was educated in the public schools of Arkansas and at the Southwestern Baptist University at Jackson, Tenn., where

he was graduated with first honors in 1878. He began the study of law under Judge Howell E. Jackson, but his health not permitting its continuance, he engaged in commercial pursuits, only to be obliged to relinquish them also. In 1891 he assisted in organizing the Jackson Banking Co., of which he has since served as President. In 1895 he began his connection with the Daily and Weekly Sun, soon afterwards becoming proprietor and editor, and under him this newspaper has risen to considerable importance and become an influential factor in the State. He sold out in the autumn of 1898, and took charge of the Jackson Dispatch, a weekly paper of great influence, and is now editor and publisher. In 1896 Mr. Burkett was delegate to the Democratic National Convention at Chicago, and has served as Chairman of the Democratic Congressional Executive Committee of the Eighth District for several years; as Treasurer of the city of Jackson; President for several years of the Board of Trade, under the influence of which Jackson grew from a village to a city of 18,000 inhabitants; and has been identified with all local, educational and financial enterprises. He is an active member of the Southern Methodist Church and a Mason in high standing. For one year he was First Vice-President of the Tennessee Press Association, and was chosen its President in June, 1898. In the same year he was Temporary Chairman of the State Democratic Convention at Chattanooga. In 1879 Mr. Burkett was married to Callie W., daughter of John and Sarah Robbins, of Chester County, Tennessee. They have three children.

J. M. PAGE,

CORRESPONDING SECRETARY of the National Editorial Association, was born in Stoughton, Mass., and attended school in that State for fourteen years. After passing his eighteenth year he left there and entered the army, first enlisting in Boston and then in St. Louis in Company F, Fortieth Missouri Infantry, serving until the close of the war.

In 1866 he went to Jerseyville, Ill., and there learned the carpenter and builder's trade, serving three years, and afterwards became foreman for the leading builder in that city.

In 1876, during the great strike, he was chosen chief of police of that city, which office he held for over four years, resigning in 1881, having bought the Jersey County Democrat, the official organ of the city and county, the publication of which paper he has continued up to this time.

He was elected City Clerk and Treasurer of the city of Jerseyville four years, also elected Alderman two years, and served as Mayor four years. He was appointed Master in Chancery of the Jersey County Circuit Court in 1885, which office he now holds.

For ten years he has held the office of Secretary of the Illinois Press Association, and was elected Corresponding Secretary of the National Editorial Association in 1890. Both of these offices he holds now.

He is President of the Jerseyville Telephone Company, Secretary of the Parkhurst Willow Bark Company, the Jerseyville Manufacturing Company, and Secretary and Manager of the Cold Spring Gold Mining and Tunnel Company, of Gold Hill, Colo., a company with \$2,000,000 capital, Chicago capitalists owning most of the stock.

He is a member of the A. F. and A. Masons, Knights of Pythias, Knights of Honor, Modern Woodmen, Royal Neighbors, G. A. R., and was the second Post Commander of Lowe Post, G. A. R., of Jerseyville.

On September 3, 1896, he purchased the plant of the Daily and Weekly Journal of Jerseyville, discontinuing the publication of that paper, and consolidated it with the Democrat, and now issues a daily and weekly.

R. M. WHITE,

RECORDING SECRETARY, is editor of the Mexico (Mo.) Ledger, daily and weekly. He was born in Southampton, L. I., in 1855; went to Missouri in 1866; graduated from Westminster College, Fulton, Mo., in 1876, and bought the Ledger the same year. He has made the Ledger one of the best country papers in Missouri, or in the United States, because there are no better country papers than those in Missouri. Mr. White is well-known among newspaper men of the country, and has

been President of the Missouri Press Association, and is now its Recording Secretary. He has won prizes in Missouri for the best article on a country fair, and the best article on the St. Louis fair. A friendly editor has said of Mr. White that in addition to performing all the duties of owner and manager of a weekly paper, he has the following additional duties: "He is deacon in a church; superintendent of the Sabbath school; member of the building committee of a church; eminent commander of his commandery; Corresponding Secretary of his State Press Association, and member of its Executive Committee; Recording Secretary of the National Editorial Association, and member of its Executive Committee; Vice-President of the Western Federation of Editors, and a member of the Executive Committee; member from his State of the National Committee of the anti-Mormon movement; member of the Board of Directors of an insane asylum; member of the Board of Directors of a college; member of the Board of Directors of a water works company; member of the Board of Directors of a fire insurance company; member of the Board of Directors of a bank; member of the Board of Directors of a proposed Old Ladies' Home, which is in course of erection; member of the Board of Directors of a Business Men's Association; member of the Board of Directors of a bond and trust company; member of the Board of Directors of a building and loan association; member of the Board of Directors of the Eugene Field Monument Association; and in addition to these, he is a member of several other committees of more or less importance. And he does all these things well."

JAMES G. GIBBS,

TREASURER of the National Editorial Association for the past eight years, and re-elected at the recent convention, is managing editor of the Daily Reflector, Norwalk, Ohio. He was born in that city in 1852, his grandfather having moved to Ohio from Norwalk, Conn., early in the century and becoming one of the original settlers in that part of the then far West. Mr. Gibbs was educated at Lafayette College, Easton, Pa., meanwhile having learned the printer's trade. Having gained valuable experience as a reporter on the Chicago Inter Ocean and elsewhere, he returned to Norwalk and bought an interest in the Reflector, which paper he still manages. He is also President of the Ohio Savings, Loan and Investment Company, a prosperous financial institution; Vice-President of the Laning Printing Company, one of the largest printing houses in America, and occupies many other positions of responsibility, honor and trust.

He has proved a most faithful and care-taking officer, and is highly esteemed in his own State and by the editors throughout the Nation.

DEATH OF TWO DELEGATES.

EBEN A. HALL.

News reaches us, just as we are going to press, of the death of two delegates to the recent convention of the National Editorial Association—Messrs. Eben A. Hall of the Greenfield (Mass.) Gazette, a past president of the Massachusetts Press Association, and Mr. John Nagle of Manitowoc, Wis., a past president of the Wisconsin Press Association. Both were gentlemen very highly esteemed in their respective states and among the editors generally. Mr. Hall died in New Orleans on March 16. Mr. Nagle died at his home in Manitowoc March 21. While visiting the national cemetery in Vicksburg, on the way to the New Orleans convention, Mr. Hall contracted a cold, which he was not able to throw off. He participated in the Mardi Gras festivities at New Orleans and attended the first day of the convention, but something more than a fortnight ago he was confined to his room. It was not supposed that he was dangerously sick until the day of his death, when a telegram was received at his home requesting the immediate coming of his son and partner, Albert T. Hall. The son started in the morning, before the news of the death of his father was known in Greenfield. He was notified by wire in New York.

Mr. Hall for years occupied a prominent position. His death causes keen regret. While he had not been in robust health for the past two years, and a portion of last year was very feeble, his health was supposed to be greatly improved when he started south. The news of his death comes as a shock.

He was born in Taunton sixty years ago, and was educated in the schools of that city. Aug. 22, 1862, he enlisted in company F, Thirty-ninth regiment, and served until the close of the war. He was mustered out June 2, 1865. In 1866 he settled at

Greenfield and took a position on the Gazette and Courier, the old county paper. Jan. 1, 1869, he became one of the owners of the paper. Feb. 1, 1876, when S. S. Eastman, senior partner, retired, Mr. Hall became sole owner and editor. He became very widely known, both in and out of the county.

In public life, Mr. Hall served two years in the house of representatives and two in the governor's council. Of this last service, one year was while Gov. Butler was the chief executive and the second was under Gov. Robinson. Mr. Hall was always a consistent Republican.

He was a bank director and trustee, and had been president of a local insurance company. He was prominent for years in the Massachusetts Suburban and National Press Associations, and had made many excursions with the members. Under his management the Gazette celebrated its centennial eight years ago.

Mr. Hall was a communicant at All Souls' Unitarian Church. He was liberal and generous. He is survived by his wife, two daughters—Mrs. Frederick L. Green and Miss Nina Hall—and one son—Albert T. Hall, who was associated with him as partner.

JOHN NAGLE.

Mr. Nagle seemed in the very best of health throughout the convention, and took a prominent part in the discussions and business. On his return home he complained of not feeling very well, but attributed his condition to a slight malaria contracted in the south. He grew rapidly worse, however, and was removed to the hospital, typhoid fever symptoms having developed. Since then his family and friends had been much alarmed by the seriousness of his condition, which was also made more complicated by symptoms of pneumonia. On March 20 it was thought there was an even chance for his recovery. There was a consultation of physicians at night and they gave some hope, but said his recovery was very doubtful. The next afternoon he passed away. It is said Mr. Nagle fully realized the seriousness of his illness early in the week, and that he made his will, believing he might not recover.

John Nagle was born in St. Catharines, Ont., on July 4, 1843, and came with his parents to this country when a young boy, settling in Meeme, Wis. He attended the country schools such as were in vogue at that time and himself took up the profession of teaching at an early age, teaching throughout the county, also at Two Rivers and at Sauk City, Wis. In 1876 he

Mr. JOHN NAGLE, Manitowoc, Wis., deceased.

gave this up and became connected with the Pilot, purchasing a half interest in the paper from T. G. Olmsted. Later on Mr. Olmsted retired in favor of Fred Borchardt, who was connected with the paper until 1883, when Mr. Nagle became sole proprietor and remained as such until his death.

Mr. Nagle, although kept busy with his paper, devoted much time to educational matters in the county and throughout the state, and in 1881 was elected county superintendent of schools, succeeding Mr. Viebahn. He held this position for ten years, until the growth of business of his paper and other interests demanded his whole attention, and he declined again to be a candidate. During his ten years as superintendent he brought about many changes in the school system in the county, and today the schools of Manitowoc county are recognized as among the best in the state, and his opinions have been sought by many of those who have succeeded him. Educators throughout the state frequently sought his advice in matters relating to

educational topics and he was regarded as one of the brightest and foremost men in Wisconsin. A correspondent of the Milwaukee Sentinel says: "The news of his death causes widespread sorrow here, where he was known to everyone and esteemed by all. He had grown up in Manitowoc county, spending his boyhood days on his father's farm in Meeme and attending the district school. Later he taught in the district schools of the county, for several years he was county superintendent of schools, and he has left the impress of his zeal and well-directed efforts upon the schools of Manitowoc. As editor of *The Pilot*, as a man interested in every movement designed to improve school methods in the state as a Democrat, who always placed principle above party, he was widely known and esteemed in Wisconsin. He had been president of the State Teachers' association and of the State Press association, and in both he was most highly regarded. As a Democrat he was against his party in the first Peck campaign and a champion of the Bennett law. In 1896 he was a gold Democrat and opposed to Bryanism and free silver. *The Pilot*, under his management, was one of the most influential of the weekly papers in the state, and however much one might differ from Mr. Nagle in opinion, his utterances always commanded respect and his sincerity and high motives were never questioned."

H. P. Hamilton, of the Hamilton Manufacturing Company, at Two Rivers, Wis., who was a pupil of Mr. Nagle when he taught school in that place, writes, under date of March 22:

"John Nagle, editor of the Manitowoc *Pilot*, died last evening, at Manitowoc, of typhoid pneumonia, contracted on a recent trip to New Orleans to attend the National Editorial Association. He was sick only five days. He was an old school teacher of mine. He was a man of sterling integrity and widely known in educational and journalistic fields, and was always a leader of men. No other paper in Wisconsin, outside of Milwaukee, was so widely quoted, and he was universally respected by all his wide circle of acquaintances."

NOTES BY THE EDITOR.

The name of Past President A. O. Bunnell of Dansville, N. Y., is being mentioned by many of his New York friends for the position of chief of the bureau of graphic arts at the great Pan-American Exposition. A better or more judicious choice could not be made. Mr. Bunnell's wide acquaintance and universal popularity among editors, newspaper publishers and printers throughout the nation would insure an attention and interest from the start that could not be obtained in any other way. Besides this he is in every way fitted for the position through his thorough knowledge and long experience as a printer, through his wide information as to the art and allied trades, as well as through his pleasing address, his geniality, his patient attention to details, and, above all, through his quick discernment, his unimpeachable honesty and fairness as a gentleman. The appointment of Mr. Bunnell would be received as a compliment to all the members of the National Editorial Association.

Many years ago, in the course of business, an article appeared in the *National Printer-Journalist* supposed at the time to be backed by facts and court decisions that did not give to the Duplex Printing Press of Battle Creek, Mich., the credit that it deserved, and in face of more recent developments has been proved misleading. What was printed was in all good faith, but, unfortunately, an editor is not infallible and has, to some extent, especially in matters pertaining to machinery and patents thereon, to depend on those claiming to be experts. It is natural, too, for any and every man, be he publisher, editor, lawyer, manufacturer, preacher or other useful member of society, to depend most on his friends, those who are his patrons, clients or supporters. A publisher, too, by experience learns that, as a general rule, those who are willing to place their claims and their goods boldly before the public and solicit investigation and comparison are most apt to be reliable. This is a general rule to which there are always, of necessity, exceptions, but even prudent men are not expected to hit on exceptions. One exception may come in the development of a new machine, concerning which, always, more or less incredulity must exist. Whatever led to the printing of what we now believe was a mistake, we are only too happy to endeavor to correct any false impression that may have been made. The evidence is now overwhelming that the Duplex Flat-Bed Perfecting Press has met a great need among newspaper publish-

ers, and that it has proved to be all that has been claimed for it, and more. Its popularity has steadily and rapidly grown with its use. Testimonials to this effect come from the very best offices and from our warmest friends. The decisions of courts of last resort have also settled the fact that this press is not an infringement on the patents of other presses, so the purchasers of the Duplex Printing Press can no longer have any cause for timidity on this score. The United States Court of Appeals, sitting in Cincinnati on March 15, 1900, handed down an opinion affirming the decision of Judge Swan of the Circuit Court that the Duplex Printing Press did not infringe either on the Kidder or the Stonemetz, as had been contended. We have every reason to believe that not only the Duplex presses, but also the gentlemen manufacturing and handling the same, are entirely reliable.

On our table is a neat little booklet, substantially bound in flexible cloth covers, entitled "Employing Printers' Price List." It ought to be of inestimable value to printers, if only used. It is founded on the almost universal plan among manufacturing establishments of a list price subject to certain discounts. No one need hesitate to show the figures to customers. It is not a guessing work, but the prices are based on the proposition that the printing business may be conducted on the same lines as any other manufacturing establishment. The book is eighty-four pages and contains a vast number of tables covering every branch of the printing business, and is by David Ramaley, Ramaley Publishing Company, St. Paul, Minn.

We are proud of our cover this month. It is wholly the work of this office, from our own type and ornaments. It is along the line of the recent rage for panel designs. While not as elaborate as an engraved cover, we believe it is fully as artistic, and will prove as satisfactory to printers. The design and execution are by Mr. O. G. Wood, foreman of the composing-room of *The National Printer-Journalist*, and at the head of our department of "Newspaper Comparison and Criticism."

Bishop Charles B. Gallaway, of Mississippi, was called away from home to South Carolina immediately after the visit of the editors to Jackson, so that he was unable to send his address on the "Ethics of Journalism" in time for our April issue. It reached this office March 27th and will appear in full in our May issue. It will be found of great interest and value to all newspaper makers everywhere.

Frank L. Murray Johnson is the name of the latest sample presented by the genial Mr. Johnson, of the J. W. Butler Paper Company.

FOR BETTER PRINTED PAPERS.

Newspaper readers are becoming more critical and are no longer satisfied with imperfect or poorly printed papers; hence country publishers find it necessary to discard their old presses and purchase machines that will do good printing. Heretofore the cost of a cylinder press and the motive power to operate it has been so heavy that most country printers could not afford it. The Challenge Country Press, for hand power, fills the gap. It runs so easy that neither engine or motor is required. This press was designed for the country printer. It prints newspapers and job work in a superior manner. It is a modern machine with many improvements not found in other country presses, including first-class fountain, reel rod and points in cylinder, impression adjustment and automatic gripper mechanism, which cannot be broken even if grippers are left open. For speed, simplicity, convenience and durability it is unequalled. Owing to the great increase in cost of materials and labor the prices will be advanced shortly. If you need a press it will pay you to write your dealer or the manufacturers, The Challenge Machinery Co., Chicago, for circular and all desired information.

BUSINESS NOTES.

Barretts' Bindery Company will remove on May 1 from the present place, at 142 Monroe street, to larger quarters, at 182 Monroe street.

* * *

Barnes-Crosby Company have made another departure by which their facilities and business are again greatly enlarged, by a combination with the Aetna Engraving Company, lately at 153 and 155 La Salle street. The Aetna Company had a large machine room and photo-engraving plant. The combined establishment will be conducted by the Barnes-Crosby Company, at the present place of business, old Times building, Chicago.

* * *

The Joseph Birren Company has bought the Imperial Engraving Company's plant and business, lately at 259 Wabash avenue. The Joseph Birren Company has for the past two years made a specialty of catalogue illustration. Mr. Birren was formerly a member of the Imperial Engraving Company, but withdrew to go into his present business. On May 1 the company will move to 63-65 Washington street, to secure larger apartments for the accommodation of the enlarged establishment and the increasing trade.

* * *

Barnhart Bros. & Spindler have arranged with the Mexican Type Foundry, of the City of Mexico, Mexico, to represent them in the sister republic. They are sending a large stock of material of their make to the new foundry. Heretofore Mexico has had no printers' supply house worthy the name, and hereafter it will have one which will ally the sister republic closely to the best enterprise in the typographical line in this country.

A representative of the house named has just returned from a trip to Mexico, and reports the governing officials, from the president down, and the printers as well, welcome the advent of the new enterprise.

* * *

The New York office of the Latham Machinery Company, which was formerly at 12 Reade street, has recently been moved into larger quarters at 8 Reade street, affording them an abundance of room for displaying their Monitor machinery.

Mr. E. C. Latham will assume the management of this office, assisted by Mr. H. G. La Sor, both of whom will be pleased to be favored with a call from members of the trade and show them through the salesrooms.

They carry in stock a full line of machinery specialties, consisting of the well-known Monitor wire stitchers, Monitor paging and numbering machines, Monitor multiple-punching machines, Monitor perforators, standing presses, job backers, table shears, embossers, etc., also a large stock of the best steel wire.

The main office and factory are at 195 to 201 South Canal street, Chicago, Ill.

* * *

One of the largest items of expense in getting the very best results from fine half-tones has been the time and cost of making overlays in order to bring out all the delicate lights and shades. In the first place, a high-priced, expert artist is required, and then from three to five hours must be used, while the press, on which the form has been placed, waits. To devise some method to get results without the expensive delay and skilled work has puzzled inventors for several years. The problem seems to have been solved at last by the Tympalyn Company, 28 High street, Boston. A representative of this office has within a few days past visited the press-rooms of R. R. Donnelly & Sons, Chicago, and witnessed the workings of one of the Tympalyn on a press doing half-tone work. The results shown were entirely satisfactory. The saving in time was stated by the pressman to be three hours on each form, and that on the one job of some twenty forms the actual money saved would pay for the cost of the Tympalyn and its installation. As we write we have before us a copy of the March number of Harper's Monthly Magazine, the pages of which, from 493 to 508, containing eleven fine half-tones, were printed on a Tympalyn. The work is of the highest standard.

A PLAIN ADVERTISEMENT IS THE BEST.

An advertisement is most convincing when it seems to be simply a plain, straightforward, earnest statement of facts. The highest art is to give business announcements this appearance. If you can see the mechanism of the ad—the work of the adsmith—sticking out of every other sentence, it detracts from the realism of the ad. Stage thunder isn't convincing when you can see a man shaking a piece of zinc to make it.—Shoe and Leather Facts.

ABOUT PRICES FOR JOB PRINTING, Ramaley's New Price List. Fifth edition. Up to date. 75 cents, or two for One Dollar. D. Ramaley, Box B, St. Paul, Minn.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 25th of the month preceding date of publication. Cash must accompany order.

FIRST CLASS ad compositor and job printer wishes situation; strictly sober; over a year with Lord & Thomas. Address W. B., care of National Printer-Journalist.

WANTED—Non-union pressman thoroughly competent to take charge of pressroom containing four modern cylinder presses; give references and state salary desired. Address "L," care National Printer-Journalist.

WANTED—A young man with a small amount of money to invest wants a position as manager or editor, or both, of a weekly or small daily paper in a town of not less than 5,000 population, in the South or West. Is a college graduate and has worked at the business from pressroom to editorial chair for twelve years. Address "R," care the National Printer-Journalist.

THE VAN BIBBER ROLLER CO., Sixth and Vine Streets, Cincinnati, will give you the best rollers that can be made for any season or press. Our facilities are the best, and we use the latest compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

YOU can sharpen or whet your paper cutter knife instantly without taking it out of the machine with Hoerner's "Little Wonder" Sharpener. It preserves a perfect edge always and can not injure the knife like a stone that becomes uneven and dangerous to use. Lasts a lifetime and does the work quickly and saves the time and danger of removing and resetting of the knife. A boon to every printery and bindery, large or small. Price, \$3; cash with order, only \$2.70; by mail, 30 cents extra. Descriptive circular and testimonials on application. For sale by Typefounders and Dealers, or by the inventor, J. S. Hoerner, Highland, Ill.

"Mr. Bates' masterpiece. It is interestingly and readably written—more readable than one would believe possible on so hackneyed a subject as advertising—and it is illustrated by pictures intended to lend a humorous turn to many of the sentences in the text. For those who want a general idea of advertising principles, the book will be found valuable, and even the readers to whom its subject is more than familiar will find it an interesting companion for a leisure hour. It is full of apothegms, every one of which rings with a true note."—Geo. P. Rowell.

“No More Cheap News Ink for Me.”

THE newspapers of this country for the past two years have been solicited, drummed, and almost persecuted by Printing Ink manufacturers who, having no reputation and no sales for Fine Grades of Inks, have been forced by their necessities to obtain a market for that grade of Ink which is easiest made and turned out in largest quantities. The result has been that so-called “News” Inks have been offered at a price so close to the cost that the manufacturer has been unable to turn out a properly made article, and in consequence there has arisen the greatest dissatisfaction among newspaper publishers at the muddy appearance of their papers and the filling up of their fine type. We have determined to give newspapers an absolutely first-class, dense black News Ink, and charge a fair price for it. The quotation at the top of this page is taken from many letters we have received from newspaper publishers who have written us asking for a News Ink that “will work free and clean, and print black.” One of the best printed newspapers in this country—the New York Commercial Advertiser—is printed with Ink of our manufacture. Any newspaper publisher who thinks this paper looks better than his own, we will be very glad to furnish with quotations for the same grade. Publishers who are satisfied to use an Ink solely because it is “cheap” we think will find from experience that there is no real economy in using anything but the best that can be made. Why spoil good paper—the item of cost of which is very large—with poor Ink, when the difference in cost between a good and poor Ink is so trifling?

Fred'k H. Levey, Pres't.
Chas. E. Newton, Vice-Pres't.
Wm. S. Bate, Sec'y.

Fred'k H. Levey Co..

59 Beekman Street, New York.

are the OWNERS of newspapers and printing offices.

Official
Paper of the
National
Editorial
Association.

The growth of the National Printer-Journalist has been going on steadily for twelve years. It is now recognized as the leader in its field. As such it is a valuable medium which good business men—who wish to directly reach Employing Printers and Publishers—cannot afford to overlook. Many new features are constantly being introduced.

Reports of the
Meetings of
the different
State Editorial
Associations
are a special
feature.

An advertisement in the National Printer-Journalist
reaches the BUYERS of the article advertised.

PRINTING PRESSES

FOR ALL CLASSES OF LETTERPRESS WORK.

The Miehle

HIGH-SPEED, FOUR-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in eleven sizes, from 26 x 36 to 48 x 65. This press is built to do the finest class of printing, and is specially adapted for halftone work both in black and in colors. It is the standard Flat-Bed Press of the world today, as the producer of a greater quantity and finer class of work than any other press on the market.

The Miehle

HIGH-SPEED, TWO-ROLLER, FRONT DELIVERY, TABLE DISTRIBUTION BOOK AND JOB PRESS. Made in six sizes, from 30 x 42 to 45 x 62. This press is designed for a little cheaper class of book and job work than our Four-Roller, differing only in the number of form rollers, having two instead of four; otherwise it is similar in all its other features, and is faster.

The Miehle

HIGH-SPEED, TWO-ROLLER, REAR DELIVERY, "RACK AND PINION" DISTRIBUTION JOB AND NEWS PRESS. Made in five sizes, from 30 x 42 to 43 x 56. Its method of distribution is "rack and pinion cylindrical" instead of "table." The class of work to which it is more specially adapted is newspaper and poster work. Felt packing used. It is very fast.

The Miehle

HIGH-SPEED PONY PRESS, TWO-ROLLER, REAR OR FRONT DELIVERY, "RACK AND PINION" OR "TABLE" DISTRIBUTION. Made in two sizes, 25 x 30 and 26 x 34. This press has a well-earned reputation for remarkable speed and the superior quality of work it does.

OUR NEW SHEET DELIVERY

Which delivers the sheet PRINTED SIDE UP OR DOWN, as may be desired, we put on all our presses with the exception of the "Job and News" and the smaller sized "Pony." This adds but little to the cost of the press to the purchaser and is a great convenience.

Cheap News Ink *VERSUS* News Ink that is Cheap

W

HATEVER you do, *don't deceive yourself* on NEWS INK.

A paper printed with *cheap News Ink* "looks the part."

The formula for so-called CHEAP News Ink is usually

"A LITTLE OF THIS,
A LITTLE OF THAT,
AND SOME WATER."

For forty years the QUEEN CITY PRINTING INK COMPANY, CINCINNATI, OHIO, has found that to make friends of their customers it is necessary to make a News Ink to suit the conditions, namely, temperature of the pressroom, the speed of the press, the texture of the paper, etc.

Their formula calls for enough high grade Lamp Black and Carbon Black to give the color, sufficient Varnish and Drier to insure proper drying qualities, all of which must be ground thoroughly with a view of having an Ink that will look well and print the greatest possible number of papers.

The above considered, QUEEN CITY NEWS INK IS CHEAP, and that is why the QUEEN CITY PRINTING INK COMPANY SELLS MORE NEWS INK THAN ANY WESTERN MANUFACTURER.

THE LATEST AND BEST

We show here our latest and most improved Imposing Stone Frame. It will be noticed that there is no waste room under this Stone, but all the space is utilized in the most advantageous manner. It is made in one size only. The size of Stone is 40 x 80 inches, and is the best stock obtainable, with smooth face and free from imperfections. The Stone is 2 inches thick. The height from floor to the top of Stone, 41½ inches.

Drawers—There are six drawers at the top. On the left-hand side, extending half-way through, are two pulling out from each side, and two drawers on the right-hand side at the top, reaching clear through, and can be pulled out from either side. These six drawers are ¾ inch deep and 11½ inches wide, and are intended to be used for storing metal furniture. Under these drawers are three large drawers, one reaching clear through the frame to be pulled out from either side, and two reaching half-way through, one being drawn from each side. These drawers are 3 inches deep by 22½ inches wide inside.

Chase Racks—At the bottom, on the side shown in illustration, are thirty-six racks for chases for 8x12 job press. On the opposite side are chase racks to accommodate eighteen chases for 10x15 job press, and eighteen chases for 12x18 job press. On the sides of the second tier of drawers, as shown in the illustration, there are eight compartments, four on each side of the frame, which can be utilized for string or small tools.

Labor-Saving Furniture Rack—The case contains a labor-saving furniture rack filled with furniture. This furniture is cut in the following assorted lengths and widths:

18 pieces each 2, 3 and 4 line	} Cut 25, 35, 70, 80, 90, 100, 120, 140 and 160 ems long.
15 " " 5 " 6 "	
9 " " 8 " 10 "	
24 " " 2, 3 " 4 "	} C t 30, 40, 50 and 60 ems long.
20 " " 5 " 6 "	
12 " " 8 " 10 "	

A total of 500 yards of furniture cut into 1,562 pieces. This gives a better and larger assortment of wood furniture than is found in the Mammoth Case. The furniture is thoroughly oil soaked, and the length and width is stamped on the end of each piece.

Rack for Steel Furniture or Cut Reglet—In the center, arranged in double tier between the wood furniture racks, are thirty-six compartments for steel furniture or cut reglets. These compartments are made to accommodate the following lengths: 12, 15, 18, 21, 24, 27, 30, 35, 36, 39, 42, 45, 48, 51, 54, 57 and 60 ems; two compartments for each length, except the 42-em length, which has four compartments. Each compartment is 6 inches wide and will hold thirty-five pieces of pica or seventy pieces of nonpareil reglet, or eleven pieces of steel furniture.

Cupboard or Bins—On the opposite side from the one shown in the illustration, over the chase rack, are two large compartments for general storage; one compartment is 21 inches deep, 37 inches long and 10½ inches high; the other is 29 inches deep, 37 inches long and 13 inches high. This arrangement as a whole utilizes every inch of space under the stone, and constitutes the most complete and compact piece of modern printing office furniture ever placed on the market. The frame is made of hardwood, very substantial. Has paneled ends, and is varnished in the natural color of the wood, the same as the best of our cabinets.

Price, complete, \$140—without the steel furniture, but including the labor-saving wood furniture.

Price of a font of reglet to fill the center racks, \$14.

Price of a font of steel furniture to fill the center racks, \$100. This font consists of 22 pieces of each length as mentioned above, except the 42-em length, of which there are 44 pieces—a total of 346 pieces.

These prices are subject to the usual discount.

This Stone Frame is for sale by every Type Founder and Dealer in Printers' Supplies in the United States and Canada.

A Single Linotype on Lease Contract

IT HAS been heretofore the policy of this Company not to rent one machine in a new installation, but to place single machines under purchase contract. As many hundreds of one-machine plants have been meeting with unqualified success, it has been demonstrated that the use of a single machine is both practicable and profitable, and no longer an experiment.

In view of numerous applications for single machines on lease contract, the Linotype Company has decided to extend to publishers and printers not now employing Linotype composition, and whose requirements will be met with one machine, the form of contract heretofore made to cover installations of two or more machines. On these terms a single machine may now be secured, in which case it becomes optional —

- To make purchase contract at end of first year, applying rental paid as part of price; or,
- To continue rental for an additional term of five years; or,
- To surrender machine at end of first year.

Under this last option the lessee has an opportunity to put the Linotype to the test for one year simply at the rental expense, and if at the expiration of this period he finds it for any reason inadvisable to continue its use, he can return the machine, and thus end the transaction, with a certain saving of at least several hundred dollars in composition bills.

A FEW AMONG MANY LINOTYPE BENEFITS

Saving in composition cost sufficient to pay for machine within a surprisingly brief period — Economy in body type investment and depreciation — More home-set matter for each issue — Reduction in plate bills — New dress for every printing — Inexhaustible “sorts” — Quick work in corrections — Ability to keep matter standing in quantity — Precious time saved in making up and closing forms, etc., etc.

Ask for full particulars, descriptive circulars, specimen sheets, etc.

THIS IS A CUT OF THE

PATENTED GOSS FOUR-DECK

STRAIGHT-LINE

NEWSPAPER PRESS.

WILL be exhibited at the coming Paris Exposition in the United States Building of Liberal Arts and Chemical Industries at Paris, France, from April 14 to close of Exposition.

Patented and Manufactured by
**THE GOSS PRINT-
 ING PRESS CO.,**
 SIXTEENTH STREET &
 ASHLAND AVENUE, CHI-
 CAGO, ILLINOIS, U. S. A.

IT WILL be in daily operation between the hours of 10 a.m. and 5 p.m., turning out papers at the rate of 50,000 per hour. It is the most practical, modern, and *up-to-date* machine ever invented. It will produce any number of pages—from 4 to 32. Do not fail to see this press in practical operation while you are taking in the Exposition. It will be run by direct connected motor.

CHALLENGE-GORDON

With modern improvements.
Here is one of them:

Counterbalanced Platen

Prevents wear on cam and cam roller. In presses with this improvement in use five years the cams are as perfect as the day they left the factory. The platen of 10x15 and smaller sizes have extra heavy truss ribs in center. The 12x18, 13x19 and 14x20 have **FIVE** impression screws; the 14½x22 has **SIX**—insures a rigid and true impression.

And there are many others.
Our new circular tells all
about them. Send for one.

Manufactured by **THE CHALLENGE—**

DEXTER FOLDER CO.,

Main Office and Factory, " " PEARL RIVER, N.Y.

A FEW TRUIISMS

ONE HUNDRED PER CENT OF ALL PERFECT

Book, Job, and Newspaper Printing is done from foundry type.

IMPERFECT PRINTING

done by other means is *solely* with the hope of cheaper production, and not with any hope or expectation of doing better work than type printing.

PRINTING FROM TYPE SETS THE STANDARD

and the highest aim of all other means of doing printing is to approach type work. "Equal to type" would be their highest praise if only able to reach it.

THIS IS BECAUSE TYPE IS A PER- FECT TOOL

when it reaches the printer, all letters imperfect in any respect being discarded by the rigid inspection of the founder.

ALL SUBSTITUTES FOR FOUNDRY TYPE ARE IMPERFECT—

necessarily more or less so—just as the foundry type itself would be if sent to the printer as it came from the casting machine. Printers using substitutes for type have no chance to pick out and reject imperfect letters, but must do the best they can with the product as they get it.

THESE IMPERFECT SUBSTITUTES MEAN EXTRA EXPENSE

for keeping machines and accessories in best possible condition, in order to get even passable results.

For continual recasting of lines to replace those impossibly bad.

For extra work in reading and correcting proofs.

For extra time making ready on the press, patching up imperfections, evening up impression, etc., beside continual close watching to replace lines which weaken during the run. The final result being

LITTLE, IF ANY, SAVING OVER HAND COMPOSITION

if a result is desired which will pass muster with the ordinarily particular customer.

CHEAP COMPOSITION OF FOUNDRY TYPE IS THE IDEAL COMPOSITION.

Every printer will admit this, no matter what system of composition he may at present be using. Even if the mere composition should not be quite so cheap, the saving in other respects would more than make up the difference, to say nothing of the superior typographical results attained.

THIS IDEAL IS REALIZED BY THE SIMPLEX

One-Man Type Setter, to judge by results obtained by users of it in 24 States, and a full and careful investigation of this simple, effective, and economical machine is urged.

The Unitype Company,

150 Nassau Street, NEW YORK CITY.

NO. 5

THE ETHICS OF JOURNALISM.

An address delivered before the delegates to the Fifteenth Annual Convention of the National Editorial Association by Bishop CHARLES B. GALLOWAY, of Mississippi, in the Hall of Representatives, at Jackson.

ICOUNT it a distinguished privilege to have been designated by my fellow-Mississippians to join with others, in extending you a cordial welcome to the wide-open hospitalities of this genial commonwealth, and its delightful little capital city. You will not find the traditional "latch-string on the outside," for the doors of our hearts and homes swung open automatically at your coming, and have fallen from their hinges. If, in this fair land of the magnolia, you do not discover its glorious bloom and detect its wonderful fragrance, it is because, like the average enterprising American citizen, you are "in advance of the procession" of the seasons. A few weeks later, you would see skies as soft as those that bend over Italy, fields "fair to the eye of beauty," and flowers as beautiful and fragrant as those that bloom in the garden of the gods.

We welcome you as fellow-Americans, lovers of the same great principles, sharers of the same mighty responsibilities, heirs of the same splendid history, and soldiers of the same glorious flag.

We welcome you to the State of Jefferson Davis, and to this ancient hall, where his eloquent voice was often heard, and from which he was sent out as the noble representative of an admiring people. In early life he was the pride of her chivalry, at a later period her greatest parliamentary leader, in old age her patriotic benediction, and I would that his honored remains were her most precious treasure. But the days of sectional conflict and separation are gone forever, and the State of Jefferson Davis is as loyal to our common country as the land of Charles Sumner. We are glad there is a star on our national flag that answers to the proud name of Mississippi.

You have done us honor, also, in elevating to the Presidency of your Association one of our own townsmen, long and prominently identified with the journalism of this great commonwealth. We appreciate the handsome compliment to Mississippi and it gives us, his friends and neighbors, special pleasure in extending you a welcome to his Southern home.

We bid you thrice welcome as representatives of American journalism, to which we are accustomed to look for leadership on all the great questions of duty in our national and social life, and for guardianship when our rights and liberties are imperiled. To me, an old member of your

noble profession, it is a special pleasure to have some honored part in this, to us, great and gracious occasion.

THE MARVEL OF NEWSPAPER HISTORY.

The history of journalism is a perpetual marvel. But a few years ago, comparatively, the art of printing was invented, and the first crude newspaper was issued from an equally rude press. Its aims were unpretentious, and of its mighty destiny there was not the faintest conception. Now they have multiplied to many thousands and become the most potent factor in every civilized land. Along with the family, the church and the State, it ranks as a dominant force in all civilizations. Its lines have gone out to the ends of the earth. We may lament its abnormal development in certain directions, grow restive over its pretentious boldness, rebuke its audacity and deny its influence, but the fact remains that the Press is

"The mightiest of the mighty means
On which the arm of progress leans."

A MAGIC FORCE

It is the magic hand that strikes the diapason of human thought, and evokes music from every chord. It is the fabled touch of Midas that turns everything to gold for the world's enrichment but, with the exception of a few metropolitans, keeps itself poor. It is the swarthy Hercules, to whose mighty muscles society looks for sure defense. It has the eager eagle eyes of Argus from which nothing escapes, and the hundred deft hands of Briarius, whose grasp is well-nigh exhaustless. All lands and peoples, all agencies and inventions, all commerce and discoveries, are brought under tribute to its daring enterprise and sublime conquests. It gathers news on the lightning's fiery wing and sends it out over the land with all the speed of steam. Everywhere its influence is felt—at home and abroad, on land and even on the sea.

"As noiseless as the daylight comes when night is done
And the crimson-streak on ocean's cheek grows into the great sun,"

so quietly and gently in all the homes of our people its influence is at work, furnishing instruction, moulding opinion, formulating principles, arousing dormant energies and guiding a nation's destiny. From the home newspaper, and amid the quiet evening hours, is gathered the intellectual and political pabulum on which nine-tenths of our people feed. Of it are born the convictions and inspiration that kindle enthusiasm on all great public questions. The

newspaper of to-day is the phenomenal orator of the early republic. What the eloquent tongue of Tully was to Rome, and the impassioned periods of Demosthenes to Athenian patriotism, the modern press is to American citizenship.

MANLY INDEPENDENCE.

Another fact is observable and commendable—the growth of a manly independence in journalism. It carries no brand and wears no manacles. I repudiate the declaration of a certain writer in the *North American Review*, that “a power greater than journalism has thrust a golden ring through its nose and leads it, exclusive chattel and creature.” Whatever bondage, galling and debasing, an exceptional paper here and there may suffer, I do not hesitate to affirm that American journalism enjoys an independence liable to imperiousness, and a liberty that may lead to license. With no subsidy but popular patronage and no support but public approval, it dares an open, outspoken, fearless utterance of opinion. The average newspaper of to-day calls no man master. Even the recognized party organs—the special advocates and exponents of great party principles—fly their own banners and are by no means subservient to any arrogant dictation of caucus or convention. They adopt their own line of argument, and wield their own weapons of conflict, whether it be the light sword of Saladin or the ponderous battle-axe of Richard. The measures and men of their own party are discussed with sturdy independence. It is above the thumb of any politician, however great his name or national his fame. It obeys the nod of no political Jupiter, but rather itself sits in undisputed majesty on the heights of Olympus swaying a scepter of magic and universal empire.

PRODIGIOUS RESPONSIBILITY.

But with this mighty power is associated prodigious responsibility. Influence is the measure of obligation. If the press be the dominant factor in our American civilization to-day, upon it most largely and sacredly rests the destiny for weal or woe of our political and social institutions. Such an engine under the control of the vicious, who have no compunctions of conscience, no sense of solemn responsibility, and no lofty ideal of patriotic achievement, may work infinite and irreparable injury. It is a blind Samson laying his strong hands upon the pillars of our social temple who will accomplish its destruction and ingloriously perish in the ruins. But on the other hand, a true journalist should and does feel the weight of large public responsibility. That he is society's watchman on the walls, and upon his ceaseless vigils and unswerving fidelity depend, in great measure, the peace, purity and safety of the commonwealth.

First then let us consider journalism in its ethical relation to public affairs. The character of a nation's civilization is typed by the spirit and conduct of its press. It is an educator of the people in all civic virtue. There is an old saying among our kin beyond the sea that “What Lancashire thinks to-day, England will think to-morrow.” With more force and aptness we may say of our country, that what the American press thinks to-day, will be the national conviction to-morrow, and constitutional law next week. In an able letter declining to become a candidate for Parliament from the ancient borough of Leicester, Herbert Spencer, the distinguished scientist, utters these significant words: “It is becoming a common remark that we are approaching a state in which laws are practically made out of doors, and simply registered by Parliament; and if so, then the actual work of legislation is more the work of those who modify the ideas of the electors, than of those who give effect to their ideas.” That is eminently true of American civil and political life. And the out-of-door influence that most mightily wields public opinion and formulates principles that find statutory expression in halls of legislation, is the American press. And into the administration of these laws its influence goes vertebrating or intimidating the judge on the bench, and inspiring or cowering the jury in the box.

THE NEWSPAPER AS RELATED TO LANGUAGE AND LITERATURE.

Again let us consider journalism in its relation to language and literature. We owe something to our mother tongue. An influential journal is more or less the guardian of our Anglo-Saxon language, and, in a certain sense, is an

instructor in its ready and skillful use. Upon it, in large measure, rests the responsibility of right education in a pure style of expression. It is related of the elder Bennett, the founder of the *New York Herald*, that he thus addressed an aspiring young journalist, just entering the profession: “Young man, you seem to think that the province of the newspaper is to instruct and improve. You are mistaken; it is to astonish and amuse.” And in that dictum he has been followed by a numerous generation. They eagerly seized upon it and emblazoned it as the lofty motto of their journalistic career. But in the face of a history so remarkable and an enterprise so successful, I must admit that his declaration cheapens and degrades the high mission of the press. Nor does his own mighty and mammoth *Herald* sustain the assertion. What other columns so teem with news from all lands and climes? What other metropolitan commands the varied gifts and learning of so many cultivated writers? What other leaders so signally display the classic grace of Addison, with the epigrammatic freshness of Prentice and the sturdy strength of Carlyle, that master of letters, who has been facetiously denominated, “a trip-hammer with an Aeolian attachment?”

And yet there are editors who consider the ready use of a mongrel vocabulary the sure evidence of journalistic genius. I know some papers that seem to be called and commissioned to teach slang and swagger. Now, mark you, I do not advise a staid stiffness and somnolent dullness of style that merit and prophesy a speedy funeral and a place in the cemetery of newspaperdom already crowded with the tombs of ill-fated enterprises. There must be vivacity, vividness and vigor—the sparkle and freshness of striking expression—to command readers and achieve success. Prosaic precision is an enemy to stirring effect and “penetrative energy.” But on the contrary, coarseness and slang, slovenly by-words and impure expletives, are to be avoided as degrading to the dignity of the profession and corrupting to our pure idiomatic English.

JOURNALISM IN ITS RELATION TO PUBLIC MORALS.

In the grasp and sweep of peerless enterprise so characteristic of the modern press, there is too little discrimination as to the quality of news served up for eager readers. Indeed scandal and crime seems to have the preference with an industrious, wide-awake newsgatherer. I would not restrain the imperial spirit of enterprise or lay a repressing hand upon its glorious courage, but an improvement in the manner of displaying the immoral is the demand of sensitive virtue and public morality. If criminal news is given, it should not be protrayed in humorous phrase or emblazoned with flaming headlines. This only feeds a vicious sentiment and becomes a very curse to purity and young ambition.

For the honor of our noble profession we ought to frown down that muck-rake journalism that feeds its readers on garbage and the malodorous decoctions of misery, vulgarity, vice and crime. I do not ask that every journalist should become a homilist or a moral censor, but I do plead for a lofty sense of public responsibility, founded upon and inspired by the purest moral philosophy. On every page of his paper should be reflected the expression of a true manhood, and every damp sheet, fresh from the press, should enfold the aroma of a pure and generous patriotism.

JOURNALISM IN ITS RELATION TO PRIVATE CHARACTER.

Public men and their official doings are legitimate and necessary measures of discussion and criticism. It is well for republican governments that their officials live and labor under the sleepless eye of an enterprising press. They are public property, in their official relations, and have no reason to resent a fair and honorable arraignment of their administration. But their private character should be preserved inviolate from public gaze. The domestic circle should be held too sacred for its secrets to be revealed to the world. And that species of journalism that invades its sacred portals deserves the execration of an outraged public sentiment. I rejoice in the untrammelled freedom of the press, but lament any single instance of degeneracy into license.

JOURNALISM IN ITS RELATION TO JOURNALISTS.

The ethics of journalistic fraternity needs emphasis and illustration. No other profession is so dependent upon mutual association and inter-communication, and yet none

OLD CRONIES.

"Comrades known to marches many
Comrades tried in dangers many
Comrades bound by memories many
Brothers let us ever be!"

BECK ENGRAVING COMPANY,
147, 149, 151 North Tenth Street, Philadelphia, Pa.

has such sharp and hostile rivalries. An editor is absolutely dependent upon his exchanges, not only for items of news, but suggestions of thought for elaboration in his own columns. By this attrition of mind—this exchange of opinion—his own vision is enlarged and he is aided to wiser, clearer conclusions. He feels the pulse of every community—sees the reflection of views modified by local surroundings—and thus by a broader generalization—with the lights turned on from every quarter—studies great questions in their widest application. This constant communication ought to cement the bonds of brotherhood, make us jealous of a fellow-laborer's good reputation and feel pride in his growing success. But as a matter of fact in no other profession is there so much personal antagonism and depreciation. So prominently do some project their own personality into their columns, that they construe dissent from their opinions into an insult to personal character. Sensitive, imperious and intolerant they are ever looking for and inviting affairs of honor. They carry a chip on their shoulders, daring anybody and everybody to knock it off. They are never without a grievance—some sore to heal—some score to settle—some apology to demand—some enemy to punish—or some old grudge to coddle and fondle. Personal assault they account the loftiest courage. That is their idea of aggressiveness and a live paper. Now permit me to say to you younger brethren of the press—you to whom the future is bright with promise and whose careers are yet to be run—let me say to you, that a porcupine never makes an ideal journalist. An editor should be above piques and personalities. His grievances, real or imaginary, ought not to afflict an overburdened community. His jealousies and spites need not become public property. Such an one becomes a cross and grievance to the people, and his retirement is hailed as a benediction and public benefaction.

I would urge a generous emulation, but a scrupulous avoidance of unbrotherly recrimination. Let there be manly, outspoken, magnanimous discussion—the outgiving flashes of impinging steel—but in lofty disdain of a groveling spirit that only aspires after personal victory. In his immortal epic, the *Paradise Lost*, Milton describes the exiled pair from Eden as spending many hours in bitter mutual reproaches and accusations for their dreadful fall. But at length Adam arose and in generous phrase thus addressed his companion:

"Rise! let us no more contend, nor blame
Each other, blamed enough elsewhere: but strive
In offices of love, how we may lighten
Each other's burdens in our share of woe."

A like generous and loyal spirit I would enthrone as the lofty ideal of true journalistic brotherhood. Eschewing puerile personalities and vain vexing. I would lock shields with every brave knight of the quill and with the chivalric spirit of our noble trust, keep perpetual vigils over the sacred rights of our people. So weighty are our responsibilities—so high our true mission—so great the achievements before us—that we need to get into closer, tenderer personal sympathy. The same flag floats over us, and under its silken folds we should gather for battle against a common enemy.

And now, in conclusion, pursuing this military figure, let me speak the words of a poet soldier, addressed to his battle-scarred comrades of many reddened fields, and commend them as the sentiment of this happy reunion:

"Comrades known to marches many
Comrades tried in dangers many
Comrades bound by memories many
Brothers let us ever be!

And if spared and growing older
Shoulder still in line with shoulder
And with hearts no throb the colder
Brothers we will ever be."

AN ERRONEOUS IDEA.

The merchant in a small town is apt to look on his newspaper advertising as a charity that he bestows on the editor of his local paper. No idea could be more erroneous. The advertisement that he puts in his home paper will, if properly managed, bring him excellent returns.—The Advertiser.

COMPLIMENTS TO A UNION.

WE HAVE no patience with an organization that undertakes to interfere with other people's rights. When any organization of men or individuals contributes money to maintain others in violations of law, in private assaults and assassinations, such organization and every member of the same just as much as each individual becomes criminal and worthy of no consideration further than such as is given to every criminal under the penal laws for the punishment of crimes. Yet the Typographical Union of Chicago is worthy of praise for its effort, however futile, to keep its organization from being openly used as the tool of traitorous demagogues. We fully concur in the following, expressed by the Chicago Post:

By the action of the Chicago Federation of Labor in expelling Typographical Union, No. 16, a high compliment has been paid the members of that union and they are to be congratulated upon the breaking of an alliance which was distinctly to their disadvantage.

No better proof of the quality of men composing the Typographical Union could be given than the reason for this expulsion. As founders of the organization out of which has grown the present Federation of Labor, the printers saw a menace to unionism in the stealthy creeping of the cheap politician into the councils of the Federation. They did not hesitate to make earnest protest, formally demanding that no person holding political office should be eligible to sit as a delegate in Federation meetings. In this they stood clearly upon a provision of the Federation's constitution. They acted from principle, but the course of the Federation in expelling the union proved their protest had come too late. The power of the politician had already grown stronger than the sense of right in Federation councils.

By expelling the printers the politicians of the Federation have unwittingly shown the public how vast a gulf lies between true unionism and its base counterfeit which at present has laid its paralyzing hand upon the industrial welfare of two million people.

It is said to be the purpose of the Typographical Union to appeal from the action of the local Federation to the national Federation, and, taking as precedent the case of the Musicians' Union a year ago, the national body is not unlikely to compel the Chicago Federation to reseat the Typographical Union delegates. Should such a course follow, the union would stand fully vindicated, but it is questionable if it can ever again feel at home as part of the Federation. Having secured from the national organization indorsement of its firm and commendable stand for principle and against cheap politics, it might be wisdom for the Typographical Union to withdraw from all affiliations with other unions and thus be in a position to look after its own interests unhampered by misguided men of distinctly narrower views.

The Typographical Union well knows its chief trials have come, not from employers, but from unionists who know little or nothing about printing. Why, then, continue an alliance which adds nothing to the printers' advantage but rather lessens their prestige through undesirable and inimical association?

The Duluth (Minn.) Tribune says: The ways of organized labor in Chicago have long been considered something very extraordinary, but the action of the local Federation of Labor in expelling the Typographical Union of the city from the Federation caps the climax.

The ostensible reason for taking this action is that the Typographical Union had raised the boycott on the Record and News. It is very doubtful if the Federation has any authority to take such action and the Typographical Union will appeal the case to the American Federation, from which the Chicago Federation holds its charter.

The real reason why an attempt has been made to expel from the Federation a union numbering 1,600 members, whose intelligence and character is a credit to organized labor, is that the printers had rebelled against the rule of men who have made a political machine of the Federation and have sacrificed the interests of labor in Chicago to political scheming. The Typographical Union was about to introduce a resolution that no person who holds a political office shall be a delegate to the Chicago Federation of

Labor. It will be readily acknowledged by all the friends of organized labor that this resolution represents a sound principle. But the Chicago Federation is controlled by politicians, and in order to head off the action of Typographical Union, No. 16, that body was declared expelled by the Federation.

Further developments in this case will be of interest to all men connected with newspapers and to all members of trades unions.

MORE DIRECT EFFECT THAN THE BIBLE.

PEOPLE who read and discuss newspapers every day in the year, if thoughtful and conscientious, ought to have some very good and valuable ideas as to the influence and obligations of the calling, even if they could not run a newspaper and fail to appreciate the difficulties and limitations that surround the publisher and editor. The Rev. F. B. Pullman in a recent sermon at Pilgrim Congregational church, Providence, R. I., showed that he had studied the newspaper conscientiously and to some account. He said among other things:

"The newspaper counsels as to our amusements and influences our daily lives. Even those who profess to be incredulous regarding it and its power are often found quoting that which it contains. I venture to say that most readers give themselves into its control, as they would to no other master. The average religious man, I venture to say, devotes more time to the newspaper than to the Bible, and it has a more direct effect upon his actions than does the Holy Book.

"When we consider the newspaper we find that it is made up of a combination of mind and matter that surpasses flight of the imagination. All the world pays tribute to the newspaper. How few of the readers stop to think of the host of hands employed and the lives devoted to the filling of its columns. Its enterprise is one of the marvelous things of the century.

"The best paper means the best man, and the best man must be as pure as the purest, as brave as the bravest and as noble as the noblest. The man who prints a newspaper simply for the money that there is in it, is as recreant to his trust as the minister who writes sermons simply for the salary he may get by so doing. The pulpit Judas will be more comfortably off in his allotted place than that editor who uses treacherously the power which belongs to the high office and responsibility of the newspaper. A newspaper which is a blessing to a community will so live on earth and so deal with facts that all the facts of life will be used to the best advantage to make good lives in the community. Undoubtedly human life needs some moral sewerage system, but the newspaper should not constitute that system. A newspaper should be dominated by the highest ideals as to morals and should have as its basis a reverent fear of God, and a full understanding of His will. It should have the highest welfare of the citizens in its care and be the embodiment of influential nobility."

AS SATAN WOULD RUN A NEWSPAPER.

SATAN has always been credited with shrewdness, but the editor of the Bloomington, Ind., Star having advertised to run his paper one day "As Satan Would," did not seem to take the wily wisdom of Satan into account, and the Chicago Inter Ocean showed the inconsistency of his proposed methods in the following pungent and racy style:

He promises, among other new features incident to the experiment, that he will make sweeping exposures of certain evils in the community. A local correspondent remarks that this programme has created great fear and trembling among evil-doers, pharisees, and hypocrites for miles around Bloomington.

It will be seen that an erroneous impression exists in Bloomington and its environs as to the methods employed by the devil in his work. His Satanic majesty is not in the habit of exposing evils, but, on the contrary, makes a specialty of concealing them. If placed in charge of a

newspaper he would view with alarm the programme marked out for him by the Indiana editor.

The devil's style in journalism is so entirely different from that proposed by the Bloomington Star that we do not hesitate to predict a flat failure for the enterprise. In the first place, an editor bent upon running a newspaper "as Satan would," certainly would move his entire plant to some large city. A little town like Bloomington could not afford Satan opportunities for the full display of his versatile genius. In a great city it would be only necessary for him to adopt and develop the methods already familiar in certain offices, and come in contact at once with a large constituency of victims.

With such a field open to him, he would not attack evil-doers, hypocrites, or pharisees. On the contrary, he would take such characters singly, in pairs, or in groups, and paint them in glowing colors as citizens deserving of the highest commendation. He would cover up their defects, disguise their weaknesses, calcimine their vices, and fresco their iniquities. He would go out into the highways and byways and collect the names of blackmailers, fund-looters, and pay-roll stuffers, and the masterly humbugs under whom they operate, and set them in black letters at top of column, first page, as typical of all that was good and great in the community, while he would take the names of ordinary, law-abiding, tax-paying people and hide them away in an obscure corner of a back page, and refer to them only on the rare occasions when he would deem it necessary to appeal to what he would call the "unthinking masses."

If the devil had a fair chance and an open field at the head of a modern newspaper of large circulation, he would also take particular pains to disguise the fact that he was the devil. He would be true to his best friends. It would profit him nothing to bring down exposure upon the evil-doers, pharisees, and hypocrites whom he would count among his most faithful adherents. While working incessantly upon the minds and consciences of his readers, and disseminating his insidious poison in every line of his newspaper, he would display that high degree of talent for which he is celebrated by making it appear that he was striving to advance the welfare of his kind from motives of pure unselfishness.

He would take a fervid interest in all "reform" movements. He would occupy a prominent place on the platform of all "reform" meetings. He would have himself appointed on all "reform" committees. He would talk sweetly at Sunday afternoon mass meetings of the higher ideals, the civic purities, and the necessity of trusting everything to the judgment of the "better element."

He would stand by a "reform" mayor, if there happened to be one, and give his support to an "honest minority" in the city council. He would sigh deeply over the decadence of public morality, and become hysterical when touching upon the degeneracy of partisan politicians. In brief, he would assume all the features and characteristics of a conspicuous citizen, and, in the course of time, he would be referred to by the pulpit as a lovely man.

"SIX DAYS SHALT THOU LABOR."

SUNDAY work is not half so bad as Sunday dissipation. There is no question that mankind needs rest and so do all beasts of burden. Man also needs time for mental improvement; for the cultivation of the higher faculties and sentiments, the play of the imagination and the sensibilities, or what is called the spiritual nature within him. To this end, he should be free from anxiety, wearying exertion of body or mind, animal or mental excitement that wears on nerves and brain or mental faculties. Rest that wearies is not rest, yet change that quiets the mind and awakens the higher sentiments contains all that is meant by the term. The body should be at ease, surroundings should be healthful, fear, dread and anxiety should be banished. Bad air, tiresome seats, hateful surroundings, disagreeable sermons, harsh, grating tones of voice or gloomy, woe-begone countenance, unkind words or backbitings, cynical criticisms, censoriousness; a mental or spiritual atmosphere of pretense and vain pride, tiresome pomp and show, of cant, hypocrisy, uncharitableness, hatred, dislike, self-glorying of one over another, disrespectful bearing or unkind, ungenerous

thoughts, are things more tiresome to body, mind and soul than the hardest toil. Because of the existence of these in too many churches, Monday is the bluest of days when body, mind and soul feel more fatigued and broken down than on any other day of the week. Peace, holy quiet, contentment, love, and congenial and ennobling surroundings are prerequisites to real body and soul renewing rest. To be strung up to the highest tension, either to outshine, to impress or to criticise others is not rest. There must be naturalness, relaxation without dissipation as to the bodily appetites, the feelings, the sentiments, or the affections, and on the other hand, without slothfulness or dullness. Reason must act calmly, the heart beat evenly, the feelings and imagination flow out as steadily and naturally as flows the "pure river of water of life, clear as crystal, proceeding out of the throne of God and the Lamb," that was shown to the beloved disciple in the glorious vision on the isle called Patmos. This is holy rest. For the lack of it many sleep and others live on with benumbed, brutalized, weakened, diseased bodies, dulled, enfeebled minds and shriveled souls, dyspeptic, gloomy, quarrelsome, suspicious, fault-finding, censorious.

Yet as disastrous as is the continued strain of work, worry, bodily or emotional dissipation, much more fearful are the results of a breach of the command "Six days shalt thou labor," the want of hopeful, useful employment. The bodily diseases and deaths, the mental and spiritual degradations and destructions coming through idleness, would need a very large volume to record, the pen of a Dante to write, the voice of a fallen angel to proclaim with all the attendant depths of woe and hopeless misery.

NEWSPAPER LIBEL.

REPORT OF JUDICIAL PROCEEDINGS.

By D. M. BUTLER, Lincoln, Neb., for the National Printer-Journalist.

PRIVILEGES of the newspaper can very properly be divided into three classes. The first relates to a publication of judicial proceedings, and a publication of this kind is privileged whether true or false, subject to some well-defined restrictions. The second is privileged if true. This relates to the publication of any matter of interest to the public not as a matter of news, but to that concerning which the public may be benefited. The third is only partially privileged, if at all. This relates to a publication concerning people's private matters. It is a discussion of the privilege as applied to judicial proceedings that we propose to consider.

As an abstract proposition the report in a newspaper of judicial proceedings is privileged if fair or complete, or if the truth of the assertions are not assumed by the publisher. It will not, however, apply to the remarks of counsel to a jury, nor to remarks of a prisoner when he makes a speech at time of sentence, nor will it apply to a publication of evidence offered and refused, or received and stricken out by order of the trial judge. Neither will it apply to a report of proceedings ordered suppressed by trial judge because of its obscene character. In all such cases the publisher must prove the truth of every statement the same as he would be required to do were the remarks made as a result of common rumor. In some States courts have declared the publication to be privileged in such cases so far as to shift the burden of proof, but at most this is the most favorable construction given by any court.

The following digest of cases may throw some light on the subject:

The publication must not be garbled so as to misrepresent. It need not, however, be repeated verbatim.

The publication of a statement made by a justice of the peace, of what had been said by persons applying to him for a warrant, which statements do not appear on any

official writ nor were made a part of the hearing, are not privileged.

It is not a fair comment on any legal proceeding to state or insinuate that a particular witness committed perjury in the course of same.

It is not a fair comment on a criminal trial to suggest that the prisoner though acquitted was really guilty.

A newspaper may comment on the conduct of magistrates in dismissing without hearing the whole of the evidence or in committing the prisoner for trial on insufficient evidence, but in so doing if the publisher impute to the magistrate that in so doing he has acted deliberately from political methods the publisher must prove the facts as alleged.

A newspaper may comment on evidence given by any particular witness in any inquiry on matters of public interest, but may not go to the length of declaring the evidence to be maliciously or recklessly false.

A newspaper published an article on a trial which had greatly excited public attention, giving a highly colored account of the attorneys on one side, and concluded with the statement that "Messrs. Quirk, Gammon & Snap were equalled, if not outdone," alluding to the noted firm of petifoggers in "Ten Thousand a Year." The speech was taken almost verbatim from the speech of counsel on the other side of the case. No allusion was made to the evidence subsequently introduced to refute this statement. It was held that the privilege was exceeded.

In each and all of these cases the publisher was required to establish the truth of the statement made when called upon to defend in a case of libel. The question of contempt did not enter them. Some or all of them might have made the reporter or publisher liable in contempt proceedings also, providing such statements were made during the pendency of the case and in a newspaper circulated near the forum, but the subject of contempt is not under discussion at this time.

In July, 1856, Frederick Tresca, a captain of a schooner in the Tampa Bay trade, was arrested in New Orleans upon the affidavit of a police officer to the effect that he had been informed and believed that Tresca and others on board the schooner were guilty of robbing dead bodies of certain persons who had been killed by an explosion on the steamer St. James, and had been found floating on the lake.

The New Orleans Crescent, in commenting on this arrest, went far beyond the affidavit as really made, assumed and proclaimed the guilt of Tresca, treated his character and history as that of a noted criminal. It spoke of his "suspicious looking schooner known to be manned by some nurslings of crime long marked by some officer of the law," and of her owner, whom the Captain of Police had known through long years of his "piratical inclinations," and "a land and water rat was this skipper of the schooner and a pet of criminal justice during many a day * * * as flushed with successful booty and bold through previous mutiny," and was portrayed as "a brawny, thick-set, low-browed bandit, and to all appearances

As mild a mannered man
As ever scuttled ship or cut a throat."

This was no doubt interesting reading, as it was intended to be. Although Joseph N. Maddox, proprietor of the Crescent, was absent at the time the article appeared in the paper, he was made a defendant in a suit for libel. It was shown upon the trial that the defendant newspaper had made a retraction of some sort. It was also shown upon the trial that while the captain may have been brawny and thick-set, he was not the bad man that he had been represented to be and that the charges made in the affidavit and in the newspaper were untrue. A jury in the District Court returned a verdict of \$1,000, and the verdict was sustained by the Supreme Court.

The Court held that the newspaper defendant had a right to publish that the plaintiff had been arrested and held to answer to a particular charge, but having gone beyond this was required, in order to establish a complete justification, to prove that all that was said was true and that it was published from good motives and for justifiable ends.

HOME SWEET HOME.

"Be it ever so humble, there's no place like home."

Southwestern Branch —
Merrill & Jacard Building,
St. Louis, Mo.

EX-PRESIDENT BUNNELL INTERVIEWED.

Speaks in Both English and Spanish of What the National Editorial Association Has Done and of What in a Similar Way the Pan-American Exposition May Accomplish.

HE following, from the Buffalo Evening News, of recent date, will be of interest to all editors and printers, who are looking forward to the Pan-American Exposition, with its special building and department to be devoted to the newspapers and the graphic arts, as a means to give a new impetus to and to exercise a broadening and uplifting influence upon this calling:

In connection with the recent meeting of the National Editorial Association of the United States, at New Orleans, where the association was organized in 1885, the remarks of Mr. A. O. Bunnell, editor of the Dansville Advertiser, are of especial interest. In extending an invitation to the association to meet in Buffalo next year, he spoke especially of the attraction which the Pan-American Exposition would undoubtedly be to the editors of the country.

As a past President of the association and speaking in behalf of the Exposition, he referred to the statements which had been made in an address before the convention that to the south of us are the Latin Republics, which import annually merchandise to the amount of \$400,000,000; that three-fourths of these imports come from Europe—France, England and Germany furnishing the bulk; that the United States is one of the heaviest buyers from those countries, yet we control only a quarter of their commerce; that this condition should not be, and under the new policy of the United States it was expected and believed that within a few years these figures and conditions would be reversed.

Referring to the association, he said that during the fifteen years of its existence, by its bringing together leading editors, representative men delegated from the Press Associations of every State in the Union, by its holding convention in the principal cities of the country, from Boston in the East to San Francisco in the West, from Minneapolis in the North to San Antonio in the South, it had familiarized the people of the different sections of the country with each other and with the country itself; and, as one of the speakers before the convention had said, "the association soon brought political and sectional toleration, which at once grew into mutual respect and genuine affection," making us more than ever before in the history of the country, one great homogeneous people.

Mr. Bunnell argued that what the National Editorial Association had done for these United States, the Pan-American Exposition seeks to do for Pan-America—All-America—the entire Western Hemisphere, viz.: to bring all the peoples of the kindred republics south of us into closer relations with each other by personal acquaintance, by personal contact, by personal interest, which constitute the strongest bonds of union. Not so much for selfish ends, indeed, not at all from the narrow view point that we may thereby capture the custom of these sister republics, but because we believe we have common interests with them, and that we are moving forward to a common glorious destiny; that of right we are, and ought to be neighbors, in fact as well as in proximity.

"That 'tis not tie of blood has made men friends,
Being oftentimes of different tongues and nations,
But the endeavor for the self-same ends,
With the same hopes and joys and aspirations."

These sentiments were endorsed by the great representative National Editorial Association as the sentiments of the people of these United States, and it was unanimously resolved by the association to accept the invitation of the Pan-American Exposition company to hold its next convention in Buffalo, where its members hope to meet the representatives of the press and the peoples of all their Latin-American neighbors, and to greet them as friends and brothers.

The date of the meeting of the association in Buffalo will be arranged by the Executive Committee of the association, and will probably be determined by Frank B. Gar-

rett, of Syracuse, who is the representative of New York State on the Executive Committee and who is an ardent friend of the Exposition.

(In Spanish.)

LA EXPOSICION PAN-AMERICANA.

Extracto De Un Discurso Pronunciado Por El Señor Redactor Bunnell en Presencia De La Asociación Editorial Nacional.

En la reunión anual de la Asociación Editorial Nacional que tuvo lugar en Nueva Orleans, en marzo de 1900, incluyendo la Asociación más de 500 de los redactores más distinguidos de los Estados Unidos de la América del Norte, pronunció el Señor A. O. Bunnell, redactor del "Dansville Advertiser" (Anunciador de Dansville), y ex presidente de dicha asociación, un discurso relativo á la Exposición Pan-Americana. En el curso de sus observaciones, que recibieron buena acogida y excitaron mucho entusiasmo, hizo el orador mención de la importancia inmensa de la Exposición, no solamente para los Estados Unidos sino también para todos los países del Hemisferio Occidental, y especialmente para las Repúblicas latino-americanas. Dió mucha importancia al hecho de que aquellas Repúblicas importan anualmente mercancías, maquinaria, etc., por la suma de \$4,000,000,000; tres curatos de las cuales vienen de Europa—Alemania, la Gran Bretaña, y Francia contribuyendo la más grande proporción, no obstante que los Estados Unidos pueden suplir dichas mercancías, dicha maquinaria, etc., á precios más bajos, siendo estos artículos de calidad igualmente buena, y, en muchos casos, superior, y ofrecidos en condiciones más favorables. Además de eso, llamó la atención al hecho de que son los Estados Unidos uno de los más importantes compradores de diversos productos de varias de dichas Repúblicas, y declaró que no debería existir tal condición de relaciones comerciales entre países tan cercanos geográficamente, á causa de sus intereses recíprocos. Expresó su convicción de que, bajo la influencia de la política actual de los Estados Unidos, se cambiarán esencialmente las condiciones y que sería la Exposición Pan-Americana un factor poderoso para efectuar ese cambio.

Explicó lo que había efectuado la Asociación Editorial Nacional al reunir con miras de utilidad recíproca, los redactores de los Estados Unidos, y arguyó que la Exposición hiciese otro tanto con: "Pan-América," es decir; con ambas Américas, con todos los Estados Occidentales. Da ría la Exposición el resultado de reunir, las unas á las otras, todas las naciones de la América del Norte y de la América del Sur, en relaciones más estrechas, por medio de amistades íntimas, por el contacto personal, y por el interés mutuo, que constituyen los lazos más fuertes de la unión. No tanto por motivo de intereses particulares; y de ningún modo considerados del punto de vista limitado, con el objeto de hacernos dueños del comercio internacional de aquellas Repúblicas, sino porque estamos firmemente persuadidos de que tenemos un interés recíproco con ellas y que nos adelantamos con ellas hácia un espléndido destino común; puesto que de derecho somos y debemos ser vecinos como en efecto lo somos por la proximidad.

Se determinó la Asociación á efectuar la próxima sesión anual en la ciudad de Búfalo, durante el verano del año de la Exposición.

A MINISTER'S VIEW.

Some Refreshing Thoughts as to the Modern Newspaper.

INSPIRING thoughts should not be permitted to die, and the following eloquent words by Rev. W. A. Hamlett, addressed to the delegates of the National Editorial Association on the occasion of their stop in Grenada, Mississippi, can but be read with profit and interest by every true man who recognizes the power and possibilities of the American Press:

"There are times when the soul of man is sorely tried—when he feels his littleness in contrast to the greatness of the things surrounding him. Men have been known to walk without a tremor into the very mouth of a cannon, because they felt themselves the equal of the men behind the guns. I am a firm believer in the equality of man, but upon this occasion I tremble; not because your position is more noble than ours, but because of your power. I speak

with no double tongue, nor oil of flattery when I say, never in Grenada's history has she had such representation of power as she has to-day in the presence of these editors! It is said that the wizzard of electricity—Edison—one day stood beside the mighty sea. The heaving, restless waves presented such a world of power that he was overcome by awe and stood before them with bared head, in their honor. And what traveler has ever seen Niagara, where nature with finger of omnipotence has chiseled out a mighty cañon and has her power reflected by the prismatic beauty of a million falling water drops, what traveler, I say, has ever seen this sight without having felt his littleness? It is the contrast of the infinite with the finite and the latter appears to a disadvantage as the result. Even so does our city stand in awe—not before you men, but before your colossal strength. Grenada bows, silent and speechless. Yet we welcome you. Glad are we that you are here; our city is the honored one. We welcome you for your power political.

"The Power of the Press' has come to be a household phrase. There have arisen generals who made and unmade kings at pleasure, their strength being such that a mere wish on their part would cause crowns to brighten or fade and make thrones totter or be more firmly established. But what these generals did, they did by sword, or spear, or powder. That which an Alexander or a Caesar could only accomplish by blood, the editor of to-day can do with ink. 'The pen is mightier than the sword.' The combined force which all of you represent can by next national election, put into the Presidential chair a man at present not known beyond the boundaries of his State. Oh, men, your power is well-nigh unlimited! You can bring on a war, or have peace to settle on our country, if you choose. A cabinet member dare not cross your will else he must soon resign. Woe unto that man or corporation, against which your combined batteries are turned! If the blasts of rams' horns tear down a city's walls, what can the 'Power of the Press' not do?

"We also welcome you on account of the enlightenment of the press. The printing press is the greatest invention of the ages. It can do more good than a nation of men and throw more light than ten thousand statues of Liberty. How many are there who never as a student saw within college walls, yet who have been educated by the instruction gained from the columns of a newspaper or the pages of a book as their only tutors? And the editor is as essential to the press as the engineer is to the passenger train.

"Behold those 'Dark Ages' from the fall of Rome to the discovery of America. Hardly an intellectual star was there to shine in that long night. Then superstition was the natural religion, while ignorance was at a premium. The less one knew the wiser he was considered. During this period, there were no great inventions; for brainy men stood out in bold relief. Everything was stagnation, while the miasm which was generated poisoned the minds and hearts of people. Would you know the reason for all this? There were no printing presses! Being no way to publish books, there were consequently no authors. There was no demand for knowledge, hence knowledge was not. Nor did all this disappear until young Johann Gensfleisch accidentally discovered the use of individual type. Then came the books, the papers, the authors, education, enlightenment, national awakenings; and back behind all, as the power behind the throne, his brain planning and his hand guiding, came the editor.

"Given: A Nation or a State with many editors and it is not difficult to find a Nation or a State that is progressive and abreast with the times. Campbell spoke in an ambiguous way when he said:

"Coming events cast their shadows before."

"We assure you no shadow has been cast before the coming of this Editors' Association to Grenada. We have been glad ever since the moment we received the assurance of your coming. In behalf of our city, let me welcome you. This is a place where nine church spires point the way to a better world, and where two graded schools and a college teach our children to be noble men and women, fit to take up the duties of life. Grenada's struggles have been many. Fire has come and left us almost an ash heap; pestilence seized upon us at one time and left us more like a city of the dead than of the living; one day the winds conspired against us, and gathering their forces, they charged upon us, leaving wrecked buildings and confusion in their wake. Yet to-day Grenada lives, as is shown by her ability to entertain four hundred editors—and her hos-

pitality is large enough to entertain four hundred more had you only brought them with you. This is the kind of city which welcomes you. There is not a home here nor a room in any home in which you are not thrice welcome. From our heart we say this and we mean it. Try us and see. And now, glad that you are here, let me, in behalf of Grenada, wish you a pleasant stay, a profitable journey to your destination, a safe return to your homes and, above all, may He who rules the world, bless you and guide you and keep you!"

ORGANIZED LABOR IN KANSAS.

WHILE attending the meeting of the Kansas State Press Association at Fort Scott, Kansas, we had the pleasure of meeting with George W. Martin, of the Kansas City (Kansas) Gazette, and learned from him, how wage earners, enslaved not by their employers, but by adherence to the new, selfish, liberty destroying superstition of degraded unionism and its greedy, ignorant besotted priesthood, had suffered and brought suffering upon their families and loss to their employers in Wyandotte county, Kansas. Editor Martin talked with vigor, for that is the style of the man, and he had suffered. What he said and claimed is best told by his own words, in an address before the Kansas City Council, when this body had under consideration an ordinance limiting all public or city work to employers of so-called union labor. Among other things, Mr. Martin said:

The proposition to limit the right to engage in labor on public jobs to one class of citizens, and thus forbidding other classes from participating in the benefits conferred by the public to the industrial and commercial activity in the city, is infamous and abhorrent to all sense of justice, a prostitution of every idea of government by all and for all, utterly un-American in principle, a most monstrous instance of the practice of monopoly, trust and combine, only effective in working disaster to honest labor, and in cultivating demagoguery and cowardice in public men and officials.

It is time this business about union labor was stopped.

Where did the right come from to discriminate in this way between citizens? Can a Presbyterian, a Methodist or a Catholic, come here and say that he must have all the public favors and the others none? If one class is to be granted special favors that class should possess special claims. Has organized labor any special claim not possessed by unorganized labor? Has some particular class of citizens developed great enterprises, monuments of honor, usefulness and helpfulness, to themselves and the public at large, and are they here asking for a monopoly by ordinance of trade and labor? Is anybody seeking special favors at your hands who contribute either to the municipality or the citizens something of great value? Is the existence of the city, and its continued prosperity, due to the brains, the genius, the enterprise and the labors of any now asking of you that they be given a monopoly by legal enactment?

This raises the question of what style of citizen is asking for this special favor. It is a very pertinent question. The great clamor to-day is that in giving away public rights the public should have some consideration. In giving to labor unions the exclusive right to do all the public work what has the public received in return? It strikes me that this is a fair and legitimate question to discuss in this connection. I need only to remind you of history to make it so plain that the political demagogue and coward can read as he runs.

Now listen. Since the spring of 1887, organized labor in Wyandotte County has promoted lawlessness, anarchy, murder, ruin; hundreds of good positions have been lost to workmen, hundreds of thousands of dollars lost to those who labor; it has made women go almost naked and children cry for bread. All this because good, well-meaning men were induced to yield their individuality and manhood to the dictation of irresponsible tramps, called walking delegates, and agitators, who, after the fire was started and the devilment accomplished, left for other parts, their trail marked by ruin and distress, lost jobs and lost homes, and disaster and confusion in all business activities.

To offset these, what has organized labor to show? Has it established any great industry, giving employment and happiness to hundreds, or to even one? Has it been active in any public enterprise, any moral reform, any religious or educational effort? Has it assisted in the amelioration of poverty or distress among those who labor? Has it made an effort to reduce the number of joints and crap games that hover so close to the packing house doors? Did you ever hear of a labor union discussing methods of improving themselves at their various occupations, or of improving the business of their employers? On the contrary, isn't every question brought before them intended to harass business, how to work the least, what new expense or embarrassment they may place on their employer? Can you point to any monument raised by organized labor in Wyandotte County of honor to it or the community? No, they do not do that way. These brawling blackmailers last only a few years. There are none left from the Martin Iron's era, none from the Argentine-Santa Fe era, not one from the days when they threw stones from dark alleys at honest labor at Armour's only three years ago. They pass away like the weeds in the fall, while the wheat and the corn and unorganized labor keep the wheels of industry going, and the wolf from the door in the cheerful home on the hill-top and

in the valley. However, the windbag and the loafer, like the weeds, are perennial!

Now, is there anything in the record of organized labor in this city and county entitling it to special favor by legal enactment? Is this the style of citizen you propose to favor?

What was the first move of organized labor in Wyandotte County? It was the Martin Iron's strike on the Missouri Pacific in 1887. What loss or gain was there in that to labor or to the community? No gain whatever, but awful loss. It was an appalling time. Three hundred citizens were appointed deputy sheriffs; hundreds of citizens met every night and drilled with Winchester; business was stopped; the spikes were drawn from the rails, a train ditched and an engineer and fireman, who were performing honest labor to support their families, were killed. Trains were ditched every day, property destroyed, and everything threatened with torch and fire from the state line up the river to Quindaro, as in Pittsburgh only two weeks before. From 300 to 500 men lost their situations, and became wanderers. The same spirit is in these fellows to-day, and you are asked for your brand of approval. Will you approve?

The next move made by these guardians of labor was the Santa Fe strike at Argentine, in 1894. Some Dago at Pullman was troubled with a disordered liver, and organized labor greatly sympathizing with him, ordered men in Argentine with good positions, good salaries, and happy little homes for which they had partly paid, to throw up their jobs and raise their hands to destroy the source of their employment, out of sympathy for the Dago near Chicago. The agitator and the walking delegate intimidated men to quit their work. We all remember what disaster followed to that most liberal of corporations and to the poor men of families from that outrage of organized labor. Men were beaten and stoned, 290 citizens were sworn in as deputy sheriffs to protect the property, business men were so intimidated that no provisions or goods were sold the deputies, and the railroad company was compelled to establish barracks and board them, while the representatives of organized labor made speeches on the street corners urging that the torch of the incendiary be applied. There was no trouble between the company and the employees whatever. The tramp and the vagabond, without any cause whatever, ordered hell raised, and it was done. The traffic of the road was disturbed, much expense caused, business men ruined, and the farmers in the neighborhood opened a commissary which they filled with produce and from which they fed the families of the strikers. The railroad company had sold lots with houses to many of the workmen, and on which they were making monthly payments. Some 200 men lost their jobs, and were unable to continue payments for their homes. They became wanderers, walking around looking for jobs. The company, notwithstanding all payments ceased, continued the families in the houses, and the men were allowed to resume payments when they could. Some resumed payments within two years, others a little later, but living away from home, while there are actually families yet occupying houses free who have not yet resumed their payments. This illustrates the cleverness of the corporation against which the fiends of hell ordered a strike. Women went half naked, and children cried for bread. That move of organized labor not only outraged labor, but it gave a backset to Argentine from which it never recovered, and which makes the citizen and taxpayer of that city exceedingly bitter to this day. Has organized labor anything to its credit in that city to offset this infamy?

The smelter at Argentine has had two strikes in its history, gentle reminders of the usefulness of organized labor to the laboring man, and to the progress of local development. The first was in 1887 and the second in 1894. Nobody can now tell what they were about, but stone throwing was also a characteristic, and one employee who was faithful to his family and his employer was brutally beaten. The company was greatly annoyed, several lost their jobs, and armed men were placed over the property to protect it from the torch. Protect it against whom? The women and children, whose happiness and comfort depends so much upon undisturbed industry, the farmers of Wyandotte County, the business men, professional men, taxpayers of Argentine? No; but against a gang of irresponsible scoundrels calling themselves organized labor, acting by order of the bosses of organized labor. Was labor or the community benefited?

The Armour Packing Company about three years ago was greatly burdened with the insufferable insolence and arrogance of the jaw-smiths, agitators and loafers manipulating organized labor. What happened? The company very quietly and of a right concluded to do their own business in their own way. They were boycotted by the statesmen who gather Sunday afternoons, and honest labor on its way to the plant was treated every day to a volley of rocks, and several deputy sheriffs were finally called in to protect labor. What element has kept that great plant going all this time? Unorganized labor. What did organized labor do? It did its utmost to break up the establishment, to destroy its business, to wipe it out, to do away with the chance for maintenance of 6,000 or 8,000 of our people. Which element will you favor by special enactment, organized labor which attempted to destroy, or unorganized labor which kept the Armour Packing Company going? You see what infamy it is to say by law that those who would destroy shall be favored over those who not only would not destroy but who fought to maintain. Could disloyalty to the city, could political cowardice and demagoguery go further?

Numerous little disturbances occurred, incited by organized labor against small concerns with some loss but without destruction, until within the past year, when these very useful and highly ornamental citizens, training under the name of organized labor, concluded to do up the Swift Packing Company. It seems that the company, owning the plant, furnishing the labor and paying the bills, concluded that business warranted a few more men on a given job. But the men on the job objected, they didn't propose to divide with any other laboring men, a strike and a boycott resulted. Where did these laboring statesmen get the authority to say that Swift and Company could not make and sell meat in this city? Did this city council give it to them. Do the laws of Kansas confer any such power on anybody? Did the Mercantile Club, the Board of Trade, or any other aggregation of enterprising citizens authorize anybody to tell this great firm to pack up and leave? While organized labor is doing its utmost to destroy this establishment, and deprive thousands of their means of living, unorganized labor is continuing the business, assisting the company, thus contributing to the prosperity of the city, and maintaining thousands of happy and comfortable homes, while organized labor gathers around a keg of beer to discuss methods of destruction. The first application for aid to the new aid society last week was by a man who lost a twelve or fifteen-dollar a week job at Swift's by this boycott, and on Monday of this week the city fur-

nished this same fellow a load of coal. Who will this council favor? Those who are doing their utmost to drive a great manufacturing plant out of town, or those who are assisting it? Is this the issue you desire to raise in considering such an ordinance? Of the 48,000 people in this city 45,000 of them want to do business in a peaceable and orderly fashion, and I have consulted with enough people in the past week to know that such an issue can be made exceedingly hot.

Well, what is the next great public-spirited move of organized labor in behalf of the city's development, what sacrifice are they making to enhance labor, and thus merit a discrimination in their favor by ordinance? Mr. George Fowler, who owns and conducts another large industry in our city, in a misguided moment disagreed with the gentlemen who assume to represent labor about the management of his business. Mr. Fowler has shown by years of experience that he is able to conduct a large undertaking, while those who seek this ordinance at your hands haven't shown that they could handle a pea-nut stand. But the decree has gone forth and Mr. Fowler will have to get up and go. There is another bunch of 1,500 laboring men at Fowler's engaged in industry, making a living, and contributing to the city's development, while a handful of organized labor agitators are seeking to destroy. Seriously, is not this awful, isn't it damnable, isn't it idiotic? And is it possible for political cowardice and demagoguery to go so far as to propose that those who destroy and never build up, shall have exclusive rights by legal enactment?

Now we will consider the latest issue of all, the Kansas City Gazette. Our experience furnishes a remarkable illustration of the beauty of a firm furnishing the business and the means, and permitting an irresponsible gang, including the joint-loafer on the curbstone, and a committeeman from a rival shop, to manage the expense and outgo in saying who and how many shall work. We paid organized labor at one time \$600 per week; we paid it too long and fell down. For two years before we parted with organized labor small shops, whose proprietors did all the work and seldom if ever employed a journeyman, manipulated the union to the eternal annoyance of The Gazette. We were cowardly, and we thought we had to stand it. It has proven to be the story of the croaking frogs ever again. Men in our employ obeyed committeemen who did not work with us. Questions were raised and holdups were ordered without number by men outside of our shop. Men in our employ said the treatment we received was infamous, but they could not help it. Think of such a style of honor cultivated in workmen by organized labor. We were totally without aid or sympathy in our business from those who took our money. It is about eight years since a union printer saw a dollar of Wyandotte County's money for advertising. We thought organized labor ought to have influence enough in Wyandotte County to assist The Gazette in obtaining the county printing. But they never could do anything or did not try. We found them empty wind and sounding brass then as we have since we parted company. The only thing they have been able to do is to scare the pudding out of the boys about election time.

Well, they run our business until we were wound up so tight we could not turn a wheel. We had no trouble with them, except it was impossible for us to make the income meet the management of the chapel, and all know that the town was raked with a fine tooth comb for business to keep it going. We came to a dead stop. We proposed to try it without them. They said we should not. We said we had to work out our debts, and then organized labor men who had never had any dealings with us, who had no trouble with us, and who could not possibly understand the trouble others had with us, said we should not. They proclaimed a boycott, and issued a decree that people should not patronize us. The devils followed us as a hungry wolf follows a trail of blood. What crime had we committed that these self-constituted executioners of labor should follow with such fiendishness? Why should we be prevented from building up an enterprise in this city, and paying our debts if possible, and we were willing to try it? What offense was it to organized labor that we should work night and day to pay our debts, a good deal of which was due to men for labor? In order to save a little I at one time proposed putting my son at work to learn to operate a machine, but the union stepped in and said it couldn't be done, and the shop continued to dig up \$18 per week for one of the gang. The stokers in hell could not be meaner or more malicious without cause than the can-rushers and gutter-snipes who have pursued The Gazette for two years in the name of organized labor.

Now what has been the result of the change? From the very moment when we got control of the inside management, and had something to say about the outgo, we paid all labor and other bills promptly to the minute, and besides in two years we have paid \$8,000 of debts, \$2,200 of which was to labor. These guardians of labor wanted us to lay down, and thus beat laboring men out of what was due them, and leave our other creditors in the lurch. We preferred to work out our debts. We have made remarkable progress in doing so. We will continue as business and opportunity affords, and some day we will make such a paper as the town should have. Now in adopting such an ordinance as has been asked for will you discriminate in favor of the management which run The Gazette in the hole, or the management which has paid its bills and a large indebtedness besides? Unorganized labor continued the business and paid debts, organized labor did all it could to compel us to beat our creditors. Which style will you endorse? Can you conceive of any degree of honor, fairness, manhood, integrity, which would compel us to abandon our debts, and turn every stone possible to prevent us from paying, or was organized labor prompted by low-down, dishonest, ordinary scoundrelism? I think the latter, and all decent business men and honest laborers will anxiously wait to see whether you endorse such style of business and labor.

In addition to what we have accomplished with The Gazette, a new industry has been established in connection, giving employment to four persons, and shipping out from 25 to 30 express packages per day. Is organized labor establishing any industries, large or small, in the town? Who will you help, fellows who tear down or those who build up?

Will this council pass a law compelling the citizen to join an organization he does not want to, pay taxes to some labor boss, and obligate himself to obey such orders as have been issued to organized labor in Wyandotte County during the past twelve years, that he may enjoy the right he has without such ordinance, under the Constitution of the United States, of seeking a job on the street walk?

Such an ordinance would be a practical boycott of the old soldier!

Duplicates for sale.

THE CANINE RACE.

Engraved by
ILLINOIS ENGRAVING COMPANY,
Chicago.

How many old soldiers belong to labor unions? How many old men any way will have a chance with the selfish push of the latter day dodger of work, nursed on eight hour laws, and countless devices to beat work and employers?

If the council will appoint a committee to investigate and take testimony of individuals who have had experience with unions they will find more wrong and outrage than from any other source, more loss, disaster and oppression ten times over than was ever suffered from employers or capital.

There is nothing so infamously arbitrary as a labor union. No trust, combine, or monopoly on capitalistic lines can hold a candle to them. The boycott is the spirit of a fiend. The man who will slip up on another in the dark and stab him in the back is the soul of honor and chivalry and heroism compared with the boycotter, who seeks to deprive another of the chance to make a living, who sneaks around assailing the character and business of some one with whom he has had a slight difference. Is the man who would boycott the product of his own labor, from which his wife and children obtain their sustenance, to spite his employer at the dictation of some fellow who has never furnished him a mouthful, unless possibly beer, worth a single whoop in gehenna? Several courts have declared a boycott to be a conspiracy, and another court has said it is a felony. The man who talks the most about "oppression to American labor" is the first to encourage the un-American boycott. The principle of the boycott was born in China more than two centuries ago. Here is a nation tattered and torn, and cast down to the dregs of degradation. Will this enterprising city of great possibilities go partner in the boycott business, and by the passage of such an ordinance endorse every fool boycott that blackmailers, grafters and leg-pullers may order? The boycott does not exist in Germany, and that country has lately benefited largely at the expense of England, where the boycott does exist, in the transfer of a large amount of manufacturing. Within the past ninety days two hundred firms in England have combined to destroy trades unions. Business men, public men and politicians will some day obtain relief from the terrorism of unionism. How often does it happen, when having some job done, painting, plastering, carpentering, brick work, spading, or other, that some red-nosed, flannel-mouthed, dummy-for-a-joint (Kansas saloon), will appear and order work to cease because the man you have employed is non-union. Let us stamp this ignorant insolence into the earth now and forever in this city.

The boycott in this city has not been a success. It has, however, annoyed, harassed and caused loss. The Armour Company has outlived the foolishness, the Swift Company continues to prosper. The Gazette works more men than all the other printing offices in the city outside of employers, countless establishments go right along with their business, and George Fowler need not be alarmed. A remarkable instance is that of Haskell Bros. One of this firm, as a member of the council, voted to stop cows from running at large. A boycott was instituted, their windows smashed in with rocks. Since then seventeen hardware firms have quit in this city, but the Haskell firm is quite strong yet. The boycott has harmed nobody. There is nothing to be afraid of. Why should this council brace up such a rotten practice by granting exclusive rights to a gang that indulges in the boycott?

The Trades Assembly seems to be the upper house of this legislative structure of organized labor—it embodies them all—that is, it is the concentrated assinnity of the whole business. They have about as little comprehension of the rights, duties and interests of labor, and its relation to others, as a chimpanzee has of the atonement or the trinity. They desecrate God's holy day by plotting against their employers, by conspiring against some one who has done something in this world for himself or his fellow man. They order boycotts. They consider only questions to harass business. But they help nobody. If we were permitted a suggestion, we would have the Trades Assembly manipulate a Sunday school of a Sabbath afternoon; they ought to form a Father Mathew Society in order to brace up their weak brothers; others of them might run a missionary society, while all of them ought to put in their time at a kindergarten school. If they were to open their devotions Sunday with prayer instead of a corkscrew, it would be better for all. But the kindergarten and the mission school are almost always maintained by the employer, the man whose genius and ability enables him to conduct great enterprises furnishing employment for the many, to accumulate and use his accumulations for the instruction and comfort of the less fortunate, but such a man the Trades Assembly stripe of humanity seem to hate with holy ardor. Why not the Trades Assembly use its mighty intellect in helping some one, through a school or a mission, or if nothing more, a word of cheer to an employer. Anyhow, before asking special privileges it should show not a special, but some very ordinary claim. Has it ever helped anybody? Has it accomplished any sort of a reform? Has it established a business? No; simply pulled somebody down—that is all. Who are these statesmen anyway, that they should gather on the holy Sabbath and issue edicts as to who shall do business and who not? Will this council approve of such arrogance upon the part of the most incompetent in the community?

Every sensible man knows not only that such an ordinance would be unconstitutional, but in a dozen instances courts have so decided, knocking out the union label, enjoining boycotts, and annulling ordinances and statutes limiting public work to special classes. Cases have been decided in Boston and Chicago, limiting the power of city councils to order, by ordinances, that in city contracts preferences shall be given to contractors who employ union labor. In Boston the Common Council had given contractors to understand that in all city work preference must be given to union labor. In this case the contractors, employing non-union labor, were building a bath-house on Dover street, and the mayor, because of the employment of such labor, suspended the contract and refused to permit the contractors to proceed with the work. The contractors brought a bill in equity against the mayor and asked for an injunction restraining him from interference with the work. The judge before whom the case was brought granted the injunction restraining the mayor from interfering with the work. In speaking of the discrimination against non-union labor, in his opinion, the judge said that it "is not in accord with our ideas of equal rights, and is hostile to that portion of the

Constitution of the United States that declares government to be instituted for the common good and not for the profit, honor or private interest of any one man or class of men." Apparently the judge is of the opinion that non-union men, paying taxes for the support of the government and entitled to its full protection equally with all other citizens, ought not to be discriminated against by city councils in the privilege of earning their living and supporting their families.

The organized labor unions of Chicago demanded of the school board of that city that no contracts should be awarded for buildings except to employers of members of labor unions. The school board hesitated to comply with this demand and the unions threatened to stop work on buildings then in process of erection. This brought the board to time and the union rule was adopted. Eventually the question of the right of the board to discriminate in this manner against workmen not members of unions was brought before the courts and reached the Supreme Court of Illinois, which by a unanimous decision decides that the action of the board was illegal and contrary to the constitution. The court showed the dangerous tendency of discriminations of this character in favor of one class of free citizens as against another class, and the injustice thus done to the rights of large numbers of people. If school boards and other public employers of labor have the constitutional right to boycott working men who do not see fit to associate themselves with unions, then they have the right to boycott all persons who are not Presbyterians or Methodists. If one school board required of all contractors that they employ only union labor, another might refuse to receive bids from contractors who employed anybody but Republicans.

Last fall, in Los Angeles, a little coterie of labor leaders succeeded in railroad through the council a resolution requiring that all printing done for the city should bear the union label. This was, in effect, a boycott on more than two-thirds of the printing establishments in that city. The non-union printers took the matter up, and, after a long and bitter fight, in which the walking delegate was pretty thoroughly shown up, established the illegality and injustice of such a class of legislation, and succeeded in having the resolution rescinded. The agitators of Pittsburgh, Pennsylvania, succeeded in having an ordinance enacted providing that contractors doing work for the city of Pittsburgh must give preference to union workmen. This was taken to the courts, and declared null and void. Cleveland and Louisville are two other cities which were blessed with "label resolutions." Each had occasion to test the legality of these resolutions, and in each case the decision rendered was hardly such as to strike joy to the hearts of the agitators and boycotters who were responsible for them.

A judgment recently rendered in the New York Court of Appeals emphasizes what has always been patent to right thinking people; that no man, or set of men, has any right to prohibit another from earning his living outside of a labor organization, if he chooses so to do. At Cleveland Judge Sage, of the United States Court, a few weeks ago, granted an injunction restraining the employees of a company employing a large number of men from interfering with the business of the company or with the men engaged to take the places of the ex-employees.

Judge Bradley, in Washington, D. C., in restraining a boycott, says: "Such a conspiracy is a misdemeanor at common law, and indictable as such. By a course of decisions running through a space of more than 400 years from the reign of Edward III. to George III., without a single conflicting adjudication, these points are clearly settled, among others, 'that an indictment will lie at common law,' 'for a malicious conspiracy to impoverish or ruin a third person in his trade or profession.' To say that by persuasion, warning and threats of boycott to induce his customers to take away their work and abandon his custom, and to prevent others who might employ him from so doing, was unlawful, is to mildly characterize such impertinent, arbitrary and oppressive interference with the rights and liberty of another, and such mischievous and malicious attempts to injure him."

Judge Blodgett says: "It shocks my sense of justice to say that a court of equity cannot restrain systematic and methodical outrages like this of one man upon another's property right."

In Saint Joseph, Missouri, last December, a similar decision was rendered, and a lot of loafers were prevented from further annoying some industrious men who desired to work.

No one has denied the awful record of anarchy and lawlessness of organized labor in Wyandotte County, its worse than worthless record in promoting the public or individual good. An appalling chapter of oppression, injustice and loss to the individual might be written. A few months' investigation satisfies me that the arbitrary action of labor union bosses have in the past caused as much distress, suffering and loss as has intemperance and gambling. I have given this proposition careful thought, and I repeat boldly that the number of men in this county who have lost jobs, and who were compelled to move and hunt others, those who sacrificed good jobs and had to take something not so good, the loss in wages and savings, caused by the irresponsible labor boss, will exceed that suffered from intemperance and gambling. This is an awful proposition, but when we look back over the past twelve years history of Wyandotte County, with its murder, riot, terrorism and destruction, without a single good act or success to its credit, it is certainly near enough true to invite the most solemn consideration. It is certainly reasonable enough, for what else could be expected from the spirit which prevailed during the Missouri Pacific strike, the diabolism of the Santa Fe strike at Argentine, the shocking malice which for some trifling difference sought to destroy Armours, Swift, the Smelter, and the Kansas City Gazette. About everything we have the spirit of organized labor has at one time or other attempted to destroy, and if it had succeeded a hundred thousand wanderers would have scattered from Kaws mouth over the earth.

Doubtless most of you have forgotten the story of Mr. Chigwidden. In June, 1897, an Englishman named Chigwidden or Franklin, living on Dugarro avenue, about two blocks from this City Hall, suicided. He had trouble with a labor union, and fell behind with his dues. He lost his membership. His union followed him from job to job, causing him to lose each, and at the same time demanding that he reinstate himself by paying his dues. They wouldn't let him

have a chance to earn his dues. He was so harassed he became in debt, and to escape his devilish persecutors he killed himself. He left a note stating these facts, and his particular friends recently gave me the details of how they hounded him to death. What brotherly brutes they are, and how they love the workingman! A prominent citizen told me that a couple of years ago he had about three days' work to do in getting a piece of property ready for building. He employed a man to do the work. In a few hours another man appeared and ordered the man at work to stop because he did not belong to the union. An inquiry showed that the man who wanted to work had been a member of the union, that he had some trouble with them, that they fined him fifty dollars, that he had a wife and eight children in Armourdale to support, and could not pay the fifty dollars. He finished the job. But to save annoyance the completion of the building was given to union men. In a few hours after work had started along came a loafer from a Minnesota avenue joint (a Kansas saloon) and ordered a holdup. An investigation showed that the very man who had complained against the first man with a wife and eight children was himself behind seventeen dollars in dues to the union, and he actually had to quit the job. How cheerful they make it for a workingman in distress! A negro in this city once had \$125 per month for superintending a lot of negro coal miners down South. They took up the fool white man's burden and struck, the superintendent out of sympathy struck with them, and he has never seen the half of \$125 per month since. A gentleman in the express office tells me that when in the employ of a railroad company he received a telegraph order to throw up his job. He thought of his wife and children, and of the illimitable gail of the unknown boss who was furnishing nothing for their support, and he refused to quit. A companion who was enjoying a salary of \$125 per month from the same company obeyed the order. The man who would not quit was hounded as a scab for two years, while his friend ever since has limited his travels to Walker's line, making a precarious living peddling patent medicines. You may walk the streets for weeks, and if you make it your business to investigate two-thirds of the mechanics and laboring men you meet will tell of such experiences with labor unions.

Did it ever occur to you what style of honor these unions cultivate among workingmen? Mr. Jackson of this city took a contract to put in some tile flooring. He engaged his tiling and started with his job. Soon a gang appeared and said they represented a union of tile workers and that he could not do the job. He remarked that he was an American citizen, had contracted to do it, was able to do it, and would do it. As rapidly as he prepared his concrete the delightful citizens representing unionism tramped on it, and they annoyed him in this way until he gathered up his mallet and threatened to brain the next one, a ridiculous proposition, but it drove them away. When he was ready for his tiling he went to the dealer who had engaged to furnish it, who informed him that the union had been there and forbid the sale, that he could not have it, and that his only recourse was to sue for breach of contract. He had about seventeen dollars in the job, and he was cornered so that he had to give it up. The same union men finished the job, availing themselves of his material and labor. Will you approve of this style of manly and honorable competition, or don't you think such representatives of labor ought to be in the penitentiary coal hole at Lansing, instead of asking exclusive privileges?

About one month ago I was walking along Minnesota avenue and heard boisterous talk in a joint. It was about a labor boss and I went in. A man was engaged in papering the room. While on a scaffold placing a strip across the ceiling a great big loafer from Armourdale appeared and addressed the man at work: "You pay me \$2.50 or quit this job immediately." The man at work was wild with rage. The fellow who attempted to hold him up was a walking delegate from a painters' union in Armourdale. I asked the man at work if they did not have a painters' union on the North Side, and he replied that they organized one a couple of years ago, but that it was a failure, "and," he added, "we owe Nick Soder for the beer yet." Can anybody explain the mysterious connection between labor unions and beer? Do you propose to give power to such insolent blackmailers by law?

I know of a man who during a strike in which he was not engaged put up about \$200 of his own money to assist those who were striking. It was not long until he was in a lockout or strike himself, his surplus was gone for the good of the cause, and he was obliged to ask the union for aid. They affectionately and gallantly told him to let his wife take in washing! What a lovely and sweet-scented brand of citizenship to ask for a monopoly by law of public rights!

Who is Mr. Russell, the walking delegate of the Industrial Council over in Missouri, that he should stop men engaged in the divine right of toiling for a living in Kansas because a few other American citizens at work for the same purpose do not belong to some select organization? Does he furnish labor to the men who obey his order to quit? Does he furnish capital or brains in the construction of the new Cudahy packing house that he should order men off? Who pays for the lost time he causes the workingmen, and the annoyance and loss to the enterprising men who desire to do something for the community with their capital? Why do laboring men and mechanics pay taxes to support such loafers, when all they do in return is to throw them out of work and cause them loss of time? Why should they furnish the stock in trade, at the expense of their families, that these walking delegates may blackmail contractors, or enterprising men who are engaged in improvements? They toil not, neither do they spin, yet Solomon in all his glory was not arrayed like one of them. Where do civil rights under this government come in with the walking delegate annoying industry, improvement, and interfering with the right of every man to engage in labor or business? Did anybody ever hear of a walking delegate doing any good to a single wage earner, to a capitalist, or to the public? I am told that the Big Four Coal Companies lost \$75,000 the past summer and the miners lost \$500,000. Not on account of wages, or of pay, but that the walking delegate might not lose his job. Western grades of coal are selling at an average of \$1.25 per ton more than one year ago, with a short supply which annoys some industries and promises great suffering when severe weather comes. The miners have lost their time, and the poor in winter must pay more or suffer, thus these labor frauds punish those they assume to care for at both ends of the game. This makes the walking delegate a very expensive as well as useless feature of our industrial system.

The practice of these walking delegates going from job to job

inciting strikes was recently passed upon by the New York Supreme Court, which issued an injunction against the Enterprise Association and the Progress Association, both unincorporated societies of steamfitters, in which it forbids them and their walking delegates to interfere with Charles McQueed and the National Protective Association of Steamfitters or its members, or to prevent them from procuring and retaining work. Justice Truax, in the opinion, said: "The evidence shows that the defendants have entered into a combination which in effect prevents and will prevent the plaintiff McQueed and the other members of the plaintiff association from working at his and their trade in the City of New York. In fact, it was shown that the defendant Cummings (one of the walking delegates of the defendants) threatened to strike against the members of the plaintiff association and the plaintiff McQueed wherever he found them at work, and that he would not allow them to work at any job in the city except some small jobs where Enterprise men were not employed. Such a combination amounts to a conspiracy, and is unlawful. To prevent one from working at any job in this city, except some small jobs where Enterprise men were not employed, is to prevent him from earning his livelihood in his profession, craft or business, and such an act will be enjoined. The injunction heretofore granted is continued."

How about labor unions in politics and public affairs? Do they contribute anything to the purity, efficiency and elevation of campaigns and the public service? A consensus of Republican, Democratic, Populist, and go-as-you-please opinion, the oft-expressed statement of candidates of high and low degree, is that they are harlots, the leaders are always after boodle. The self-constituted manipulators sell out in every campaign, and they are a terror to candidates, because many of them will not stay bought. I have some compassion for the fifty-cent and dollar nigger, who has had a mighty poor chance to learn better, but the white man who has had all the wonderful opportunities of this country, who combines to manage not only his fellow laborer, but industries requiring the greatest intellects, guilty of the venal prostitution we know of in this country, I submit has no royal or divine rights as asked for in the ordinance granting to union labor exclusive privileges.

Viciousness, meanness and oppression of labor unions is not peculiar to Wyandotte County alone. Take their record the world over and an utter disregard for the rights of others characterizes all. The spirit of labor unions is unfair, founded alone in selfishness, and in its application it is destructive of industry, liberty and government. To throw stones at honest workingmen, to attempt the destruction of a man who does not belong to their set, to murder and riot, to cause loss and destruction without a single compensating service to their own class or the public, is the record they have made everywhere. The great destruction at Pittsburgh, which cost the taxpayers of Pennsylvania many millions of dollars, the disastrous riots at Chicago, when Grover Cleveland did the greatest act of his life, have their counterparts in the devilishness of labor unions at Wardner in Idaho, in the street car strike in Cleveland, and wherever and whenever it is possible for them to make trouble.

Such discrimination in the interest of a few, such subversion of private and popular rights can mean but one thing—the destruction of all order and government. What has been the history of the Idaho troubles, covering seven years of riot, murder, and destruction, which have ended in martial law? It began in rioting in 1892, in every sort of violence and crime on the part of union men, resulting in the total failure of various prosecutions for murder, arson and conspiracy, because of the terrorism of the unions. Every effort to command order failed, and the end was that the unions seized the county government in the County of Shoshone. The result has been that the law has been administered for the benefit of the miner's union and their sympathizers, and to the detriment of other classes of people. Operating in a most lawless manner through a secret cabal, the unions have used the power of government for the selfish purposes of the few and to the destruction of the rights of the many. Men have been murdered in broad daylight; their murderers have been known to hundreds of people, yet no one has dared to come forward with testimony against them, because their crimes were in the interest of the union. A great number of men were driven out of the country. Their expulsions have often taken place in the dead of night, men being required to take their departure on an hour's notice on penalty of death. Outrage followed outrage, but there was no way to reach the perpetrators for the reason that the officers of the county would not act. All this culminated a few months ago in a raid of 1,000 union miners on the Bunker Hill and Sullivan mill, who destroyed a quarter of a million of property and killed two men. In addition to martial law we have the singular spectacle of a Demo-Pop governor seizing the local organization of a county, calling on the Federal Government for aid, and issuing a decree that all miners to obtain employment must first secure a permit, and must renounce all connection with unions. How many millions did the Mollie Maguires cost Pennsylvania? And what is the difference between the spirit which says that a first-class citizen shall not sell meat in Armourdale, the spirit which prompted the Martin Iron's strike, the Santa Fe strike, the throwing of stones at Armours, and the spirit of union labor at Wardner and of the Mollie Maguires years ago in Pennsylvania? None whatever.

On the 28th of September Secretary of War Root wrote Governor Stuenenberg, elected as a Demo-Populist, protesting against the further employment of troops to guard prisoners at Wardner in Idaho, and asked that the State authorities release the troops. The reply of Governor Stuenenberg, under date of October 10, asserts that the withdrawal of the troops would surely result in a great loss of property and the loss of life in that vicinity.

"Covert threats," the governor adds, "are constantly being made by those who engaged in the riot of April 29, which resulted in the destruction of some \$250,000 worth of property and the assassination of two men, that, as soon as the troops are removed, they will gratify their revenge upon those citizens who have been induced to assist the state in the attempt to ferret out crime, and the history of that region convinces me that these are not idle threats or the boasting of irresponsible parties, but are the expressions of deliberate and well arranged purposes and plans.

"It should be understood that this is not a conflict between capital and labor, nor a question of wages, but it is a conflict between the State of Idaho and certain criminal organizations which seek to

cloak themselves under the cover of labor organizations. [But every labor organization has endorsed the miners in Idaho and condemned the use of troops.] These organizations were originally undoubtedly legal and proper, and were organized for a commendable purpose, but they have been taken possession of by men who utterly ignore all law, who are anarchists in belief and practice, and by such men transformed into criminal organizations. [They have been endorsed by labor organizations all over the country.]

"We do not for a moment concede that these organizations in Shoshone County, to which we are referring, have anything in common with the great labor organizations throughout the country, and they are not in any way to be considered in that light. We are not in conflict with organized labor, as such, in any manner whatever." [However, all labor organizations have taken up the fight of the Idaho criminals.]

The governor then gives a history of a series of crimes consisting of murder and arson, and the blowing up of mines, extending over a period of six years from 1892, no effort being made by the county authorities to discover and prosecute the guilty parties. He says:

"It may be proper, for purposes of general information, to add that the State of Idaho is responsible for all that has been done in Shoshone County, relative to the call for troops, the arrest, detention and care of prisoners, the regulations under which the mines can and have been operated from the time of the insurrection up to the present time, and the regulations of all matters concerning the employment of men in these mines, all of the above matters having been under the immediate supervision, control and direction of the officers and representatives of the State of Idaho, and not in any way of the Federal troops. I further state that the State of Idaho assumes and acknowledges all responsibility for the manner in which affairs are conducted in the Cour d'Alenes so long as martial law, as proclaimed, prevails."

Facts might be presented indefinitely to show that labor unions are wholly and wilfully lawless. In the Spring Valley district in Illinois, where two thousand miners were thrown out of work, the union bosses demanded permission to enter the mines to collect union dues from those in arrears. The manager refused, saying there was plenty of time at their homes and on the street to see them about such matters without interfering with work. They then demanded that he withhold alleged union dues from their pay, but the manager said that miners had obtained a law forbidding companies from holding back money from employees without an order. And because he would not violate a law of their making, for their selfish purpose, they called the men out, closed his business, cause loss to the men, and annoy industries by a shortage of fuel. At Indianapolis a man running a large painting business was compelled to go into the Federal Court to seek protection from a boycott, placed on his business because he would not withhold from his employees fines imposed by unions, which fines the men said were unjust. Can such un-American insolence prevail and not excite special wonder?

The proportion of people who are members of labor unions, as compared to the whole body of working people in this country, is one in fourteen, and of this number again but a very small proportion—probably less than ten per cent—belong to the loud-mouthed, rampant element which seeks to deny to a man the right to earn a living unless he first swears allegiance to the labor union and walking delegate presuming to control the particular calling which he elects to pursue. It is a disgraceful thing that in a land of liberty such a thing should be as that a mere handful of men should take it upon themselves to dictate what men may or may not work, how men who have thousands of dollars invested in a business in which the dictator has not one cent, shall conduct such business.

ADDENDA.

As a further illustration of the criminal, anarchistic and traitorous methods of unionism, the following circular, issued by the committee of the Kansas City (Mo.) Typothetae should be read:

March 23, 1900.

Prior to November, 1899, the Employing Printers of Kansas City, Missouri, ran their shops as they chose, "open," non-union, or union. This condition was sanctioned by the unions by allowing their members to work in these offices.

Early in November, 1899, the Feeders' Union, Pressmen's Union, and Typographical Union presented a contract to all book and job Employing Printers, demanding that said contract be signed or they would call out the employees in all the offices, and stated that they would no longer tolerate the "open" offices in Kansas City.

The Cylinder Pressmen's proposed contract contained the following:

"None but members affiliated with the International Printing Pressmen's Union, and assistant Union, shall be employed."

The Typographical Union's proposed contract contained the following:

"It is hereby agreed between ——— Company and the Kansas City Typographical Union, No. 80, that the appended book and job scale of the Kansas City Typographical Union, No. 80, shall be in force and effect in the composing-room of said company."

The first article in the "appended book and job scale" mentioned above reads as follows:

"None but members of the Kansas City Typographical Union, No. 80, in good standing, shall be employed to operate any type-setting or type-casting machines; this shall apply to foremen, assistant foremen, all printers, proof-readers, and composing machinists."

The Employing Printers of twenty of the largest shops, representing 90 per cent of the capital invested in this business, were called together and discussed the matter from the following standpoint:

Shall we stand for our rights and settle the questions that may soon confront every employer? Shall we submit to the dictation of the unions as to whom we shall employ? Does a man own his own business or not? Is he entitled to control and manage his business, or must he yield its control and management to some one else? Can he employ non-union men, or must he employ only union men, and yield obedience to the commands and requirements of the unions?

It was the unanimous vote of the Employing Printers that they would not sign the contract; that the Unions have no right to dictate to the employers whether they shall employ union or non-union men,

a matter in which the law guarantees freedom of choice to the employers.

The matter of wages was of minor importance. This is manifest from the fact that some time ago a committee from Typographical Union No. 80 offered to have its scale of wages reduced two dollars per week if the Employing Printers would unionize their shops. The nine-hour day has been adopted, as per the recommendation of the Syracuse Conference, and we are paying the same wages as we did for the ten-hour day.

The second week in November, 1899, all the union feeders, pressmen and compositors were called out in a strike because the Employing Printers refused to unionize their shops. Soon unlawful tactics were resorted to: non-union men were waylaid and beaten while going to and from their business; the shops were picketed and patrolled by one hundred strikers in a body; they threatened our employees with violence if they remained at work; intimidated other persons seeking, and willing, to enter our employ; we had to take our employees home in vehicles, and these were followed and attacked; in one case five men were going home in a wagon when they were assaulted by a crowd of about twenty-five negroes, one of whom was shot and killed; the testimony shows that these negroes were conducted by a white man who has been one of the leaders in this strike; a non-union man, one of the employees in the wagon assaulted by said negroes, was charged with murder at the coroner's inquest, was acquitted on the ground of self-defense, and later was indicted by the grand jury.

Following is a portion of the testimony of Mr. Grigsby, one of the striking printers:

"Q. I am talking about this night. A. Yes, sir.

"Q. And you were running after the wagon for the purpose of having a talk with the men inside of the wagon? A. Following them any place we could get to talk to them, and follow them home if necessary.

"Q. Was it your purpose to stop the horse if necessary, that night, by violence, and have a talk with the men? A. Yes, sir; if necessary.

"Q. To use violence in order to induce the men to talk to you? A. Why, yes; we have to do with that push down there.

"Q. And sometimes you have to beat them up and about kill them in order to get them to talk to you? A. Not necessarily that.

"Q. You do sometimes—is that it? A. Well, we did not beat them up; talk to them; men try to bulldoze us and would not listen, we try to bulldoze them.

"Q. If he would not listen, then you are at liberty to let him have it? A. Yes, sir.

"Q. That loosens him up—is that the idea? A. Yes, sir.

"Q. If he would not talk to you, you can make him talk? A. Yes, sir."

Thirty-three non-union employees have been assaulted and unmercifully beaten. This is a cruel and infamous injustice to those employees who see fit to follow their trades without becoming members of certain unions, and the unions should be held responsible for such brutality, for these assaults are the outgrowth of a general system of interference with non-union employees, countenanced and promoted by the labor unions. Between strikers and present employees the contest is of labor against labor—between the workman willing to work and the workman unwilling to work.

Our employees have appealed to us for protection. We have in turn appealed to the courts and the city authorities and police department for protection for our employees, and for a permanent restraining order from this lawlessness. Our courts are overcrowded, and we have been unable to get as speedy relief as desired from this source.

A boycott has been declared against the Employing Printers, and the strikers are now engaged in carrying out a combined system of threats, menaces, and unfair persuasion, to compel our customers to send their patronage elsewhere against their will.

In the name of the Attorney-General of the State of Missouri, proceedings have been instituted in the Circuit Court to dissolve the Kansas City Typothetae, on the ground that it is a trust, pool, or combination.

It is further asked that all corporations, members of the Typothetae, be deprived of their franchises, rights, and privileges. There is no foundation whatever for this suit, the same being instigated by the Unions.

Our property has been destroyed, type and cuts have been ruined, presses have been broken; large plate-glass windows in different shops have been smashed, and many thousands of dollars' worth of property destroyed.

During the fourteenth week of the strike our local press printed the following: "Lawrence Smith, president of the Union, says that over \$20,000 has been used in meeting this expense; that the Union has plenty of money in bank and is prepared to spend \$20,000 more if necessary."

After the unions have declared that we shall employ none but union men; called out our employees on a strike; picketed our shops to intimidate and coerce the men who wanted to work, waylaid, assaulted, and beaten up our employees; boycotted our business; destroyed our property; spent thousands of dollars, and tried in every way, lawful or unlawful, to ruin our business—they now come to us after four months of this destruction, and propose that we arbitrate all differences between us. A meeting of the Employing Printers was called to discuss the arbitration, and the following resolution was adopted:

"Resolved, That the Employing Printers hereby endorse the action of the special committee appointed to conduct the strike inaugurated by the Typographical, Pressmen's, and Feeders' Unions, and hereby reaffirms its position, that employers are entitled to and have the right to conduct their business as they may elect, with justice to all; and further, that the conditions of a settlement of the troubles now at issue be: the acknowledgment of such right; a dismissal of the suit pending against certain of the concerns of Employing Printers; the withdrawal of all boycotts against offices and merchants patronizing offices affected by the strike; and the Union Label case carried to a speedy and final settlement as a friendly suit."

After this we received a proposition from the unions for a settlement. They demanded the recognition of the "shop chapel." This would mean union shops—just what we refused from the first, and something that has never existed in some of the large shops in this city. Our employees, who have made it possible for us to run our business through this strike and have no desire to join a union, "would be permitted to make application to the union of their craft."

1633-39 Arapahoe Street, Denver, Colorado.

In answering this proposition, we stated that before the matter of a conference would be considered with the unions the strike and boycott must be called off. We received another communication, asking for a conference; we replied that it would be useless to discuss their proposition, for the reason "that the underlying idea upon which it is all predicated is that of unionizing the shops."

For the last twenty-five years or more the printing shops of this city have been run "open," union and non-union, and the employees of these shops have been making their homes here, a large per cent of them non-union men. In November, 1899, the unions combined to unionize this industry. We entered upon this strike believing we

had the right to run "open," union, or non-union shops, a freedom of contract guaranteed unto us by the Constitution and laws of the United States. We believe it is wrong and un-American to coerce men into becoming members of any organization, or compelling employing printers to unionize their shops against their will.

Half a Century's Advance in Illustrations.

A STORY OF TYPE AND PICTURES.

PART FOUR.

Article and illustrations (shown on opposite page) contributed by LON SANDERS, St. Louis, Mo.

COARSE HALFTONES FOR NEWSPAPER PRINTING.

IN TAKING up part four of your series of articles upon "Half a Century Advance in Illustrating," I feel that no part of the engraving business has brought about a greater revolution in any branch of the printing business than has the use of coarse halftones in newspapers.

While the large daily papers in the leading cities have made the greatest strides in using these cuts, their use has in no way been confined to these papers, as such engravings are used more or less by almost every newspaper published in the country. When these engravings were introduced several years since, it was found difficult to successfully use them upon cheap grades of newspaper, though all of these objectionable features have since been removed through the efforts of the engraving firms in securing much deeper work, and with scarcely any additional care they can now be printed by any publisher.

The halftones in general use for this purpose are usually made with screens ranging from 80 lines to 100 lines to the inch, while some few publishers use a screen as coarse as 65 lines to the inch. The objection to a very coarse engraving is on account of being unable to retain the detail that can be secured in the finer screen engravings, and for this reason the engravings containing 80 to 100 lines to the inch have become of general use. You will find with this article engravings made by a screen containing 85 lines to the inch, and also containing 100 lines to the inch, which will give you a fair idea of the difference between the two.

In looking back only 10 or 15 years, you will find that outside of the magazines and a few of the Sunday issues of large dailies there were comparatively no illustrations used in the newspapers, and when you compare such papers with the ones published to-day you can fully realize what a wonderful change illustrating has wrought among news

publishers. With the advent of the photo-engraving method it became possible for the masses to view with photographic accuracy the scenes of important events, the leading art pictures, views of every Nation, and to become familiar with the portraits of our politicians, our prominent men and notorieties through the cheap method of producing engravings in newspapers. In this way the illustrative art has become a valuable educator. It would be difficult to measure the debt which we owe to these cheap prints, which have so often cleared away the misty mental impressions and shown us the truth, vivid and distinct.

It is no common thing in these times, as many an author can testify, for the editor to write to his contributors, asking them to "write up" to a set of pictures. The reading public would be surprised to learn how much the descriptive matter of the day is written to accompany a very attractive set of pictures, which the editor has acquired, and it is coming to be generally understood that there is little hope for a story that is not attractively illustrated. A writer who took a rather advanced opinion of the situation, recently claimed that if the craze for illustrations keeps on at the pace it is now following, the day will soon arrive when the people will refuse to read essays, to consider political arguments, or to study political economy unless every line is accompanied with a picture. School children will require their arithmetics and grammars enlivened with funny and pathetic and dramatic cuts. All of our celebration will soon come to be along the optic nerves. I do not look upon these opinions with seriousness, though it must be admitted that the credit for all of these changes is due to the process of photo-engraving. The cost of coarse halftone engravings has been reduced so much that this expense is a very small item, and the use of such engravings in a newspaper not only adds greatly to the interest in such papers, but it gives the same prestige, and stamps the publisher as being progressive and enterprising.

Halftone 85 lines to the inch.

Halftone 100 lines to the inch.

Halftone 150 lines to the inch.

SHOWING RESULT OBTAINED ON HALFTONES BY VARIOUS SCREENS.

Entered at the Chicago Postoffice as Second-class Matter.

BENJAMIN B. HERBERT, Editor.

Official Paper of the National Editorial Association.

Published Monthly by the

NATIONAL PRINTER-JOURNALIST COMPANY.

WILLIAM E. HERBERT, - - - - - Advertising Manager
BENJAMIN S. HERBERT, - - - - - Secretary

*Business Office and Editorial Rooms, 400 Caxton Building,
334 Dearborn Street, Chicago, Ill.*

SUBSCRIPTION PRICE, \$2 PER YEAR.

In England, 10s. 6d.

May be obtained in England from the International News Company,
Breems Buildings, Chancery Lane, London, E. C.; and
F. O. Strong, 111 Fleet Street, London, E. C.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep this monthly on sale regularly.

Advertising Rates Promptly Furnished on Application.

CHICAGO, - - - - - MAY, 1900.

Absolute loyalty to truth, the sacrificing of advertisers, subscribers and everything else to principle was recently given, by E. L. Godkin, the famous editor of the New York Post, now retired, as the distinguishing feature of Horace Greeley's conduct of the New York Tribune. It was this that gave the paper power, made its influence so deservedly high and universal, until it came to be considered infallible and made its editor to be almost adored by hundreds of thousands of readers for near a whole generation. No paper can have a more valuable possession than a reputation for absolute sincerity, honesty and reliability.

We have had occasions to remark on the danger, or at least lack of wisdom, of the unguarded use of sarcasm and buffoonery or horseplay in the newspaper. It was a little surprising to see these used recently in the United States Senate, and then the man dealing out the hateful, silly exaggerations and buffoonery receiving the applause and congratulations of his fellow Senators, who make great claims to dignity, fairness and courtesy. It reminded one of the imaginary scene, portrayed by the author of "Ten Thousand a Year," of the half-witted Timothy Titmouse crowing like a rooster in the House of Lords in England in answer to an argument, and thereby winning applause and the votes of the noble peers. The exhibition in the Senate and the manner in which it was received are sad indications of degeneracy and of a disregard of the rights or feelings of fellow Senators. If humor consists in reckless, untruthful exaggerations, in the casting aside of all reserve, all regard for common courtesy or decency,

then anyone can be humorous, for humor is said to consist in the unexpected. In this sense, it would be humorous for a grave and revered bishop to stand on his head in his pulpit for the entertainment of refined worshipers or as an illustration of an argument against some other sect. Sarcasm and buffoonery cannot be answered, to be sure, but there is a reaction that tends to injure the one that uses either and the cause that he may seek to advance. Unanswerable sarcasm leaves a wound that never heals, and brings a return blow when least expected. Buffoonery or horseplay destroys respect even in the minds of those who laugh.

Indiscriminate condemnation by newspaper publishers of those whose business it may be to work up, to direct or to take care of advertising is unwise. There is no doubt but that honest, energetic, progressive advertising agents have been of great value to publishers as well as to advertisers. A publisher who certainly ought to know, to ask and thereby receive what his advertising space is worth, has only himself to blame and shows bad taste, at least, if nothing more, in attacks upon those with whom he deals and whose money he receives under a plain contract, into which he has voluntarily entered. No one can compel a publisher to sell his space for any other price than that which he agrees voluntarily to receive. However, no one is to be blamed for criticising and warning others against unfair, dishonest and unjust methods or misleading devices intended to ensnare the inexperienced, too credulous, confiding or unwary.

The New York Evening Journal has the name of sensationalism; yet it contains the news and its editorial columns stand for what the editor and publisher deems right. A recent issue contained some very wholesome suggestions to editors. The editor said:

"Give space in your editorial columns more often to things that are really GOOD. Never mind if they are old. The great public has little time for reading. It will thank you always for selecting something worth while, for picking out the best part of a good thing and publishing it.

"Give the people something worth while. Use your columns and your circulation to send broadcast the best that man has written—instead of forever ladling out office-made drivel.

"Just try this plan. There is profit in it for you, as well as public service."

This is good advice. Quotations, with brief note or comment, from the grandest and most stirring thoughts of the wisest, noblest, most patriotic and philanthropic writers and speakers, stir the blood, direct readers to the fountains of true wisdom and inspiration, give interest and dignity to the paper and by reflex influence ennoble, enliven and inspire the editor.

The recording in our last issue of the deaths of two delegates to the recent convention of the National Editorial Association saddened the heart of the editor, as the news must have been a real sorrow to every member of the association. Editors Hall, of Massachusetts, and Nagle, of Wisconsin, were noble men, and true types of the conscientious, industrious American editor. They had both been active in State, District and National Associations, with efforts to better the calling. Mr. Hall besides being President of the Massachusetts, was one of the organizers of the Suburban Press Association of New England. Kind words as to the lives and work of both gentlemen still

reach our desk. "Valuable men, able editors, the supporters of education, good government and every worthy cause," is the universal verdict. How much better this than to have to say merely that the deceased left so many millions of dollars, or had, through political manipulations, merely climbed to some place of public office.

All who seek, through the sowing of discord, through selfish, one-sided organizations or otherwise to divide the people into classes on the basis of labor so called are traitors to the principles and genius of American institutions. All men who manage or direct estates, or business, manufactures or trade, who employ their time in any useful calling or profession, who work with their skill and hands in agriculture or the arts or who usefully direct the labor of others, are laborers, with the right to control their own time and labor without any dictation, interference or annoyance from others, directly or indirectly. These ideas cannot be kept too prominent, cannot be too often enforced on the minds of all people in a land where all and each are supposed to be governed by the will of all for the good of all.

The San Francisco Call shows that the public utility of printing school text books by the State utilizes at an annual loss of over \$300,000, with an inferior grade of books. No statement is made as to how much, if anything, is actually saved in money to the purchasers of the books, yet if there is such a saving and it is made at the cost of quality and character of the books to be used by the children, it would, in the end, prove a costly economy. It may be that the Almighty is to blame for creating beings who do the best and most economical work when compelled by competition with their fellows and the desire for gain, still such is the nature of men, and until God changes human natures, where competition and individual enterprise both can have sway, the results will continue to justify the world-old system of individualism as against fraternalism, communism, socialism or any other sentimentalism.

The life of A. E. Burr, who died at Hartford, Conn., after having been connected with the printing and newspaper business for seventy-three years, accentuated the importance to this calling of honesty in and loyalty to convictions. These gave energy and vitality to his work. Speaking from deep conviction, he not only always had something to say, but said it in a way to compel attention. He was kind, truthful, honest, reliable in private and public affairs. He was one of the committee who built the splendid State capitol, within the appropriation first allowed.

Let every conscientious editor carefully read and consider the facts set forth in this issue under the caption, "Organized Labor in Kansas," and then ask himself as to his duty—as a citizen, a lover of free institutions, of personal liberty, of equal opportunity to each and all in the disposal of his labor and property—toward this terrible delusion, this criminal, selfish organization of intimidation, assault and assassination. Would it not be well while extending the blessings of free institutions, of liberty, enlightenment and advanced civilization to Cuba, Porto Rico, and the Philippines, to do a little toward wresting our own people from barbarism, to do a little civilizing at home? To us, though making no claim to infallibility, any one, be he President of the United States, Governor of a State, or Mayor of a city, who bends his neck to,

countenances, encourages and aids, in this free country, an organization that sets up a government in defiance of law and undertakes to enforce its decrees by violence, intimidation and the annoyance of others, is a traitor and is worthy of impeachment, trial, conviction and execution as such. Those who assemble to watch, spit upon, annoy, interfere with, assault and assassinate their fellows, alike free citizens of this Republic, and to injure them in character, property or person are simply criminal rioters and their supporters and abettors are in the eye of the law, of all who know anything of personal rights, and in the eyes of God, alike criminal.

The words of Ex-President A. O. Bunnell, printed in this issue of the National Printer-Journalist, from the Buffalo News, in both English and Spanish, as to the influence of the National Editorial Association that has wrought a political and sectional toleration "which at once grew into mutual respect and genuine affection," as it is hoped "to bring all the peoples of the kindred republics south of us into closer relations with each other by personal acquaintance, by personal contact and by personal interest" through the Pan-American Exposition, will be read with pleasure and profit by the editors of the United States, as they were listened to with both by the delegates to the National Editorial Association. It has not been customary to print the speeches in favor of the different places seeking the conventions of the National Editorial Association, yet many of them are so good, as was the case at New Orleans, that the customary omission is a great loss.

An appeal to the "sacred rights" of labor as applied to one body of workers, whether with head or hand, over others, is an appeal to short-sighted prejudice, selfishness and ignorance. All such appeals tend to the subversion of liberty and of all else that stands for justice and right in human government. Those who live by or seek political promotion through such appeals are the enemies of society and of every member thereof, and most of all are they the real enemies of those whom they pretend to serve. The Times-Herald recently fittingly described these traitorous busy-bodies as "insidious, persistent, supremely selfish persons, who do not hesitate at any betrayal." Betrayals are their only means of subsistence.

The terrors of a vapid, vacant, purposeless life are more consuming to body, mind and soul than are the wasting fires of want and of the lowest drudgery or than can be the licking, curling, penetrating flames of the hottest imaginable hell. Such a life is a soul burning Hades; while a life of noble purpose, of high endeavor, of inspiring devotion to an ideal, to virtue, purity, humanity and righteousness, is Heaven itself. With such a life of noble purpose, resolve and effort, a man smiles at adversity, rejoices in the midst of suffering, and triumphs with the joy of the martyr, the deepest, purest joy and peace known to mortals, in the very presence of death.

The newspaper that purposely deceives and misleads its readers with the view to the accomplishment of deceitful or unworthy ends or to create a sensation, should be shunned and spurned as is a common liar or malicious, mischief-working deceiver. The members of the press and the readers of newspapers owe this much to the standing and character of a useful and noble calling and to their own self respect, if they have any self respect.

The Grand March of the National Editorial Association.

By HON. WILLIAM R. MOORE, M. C.

The flight of Time through ever-widening space—
More rapid than the eagle's swiftest pace,
Has passed the milestones of six thousand years—
Or sixty thousand—mid the whirling spheres:
Has witnessed wars for conquest and for peace,
For which good men have ever asked surcease;
In all the cycles, not an atom lost,
But only changed, with daily added cost.

The myriad millions of the buried past,
Whose names and memories were not born to last,
Have mingled with the dust from whence they sprang—
Their deeds forgotten, if in fact e'er sang.

The seasons in their turn have come and gone,
Beneficently bringing blessings on:
Our favored land has yielded rich increase
Of annual bounties, wool and cotton fleece;
Of precious metals, food and raiment, too—
All these have stood in front to tempt and woo.

Our tolling masses better paid and fed
Than those of other lands, alive or dead;
Their children daily taught in public schools,
With justice and equality of rules;
The way to honors open unto all—
The poor as well as rich, the great, the small.

The fount of knowledge flowing rich and free
As mighty Mississippi to the sea—
Where all may drink, and, drinking ne'er be dry—
Are ever open to the low and high—
These are the glorious truths which stand to-day
Confronting our wise editors on their way.

And as they come from South, North, East and West,
Bringing from each and all, their views the best,
We welcome them with hospitable cheer,
Within our gates this nineteen hundredth year.

They come presenting their composite thought
Of what should not be, as well as what ought;
Both they and we, in some things, likely, wrong,
Yet striving each for right, in act and song.
Each has been educated in the schools,
Perhaps, enforcing different sets of rules;
Yet looking all to patriotic ends,
To which our Yankee nation ever bends.

Why are we met together here to-day
To ponder over what each has to say?
Why have you come a thousand miles or so?
Because each for himself desires to know
Exact conditions all the country through,
And of each phase to write precisely true.

Your calling makes it plain to all, and clear
That new investigations every year
Through editorial search, should e'er be made
If you would hold profession up to grade;
You can't afford to take it second hand
The facts that lie direct at your command.

The century now ushering in its mighty tread
Along the way by Art and Science led,
Is pregnant with developments untold,
Of unimagined grandeur, gain and gold.
Our governmental policies to-day,
Political and industrial, we may say,
Which rule our land and give it voice abroad,
Mark Progress upon every mile of road;
And teach the nations, in a language plain,
"Behold! all things are new," and old things slain.

The world is growing better every day,
No matter what the pessimists may say.
Even "steam," a few short years ago endowed
With praises and with paeans long and loud,
Is relegated to a seat in rear,
Behind the cushioned place of "compressed air;"
And "electricity," while almost new,
Is e'en now fighting for its "front seat," too.

These things we merely mention as we pass,
To show their evanescence, as the grass;
And though we wonder how it all can be—
Our minds so finite that we cannot see—

We yield obedience blindly to what is,
And, Yankee like, say, "Guess" it is our "biz."

Comparing with one hundred years ago
Our later years, the old seem tame and slow;
And yet the seeds then planted in our land
Have sprouted, grown, continued to "expand,"
Until to-day we spread from sea to sea,
Our nation indivisible and free.

Our armies, led by Shafter, Lawton, Lee,
By Otis, Wheeler, et id omne ge;
Together with our ships by Dewey, Schley,
Have hung our banners up athwart the sky
In far-off islands, there to wave for aye,
For right, for justice, liberty, we pray.
Inertia is a foe to nature's laws,
We can not stop—'twere death if we should pause.
We must move on, it is not that we may,
And when we plant our flag, we plant to stay.

The wars we wage were not of our own choice,
And even now a universal voice
Would swell the air for peace from our whole land,
If but our foes could only understand
We fight for equal rights and liberty—
That governments shall make their subjects free.

The twenty thousand editors to-day
Have, each, his own important part to play;
He helps to make the "public sentiment,"
Which through the throbbing wires is hourly sent;
And, knowing his responsibilities,
Should set his standards high above the trees;
He should make daily, vigorous war on wrong,
For, at the most, he can't fight very long.

This being true, his conscience and his skill
Should strive with best, his columns e'er to fill.
His unsophisticated neighbors at Frogtown,
Who scan the paper head, then throw it down,
Are satisfied with Squire Jones' view,
Because "they say" he knows a thing or two;
'Tis said he owns a ten-cent dictionary,
Can spell from "b-a-ba" to "luminary,"
Jones tells them that your views are sound and just,
And whatsoever Jones says "goes"—it must.

Your duty is to lead, to civilize,
To lift the masses, and to turn their eyes
To loftier heights, not to grovel in the ground
Of ignorance and prejudice—fast bound
In rusty, clanking, galling, festering chains,
That leave their inextinguishable stains.
Your heaven-sent mission is to spread the truth
In beauteous phrase; to educate the youth
In purity and patriotism high;
Fit them to nobly live, and grandly die—
These lofty motives urging you along,
Will make your daily lives one glad, sweet song.

And now, good friends, my task being nearly done,
I'll broach a subject sweetest 'neath the sun—
A subject that has baffled wisest men,
Beyond the painter's brush, or poet's pen;
You ask what is it? 'Tis "the ladies dear"—
Dispensing sunshine, music and good cheer,
As blushing maids—superlatively sweet,
As loving wives—yet holding higher seat;
Without them, man were savage and a beast,
With them, he's lover, charlatan or priest.
When troubles come she's always at our back,
And for sweet sympathy we never lack.
When duty calls, you'll find her ever near;
If sorrow comes, she's first to wipe a tear;
She's first in every charity that starts,
First in our pockets, and first in our hearts.
If husband says "I've stayed too late at lodge,"
She, smiling, says, "My dear, that's an old dodge;
It seems to me that 'chestnut's' served before—
But, never mind, this time I'll look it o'er."
Then "Hubby" turns away, and (in his mind)
Says "Mine's the only woman of the kind;
Of all the women in the land, she's sweetest,
The best, most lovable—the discreetest.
Smith brags about his wife at every minute,
But 'side o' mine, Smith's wife was never 'in it.'"

CO-OPERATION IN MODERN TYPESETTING MACHINES.

How Two Wisconsin Publishers Unite in Securing Improved Machinery—Practical Experience Related.

HOW to keep up with the times where more capital is required than actual or prospective business will apparently justify is often a perplexing question. This seems to have been solved by a couple of publishers at Berlin, Wisconsin. These brother competitors evidently have a practical kind of fraternity instead of the merely theoretical. The story as told by Mr. Charles G. Starks, publisher and editor of the Berlin Daily Evening Journal, before the Wisconsin Press Association, has many valuable lessons and suggestions besides those with regard to the providing and operating a modern typesetting machine. But these are all too evident in the paper itself to need enumeration or comment here. Mr. Starks said in part:

I know that many country publishers are beginning to consider the introduction of machines and I predict that within five years there will be many of them in use in such towns as Berlin of 5,000 people and from that up to 10,000. They have already come in larger towns. What I shall say will be from the standpoint of publishers in the small cities, where in many cases it will be necessary to personally take charge of a machine instead of placing it in the hands of experienced men to whom the machine is an open book rather than a complicated white elephant as it was to the Berlin Journal greenhorns for some time after its arrival. I know of only one smaller town than Berlin in the west that has a Linotype—Morris, Ill.

Probably all of you who have stood by a Linotype and seen its wonderful workings in some large daily office have felt the desire to have one. I got the fever some years ago and I visited plants at every opportunity and asked if a greenhorn could manage them. The man in charge invariably looked wise, shook his head, shrugged his shoulders and smiled. But that did not cure me of the fever, although it relieved it for a while. I finally wrote the Mergenthaler Company for terms. They did not seem inclined to do business with small publishers and stated that they generally put machines out in batteries of three and more. They did offer me a machine for \$750 per year. I dropped the matter. Two years ago I received a letter bringing up the subject and offering me a machine at \$500 per year. I replied that even at that price I could not afford it. One year later, in February, 1899, I got another letter referring to the previous offer and hoping that I was nearer the point of investing. They enclosed a blank on which to make a statement of the amount of work my office had to do. I filled out the blank and in due time they replied and stated frankly that my business would not warrant me in putting in a machine, but they suggested that some other office in the town might combine with me and give work enough for one machine. Here was a new idea. My vile cotemporary lives just across an alley, not over 40 feet from me. We had already combined on a press and folder attached. I at once broached the Linotype subject to him. He was favorable and after about two months' correspondence in which we asked about all the questions we could possibly think of we decided to try a Linotype for a year with the privilege of six, and an option to buy at the end of the first year, our first \$500 applying on the purchase price of \$2,800 for a rebuilt, but up-to-date machine. The monster arrived June 24. One month after date of shipment was allowed for transit, setting it up and getting used to it. Our year begun July 19.

The bill of lading had arrived at the bank ahead of the machine and our \$500 rental had to be paid before we could unload the machine from the cars. It arrived Saturday and we deemed setting it up work of necessity and it really was as the Oshkosh Northwestern's expert could only get away to install the machine on a Sunday. We tackled the job early Sunday morning and the first thing was to cut the doorway out wider in order to get the machine in the office.

At 8:30 p. m., after a hard day's work, we had the machine at work and the editor of the Journal and Courant set up the first item, each setting a line alternately, forming a sort of composite job.

The expert stayed with us till Tuesday at 10 a. m., when he had to depart for Oshkosh to resume his work. He left

the Berlin greenhorns with a little more than one day's experience and instruction to take charge of the machine. The Courant got along from the first without any hand-set type. The Journal kept one girl till July 16, and after that got along with machine work exclusively. It is a fact that it is not all smooth sailing to install a machine and run it with inexperienced help and take a hand personally in the fun. It is my opinion that a publisher will do well to employ an experienced operator at least at first and make up for this expense by dispensing with some help in other departments. Of course it depends much on whom it is. Some printers are natural mechanics and like nothing better than mastering new machines. But a man with average mechanical ability and a taste for that sort of thing can take a machine and keep it running in fairly good shape, as we have proved in Berlin.

The expense attending the Berlin machine for the first year is as follows:

Rent	\$500
Freight and drayage.....	30
Power, water motor.....	30
Kerosene for heating metal.....	65
Smelting	30
Insurance, on \$1,000 policy.....	12
Repairs, new matrices, etc., estimated.....	10
Expert to install machine.....	25
Total	\$702

Seven hundred dollars, or about \$350 for each office. For hand composition each office was paying \$500 per year over and above the help retained after the machine was installed. So there is an apparent saving of \$150 for each office by the machine. As a matter of fact there have been other items of expense which, however, I do not deem proper to count, as they would not be experienced, perhaps, by another office in putting in a plant. For instance, owing to the location of the machine in the Journal office, where there was no power of any kind, a water motor has been put in. In most offices that would adopt a Linotype the power in use would suffice and there would be no expense except a little for shafting, pulleys, etc., to fit the machine. In my case an increase of wages to the old force had to be met. Possibly this might have happened under the old system of hand work. Be that as it may, I find that with two employes and the use of the machine half of the time my running expenses have been just about the same as they used to be with four employes and no machine. But I have been able to do more work and give my readers more reading matter than I did with hand composition. I have also been able to print four large special editions that have netted me, say, \$200, that I could not have handled without the machine. On the whole, then, the machine has paid both the Berlin offices. Besides a little profit financially, we consider our experience worth considerable. During the succeeding years we could improve on the profitableness of the machine. We would be thoroughly acquainted with the machine and could do more and better work—would have none of the initial expense to pay. I could, if I was willing to confine myself more steadily, dispense with one more hand. Owing to my doing no job work my foreman often has nothing to do in the forenoon after the matter has been killed and the forms made ready so far as they can be made ready early in the day. If there are no ads to set, time must be killed till our hour for taking the machine arrives. In the average country office where job work is done these idle moments in my office could be employed in the job department. Two of the three persons in my office often do all the work of printing my daily and my weekly. The two employes are this week during my absence running the entire institution in all its departments.

I have said nothing about the expense of buying metal as that is merchantable and if we were to abandon the machine we could sell the metal at probably a loss not exceeding 10 per cent, a small item on \$60 worth of metal which suffices our two offices. I will say here that where only one machine is used, it is not safe to dispose of your type. You may not have to use it more than once a year but if the machine is disabled that once, without type you get out no paper.

I will here give a few items about our use of the machine, thrown in hit and miss. We use about two gallons of oil a day to heat metal. We keep metal hot constantly. The slugs or lines cannot be melted over directly in the machine. In big daily offices the stereotype kettles come in

landy to smelt them into pigs, but with us it is done at a blacksmith shop and we pay 30 cents per cast and have to do it twice a week. We have had no break-downs and find the machine not easy to break. The slightest irregularity stops the machine, but does not break it. We have not failed to get out our papers with machine-set type since we abandoned the hand composition, although we have been slightly delayed at times and have used a little hand-set type. But not often. We use minion or 7-point and cast it on a 10-point body, thus getting ready-leaded matter. We thus have no leading and unleading to do. There is no distributing to do with machine type. When the matter is dead it is dropped into the metal box as a handful of broken type is thrown into the hell box. We often get our daily up, five columns of minion, after 1 p. m. If we are short of space we set it minion solid. It can be very easily and quickly changed. We have the outfit for three measures, 13 em, 18 em and 26 em. The Courant, which office does job work, has the past six months set up several jobs of wide measure and been able to accept jobs that could not otherwise have been handled. You never get out of sorts with the Linotype. Figures, caps, odd characters you never lack no matter how many columns or pages you want to get up. By investing in a little extra metal at 7 cents per pound you can set up type by the yard and hold it indefinitely. Matter may be set "out of your head" without copy as many an old printer sets it out of the case. This paper is set in that manner, although I had copious notes to refer to, but I did not follow copy at all. All the three persons in my office run the machine equally well. It is very easy to master fingering the keyboard. Old experienced printers or type-writer operators I think succeed best at learning.

We use kerosene to heat metal with. We do not consider this a perfect method, but we cannot get gas. The fault of the oil heater is uneven heating. Metal must be as near 565 degrees as possible. Too hot or too cold metal makes trouble invariably. The power must be steady. The main shaft should run about 65 per minute. Faster motion uncouples a part of the machine and slight damage and delay ensues. For extra sizes of type each font costs \$35. Any machine will set any size type from Agate to Small Pica. The length of line varies from six ems to thirty. Each change of measure calls for an outfit costing \$2.75. Each change of body costs about \$5.

Special matrices costing \$2.50 will enable one to cast fancy borders and cast them on the line with the type so in lifting there is no loose border to drop off. We cast all our dash rules, headings, date lines, etc. The machine is a veritable stereotype foundry. A dash rule or any line to be duplicated can be with one setting as the machine can be locked so as to cast 50 or 100 copies by simply keeping the machine going. In make up and handling the Linotype slugs are admirable. No hyphens or thin letters to drop off the ends. Pi is unknown. In proof corrections a whole line must be reset to correct one error. The remedy is easy—set clean proofs. Even resetting whole lines to correct the proof the work is more quickly done than hand correcting.

The machine does not always work well, but I am satisfied that it is about all in equipment and management.

With gas for fuel, with steady power, with one operator at a machine instead of four or five different ones, good results will follow. We have had all the disadvantages to contend with and yet have succeeded fairly well. We do not take all the credit, but give the machine full credit for working under disadvantageous management and circumstances.

I have been asked, will the Journal and Courant keep the machine after the first year? That is undecided as yet. If it goes out it will be because the partnership is not satisfactory and because neither office feels warranted in retaining it alone. It will be a sorry day when it does go out. I do not want you to think that my contemporary and myself have any trouble personally in our partnership as some of you contemporaries do who have nothing in common and yet do not speak as you pass by. It is entirely a different trouble. There are not enough hours for us both to do our work without one of us working evenings. This is unpleasant if kept up every evening.

I think the proper way is to buy the machine, as interest on \$2,800 or \$3,000 is not as bad as an annual rental of \$500, as any one can figure out. If partnership is made by two offices one operator should do the work for both and have full charge of the machine. Otherwise let one

office have the machine and do work for the other at so much per 1,000, or on any other basis of payment.

As rental is for a term of six years it costs \$3,000, and then you do not have anything to show for your money, whereas it costs no more to buy and own the machine long before the six years expire. I think almost any publisher who has use for a Linotype can in some way procure cash to buy with and save renting.

The item of taxes on the machine I have not mentioned. You pay the taxes whether you rent or own the machine—at least that was the sort of a bargain they made with us. Our item of taxes is and will remain an unknown quantity till the assessor comes around next May.

I have but one more feature to speak of and that is setting type without copy. It seems to me this is one of the most wonderful things about the Linotype in the country office. Imagine the editor or reporter who runs his own machine. He has a subject and more or less data either in memory or jotted down. He seats himself at the machine. The ideas literally flow out at his finger ends. There is a sort of inspiration in thus working out your thoughts and ideas into cold metal ready to put into the form and print from. An hour ago there was nothing but thought and a subject. Now a column of ideas and words literally snatched from one's brain, boxed and coined into cold type, is on the press giving impress to the white paper and in a few moments more hundreds of people will be reading these thoughts. Compare this to the slow process of penciling down your ideas and the still slower process of the faithful and intelligent compositor deciphering your scrawl and finally getting it into type. This feature you will only find in the country office, but it is wonderful. It reduces labor and consolidates the work of editing and type setting into one process. That it is practical I know by experience. Nearly all my Linotype work is done in that way.

The wireless transmission of words, liquid air and electrical devices are most often mentioned when noting the late wonders of the world, but I can assure my brethren that in our own honored calling there are wonders equally great. What would Franklin have thought and said to witness the workings of the Linotype? If he could have had a machine the night he pined that page that we have all read about he could not have pined it at all, and even if he could it would have been but a few moments work to straighten it out again. Gentlemen, we all honor Franklin and like to emulate his examples, but I predict that you country publishers are not very long going to be as foolish as Franklin was in getting along without type-setting machines.

About four hours was required to compose this paper on the machine. (The original paper was $4\frac{1}{8}$ newspaper columns in length.—Ed.) I mention it simply to show what can be done on the machine, and that not by an expert but an amateur. Of course I took extra time to correct and revise it, but that was done on the Linotype in shorter time and more satisfactory than it could be on a type writer or in written copy. And having composed it in this way I have not only a clean, legible copy to read from myself, but am able to present to each person here a copy for perusal and to show what can be done on a machine without copy, using it as you would use a type-writer.

Regarding machines that set regular type, the Simplex and Unitype, I know but little, but from what I know I believe them practical and of great advantage. They are going to make the great Linotype give them a share of the patronage of the country printer. We are to hear something about them from the gentlemen who follow me on this program.

NOTE BIOGRAPHICAL.

Mr. Charles G. Starks commenced the publication of the weekly edition of the Berlin Wisconsin Journal in 1870, when he was nineteen years of age. He was then the youngest editor in the state of Wisconsin and has shown the genuine newspaper instinct from the first. He is always alive to the news and to any and every event, occasion or special day in which the people are interested. His "Thanksgiving," "Christmas," "New Year's" and "Easter" issues during the past year were brilliant in colors and design as well as in seasonable reading matter and advertising. His whole heart and ambition are centered in his paper and he is one of the few publishers

The Mascot.

in a small city who does not run a job printing department. He has solved the question, "Can a Newspaper in a Small City be Run Profitably Without a Job Office?" and has given an affirmative verdict.

He has been the continuous sole proprietor of his paper from the first issue, thirty years ago, although he has not reached his fiftieth birthday.

He established the *Daily Journal* January 1st, 1881, and has had no job office since 1883. In addition to the usual matter—general and state news, editorial, local and miscellany—appearing in an evening local daily in a small city, he, each day, prints a full column of latest wire news, giving in brief all important happenings. The entire daily and weekly establishment, including business management, newsgathering, editing, localizing, composition, press work, etc., is run by three persons whose portraits are presented herewith. Mr. Sparks makes the claim of having the only establishment of like character, conducted by only three persons, in the United States. The paper is Independent Republican in politics. A daily paper twenty years old in a Western town of 4,500 inhabitants is something of a novelty in itself. Is there another?

THE TROUBLES OF PUBLISHERS.

By WILLIAM BORSODI, Boston, Mass.

The recent embarrassments of the two great publishing houses, the Harpers and the Appletons, have created much newspaper discussion. Two reasons given by various writers for the embarrassments of these famous houses are failure to recognize "the revolution in public taste," and a corresponding neglect to adopt the methods of advertising made popular by the theatrical press-agent. Both the Harpers and the Appletons, according to one writer, have neglected to foster in the public mind an "admiration and adoration" of the "personality" of the author they employed, "with detailed accounts of what, where and when he eats, drinks or sleeps; whether he uses a quill toothpick or a wooden one from the state of Maine," etc.

Weighty as such reasons may appear to the casual reader, it does not appear to me that any of the articles that I have seen are of any great value as epitomes of the causes of the failure of these long-established firms.

As one who has had a long experience in the publishing business as conducted in Germany, and who has observed publishers' methods in this country for ten years, it is possible that I may throw some light on the subject. I will try to show some of the causes that have militated against these houses and that will possibly be the downfall of others, even though they be not "built upon the sand."

If there has been any change in the public taste which may properly be termed "a revolution," the Harpers and the Appletons certainly did not fail to recognize it. They kept up to the times in all the improvements that the higher class of readers to whom they catered had a right to expect. The taste of such people has always been and still is to have "the best that is going," and whatever revolution there has been in their taste is simply due to the fact that the best of to-day is in many respects enormously better than the best of fifteen years ago. The Appletons and the Harpers have always kept their books and periodicals up to the highest standard. This was a wise policy, considering the class of patrons they have always made an effort to please. But in their very zeal to keep pace with modern improvement, they have neglected the hard matter-of-fact business methods that are necessary to make up-to-dateness profitable.

There is not the same care exercised in the selection of managerial talent in America as there is in Germany, and this fact is recognized by those who are looking for positions. If one would advertise for a manager for one of the greatest publishing houses in New York City that one would at once get fifty, or possibly five hundred answers, whereas a German publishing house might advertise fifty times and get but one reply. The general and particular ability positively required by the German firm are too well known for the ordinary man to waste postage upon an application. So it is possible that the one reply in Germany will be from the right man for the right place; whereas none of the fifty or more American responses is likely to be from as good a man for the position as the one confident German. It is a common idea in America, where too much importance is placed on the national

talent for adaptability, that a man who is successful in one business must of necessity be successful in another. In Germany it is only men who understand every detail of the publishing business (which has a greater field for detail work than almost any other)—it is only those who have made a success in that business who are wanted for responsible executive positions with publishing firms.

The publishing houses of America pay out too much money in proportion to the risks they must face and the services they obtain. They have too many high-salaried men to attend to the technical and literary parts of the work, but they are lamentably weak in that executive talent which knows how to sell. In this most important respect the publishing business is on the same level as any other business. The man who can sell is the man any business cannot afford to be without.

The trouble with the American publishing houses is largely due to the whole situation of the American book-market, and this situation might be changed by the publishers so as to be more in accordance with their business interests.

The book business in its present situation has disadvantages as compared to other trades. Nobody, outside of the poorest, thinks of buying second-hand clothes, but the second-hand book-stores are frequent resorts of the book-lover who could afford to pay a higher price for the book he needs. It should be the publisher's outlook that his books shall appear on the counters of the second-hand book-stores as little as possible—and when the books are really "second-hand" and not brand new. The man in the publishing house who knows how to sell can do much to remedy this matter.

The extent to which so-called "second-hand" books are bought by the best of people is amusingly illustrated in one of the successful books of a season or so back. An ingeniously precocious youth at school makes the startling discovery that all the books his uncle had purchased for him every Christmas "since he was a kid" were bought at a second-hand store, and so makes up a statement wherein the uncle is charged with the difference between the "nominal price" and the "price paid." This difference is of great moment to the publisher.

Care should be taken that the department store, in which the art of buying and selling is better understood than in most publishing houses, should not get a chance to dispose of so many books at "half-price and less." Nowadays many people who can afford to buy for cash upon its publication a work which they would like to possess, wait until the time which they realize will soon come, when they can get it at the department store at a ridiculously "little" price.

The news companies of the United States are middlemen between the publishers and the retailers who absorb much of the profits that should accrue to the publishers or be a source of greater benefit to the consumers. The news companies take no risks—these are the privileges of the publishers. In their place in Germany is the publishers' co-operative institution at Leipsic known as Boersen Verein fuer den Deutschen Buchhandel, which, instead of being an outside profit-eating corporation, has as its sole aim the benefit of the publishers. It facilitates the sale of books and magazines to a greater extent than the news companies, and attends to all matters which are to the mutual benefit of its members, without taking a good slice of the profit.

The system of selling books on the installment plan is one replete with risks, and sends many books to the second-hand stores. The agents in the different cities have an excellent chance to swindle the publishing firm, and frequently act upon it. The installment business has been one of the principal causes of the failure of the Appletons.

There is altogether too much cut-throat competition among American publishers, which a mutual understanding would do a vast deal to prevent. Honore de Balzac was secure from the booming of American publishers for many years, but in the last year no less than three American publishers got out editions of his works. The onslaught of a book-agent with an edition of Balzac is now a constantly recurring nuisance. Every smart book-buyer who wants Balzac's works—and book-buyers are smart—will now wait a little while, and get a \$40 edition from an "assignee sale" or second-hand bookstore for a ten-dollar bill.

A few years ago the play of "Madame Sans-Gene"

started the Bonapartie craze among American publishers. Several magazine publishers appeared to wake at once to the fact that Napoleon was an interesting character of history. He soon ceased to be interesting, however, but publishers kept up the Napoleonic rivalry until the public was nauseated, and the publishers had to follow their leader, like a flock of sheep, with some new hero that had been recalled from the dead.

In Germany, for a year or more before a book on any such subject is announced, the publishing trade are made aware of it, and strive to keep out of the field in which one of their members has staked his claim. Here, as soon as the publisher of one magazine engages a politician to write upon the life of Oliver Cromwell, another magazine publisher engages another politician to write upon the life of that same individual who has been "dead dis tree hunder year." The result is that the public soon has a satiety of Cromwell and both publishers suffer.

Among the many reasons adduced for the troubles of high-class magazine publishers is the arrival of the cheap magazine. Before the climax of the Harper troubles, Harper's Magazine was reduced from 35 cents to 25 cents; and the Appletons, in a frantic effort to retrieve their fortunes, very recently reduced the price of their Popular Science Monthly from 50 cents to 25 cents. But with the retention of the high prices, the highest-class magazines should not be ousted by any cheap magazines that have as yet appeared. It should still be profitable to sell a high-class general magazine for 35 cents, and the Popular Science Monthly has no American competitor in its peculiar field as a high-class magazine of general popular science. The 10-cent magazines undoubtedly hurt the higher priced ones to a certain extent, but so would any good new magazine. The comparatively high prices have been but a small factor in their downfall.

Suppose a circulation of 100,000 copies of a 35-cent magazine were increased to one of 125,000 because of a reduction in price to 25 cents—the 125,000 copies would then bring \$3,750 less per month than the 100,000 copies at the old price. And this does not take into account the cost of production of the extra 25,000.

If there are more magazines than formerly, there are also more readers. I agree with Robert Barr in what he said recently: "This is certain to be a great year for literature. The natural idea seems to be to read and this desire extends to all classes. The reading public everywhere seems to be bigger now than ever."

No, there is still room for such publications as Harper's Magazine, but there is still more room for a change in the methods of business which prevail with American publishers. It may be the turn of the publishers of some ten-cent magazine to have their troubles brought before the public next.

The Harpers' position at Franklin Square, which they have held for so many years, was one feature which entailed a large amount of unnecessary expense. The place where they are situated is an immensely more valuable property than it was fifty years ago. The loss of interest, the insurance, etc., necessary upon being in a downtown district must have eaten up much of the profits of the concern. A publishing house requires plenty of light and space, and these are certainly not to be had in such crowded portions of a great city. There is no good reason why the Harpers could not be as advantageously located in Tremont as in lower New York City or why the Appletons should not be near their Brooklyn factory, and have on Fifth avenue only their retail department.

The profitable disposition of literary matter and "cuts" that have served their purpose is a field in which the German publishers are able to get back much of the money they have invested with literary men, artists and engravers. Such a use of old cuts may not appeal to American publishers at first thought, but this is one of the many ways in which Germans, by their knowledge of publishing conditions all over the world, are enabled to keep themselves, in spite of the many disadvantages of which American publishers know nothing, in a pleasing condition of solvency.

When a German publisher has expended a great amount of money on the colored plates of, for instance, the medical works that he publishes, he sells duplicates of the plates in Sweden and England and America and other places where they are not likely to conflict with the sale of his work. Hence he can increase his profits immensely,

while being enabled to sell his own book at a great reduction in price. He thus, while increasing his sales, does a great good to the physicians of his country, who can afford to buy the book at the low price which he could not have otherwise allowed.

That the Harpers have not advertised is by no means the case. They have advertised a great deal and have got a vast amount of advertising from country publications with very little outlay. They have advertised more extensively in their own publications than almost any other publishing house and a great deal more outside their own columns than McClure's, Munsey's and the other new firms. The Harpers have certainly made a great to-do about any new writer or artist which they have taken up, notwithstanding recent assertions.

There was a time when all the advertising to be found in the Harper publications consisted of announcements of their own wares. But of late years the Harpers have had, in common with other publishers of periodicals, the benefits resulting from the now widespread recognition of the value of the new science of advertising. It is the advertising now done that has made possible the competition of low-priced magazines and periodicals.

So latter-day advertising has both helped and injured the old magazines. If it has helped them more than harmed them, as is probably the case, they should be all the more anxious to provide for a day soon coming when there will be less magazine advertising than there is at present. "There is no firm big enough to take all the advertising offered them," says Printer's Ink, a recognized authority on business publicity, and advertisers must needs discriminate.

Advertising in daily newspapers, on boardings, and by means of booklets and other specially prepared printed matter, is becoming more and more popular, and many advertisers who used the magazines almost exclusively are spending three-quarters of their advertising appropriation in other channels. If the selling of advertising space profits the magazines, they should prepare schemes of retrenchment for the day when their space will probably once more go a-begging.

The universality of the circulation of the American magazines and periodicals is not by any means as great as it should be, and the managements of these publications should consist of men who are able to take greater advantages of the possibilities of world-circulation. Papers published in Germany, Austria-Hungary, and other European countries are widely read by the Germans, etc., here, who can read English as well, but how few readers American papers have in the thousands of the out-of-the-way places where English is the only language spoken by Englishmen and Americans! A few years ago Harper's Weekly could be found in but two of the Vienna coffee-houses. It was a better paper then than it is to-day, and had not anything like the competition it now meets with. But at that time, as at present, the Illustrated London News and the London Graphic were everywhere in Vienna. There are a hundred thousand public places where these two papers are to be found, in which one never sees an American paper. And yet the frequenters of these places are interested in everything that pertains to this more interesting land.

In 1889 a friend of mine inserted a small advertisement in the Illustrated London News, and the replies came from all parts of the world. There were answers from many out-of-the-way places which necessitated the consultation of atlases and gazetteers before the orders could be properly filled. A similar advertisement in Harper's Weekly brought no replies outside of the United States and Canada, and scarcely as many from these countries as were obtained by use of the London periodicals. There is a circulation all over the world which properly managed journals of such high class as Harper's Weekly should be able to obtain; but means to secure such a circulation seem to have been ignored.

Sir George Newnes has tried to increase the circulation of his many papers in America, with wonderful success, although it was long believed that such papers as he issued would never be read by the American public. The American editions of London publications are now far more read in the United States than American papers are read in the British Isles, despite the fact that the latter country is more greatly interested in the United States than this country is in her. Munsey, with his new English

editions, is at last following the lines of the English periodicals, and will surely meet with the success which such a bold introduction to English readers deserves.

To go back to Germany again, the German magazines do not pay such large sums to many famous authors as American publications; and they pay far more attention to the work of literary men than to the dabblers in literature, who owe their fame to proficiency in other lines of human endeavor, but who nevertheless command in America fabulous prices for their writings. By means of a mutual understanding a German publisher can contract for one serial story by a famous author, and thus is enabled to give the coming men a chance. The frequent marvellous inability of the American publishing houses to recognize the earmarks of genius in a writer who has not made a name in some other part of the world, is due to the lack of care in the employment of readers who know a good thing when they see it. It seems almost incredible that Rudyard Kipling was unable to interest a single American publisher in the very stories which, offered elsewhere, at once placed him in the foremost rank of living writers. But there are many cases, almost as surprising, of the same lack of ordinary intelligence on the part of the literary critics employed by American publishing houses. Kipling claims to have been even discourteously treated by one leading New York publishing house when he offered those stories which so speedily awakened the admiration of the world.

There are possibly other American houses besides those whose troubles are now proclaimed to the world, that are on the anxious seat at present, and that have good cause for anxiety unless they effect a revolution in their business department. We now know that the Harpers have had to seek the advantage of J. Pierpont Morgan's millions, but how many know what other publishing houses are compelled to borrow immense sums of money to keep afloat on the turbulent tide?

In order to prevent future disasters similar to those of these two houses, now known to be unfortunate, publishers must use all necessary means to divide their risk with the thousands of local booksellers, who will gladly share it and help the publishers if their share in the profits is commensurate with their additional risks. The Appletons pay rent in Boston, Chicago, St. Louis, and good salaries to men who are not as well posted on the financial standing, etc., of customers as the local booksellers. Publishers must pay more attention to the employment of men in their home office of a wide and varied knowledge of the pitfalls of the business, and a faculty for avoiding them. They should act upon the principles that have made the fortunes of houses that have not had half their chances, as well as keep in touch with the ever-increasing demands of an ever-expanding circle of readers. Then the general public will hear less of the troubles of publishers, and will have more time to consider the troubles they have of their own.

HARMONY IN TYPE DISPLAY.

Edward P. Call, publisher of the New York Post, in speaking of the harmony of type in Profitable Advertising for March, says: "The question of style and arrangement of type seems to me so largely one of taste that it is almost impossible to lay down any definite rules to follow. There is almost as much in the way of harmony between types, which is capable of close study, as in music, and when this is once mastered, and the value of white space is appreciated, nothing more is needed for the appropriate and effective use of display types than good, every-day common sense and genuine good taste."

* * *

The essential elements of a good ad. are attractiveness and impressiveness. A sensational announcement may attract, but not impress, if it ever succeeds in attracting. The first attracts the rabble; the second reaches the sober few. A combination, with just enough of the sensational to be inoffensively startling, and sufficient dignity to command respect while it holds attention, is just what you want in your advertisement.—Ads.

* * *

Originality in advertising should not be carried to such a point that it becomes ridiculous.—The Advertiser.

* * *

Type is talk. It is your voice to represent your emphasis and gestures.—Kuh, Nathan & Fischer.

Specimens of all kinds of job printing, books, and pamphlets will be reviewed in this department. It is desirable that they be mailed flat when possible. If only favorable notice is desired it should be so stated in a letter accompanying the work, and should the specimens not be deemed worthy of praise no comment will be made. Address all communications to the office of this paper plainly marked on corner "OCTAVO, for Review."

A batch of booklets from the Booklet Publicity Co., 208 Summer Street, Boston, show how almost any trade can be reached by this mode of advertising. The samples sent to this office are intended to show how to advertise rather than as specimens of fine work, which, however, is quite attractive.

* * * *

The Tympalyn people are sending out a fine specimen of printing in the shape of a booklet of ten forms and nine colors, including cover, all printed on Tympalyn with a saving of fifty per cent of make-ready. The work was done by the Oxford Press, Boston. The title page is repro-

A FEW WORDS
about Tympalyn together
with some *Letters, &c.*

1900
The Tympalyn Company, Ltd.
BOSTON, MASS.,
U. S. A.

TITLE-PAGE DESIGN.

duced and shown herewith; the outer rule in the original being printed in red. Besides being a fine piece of printing the booklet tells of the use and advantages of Tympalyn.

* * * *

There seems to be no end to the schemes for sending printed matter through the mails for a one-cent stamp. Will Leffingwell, 3853 Poplar Street, Philadelphia, sends an ingenious arrangement—advertising the Nine-Hour-a-Day Wage Calculator—which is very useful and compact.

It is folded twice, one corner passes through a slit in the paper, making it secure. The size when folded is about that of an ordinary business envelope.

* * * *

Barnhart Bros. & Spindler, Chicago, have issued a specimen book of the new Curtis Series. A sample from the book is shown herewith. It is a face designed to

TITLE-PAGE DESIGN.

meet the great demand for this new style of type which is relegating all others to the past, not excepting either Jenson or DeVenne. The effect produced with this and similar faces is most excellent, and it has the advantage of being easy to accomplish. The writer is sincerely glad to see the rule-twisting abortions in the art of printing gone for good.

* * * *

A handy guide to Cincinnati, published by Earhart & Richardson, gives a whole lot of condensed and accurate information about that city. The price is 15 cents.

* * * *

Walter Scott & Co., Plainfield, N. J., send a booklet advertising Scott presses. The illustrations are wood engravings. The display is all set in the MacFarland series, and it is printed in black ink on white paper, which is quite correct when advertising machinery.

* * * *

Chalk plates are used to great advantage for illustrating by many newspapers and for other purposes. The Bell Chalk Plate Company, Cleveland, Ohio, is sending out a booklet telling all about the process. It is neatly printed, and fulfills its mission without going into useless detail.

* * * *

Calendars still continue to arrive at this office, including one from the Humphrey Democrat, Platte County, Neb.; a neat and artistic one from C. Struppmann & Co., 78 Fifth avenue, New York; Barnes-Crosby Co., Chicago, send a neat one for the month of April; Wheatley & Co., Temple Court, New York—who execute fine photographs for calendars—show a good subject; and the

Franklin Company, Chicago, sends the poorest of the lot, with a particularly common calendar wire-stitched on a card much too large for the design shown.

* * * *

The Honey Jar for March, price 5 cents, is full of sweet things and shows some reproductions of book plates. It is on the Philistine order and is printed at Columbus, Ohio.

* * * *

The Easton Printing & Manufacturing Company, Dayton, Ohio, send a specimen of a waterproof advertising sign printed on cardboard. It is a good advertisement. The cardboard is especially adapted for exposure to the weather.

* * * *

Rogers & Wells, engravers and printers, Chicago, have executed a fine piece of work for J. L. Cochran, a real estate man, the title of which is "A Home by the Lake." The cover is shown here, but the reproduction fails to

COVER DESIGN.

show the beauty of the design, as the letters in the original were embossed. The halftones were printed in black, and the reading matter in green ink on fine cream laid paper. It is a good thing and it would be a difficult matter to find a flaw in it from the standpoint of the artist or printer.

* * * *

C. B. Cottrell & Sons Co., Park Row, New York, send a nice specimen of a plain four-page circular, showing a

fine vignetted halftone of the Cottrell press. This process of illustrating machinery is quite commonly used now, and appears to be gaining favor.

* * * *

Elegance of simplicity in typographical display is shown in a booklet arranged and printed by The University Press, Cambridge, Mass., on Kremlin cover paper, for sale by the J. W. Butler Paper Company, Chicago. It is a fine example of printing, suggesting the possibilities of this kind of paper when combined with artistic typography and good presswork.

* * * *

A booklet, illustrating and describing how the daily and weekly Journal, Berlin, Wis., is conducted by three persons, arrives at this office. The cover is printed in red and black and the halftone illustrations show views of the exterior and interior of the Journal office, machinery, and portraits of the wonderful three, and the mascot—a dog. It can hardly be said that they are "Three men in a boat" and a dog, for one of the three is a woman. Who can beat this?

* * * *

Good taste is shown in a booklet sent by the Courier Printing Company, Ottumwa, Iowa. It is set entirely in MacFarland and MacFarland italic and printed in two colors only. The cover is reproduced to give an idea of

THE JOB PRINTER.

By Charles H. Cochrane, New York.

The young fellow in a printing office who has learned to set type and to feed a job press, but who can see no way open to learn more of the trade, is to be pitied—and more, he is to be helped by all right-thinking journeymen who come in contact with him. As the boy is father to the man, so the apprentice (so-called) is father to the jobber. The sort of a jobber he will make depends quite as much on the assistance and instruction that he receives as upon his own intelligence and application. The trade cannot be learned from an incompetent or an unwilling source. Every young compositor of to-day should seek to become either a jobber or a machine operator, for as a plain typesetter his services will never be in demand.

Let the young man who seeks to be a jobber cultivate the good will of the journeymen with whom he comes in contact, and try to learn from the best workmen among them; and let the foreman and journeymen be always ready to help the youngsters with hints and advice, and to allow them to do a part of some new or more difficult

COVER DESIGN.

its effectiveness; the initial "T" in the cover was printed in bright red. The text refers to advertising and is clear and concise.

* * * *

If anybody wants to get mixed up in figures they can do so by writing the Queen City Printing Ink Company for one of the "square inch" cards this firm is sending out. This kind of a puzzle always interests a certain class, and advertising is for the purpose of getting all classes interested.

* * * *

A nice piece of up-to-date printing has been executed by Bartlett & Company, The Orr Press, New York, for the Goodson Graphotype Company. It is a booklet—telling all about the type-casting and setting machine—printed on good stock, in black ink only. The letter-press is about perfect, a broken letter can not be found. The work is a credit to both parties.

* * * *

Neither art nor beauty, nor, indeed, any other quality whatever, can redeem an advertisement which doesn't get business. That is its reason for being. It has no other work or worth.—Portsmouth (Va.) Star.

work at every convenient opportunity. The helpful journeyman, working in the same alley with the apprentice, will show him the correct principles of spacing, that a condensed display letter does very well when spaced with three-em spaces, while an extended letter often requires em quads or more between the words. The general rule is that the space between words should be equivalent to the width of an average letter in a font. This is subject to modification, however, as appears farther along. In leading out a page or job to the required size the distance between lines does not usually require to be the same. Lines that go together in sense or display or that are grouped commonly require half or less than half the space that separates them from other groups or from single lines. In such leading, regard should be had for the shoulder on the type, so that the effect of distance between the printed lines may be what is intended, rather than be measured by the number of leads. One not infrequently sees jobs that have had say three leads placed uniformly between the display lines, with a total disregard of the fact that some lines are without shoulder and therefore perhaps three leads nearer the following line than some lower-case line with a wide shoulder. The leading should bear a direct relation to the margins of

the job, and should be in harmony with the spacing between the words. Body type that is triple lead should be double spaced, and very condensed type is therefore objectionable for use in a page that requires to be heavily leaded between the lines.

The accommodating journeyman will also coach the apprentice who assists him on tabular work, and will tell him why the columns and rules are laid out as they are, that certain measures are made to suit certain conditions, and so on. Or if the work be display, he will suggest the general character desirable, as that the whole job be kept in light face type, or that a certain class of paragraphs would be best indented on both sides—and at the same time tell the apprentice why this or that is desirable, that he may follow understandingly and not slavishly.

* * *

I saw a neat trick on a billhead the other day that pleased me. Instead of the conventional "Dr. to Blank," or "To Blank, Dr.," the arrangement was "U O 2 Blank." Evidently the printer—it was a printer's billhead—took his cue from the familiar "I O U." A thing like that is catchy, and while many customers would not care for it, yet it is good for a printer's own stationery, as showing originality and an effort to keep out of the ruts.

* * *

Another good thing came to my desk the other day in the shape of a novel blotter from the press of the Baldwin & Gleason Co. of New York. Strictly speaking, it was not a blotter, but four plain white blotters eyeletted to a pink top sheet, on which the advertisement was printed, the whole being mounted with a top of transparent celluloid. The blotters were thick and soft, much better for use than the average advertising blotter, which is too hard to absorb ink readily, and the celluloid protected the advertising so that it would last during the life of the blotters. The job also had the merit of being ornamental to the desk, and was picked up and examined by many visitors, increasing its value as an advertisement. For actual use it has taken preference on my desk, as I believe it would on the desk of any man who used it once. Printers who advertise by blotters should be quick to catch on to this, which though more costly than the ordinary blotter, does away with the need of sending out any more for some time, leaving them a chance to develop some other means of advertising their business.

* * *

A catchy thing in envelopes comes to me from I. H. Blanchard & Co., New York printers, and is a miniature imitation of a large leather mail-bag, with a silver bronze padlock, labeled with Uncle Sam's initials. It is cut to the proper shape, and made of leather-colored paper, and sealed with a big seal of vermilion wax. This envelop becomes very conspicuous in a morning's mail, and is sure to be among the first opened, even though it contain only a printed circular; and herein lies its value to the advertiser, and incidentally to the printer who gets it out. Men who advertise by letter circulars lose enormously in circulation of their advertising by reason of the letters never being opened or read. This envelop arrests attention, and invites reading of the interior, and no doubt triples the value of the advertising sent out in it. Live job printers should scratch their brains every day for ideas of this sort, which when found may be used to develop trade, sometimes to an enormous extent.

* * *

The artistic efforts of the job compositor seem destined to be the last and only demand on artistic ability in the art, for the fine overlay work of the pressman seems doomed. The patent spring wire overlay blanket is slowly but surely creeping into use, and improves with acquaintance. It may now be regarded as out of the experimental stage and in the field to stay. No more can the pressman-artist, with the overlay cutter in his hand, build up layers of tissue to bring out the shades and shadows of the beautiful halftone illustrations. The "confounded" blanket does it automatically, and he has only to put on a few rough underlays and a few general overlays and go ahead. No use now for our friend W. J. Kelly to write upon the mysteries of elaborate overlay work. The pen that told so glibly all that the young printer wanted to know of the theory of overlay cutting may now be laid aside to rust, for the march of invention has rendered it useless. The pressman of the future will simply put on the squeeze, open the fountain and "let 'er go," while he folds his

arms and explains to his helper how in the older times it used to be necessary to put in so many hours a day in fancy patching up, and regulating the ink. I include the ink, because I suppose some clever Jack will make that distribute automatically before long.

* * *

That was a most artistic cover on the April Inland Printer, but will the artist please tell me how the poor fellow with the ink balls is going to pull an impression by the lever of the hand press when he has to stand in such a narrow space with his back to a brick wall?

* * *

The job printer who is doing business and cannot seem to make any money at it should take a trip among the dealers and advertisers who sell printers' machinery and appliances, and learn whether a principal cause may not be that he is behind the times with his machinery and so cannot compete with those who have bought better. Some become so conservative that they discount everything they see in advertisements or that salesmen utter, and remain wrapt in the belief that nothing better exists than the old drum cylinder, or the alligator jobber. As a matter of fact the makers of machinery for the printer are advancing every year in the art, and he who does not keep pace with them must lose trade to those who do. If a new press will run ten per cent faster than the press in use, it is time to throw out the old one; if an attachment or a new device will add to the product or the quality of the work, it should be bought at once, without waiting until a competitor secures it and begins to take away work from the slower concerns. By keeping up with the times you keep up with the best class of customers, the class whose work yields the most profit.

* * *

The writer stumbled on an odd thing the other day, written by C. Stower, an English printer, in 1808. He said of the sizes of type:

Paragon, small pica, bourgeois, minion, etc., were formerly termed irregular bodies from their being intermediate sizes between the regular gradation. They were seldom introduced by the printer, from the apprehension he entertained that his office might be thrown into confusion in consequence of the slight difference which exists in those fonts and others, in point of size. This difficulty disappeared as printing improved; for now small pica and bourgeois are more generally used than any other letter, except pica, which is considered the standard size, as all leads are cast, and all measures made to its em's. Its face is either too small for the eye, nor its size too large, so as to extend a work unnecessarily. Minion is a letter become almost useless, except on newspapers, it being so nearly allied to brevier, a much neater type. Nonpareil and pearl have lately been much employed in miniature editions of some of our standard works, dictionaries and other books of reference, where it is desirable to have multum in parvo. They are introduced with much propriety and beauty in notes, quotations, arguments, etc., instead of brevier, to a bourgeois body. Diamond is only a pearl face upon a smaller body, and seldom used.

The primer is a size answering to two brevier bodies. There are likewise various other sizes cast for titles, which will appear in our specimen of different types.

The double pica may, with the greatest propriety, be termed an irregular letter, from its lining with two small picas. From what cause it acquired its present name will be difficult to say, unless it was originally cast to two lines of pica, and, being judged too small a face for that size, was reduced to two lines of small pica. Mr. Caslon has cut a letter that may be properly called double pica.

Who ever would have dreamed that double pica was once double small pica in size?

ADVERTISING ON THE INCREASE.

There never was a time when the strength of newspapers as advertising mediums was so apparent as it is at the present day. Advertisers are using them to a greater extent than ever before. Within the last few months business that once appeared exclusively in the magazines has begun to appear in the daily press also, while the trend of events seems to be toward including the latter in every advertising campaign of any pretensions whatever.—In dianapolis (Ind.) Sentinel.

NEWSPAPER

COMPARISON and CRITICISM

By O. G. WOOD, Chicago.

Publishers who wish criticism on their newspapers are respectfully requested to direct the same to this department.

THE Buckhannon Delta and the Knight-Errant, of Buckhannon, W. Va., have been consolidated, and the following are the officers of the new company: I. J. Ligget, President; Eugene Brown, Secretary; Hugh A. Lorentz, Treasurer-Manager.

Two copies of the paper arrived at this office, along with the following letter:

Buckhannon, W. Va., April 3, 1900.

National Printer-Journalist, Chicago, Ill.

Gentlemen—I send you under separate cover copies of The Delta for criticism. Do not be afraid of our feelings, as we send you this to benefit the paper.

Very truly yours, Hugh A. Lorentz.

The paper is nice and clean; the presswork is fair, with the exception of some leads and quads working up in the issue of March 29; the local news field is well covered. A short dash under the names of the different towns would be better than the full-width rule which is now used. The ad display would be improved if much smaller "catch" lines were used and more "white" allowed to appear. Brevier upper and lower-case headings are too small when the body of the paper is set in 10-point; pica is small enough for the heads. The following is taken from one of the issues sent to this office. It describes the paper accurately and might prove of value to readers of this department:

This week The Delta changes its style of make-up. The county news page has been moved to the second page and the eighth page given to a summary of the important National news of the week. On the seventh page is the usual serial story, and an interesting short story. Among the new features introduced this week are the market reports, the short story, the news summary, and a weekly review of the news of the week. This gives The Delta departments that will be appreciated by all the family and makes it a newspaper on modern lines for the people. The management would appreciate if every reader will tell them how they like the new features, which department they like best, and offer suggestions as to other features that could be introduced with profit. The Delta is a paper for the people and knows of no better way to serve them than to get their criticism.

If the management continue to ask advice and profit by it when given they are sure to succeed and make a good paper of the Buckhannon Delta.

* * *

From the University of Wisconsin comes a batch of the Daily Cardinal and the following letter:

Madison, Wisconsin, April 6, 1900.

Editor Dept. Comparison and Criticism:

We send you under separate cover some current numbers of our University Daily, which we wish you would examine and criticize. As a college publication may be out of your line and you therefore have no room for criticism of it in your columns, I send you postage, hoping that you may mail your criticism. We wish to make the Cardinal the most newsy, attractive, well-written, and altogether the best college newspaper published, and will be more than glad to profit by any advice or suggestion you may offer.

Your excellent monthly is eagerly read in our office each month. The article in the last issue on Reporting is the more interesting to us because it is practically the same method which we follow here.

I trust you will be able to favor us with a reply. Yours truly, Robert E. Knoff.

It is quite within the scope of this department to offer advice to a college publication, in fact, it is a pleasure to have the opportunity. The paper is a four-page daily of four columns to the page, three of which are almost entirely filled with ads—not very well set. The steps necessary for the improvement of the paper are better make-up, take

all display from front page, and set the headings to articles in job type. The word "India" for a heading in the issue of March 28 does not mean anything; it should be "Lecture on India," or "India and Its Government;" the heading should briefly tell the story. The size of the paper should be increased to admit of better make-up and give it the appearance of a newspaper, which is certainly not the case at present. The editorial head should appear at the top of the column, and official notices of the University should be placed on this page. Strict attention to small details and allowing nothing to "slide" are two good rules to follow.

* * *

W. C. Belknap, of the Bellows Falls (Vt.) Times sends several copies of the paper and a letter with instructions to "pass them over to the man who conducts the department of criticism. I would like to know how his ideas of make-up and ad setting tally with ours." Taking the copy dated March 8—twelve pages—I would remove all ads from first page; I would set the head "Neighborhood News" double-column, and all news headings larger and in caps of a job letter; I would place the editorial heading, which appears in the second column of the second page, on page four and in the first column. The ad composition is fair and so is the presswork, with the exception of a little too much "squeeze."

* * *

This letter of explanation accompanies a copy of the Republican Journal, Belfast, Maine:

Belfast, Me., March 15, 1900.

Department of Newspaper Criticism:

Dear Sir—I send with this the current issue of the Republican Journal for your consideration and criticism. I would state that we have a new dress on the way, having run the present one eight years, and that the paper stock is not up to our usual standard. With these exceptions the paper, in make-up and contents, is a fair sample of our endeavors. Ours is merely a "country newspaper," in a comparatively limited field, and we make no claims to superiority. Yours very truly, Chas. A. Pillsbury, Editor Journal.

Speaking generally, the paper has a nice clean appearance. Upper and lower case of Brevier De Vinne, however, is not large enough for news headings of the first page, and seven of them right across the first page—one in each column at the top—is not good make-up; larger type should be used for the headings, setting the first line in caps, and upper and lower case could then follow as a sub-head. With these changes and the new dress spoken of in the letter the Journal will be a credit to Mr. Pillsbury.

* * *

A strange make-up is that of the Berlin (Wis.) Weekly Journal. It is eight pages in size and the paper is not cut. The inside pages are printed with the head toward the fold; the outside pages are printed with the head to the outer edge. When the paper is cut the pages appear heads and tails, one-half being upside down.

* * *

Keep right along, Mr. Carter; publish the Lyons (Neb.) Weekly Sun the way you are doing. It is all right.

* * *

The Osceola Sun, Wisconsin, has put in a new press, and there is a marked improvement in the presswork. This change has often been brought to the attention of Mr. Roese in this department, and the paper now looks well.

* * *

It is astonishing to see the perfection reached by the process engraver and the newspaper artist. The Buffalo Courier of March 11 had a lot of halftone illustrations that were remarkably well printed for newspaper work. One

page of the paper of that date is devoted to the National Editorial Association, and has a number of well-printed halftone portraits of prominent members.

The Denver Evening Post makes a good showing in red and black. The work is above the average newspaper color printing.

Facts, a Denver weekly, has just added a Mergenthaler, and promises to be better than ever.

There is an improvement in the working of the halftones of the Northwestern Agriculturist, Minneapolis, Minn. Try and get them still better.

Trust or no trust, the Media (Pa.) Ledger continues to use the best kind of paper, and it is really a pleasure to handle the Ledger and look over its clean pages.

The Mail and Times, a social, musical, and literary journal issued every Saturday morning at Des Moines, Iowa, is a well-printed and well arranged weekly.

The Maurice (Iowa) Review recently got out a souvenir edition of 36 pages and cover. The ad composition was good, but the presswork on the halftones could have been improved.

The Kansas Dairy Farmer is the name of a small eight-page monthly devoted to Kansas dairy interests. It is published by Borman & Shawhan, at Enterprise, and is fairly well printed.

Woodsley Bros. send a copy of the Orlando (O. T.) Herald. They now publish two papers, the other being the Mulhall Enterprise, which has received attention from this department previously.

The Kingsley (Iowa) Times puts the editorial head in the middle of the last page—the eighth—under a big three-column ad. This is not good form.

The Garland (Texas) News recently celebrated its thirteenth birthday and adopted all "home print." Several typographical errors are easily discovered in the News. If it is to be all "home print" let the proofreader do a little overtime.

A large display head in every column is not good make-up. The attention of the Ashland (Wis.) Daily News is called to the issue of the paper dated March 14, which could easily have been made look better by setting the heads of a couple of the less important news items in smaller type, even if they did go at the top of the column.

The La Harper, La Harpe, Hancock county, Ill., celebrated its twenty-third anniversary April 6 by coming out in an elaborate lithographed Easter cover, to say nothing about the increased number of ads. The editor says that "the newspaper business has not always been a profitable one in La Harpe, several enterprises having been wrecked on the shoals of adversity." But the La Harper has weathered the storms—also a fire in 1893—and is now a solid success.

The Advisor sums up the New York newspapers as follows:

The Thunderer.—The Tribune.
The Morning Glory.—The Sun.
The Yellow Journal.—The Journal.
The Yellow Imitator.—The World.
The Scintillator.—The Evening Sun.
The Dope's Delight.—The Telegraph.
The Morning Blossom.—The Herald.
The Official Organ.—The Daily News.
The Woolen Mill Gazette.—The Press.
The Pink Eye.—The Evening Telegram.
The Family Friend.—The Brooklyn Eagle.
The Sleeper.—The Commercial Advertiser.
The Snail in Distress.—The Mail and Express.
All the Snooze that's Fit to Eat.—The Times.
The McLaughlin Regu'ator.—The Brooklyn Citizen.
The Old Reminder.—The Brooklyn Standard-Union.
The Old Woman in Fulton Street.—The Evening Post.

The following is taken from the Hell Box and Ink Can, Denver, and is published here for the truth it contains:

The Silver City (N. M.) Eagle has changed hands and Oliver P. Williams is now editor and manager. Mr. Williams is getting out a very breezy little paper, but in common with many others has the fault of using too much space in ads for the job department and paper itself. This does little good, as those who see the ads are usually your customers already, while it also looks as if you lack something with which to "fill up." [Nothing personal, Mr. Williams; "there are others."—Ed.]

A few extracts on the Loud bill are given here for information and in order to bring the matter to the attention of all readers of this department:

We believe those newspapers that have been offering opposition to the Loud bill have made a mistake. We believe it to be favorable to legitimate newspapers and against cheap book and fake publications.—Madelia (Minn.) Messenger.

It is the clear duty of the publishers of "country" newspapers to use their influence in behalf of the Loud bill and secure its passage through Congress.

At present hundreds of magazines, "mail-order" advertising sheets, novels and other editions styled "dated publications" go through the mails at newspaper rates that should be excluded. Those who oppose the bill claim if second-class matter included only those publications that are entitled to that classification, the Government's income would be largely decreased. But this is just what threatens the country publisher. If the postal deficit continues the second-class rate is in danger. There are grave abuses of the rate, and they should be corrected.

There are probably injustices in the bill and it may need some amendments before it becomes a law. The clause relating to the mailing of sample copies has created great excitement among the rich publishers of dated novels, etc. The clause allows sample copies not in excess of fifty per cent. of the subscription list, and in no case shall the number of such copies exceed 500. It seems to The Journal that this part is a good thing for the "country" publishers, because it does not permit the cheap weeklies and other publications of large cities to send out thousands of sample copies at pound rates. The Loud bill, if passed, will undoubtedly cut off much competition from cheap weeklies and fake monthly publications because of this and other restrictions. The bill will come up in a short time for consideration. The Congressmen who have at heart the interests of the country papers will vote in favor of it.—Faribault (Minn.) Journal.

The labor market is stiffer, yet the price of advertising and subscription has not advanced. On top of all the publishers' burdens, Mr. Loud, Chairman of the Post Office Committee in the House, introduces his Second Class Mail Matter Bill again, known as H. R. 6071, which was first introduced three years ago. This bill, if passed, would require all publishers to put a stamp on all exchanges, copies to advertisers, all copies desired to be circulated for the purpose of securing new subscribers, all copies or special or extra editions of any kind or for any purpose.

Mr. Loud stated to a publisher that after this bill was passed he proposed to introduce a bill prohibiting the circulation of country papers free in the county where published. He states that "they (the committee) do not assume that the bill they recommend to you is perfect. Far from it; neither does it wholly remedy this evil. It is, however, a step in the right direction, and goes as far as they thought prudent at this time." A strict construction of the bill requires the cutting off of subscribers as soon as the time to which they had paid in advance had expired.

The aim of Mr. Loud is to finally model our postal laws after those of monarchical countries which Mr. Loud visited and investigated during the past summer. In foreign countries the publishers have no privileges not extended to merchandise of all kinds. The result is there are a few publications of enormous circulation and practically no weekly papers like ours which have made the United States the most intelligent country in the world. The second class postal laws of the United States to-day are not as favorable to the publishers as those in force in Canada and Mexico, and yet Mr. Loud proposes to take a step backwards and towards the usages of Imperialistic countries.—Hinsdale (Ill.) Doings.

ADVERTISING RATES.

AT THE recent meeting of the National Editorial Association Mr. A. W. Lee, of Ottumwa, Iowa, delivered so able a paper on the "Best Method of Securing Circulation for a Local Daily" that the following by John L. Mahin, a leading advertising expert of the country, as to Mr. Lee's methods and advertising rate table, will be found of especial interest to newspaper publishers. It will prove valuable as well. Mr. Mahin says:

"You may put me on record as saying that I regard the Ottumwa Courier one of the best conducted daily newspapers to be found anywhere in the United States. Your so-called 'new plan' of handling your advertising interests me particularly, and I want to say that it is bound to succeed, because it is founded on the right principle, and that is to give the greatest possible value to the advertiser for the money which he expends with your publication. I refer to it as a 'so-called new plan' because it is in fact only adapting to the country daily the advanced business ideas and methods which have been used so successfully by the great magazines and the metropolitan papers. I am pleased to see that you do not hesitate to tell the public that you are charging more for your space now than formerly. This is necessary in order to properly handle advertising on a modern, up-to-date, frequent-change-of-matter methods; but the condition of your advertising columns gives conclusive evidence that your live and progressive merchants appreciate the service which you are giving them. That they are getting results from their expenditures in the Courier, goes without saying.

"Your circulation of 3,500 daily, and 5,500 weekly, each issue respectively, in a city the size of Ottumwa, is unusually large, and the fact that 2,500 of these dailies are each evening delivered by carrier in Ottumwa alone, shows something phenomenal in circulation building. I do not wonder that Mr. Lee was invited to deliver an address before the National Editorial Association on the occasion of its recent annual meeting at New Orleans, on the subject of building up circulation. He certainly ranks as an expert in this matter.

"Your card of advertising rates is one of the plainest and most equitable that I have seen anywhere, and the rates charged for space are exceedingly reasonable for a newspaper of the character and standing of the Courier. In this connection I want to say that the Courier has in E. P. Adler an advertising man of unusual ability. His grasp of the situation is wide and comprehensive; he realizes that advertising is not worth anything to the advertiser, no matter how low or how high the rate is, unless said advertiser uses his space in such a way as to make him money. If the advertiser doesn't make money the publisher won't get any more business from that advertiser. If the advertiser does make money, he will pay a rate that is justified by the returns. The Courier seems to be successful in making advertising in its columns a money-making proposition for the men who pay for that advertising. The make-up of a paper, the quantity of news it carries; the character and amount of local news it publishes in each issue, the quantity of new matter put in type every day, the frequency with which advertisements are changed, all give a practical man, who is buying advertising space, a quick insight into the amount of money that is spent in conducting said newspaper; and all of these things should go to determine, in the mind of the buyer of advertising space, the value of that space and the returns which it will probably give for the investment made. Looked at from

this standpoint, I can truthfully say that I regard the Courier as one of the best conducted daily newspapers in the United States."

The following is the advertising card of Mr. Lee's paper, the Ottumwa Courier, to which Mr. Mahin refers:

ADVERTISING RATES.

DISPLAY IN DAILY OR WEEKLY.

Transient and Circus, 50 cents per inch.

	2 t	7 t	26 t	52 t	78 t	104 t	156 t
Run of paper, per inch..	.25	20	17½	15	13½	13	12
Next Reading.....	27½	22½	20	17½	15½	14¾	13½
Full Position.....	30	25	22½	20	17½	16½	15

Full position not given advertisements less than two inches.

Additional space pro rata.

BULK SPACE.

100 inches or more.....	per inch, 25 cents
1,000 inches	" 20 cents
2,000 inches	" 17½ cents
4,000 inches	" 15 cents

Special or legal, set in nonpareil solid, 12½c per line, 1t. 6½c per line each additional insertion.

PROFESSIONAL CARDS.

One year daily, \$12.00; daily and weekly, \$18.00; weekly, \$9.00. Less than one year, 50 cents additional.

READING MATTER.

Readers.—Readers in local news columns, 15 cents per line each insertion.

One or more lines, each issue for one year, 12½c per line.

Locals.—Locals following local news matter, 10 cents per line each insertion.

Three or more lines, each issue, one month, 8 cents per line.

300 lines during one month, 8 cents per line.

1,000 lines during one year, 8 cents per line.

Three or more lines, each issue one year, 6 2-3 cents per line.

2,000 lines during one year, 6 2-3 cents per line.

CLASSIFIED, WANT COLUMN.

One-half cent per word, each insertion, in Daily or Weekly. No advertisement inserted for less than 15 cents. Advertisements changed as often as desired without charge.

PRACTICAL HINTS ON ADVERTISING.

By Charles Austin Bates, New York.

The retailer in minor cities should contract for all newspaper space in bulk at so much per inch, using so many inches a year. He should get a bed-rock rate on this. Then he should use the space as he needs it. He should use just enough space to tell his story, no more.

He should not only use his space to the best advantage, but be sure he is using the best papers. He should take more space in the paper that brings the best returns. He can easily find out which that is. There are several ways. Here is a simple one which always proves effective:

On a day when some particularly attractive bargains are offered, give a free street car ride to and from the store to every purchaser. Advertise it in every paper, and in each paper put a coupon good for two tickets on the lines running to the store. Have the name of the paper, in which the coupon appears, on the coupon. Tell customers to bring the coupons when they come. Most of them will. Ten cents is worth saving. This will give

the minor city retailer a very reliable record of the papers that brought the best returns. No paper should object to such a test.

Of course, in metropolitan cities where there is a large class of conservative wealthy people who ride in their own carriages and make but very little use of the street cars, a test of this kind might do injustice to some high class paper. For instance, in New York City it might do an injustice to the New York Evening Post. In Chicago, it might do an injustice to the Chicago Evening Post. However, in a minor city—anything less than a metropolitan city—it will give a pretty fair basis upon which to estimate the value of mediums.

* * *

Most retail firms, especially department stores, in minor cities, have more or less mail order business. Very few of them push it properly. It is a business that can be pushed even in cities of sixty and seventy thousand people. In order to push it, it is necessary to use small space in the neighboring country papers.

This space can be obtained at very cheap rates. Just as much attention should be given to preparing the ads. for these country papers as for the city papers. The ads. should be checked, and it should be seen to that they are inserted according to contract. They should be changed like those in the city dailies, every issue.

Special attention should be given to seeing that the articles advertised in these country papers are profitable and suitable for mail order business. As a rule, it is best to advertise high-priced things for mail orders. Give the price and bear down on the good quality and description. Advertise constantly the good points of your mail order business. Say you have the quickest mail order house in your territory; say that you are prompt, reliable, and that you give money back on unsatisfactory purchases; and say that all these statements are strictly true.

After you get an order, no matter how small, see that it is filled correctly and intelligently. Follow up all requests and inquiries for samples, if they come to nothing. Have a courteous letter to send to all who have written once and find out why they have not ordered. Find out what is wrong and make it right.

* * *

When a special sale is to run a certain time, be sure to advertise its continuance. Follow it up each day with new announcements as long as it lasts. It isn't necessary to give it much space for the first announcement, but don't ignore it, and make everything about the store advertise it. Show the public that you think it is a big thing. Have the bargain counter the most conspicuous in the store. Have plenty of card signs, and have window displays, if necessary, on the same lines.

Be sure your sales people see all of the ads. every day; not just what pertains to their own department. In a small store especially, the sales people should know all the store news.

Have your clerks suggest ideas for advertising their departments. Use the suggestions if they are good. Enlist the interest of your salesmen.

Keep a careful record of your advertising expenditure. Itemize it as carefully as you do your sales. Charge all advertising to the separate departments. For instance, if dress goods had so many inches one day, at so much an inch, charge it to dress goods. Then study this record, and see how the sales correspond to the advertising.

* * *

Advertising is like any other particular of your business—if it does not bring results, there is something wrong. When you locate such a case, study it out and find why it did not bring results; whether it was the wording, the prices, the medium or the weather. The accumulation of this experience will make you rich.

* * *

I understand from reading advertising journals that many advertisers nowadays think that two-color illustrations are a chestnut, and are no longer effective. I don't agree with this idea. With the average human being a cover design in colors is more attractive and catchy than a one-color half-tone. Of course, three or four colors are more attractive, but where that cannot be afforded, two colors will do. The average human being is caught by colors, even when they are not particularly artistic in blending. Throw a booklet with a cover design, made up in even inartistic and broad color effects, on the floor before you, front cover up, and then throw a booklet with

a one-color half-tone design in the same position, and see which catches your eye and arouses your curiosity.

ADVERTISATORIAL.

In the making of prosperity, industry is not the only requisite, nor is economy—though both are indispensable. There must be something additional. A market for the sale of products must be provided; and that market must be sought, and not waited for. There is no market seeker so successful as the daily advertisement. This does more and better work than would be possible to an army of agents, emissaries and canvassers.—Advertising Notes.

* * *

Time was when a man in business got trade whether he advertised or not, but that day has gone by. The public has been educated to understand that the foremost merchants advertise their wares and that those who do not advertise are so far behind the times that no woman who loves to buy up-to-date goods should ever think of patronizing them.—Binghamton (N. Y.) Herald.

* * *

It is not necessary that an ad. should be a model of literary style in order to attract attention, but it should tell something about the goods that the public would like to know. Every retail merchant tells this orally many times a day. He can say the same thing in his paper and make a large advance towards being a successful advertiser.—Omaha Trade Exhibit.

* * *

Look over some letters you have written to prospective customers and you will find excellent material there for an ad. Many ads. are written under forced circumstances when the writer is trying hard to say something brilliant, whereas in the letters you write you use natural, easy expressions.—The Advertiser.

* * *

The highest form of advertising consists in teaching the public the varied uses of the article advertised, making it clear how completely it fits into the social economy of the public, and proving that the person addressed must buy the article in order to live according to the highest ideals.—Advertising Experience.

* * *

The most successful advertising does not attempt to do too much. It introduces the buyer to the seller. Even if it makes a direct sale, that sale should serve only as a wedge to open the way for other sales.—Agricultural Advertising.

* * *

If an advertisement is so plain that the veriest dunce cannot mistake its meaning, it will certainly not be misunderstood by others whose mentality is of a higher character.—Printers' Ink.

* * *

The newspapers and periodicals with the largest circulations reach the great middle class, which buys everything. They're the best advertising mediums.—Profitable Advertising.

* * *

The day will come when each of the great newspapers of the country will have a department attached to them for the proper preparation of advertising matter.—Gibson.

* * *

Use common words. Many liberal purchasers of the necessities and luxuries of life have never included a big dictionary in either list.—New England Grocer.

* * *

All men who advertise are not successful, but, with rare exceptions, all successful men have been advertisers.—Red Hook (N. Y.) Journal.

* * *

Whether an advertising method is good or bad depends upon the circumstances under which it is applied.—Printers' Ink.

* * *

Newspaper space is like space in a garden. Results depend on the manner of cultivation.—Press and Printer.

* * *

Involved sentences are bad whether their subject be soothing syrup or philosophy.—New England Grocer.

* * *

A few words, if they tell the story, are better than fine type and much reading.—Business Problems.

By WILL OWEN JONES, Lincoln, Neb.

Questions, criticisms, and experiences are solicited for this department.

While the answers propounded in the March and April numbers of this journal on the Story of Tillerman McDermott have been coming in freely, it is not yet time to classify and tabulate them and render a verdict for or against the use of such a story as a part of a newspaper report of a fire. My own idea is that it has no legitimate place in the news columns of a newspaper that serves an intelligent clientele. It may fascinate the ignorant and susceptible, but the thinking reader will see that it is more likely to be fiction than fact. When this sort of thing is done repeatedly the writers are bound to expose themselves sooner or later as makers of fiction, and the paper is branded as unreliable all the way through. The editor who respects his readers will give the news in a direct, forcible and convincing way, leaving emotional stories to be handled by his yellow contemporaries.

But of course this is largely a matter of opinion. If the readers of this journal disagree with me they are invited to discuss the question in these columns. This is a free parliament and no opinions will be denied expression.

"The Adventure of Tillerman McDermott" appeared in McClure's Magazine in December. It was reprinted in the March number of this magazine, with the following questions: 1. Is this story done in "newspaper English?" 2. Would it be suitable as an introduction to a report of the fire? 3. Would you use it in any part of a report? 4. Does the story give information or emotion? To what extent may emotion be used to intensify a newspaper report? 5. If work of this kind could be done by reporters in time to print in the morning, would it be advisable to use it?

A few of the replies received during the month are presented here, with the hope that many more readers may yet be heard from, especially on the fourth and fifth questions:

(1) The story is not done in "newspaper English," although I think it follows that style more closely than is usual in a magazine story. The descriptions of the fireman, the rescued woman, and the scene generally would be considered too elaborate for a newspaper account.

Such sentences as "The crowd below held its breath," "It was a moment of awful uncertainty," and "Seen against the wall it was a mere thread," would be certain to be blue penciled. A reporter would consider the phrases "Where a man's strength lies," and "You would know him for a fireman" as entirely out of the range of a newspaper assignment.

(2) It would hardly be suitable for an introduction or "lead," as it does not embody the main facts of the disaster, which a lead should always do, and is merely the account of a personal achievement in connection with it.

I should say that it would make an excellent story for the inside of the paper, were it possible to write it in time to print the next morning; or in a Sunday edition under such a caption as "Sparks from the Great Fire;" or in a more detailed "after-report" of the accident.

(3) Primarily the story is merely emotional. Emotion may be used in a newspaper account only to the extent of relieving the baldness of an array of facts and inspiring the reader with the actual horror (or whatever the aspect may be) of the affair described.

If work of the finished literary style of Mr. Baker's story could be turned out by newspaper reporters in their

extremely limited time, it would still be impracticable to use it as the regular morning report inasmuch as hurried readers demand above everything else the real and ungarlished facts, placed as concisely as possible. It is quite likely that had the story in question appeared in a New York newspaper the morning after the fire, it would have been skipped by almost every reader in the impatient search for actual details.

M. F. APPLGATE.

(1) Baker's story is not done in "newspaper English," all descriptions of the truck and of individual persons are examples of waste. "Sheer above," "white" streams of water are words that a reporter would not use. The whole thing is too much merged into the person of McDermott.

(2) No. Too long and too individual.

(3) "As Seen with Other Eyes," or some such heading, following, not preceding nor mixed up with the regular account of the locality, extent of fire, owner of building, deaths, successful combating of fire and probable loss. Also insurance.

(4) The story gives some information scattered ad libitum throughout a one-sided emotional story. Emotional matter in a newspaper report should be sparingly used. But where there is no direction from the managing editor as to space limit, the individual style of the reporter should be allowed to assert itself. Mere reports in set phrases do not always make good reading matter. Witness "one of the prettiest weddings," and "the performance was pleasing and agreeable."

Above all it is the reporter's business to push out from the center to the periphery and not vice versa. Give the main facts first and embellish them afterwards.

(5) Yes, in the dailies of a metropolitan city. In a paper in a small city such a report would occupy too much space.

J. H. TYNDALE.

(1) No. The whole style is indirect. The second sentence of the first paragraph would not be used by a reporter. If he wished to give that information he would say, "Truck 21 had ten ladders, etc., and weighed five and a half tons." He certainly would not begin, "What with." The first and second person "you" and "I" are seldom used in newspaper narration.

(2) No. The facts about the fire are made secondary to the incident, and are only introduced for literary effects in the story. In a report more real information would be necessary at the beginning.

(3) Not in that form. If used at all it should be at the close of the report as simply an incident connected with the fire. It is not of sufficient importance to be in the body of the report. The woman rescued was only one of many saved and the other firemen were probably equally as brave. When dozens of people were injured and lost there is a lack of proportion in devoting that much space to the rescue of one person.

(4) The story simply gives emotion. The terrible climb of the fireman and its realistic portrayal make the man himself more prominent than the fire. The emotion aroused adds in a general way to the horror of the fire, without giving any actual information. Emotion should not enter into a newspaper report.

(5) No. The newspaper is read for facts and general information. The world has not time to learn in detail the thoughts of each fireman who mounts a ladder, nor his harrowing sensations as he passes from round to

round. Emotion destroys all idea of proper perspective. In this story the fireman to whom nothing happened becomes more important than all the other people involved, many of whom were killed. An act of heroism always appeals to the imagination when told in the simplest words, and does not require so-called literary effects to be appreciated and understood.

A. L. MILLER.

(1.) No, it is not "newspaper English," nor is it "plain English." The style is not direct or concise. It is full of useless microscopic details. A reporter going out to rescue a woman from a burning building would not commence at the house of a ladder truck and use 360 words in introducing her and then use 880 words in getting her to a place of safety. He would not speak of "truck 21" except for special reasons, nor of "a 3-3 alarm," which is a technical term not understood by the public. He would not use the word "truck" as feminine gender or any other gender. He would say "horses" and not "the big blacks." If there was a fire in a house a reporter would say so instead of writing, "the windows were giving out a peculiar ominous orange glow that told the grim story of the destruction within." He would not use the pronoun "you," nor use the expression, "What with," as used in the story. He would not speak of streams of water from a fire engine as "curving like bows and opening in spray at the end where they cut into the rolling smoke." He might not even deem it necessary to explain that a man named McDermott was an Irishman, certainly not that a man was "short of legs," unless the man referred to was without legs.

(2) The story would not do for an introduction to an account of the fire because it is a mere incident. The reader wants the principal facts first and will take incidents later, if he has time to read them.

(3) Such a story would be read by many with great interest, and for this reason it might be used at the close of the report after all the necessary information had been given. The first reading would attract the unthinking, but the ordinary reader after giving it a moment's thought would see that it was written for effect.

(4) The story contains little but emotion and its effect is as harmful as a dose of an exhilarating drug. Emotion is permissible in newspaper reports if created by a statement of what happened and what could be seen by an observer of the incident, not by a description of supposed thought or feeling.

(5) It would not be advisable to use reports of that kind in a daily newspaper. Many reporters could write such reports, but the paper using them would not be entitled to be called a "news" paper. The story does not contain much news and what there is not given in the form of news.

J. M. THOMPSON.

(1) I think the story is done in newspaper English, perhaps, but not in newspaper style, because the news is not told at the start. The story is told, not for the story but for the effect that may be produced on the reader by the artistic telling of it. Newspapers print stories for their intrinsic worth.

(2) It would not be suitable for a lead or introduction to a news story, for the reason that the news is not told until the entire story is read.

(3) It might be used to good effect in a report of the fire after the story of the fire had been told, if other stories of a similar nature were obtainable and it was desired to make the fire story "lurid" and long.

(4) Emotion. Little information is given concerning the fire; this was probably one of many perilous acts accomplished by the many firemen at work on the building. My opinion is that more emotion in reports of such occurrences would please the readers, but whether it is proper for a writer to strive for that effect I hardly know. Where facts may be strictly conformed to I can see no harm in giving the public what it wants. In this case, where a large fire caused great loss of life, I believe the public wants the story first, told as tersely as possible, and then all the detail and emotion that can be thrown into a lengthy article.

(5) I believe it would. But the reporter who did this work could not have done much of the real story of the fire.

I think a paragraph telling of the fire, and the great loss of life and property, preceding the story sent out by the Associated Press, would have improved it.

F. L. WILLIAMS.

AN ELDERLY DELEGATE.

ONE of the elderly gentlemen in attendance at the meeting of the National Editorial Association in New Orleans was Loring William Puffer, of Brockton, Massachusetts. He was born at Stoughton, September 17, 1828, and came as a delegate from the Suburban Press Association of New England. His labors and experiences have been varied. A work entitled "Men of Progress," published in Massachusetts in 1896, in speaking of his literary, newspaper and other works, says:

Quite early Mr. Puffer became a copious correspondent for various newspapers, and later had experience in the editorial chair, being editor of the Brockton Advance, and the editor of the Brockton Eagle, during the years 1884 and 1885. He has done other literary work, especially in historical and biographical fields, which has widened his reputation.

Outspoken and frank with tongue and pen, he is counted one of the most efficient, honorable and successful political workers in Eastern Massachusetts. He has been on the Republican City Committee of Brockton for many

Loring William Puffer, Brockton, Mass.

years, and was its Chairman in 1884-85. In 1856 he became an active member of the Plymouth County Agricultural Society, was a trustee for many years and has been Vice President. In 1860 he built the first green-house ever constructed in North Bridgewater; and from that date to the present he has been an ardent horticulturist, florist and a frequent contributor to agricultural, horticultural and floricultural publications. He was one of the most active originators of the Brockton Agricultural Society, founded in 1874, which was a success from the first. Its opening exhibition, held in ten days under a tent, received an income of \$7,400; and by 1893 its annual income had reached \$29,500. Dr. Puffer is also a member of the New England Historic Genealogical Society, of the Natural History Society of Boston, of the Massachusetts and Suburban Press Association, and of the Norfolk Club; and he is a charter member of Paul Revere Lodge and Satucket Royal Arch Chapter, Free Masons of Brockton. He was married September 16, 1855, to Miss Martha Mary Crane Worcester, niece and adopted daughter of the Hon. Samuel Thomas Worcester and Mary Fenno Crane (Wales) Worcester, of Norwalk, Ohio. They have four children.

CIRCULATION Department

This department is intended as a clearing-house of suggestions and opinions as to the best means of securing, handling, and retaining subscriptions to all kinds of newspapers. Communications are solicited.

We feel that we cannot do better for this department this month than to quote from the valuable little book, "Making a Country Newspaper," by A. J. Munson, published by the Dominion Co., Chicago. This work covers the whole field as indicated in its title. It gives the hard-pan facts as to the newspaper "Man, the Field, the Plant, the Paper, the News, the Headings, the Circulation, the Advertising, the Daily, the Style, the Law." We have arranged to furnish the book to subscribers to the National Printer-Journalist who are paid up to January 1, 1901, for fifty cents. In the meantime we are permitted, by the author and publishers, to present the following for the readers of this department as a specimen of the practical manner in which the various topics are discussed. The author says:

The first thing in seeking circulation is to publish a good newspaper. Set the circulation mark at such a figure as the field warrants and then make as good a paper as you could afford to do if you had that circulation. Having done this, you are ready to set about securing the circulation. It must be understood, however, that this plan is the sequence only of the advice that has been given in the preceding pages in regard to what kind of a paper to publish. If you are publishing a personal mouthpiece, or a party organ, all the plans in the world will avail but little in building up a general circulation.
